The Senator from Maine (Mr. MUSKIE), for himself and others, proposes an amendment numbered 93.

The PRESIDING OFFICER. Time for debate shall be limited to 3 hours, to be equally divided between and controlled by the Senator from Maine (Mr. MUSKIE) and the Senator from Wisconsin (Mr. NELSON), with the vote thereon to occur at 5 p.m., and with no amendment or tabling motion thereto to be in order.

Mr. MUSKIE. Mr. President, I yield myself 15 minutes, so that I may control the disposition of my time. Since I am now operating on my time and not on the majority leader's time, I would like to spend it a little more frugally.

Mr. President, I should like to make one observation at the outset of this debate this afternoon.

This morning, before I had to go to a committee meeting at 10 o'clock, I called six of our colleagues to test their evaluation of the pending amendment and the one that will follow. Of the six, five said: "Ed, you're absolutely right, but—"

So I asked them: "Why, then, are you going to vote against the amendments?"

The reasons fell into three categories.

The first reason, by some: They already had promised the majority leader to vote the other way.

The second reason: The pressure of public concern with congressional ethics led them to the conclusion that they had to vote for anything in the name of ethics, whether or not it was right.

The third reason: Because they had voted for the pay raise and had taken so much flak back home for that vote, they had to oppose those critics by voting against these amendments, no matter how meritorious.

So here are five of six Senators who have decided to vote contrary to the merits as they see them. The sixth conceded the persuasiveness of my agruments, which he had not heard before he had made his commitment, but felt that his commitment was overriding and that he could not now focus on the merits:

I ask the Senate: Is that the way we are going to make public policy on this issue? The six Senators I called were picked at random. I did not select them for any reason. So it is a random sample. If it is a sample that is at all reflective of the Senate as a whole, the Senate seems about to approve a policy as to the merits of which a majority of the Senate is in disagreement.

So we are going to play with Senators' lives, play with their economic viability, play with the viability of the Senate to attract for service in the Senate young people without resources, for reasons that are irrelevant to the merits. That is what my sample said this morning, and I thought we should get it in the record at the very beginning.

There is every indication that the Senate is panicking to vote for anything in the name of ethics in order to emerge with the image of strong moral and ethical leadership, whether or not what we do in the name of ethics is right or wise on the merits.

Now, Mr. President, I am going to talk about the pending amendment. It is interesting to note that none of those pushing for the committee proposal has bothered to spend a minute since last Friday on the pending amendment.

My good friend from Missouri, Senator EAGLETON, dismissed it yesterday as a tactical ploy, as a gimmick. Mr. President, I point out that I offered this as the first amendment to be voted on. I have committed myself to vote for it. I have been soliciting support for it from Senators on both sides of the aisle. Those who oppose it, oppose it not because it lacks merit but because they choose to dismiss it in order to avoid the merits as a tactical ploy, as a gimmick.

Mr. President, yesterday, the distinguished Senator from Missouri, in justifying his support for the 15-percent limit on earned income, said that it was necessary because of public concern with congresssional ethics. This is what he said:

We have had examples in the public press of extravagance and luxurious junkets, shopping sprees, carloads of gifts and the like.

We have had press allegations that the oil interests unduly influence legislation on energy, et cetera.

We have had the image of congressional staffers junketing around the world, paid for by foreign governments and the like.

There have been allegations about the practice of lame duck Members of the Senate and Congress junketeering around the world in the waning days of their terms.

And there has been the whole area of obscene campaign spending, of almost outright purchase of seats in the Congress of the United States in terms of the personal investment by a wealthy candidate.

That was Senator EAGLETON's justification for the limit on what? Earned income. There is not an abuse listed in that language which I have read that has anything to do whatsoever with abuses attributable to the lecture circuit.

Later on in his discussion when I asked him specifically what overriding public interest required the prohibition that a Senator cannot speak to an obviously conflict-of-interest-free audience on his own time, what did he have to say to that? He says:

There is something inherently risky.

And what example did he give? Let me quote from what he had to say:

Think back,

He said,

to the Haynsworth debate. What was said time and again on the floor of the Senate about Clement Haynsworth? He was honest, yes. He had good, lovely neighbors who liked him, yes. His fellow judges on the fifth circuit court of appeals liked him, yes. But what he had done gave "the appearance of being improper." He owned stock in the Brunswick Co., a few shares, and sat on an important Brunswick case. There was the "appearance of impropriety." He or his wife owned a company called Carolina Vendomatics, as I recall.

That was in direct response to a specific lecture hypothesis, and his answer had nothing to do with lecture fees. It had to do rather with other potential abuses, abuses related to junketing, abuses related to other behavior around the Senate, but also abuses related to investments—let me repeat, abuses related to investments.

Well, if the lecture circuit, on the basis of evidence which he did not supply, carried a high risk of conflict of interest, then what about the very instances he cited of risks associated with investments which are not treated with the same discipline in the committee bill? And that is the justification, Mr. President, for my first amendment.

If the high risk of conflict is the reason why we limit income from earned incomes, then a similar risk exists with respect to investment income and ought to be treated the same.

It seems such a simple proposition that I find it unbelievable that I am still arguing it on this third day of debate and finding disagreement with it.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. MUSKIE. Yes; I yield to my good friend.

Mr. SCOTT. Mr. President, I appreciate the Senator's yielding. I just wonder if he has had anyone research the question of the validity of the Senate's putting some additional obligation upon an individual who happens to be rich. I am not in that category, I hasten to add, but I think the requirements for service in the Senate shculd apply alike to rich and poor, and once you are here the behavior pattern should be the same.

I wonder, when we say to a person who inherited wealth that we can tell him how he must apply that wealth, put down

restrictions with regard to what constitutes the proper kind of a trust, whether that is proper. I can see several objections to it just from a curbstone point of view. I have not researched it, so I am asking the distinguished Senator from Maine whether he has or has not.

There are certain requirements in the Constitution for service in either the House or the Senate, and under the 14th amendment we are all entitled to the same privileges and immunities. I know that specifically applies to the States, but I wonder if the courts would not say that it would apply to Members of the Senate also.

Here we are saying that if somebody inherits wealth they must do a certain thing with their wealth which they have inherited. This might keep people who happen to be wealthy from offering themselves for service in the Senate.

I would like to think that someone born in a log cabin, somebody without funds, would be acceptable as a Member of the Senate, and someone with almost unlimited financial background would be also.

Will the Senator comment on that?

Mr. MUSKIE. I will be glad to. The Senator is making my speech. The intent of the committee report was clear. I am one without wealth, so that my potential for serving in the Senate must be limited by divesting me of outside earned income above 15 percent of my basic Senate salary. I think that is wrong. But if the Senate says it is right for me, then I say let us apply the same standards to those whose source of income derive from investments, ventures of one kind or another, or any other kind of activity in the private sector.

The thrust of the committee report is to impose no restraints upon those who are wealthy but to impose the ultimate discipline, that is divestiture of income above a certain amount, upon those who have no outside resources. That is the thrust of my remarks this afternoon.

The other day, Mr. President, Walter Pincus had an article published in the Washington Post which I ask unanimous consent to have printed in the RECORD at this point.

There being no objection, the article ws ordered to be printed in the RECORD, as follows:

SENATE ETHICS DEBATE: WHAT INCOME TO LIMIT

(By Walter Pincus)

Debate on a new Senate code of conduct, personal and occasionally bitter last week, will heat up again today.

The focus will be on whether invested as well as earned outside income should be limited.

In the draft code, drawn up by a special committee chaired by Sen. Gaylord Nelson (D-Wis.), a limit of 15 per cent of a member's salary ($8,625 at the current $57,500 rate) was applied to outside earned income. Exceptions were made for money received from family business and farms, and from partnerships where the senator's own services were not material to the concern's gross income.

A similar proposal passed the House.

As Nelson puts it, "I feel there is nothing that can be done about the investment income of wealthy people . . . Unearned income is passive income and earned income is not."

The unearned income that would remain unlimited would include not only dividends and interest from stocks and bonds, but also gains and losses from trading stocks, real estate or oil and gas leases or any other business investment.

Although senators have not been required to disclose publicly such holdings or such income, some do. A Congressional Quarterly survey of 1973 voluntary income reports showed:

Sen. Abraham Ribicoff (D-Conn.) had gross incomes of over $125,000 in 1972 and 1973 because of capital gains on sales of real estate, and held shares in 13 Washington area real estate ventures.

Sen. Lawton Chiles (D-Fla.) reported extensive real estate holdings and a 1973 income of $112,534, including $66,346 from partnerships.

Sen. Walter Huddleston (D-Ky.) reported 1973 outside income of $38,849 from partnerships in a real estate, a shopping center and a radio station.

Sen. Jacob Javits (R-N.Y.) reported outside income of $74,603, including money from oil and gas leases and land development partnerships.

Sen. Alan Cranston (D-Calif.) showed holdings of $419,624 in various properties, with 1973 income including $4,900 in rents and royalties, $1,290 in partnership income, $11,069 in other business income and a real estate loss of $7,188.

Sen. Mike Gravel (D-Alaska) reported that his three-year gross income for 1971–73 averaged $65,000 and that he and his wife had a $124,500 investment in Mike Gravel Real Estate, Inc.

Leading the fight against any limitations on income is Sen. Edmund S. Muskie (D-Maine), who argues that public disclosure—which has not been required in the past—is all that is needed now. Muskie argued Friday that earned income, and particularly honoraria, were picked out for limitation because they "are the only form of income we have had to report that having reported then we become the visible target."

"My big point," Nelson said last week "is just the general belief on the part of the public, in my judgment, that somehow or other there ought to be some kind of limit on outside earned income."

Muskie retorted, "Are we going to respond to perceptions or are we going to get down to realities?"

Hoping to defeat the income limit, Muskie has proposed applying the 15 per cent ceiling across the board to both earned and unearned income.

Mr. MUSKIE. The column contained several examples of the kind of resources held by Senators who have voluntarily disclosed those resources in the past.

In referring to this column I want to make it clear I imply no wrongdoing on the part of any of the Senators whose names appeared in the column, but I would like my colleagues to test the two questions which have been offered as justification for a limit on earned income. In other words, is there a high risk that time will be taken from Senate duties? Is there a high risk of potential conflicts of interest?

The first Senator—and I will not use his name—had a gross income of over $125,000 in 1972 and 1973 because of capital gains on sales of real estate, and held shares in 13 Washington area real estate ventures.

Yesterday I put in the RECORD the amount of time it took me to go on the lecture circuit and, overall, it was on the order of 2 percent of the days that Senate was in session. Now, since that is forbidden by the committee bill, I think that time frame is a proper test of what is a high risk with respect to something else.

With respect to that kind of holding is there or is there not a high risk that time will be taken away from Senate duties? If the same standard is applied to both, is there or is there not a risk of conflict of interest?

The second Senator reported extensive real estate holdings and in 1973 an income of $112,000, including $66,000 from partnerships. Is there or is there not, looking at it realistically, a risk that time will be devoted to the Senator's own private interests, time that he could otherwise devote to his Senate duties? Is there or is there not a risk that there may be a conflict of interest?

Apply those same questions to all of these; I am not going to repeat the questions for each.

Another Senator reported 1973 outside income of $38,000 from partnerships in real estate, a shopping center and a radio station.

Another Senator reported outside income including money from oil and gas leases and land development partnerships.

Another Senator showed holdings of $491,000 in various properties with 1973 income including $4,900 in rents and royalties, $1,290 in partnership income, $11,000 in other business income, and a real estate loss of $7,000.

Another Senator reported that his 3-year gross income for 1971 to 1973 averaged $65,000, and that he and his wife had a $124,000 investment in a real estate corporation.

I am not criticizing any of these Senators, but the test that is being applied to us is whether or not there is a risk that our activities will take time away from the Senate. I repeat that I put in the RECORD yesterday how much time the lecture circuit has taken me away from the session days of the Senate. I think it is a reasonable conclusion to reach that these activities carry just as high a risk.

Second, for the third day now I have discussed my lecture circuit appearances, and I submit that they carry no higher a risk of conflict of interest than these specific proposals which I have just read from the Pincus article. I do not mean to judge those Senators or find them guilty. But if what we are talking about is a risk—a risk; I repeat, a risk—let us apply the same discipline when the risk is identified.

I shall refer to another column here, an article by Tom Braden, which tells the story of a Congressman named Jim who made money by being cut in on a land deal. This is how it happened. This deal was being put together, and these are the words from the Braden column:

Time was of the essence. If the absentee owner of the land found out that the department store was interested, he wouldn't sell to us. Thus, the meeting. We were just about to sign the papers when somebody—I think it was the major—said, "Don't you think we ought to cut in Jim?"

Nobody said, "Jim who?" Jim was our congressman. Of course we ought to cut in Jim. How in the world could we have forgotten about Jim?

So we got Jim on the phone back in Washington and explained it to him, and he said he'd be glad to go along. I am in a position . . .

Said Mr. Braden—

. . . to report to you that the deal went as had been planned. Jim made a lot of money.

Does that situation or does it not carry a risk of conflicts? Does it or does it not potentially take time away from the Congressman's duties?

Mr. President, I ask unanimous consent the Braden article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A QUESTION OF ETHICS

(By Tom Braden)

There is, as every senator and congressman knows, an easy way for a senator or a congressman to make money. Let me cite you an actual example.

A group of us were gathered at the Elks Club bar one afternoon in the '60s. The group included the town's principal banker, its mayor and its chief of police. We were meeting to discuss the purchase of some land just outside the town, on which—the mayor had very good reason to believe—a large department store wished to build.

The turnover would be pretty rapid, we thought, and if each of us put up a little cash, borrowed the rest from our friend, the banker, and held on to the property for six months, we could sell it to the department store, pay off our debt and have a profit.

Time was of the essence. If the absentee owner of the land found out that the department store was interested, he wouldn't sell to us. Thus, the meeting. We were just about to sign the papers when somebody—I think it was the mayor—said, "Don't you think we ought to cut in Jim?"

Nobody said, "Jim who?" Jim was our congressman. Of course we ought to cut in Jim. How in the world could we have forgotten about Jim?

So we got Jim on the phone back in Washington and explained it to him, and he said he'd be glad to go along. I am in a position to report to you that the deal went as had been planned. Jim made a lot of money.

This is the way in which a great many congressmen and senators make money. They are well known back home; they are one of the boys; the other boys get a certain feeling of prestige by having their senator or congressman in the group; he gets in on the ground floor.

I'm not sure there is anything wrong about this. It depends. But surely it is not "right" as compared to other ways in which senators and congressman can make money. For example, why is it all right for Jim to make money by being cut in on a land deal but not all right for Jim to make money by giving lectures or practicing law?

Because, says the Senate Committee on Official Conduct, giving lectures or practicing law produces earned income while investing does not. It is virtually impossible to write a rule governing investments, but it is very easy to write the rule limiting earned income. So that's what the Senate is about to do.

I don't buy this, and I don't think the American people will buy it. Lecturing or practicing law is often hard work compared to which making a sweetheart investment is rolling off a log.

I think the senators and the congressmen are buying future trouble with their new rules for ethics. There are almost certain to be court tests. Is it legal to set a limit on what a man can earn? And by exempting unearned income from the ethics code—simply because it's impossible to set rules for investments—senators, like Edmund Muskie (D-Me.), who have relied on lecturing in order to earn extra money are placed at an enormous disadvantage. For years, Muskie has refused to make investments lest he place himself in conflict of interest. Now he is to be penalized. Rightly, it seems to me, he calls the penalty unfair.

Why wouldn't it be simpler and better to eliminate all limits on any kind of income for senators and congressmen so long as the senators and congressmen are required to disclose the income?

Full disclosure would leave questions of ethics to the voters—and to opponents at the next election. Returning to the story I related, I'm not sure that Jim was wrong to get in on the ground floor. Neither am I sure that, under full disclosure, he would have to stop and think about it.

The public is concerned about these risks as well as the risks from improper honoraria. The Harris poll goes into those risks extensively.

Mr. President, I ask unanimous consent that the full list of 15 questions that were put by the Harris poll, with the responses by percentage, be printed in the RECORD at this point.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

COMPARISON WITH QUESTIONS ON OUTSIDE UNEARNED INCOME

[In percent]

In addition to the questions on honoraria income, the survey included 7 questions on personal service income (partnerships, firms, legal work, etc.) and 3 questions on stock ownership. With the exception of speeches for "large fees" before groups with a direct legislative interest, the pattern of concern expressed is not much different for "unearned" than for honoraria income. More importantly, the extent to which the public would be satisfied by disclosure is almost identical.

	Bothers me	Does not	Seriously bothered	Not so seriously	Satified by disclosure
Owns a large amount of stock in a major corporation which has Government contracts. (Question 1)	67	7	79	20	64
Owns a large amount of stock in a small corporation which has no business with the Government. (Question 2)	14	79	56	43	70
Owns a small amount of stock in a hometown saving and loan association. (Question 3)	10	83	50	47	64
Retains interest in law firm; does some work on weekends, but the firm has no business with the Government. (Question 6)	33	59	56	44	65
Retains partnership interest in a construction firm; receives share of profits, but spends no time doing work for the firm. (Question 9)	22	69	58	40	64

A number of speeches to groups affected by legislation, for a large fee. (Question 15)	71	21	80	20	57

FULL QUESTIONNAIRE (HAND-WRITTEN #'S ONLY)

25a. Congressmen come to Washington with a wide variety of different backgrounds and previous job experiences. However, all Congressmen are called upon to vote on all types of legislation, including legislation which effects businesses in which they themselves may have been previously, or are presently, involved. Here is a card (hand respondent card "G") which lists different situations which apply to various Congressmen. First of all, for each these situations, I'd like to you tell me whether that situation bothers you, or not. (Read list, recording below—for each "bothers me" ask 26b and 25c before going to next item).

25b. (If "bothers me" in 25a) And would you say that you are seriously bothered, or not so seriously bothered, by that situation? (Record below and ask 25c.)

25c. (If "bothers me" in 25a) Would your concerns about that situation be substantially satisfied, or not, if the voters in his District were made fully aware of his situation and could vote for or against him at the next election? (Record below and continue with next item in 25a.)

	25a Now			25b. Intensity			25c. Would disclosure satisfy you

Mr. MUSKIE. Mr. President, if public concern revealed by the Harris poll justifies a limit on outside earned income, then why is not a similar discipline justified with respect to others? This is the same point I have been raising here for the last few minutes.

Mr. President, as far as I am concerned, and I am more convinced of it now than when this debate began, there is only one reason, only one, for the committee's proposed 15-percent limit on earned income: A scapegoat had to be found. The public had to be convinced that the committee——

The PRESIDING OFFICER. The Senator's additional 10 minutes have expired.

Mr. MUSKIE. Mr. President, another 5 minutes.

The PRESIDING OFFICER. The Senator is recognized for an additional 5 minutes.

Mr. MUSKIE. A scapegoat had to be found, and the scapegoat has been well chosen. It is suggested by the responses of the six Senators I called this morning which I described earlier. They are panicking. They do not dare to do what is right.

But let me say to Senators if opinion back home is what bothers them, let me read an editorial that appeared back home in my State this morning, and this is not a knee-jerk Muskie publication, I assure Senators. This is from the Times Record of Brunswick, Maine.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ETHICS "REFORM"

Politicians everywhere are trying desperately to, as the phrase goes, restore public confidence in their honesty and integrity.

In legislatures across the land, in the Congress, and within many governing bodies, there is emerging a wave of ethics codes, disclosure rules, pledges to refrain from this or that, and repeated vows to stay clean.

This spurt of self-imposed ethical discipline isn't confined to government. Any number of private organizations and professions have recently been busy drafting up their own codes of ethics or rules setting standards of performance.

The medical profession, for example, has set up a system of peer review that is supposed to help all stay within the bounds of propriety and legality.

Accountants have been trying to come up with some definition of what they're supposed to be doing so that a balance sheet or annual report really means something and is not too creative with the phrase "generally accepted accounting principles."

Many of the nation's largest corporations have already or are now drawing up regulations and codes to prevent their personnel from engaging in bribery, kickbacks, price fixing and illegal political contributions.

"Reform" is the word generally used to describe all of these activities. The thought is that if there is enough reform, if enough effort is put into getting straightened out and defining what is and what is not acceptable conduct, all will be well—providing all follow the new reform rules.

But will it work out? Will the Congress, for example, really enter a new era of honesty and integrity once the new code of ethics is on the books?

To be more specific, will the Congress of the United States rise in public esteem if the amount of money a congressman can earn outside his regular salary is $8,625?

That's the proposal now before the United States Senate. The House has already imposed such a limitation.

Sen. Edmund S. Muskie of Maine, for one, is against any such limitation, especially since it does not apply to unearned income. The rich senator would be able to gather whatever he could from his stock portfolio, personal and family investments and other interests, but a person like Senator Muskie, who is not rich, can only earn $8,625 in a year.

He says that's unfair, and he's right. It is unfair and most discriminatory.

It can be argued, and has been, that a congressman ought to be able to live on an annual salary of $57,500 a year plus the upper limit of $8,625 proposed for outside income.

Of course, that's an ample income by almost anyone's standards. But there are times when a United States Senator might need more than that, such as in 1972 when Senator Muskie needed money to prepare himself to run for the presidency.

Like so many others in the Congress, Senator Muskie picked up some extra money by hitting the lecture circuit. In one year he earned $30,000 by speaking to various groups at fees as high as $1,000.

Nobody has ever accused the senator of not paying attention to his Senate duties, either. He's one of the hardest working people on Capitol Hill and has an excellent attendance record on the floor and in committee.

It's not that he'll henceforth be spending more time lecturing. With his duties as head of the congressional budget committee, he doesn't have all that much time.

The point, however, is that he should be able to devote his own time to such activities if he should want to or ever need to. If his outside earnings come to $10,000 a year, $4,000 or even $300, what does it matter so long as he's performing his senatorial duties to the voters' satisfaction?

If the Senate should go ahead and approve the ethics code as it stands, why should a man like Senator Muskie's outside earnings be limited to $8,625 because he works, while somebody who does not have to work can earn as much as he likes?

It makes no sense. Either the Senate should drop the outside income limit, or it should apply it to both earned and unearned income.

The key issue in this matter is disclosure. The source of a congressman's income, almost down to the last dollar, should be known. Limiting the income of a congressman serves little or no purpose.

Indeed, it might even do harm. Somebody who really needs money beyond the proposed $8,625 limit, might be driven to get it in secret from unsavory or questionable sources, so what kind of "reform" is that?

Mr. MUSKIE. I would like to read this part of it:

Sen. Edmund S. Muskie of Maine, for one, is against any such limitation, especially since it does not apply to unearned income. The rich senator would be able to gather whatever he could from his stock portfolio, personal and family investments and other interests, but a person like Senator Muskie, who is not rich, can only earn $8,625 in a year.

He says that's unfair, and he's right. It is unfair and most discriminatory.

It can be argued, and has been, that a congressman ought to be able to live on an annual salary of $57,500 a year plus the upper limit of $8,625 proposed for outside income.

Of course, that's an ample income by almost anyone's standards. But there are times

when a United States Senator might need more than that, such as in 1972 when Senator Muskie needed money to prepare himself to run for the presidency.

Like so many others in t' e Congress, Senator Muskie picked up some extra money by hitting the lecture circuit. In one year he earned $30,000 by speaking to various groups at fees as high as $1,000.

Nobody has ever accused the senator . . .

At least not before now, I might interpolate—

of not paying attention to his Senate duties, either. He's one of the hardest working people on Capitol Hill and has an excellent attendance record on the floor and in committee.

It's not that he'll henceforth be spending more time lecturing. With his duties as head of the congressional budget committee, he doesn't have all that much time.

The point, however, is that he should be able to devote his own time to such activities if he should want to or ever need to. If his outside earnings come to $10,000 a year, $4,000 or even $300, what does it matter so long as he's performing his senatorial duties to the voters' satisfaction?

If the Senate should go ahead and approve the ethics code as it stands, why should a man like Senator Muskie's outside earnings be limited to $8,625 because he works, while somebody who does not have to work can earn as much as he likes?

It makes no sense. Either the Senate should drop the outside income limit, or it should apply it to both earned and unearned income.

The key issue in this matter is disclosure. The source of a congressman's income, almost down to the last dollar, should be known. Limiting the income of a congressman serves little or no purpose.

Indeed, it might even do harm. Somebody who really needs money beyond the proposed $8,625 limit, might be driven to get it in secret from unsavory or questionable sources, so what kind of "reform" is that?

I ask unanimous consent to have printed in the RECORD another editorial written by Charles Bartlett and published in last night's Washington Star.

There being no obligation, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Star, Mar. 21, 1977]

CONGRESSIONAL ETHICS MAY HAVE A HOLLOW CORE

(By Charles Bartlett)

If envy is a key ingredient of the egalitarian spirit, Congress is brewing a fresh batch of it in its urgent moves to win back popular esteem.

The new assertions of more rigid ethics in the House and Senate will take members of Congress out of the ranks of the moonlighters. Their sense of vulnerability at having their pay raised sharply has stirred them to react to admonitions that they should now regard themselves as fulltime hirelings of the Federal Government.

Accordingly, the House has adopted and the Senate is about to adopt a restraint that will allow no member to earn more than $8,625 beyond his salary in any given year. No matter how well his book is selling or heavy the demand for his lectures, he will confront what Speaker O'Neill has called "a sacrifice we must all make."

The injustice of this sacrifice is that it will not affect the outside incomes of members who have made money, who inherited it, who own farms, business, rental properties, or who have working wives. They will enjoy whatever added income their assets produce while less endowed colleagues chafe at the restraints on their earnings. The latter will also be tempted to chafe at the wealth which has eluded them and their egalitarian instincts may be inflamed.

The members are too sensitive about being lofted by their pay hike into the top 1 per cent of income earners. They should take heart from the late Sen. Robert Kerr, a shrewed coot who relished being rich. He argued that he had "a community of interest" with Oklahomans through his involvement in oil, farming and banks. He said that without these links, he wouldn't "be worth a nickel to them."

George Bernard Shaw similarly concluded that power does not corrupt men. Actually, he said, power is corrupted by the fools who acquire it. Few who get to Congress are fools and those who exposed the institution to ridicule in recent years became fools because they allowed themselves to stay immersed and isolated for too long in its specialized environment.

Pending proposals to impose purity on those who serve have the huge defect of enlarging the apartness of the average member, pulling him further away from the warp and woof of society.

The disclosure laws, spending limits, and heavy burdens of the job are transforming him into a frocked citizen, a novice in an order with its own code of conduct.

Sen. Floyd Haskell, D.-Colo., testified that no member should spend "any substantial amount of time" managing his financial affairs. By this yardstick, a member should also limit the time he spends tending his garden, playing tennis, or rearing his children. The idea of the code is to commit him to being a full-time politician, an exertion certain to reduce him in a few short years into a caricature.

This is not what the founding fathers had in mind. Legislators were to emerge from the people long enough to do their duties and then return to what they were. They were to keep their identities as striving citizens instead of flaunting their togas. The aim of reform, as Sen. Howard Baker, R. Tenn., has been saying, should be to help the overworked members recapture their civilian status.

The new code is an overreaction. Congress is not perceived as corrupt by reasonable people and cosmetic cures will not reach the few members who may have strayed. If the members could learn to take serious trips instead of junkets, retire when their abilities diminish, get organized to face up quickly to the problems that arise, and behave more like citizens than politicians, Congress's popularity will soon revive.

"The first mistake in public business is going into it," Benjamin Franklin said. The old codger will be proven right once again if the members keep accepting indignities as the price of restoring Congress's reputation.

The PRESIDING OFFICER (Mr. ALLEN). The Senator's 5 minutes have expired.

Mr. MUSKIE. Another 5 minutes.

The PRESIDING OFFICER. The Senator is recognized for an additional 5 minutes.

Mr. MUSKIE. I would like to read this:

The injustice of this sacrifice is that it will not affect the outside incomes of members who have made money, who inherited it, who own farms, business, rental properties, or who have working wives. They will enjoy whatever added income their assets produce while less endowed colleagues chafe at the restraints on their earnings. The latter will also be tempted to chafe at the wealth which has eluded them and their egalitarian instincts may be inflamed.

The members are too sensitive about being lofted by their pay hike into the top 1 per cent of income earners.

Another paragraph in the same editorial:

The disclosure laws, spending limits, and heavy burdens of the job are transforming him—

The Member of Congress—

into a frocked citizen, a novice in an order with its own code of conduct.

Sen. Floyd Haskell, D.-Colo., testified that no member should spend "any substantial amount of time" managing his financial affairs. By this yardstick, a member should also limit the time he spends tending his garden, playing tennis, or rearing his children. The idea of the code is to commit him to being a full-time politician, an exertion certain to reduce him in a few short years into a caricature.

Mr. President, the pending amendment is a serious proposal. If it is the judgment of the Senate that this is the way to make us honest, if it really is, I am willing to accept it. But not as one of a discriminated-against few. If we lose this vote it will not be because our case is without merit, but because Senators with other interests to look after disagree that it is a reasonable proposal for them.

The Senate, of course, since it operates by a majority vote, has the power to make that judgment. But I have the right to protest it with all the vigor at my command. This is what I have tried to do.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. NELSON. Mr. President, we have been discussing this question since Friday. I have heard nothing new in the past 2 days which was not said before. I would like to repeat one point I made before. We have listened to the Senator from Maine lament the committee decision to recommend an income limit of 15 percent, asserting time after time that it cuts his income and his opportunity to make outside income.

One of the unfortunate things which has happened here is that all kinds of people who either have lots of money or lots of honoraria also vote against the pay raises, as Senator MUSKIE did, though he knew it was justified; though he knew there had previously been only a 5-percent increase in an 8-year period while the median income of this country went up 80 percent. During that time the income of executives in the country went up 59 percent; the cost of living went up over 60 percent; and we voted over a 65-percent increase for all other Federal employees. Everybody knew that for that same 8-year period a 5-percent increase for Federal judges, the top scientists at NIH, top executive branch officers and the Congress, was inadequate.

There is not a single Senator I have yet met off the floor who did not concede that a salary increase for those three groups was long overdue. But the Senator from Maine voted against the increase and then comes here to the Chamber shedding hot tears, flooding the Chamber with his lament about cutting into his opportunity to travel the country and speak as he pleases.

Well, I do not shed tears for one who takes the posture that he is going to op-

pose the salary increase and then say, "We do not have enough income; therefore, you ought to let us earn more outside income." It falls on my deaf ear.

Mr. BAYH. Will the Senator yield for a short question?

Mr. NELSON. Does the Senator from Indiana have a short question?

Mr. BAYH. Yes.

Mr. NELSON. All right.

Mr. BAYH. The question will be short and I trust the answer will be short. I just wondered whether the Senator from Wisconsin has better hearing in his other ear in directing the same argument to some of us who joined him in supporting the pay raise.

Mr. NELSON. I heard that in my other ear.

Mr. BAYH. Fine. That is all I wanted to hear.

Mr. NELSON. But with one of my ears I could not hear the statements made.

I just wanted this to show clearly in the RECORD.

Mr. President, there is a difficult question respecting blind trusts.

Mr. MUSKIE. Will the Senator yield for a question? There are no blind trusts in my amendment, if that is the argument the Senator is about to make.

Mr. NELSON. No; I know there are no blind trusts in the amendment, but there have been discussions of blind trusts, as I understand it, during the Senator's comments.

Mr. MUSKIE. Not with respect to my amendment. I have not mentioned blind trusts today, I do not believe.

Mr. NELSON. I thought the Sentaor had. Relevant or not, I would just like to mention the subject for those Senators who have expressed concern. The resolution did move to abolish blind trusts. In looking at the issue several times since, I am of the opinion that the decision whether to eliminate blind trusts and the decision as to what would constitute an acceptable standard for a blind trust should probably be referred to the Rules Committee for their consideration.

If we abolish blind trusts, those who do have them would then be requested or required to dissolve the trust. Then if we pass a subsequent statute deciding that a blind trust was in fact a proper instrumentality for insulating the Member from knowing what transactions were occurring by investments and sales by his trustee, we would have done the injustice of forcing the abolition of the blind trust only to later permit its re-creation.

I simply want to state this for the record at this time. I would hope at some later date, after we dispose of the two pending amendments, we would be able to address ourselves to that question.

I wonder if the Senator from Maine would yield on my time for a question.

Mr. MUSKIE. Of course.

Mr. NELSON. Let me say to the Senator first that it has not been characteristic in any way of my past to spend time defending rich people.

Mr. MUSKIE. I know; I am astonished.

Mr. NELSON. I do not intend to begin now. As the Senator knows, all down through the history of this country and every other country, rich people have defended themselves quite well.

Mr. MUSKIE. May I say this is one rich person the Senator has not defended in the last 3 days.

Mr. NELSON. That is correct. I am not starting to defend them now, although I think the Senator will agree with me, if he has spent any time talking to deep sea divers and visiting with them, the Senator from Maine knows that if they rise to the surface too quickly, they get the bends.

Mr. MUSKIE. Maybe it will happen to me in the Senate.

Mr. NELSON. Some of them die from the bends.

This limitation that the Senator is going to put, if his amendment is adopted, on disposable income that can be spent by the wealthy people here, would introduce them into a strange and harsh environment that they have not experienced before, and it may give them the bends and they may not be able to adjust to it.

Mr. MUSKIE. There would be no transition period.

Mr. NELSON. That is the problem. I think that the shock might do grave damage and be an injustice to do to these people.

Mr. MUSKIE. All I am trying to do is share the shock.

Mr. NELSON. The Senator grew up that way, so he is used to living in a cruel, harsh environment and earning his own money, as am I. So that does not shock me. I have been living in this condition all my life.

The question I had was, under the proposed limitation, do Members have to sell their houses if, in fact, it would cost more than the maximum allowed to maintain them?

Mr. MUSKIE. They would have to struggle with the same dilemma that I am struggling with. I may have to sell one of my houses in order to meet the limitation. If the Senator will give me the answer to my question, I shall turn it around and give the Senator an answer, as far as that is concerned.

There are three provisions in my amendment that give a little flexibility to the Senator, under my amendment, that he does not give to me.

One, income in excess of the 15 percent can be used to pay income taxes. We do not require that he pay his income taxes out of the income he keeps, and there is no income tax relief in the Senator's amendment for me that I know about.

Two, under the court decision, he can use his income in excess of the limited income for campaign purposes. The courts seem to have decided that people, under the Constitution, can spend as much as they want of their own resources for campaigns, so we do not try to challenge that.

Third, if there is an unforeseen emergency in the Senator's life, my amendment provides that he can have access to income above the minimum. There is no such relief provided in the committee's proposal as it applies to me.

There are those three areas of flexibility in my amendment for those with outside, unearned income that I think are realistic and reasonable—not that I think the 15 percent is reasonable for anybody. That is the test.

Sure, there are going to be inequities of the kind the Senator's question poses. But I repeat, I have the same problem: Whether, to stay here in the Senate, I should eat into the equity, the real estate that I own—two homes—or sell them.

Mr. NELSON. I wonder. Is it defined as an unforeseen emergency?

Mr. MUSKIE. Let me give the exact language.

Mr. NELSON. "Extraordinary personal circumstances."

Mr. MUSKIE. That is right.

Mr. NELSON. "Necessary to meet expenses forced upon him by extraordinary personal circumstances."

Mr. MATHIAS. Mr. President, will the Senator let me respond to his question just briefly on that?

Mr. NELSON. Yes.

Mr. MATHIAS. I recall, as old hands in Washington, I think, will recall, a case which falls precisely in that slot. That was the case of one of our colleagues, a man whose wife was dying of cancer, a man who had spent a large part of his life in public service and who had no large estate to pay the extraordinary bills which a terminal case of cancer entails; a man, Mr. President, who had been Vice President of the United States and who was observed, night after night, standing out here on the corner of Constitution Avenue, trying to get a taxicab to take him to National Airport so that he could go and make a lecture somewhere around the country to pay the hospital bills to keep his wife in a reasonable degree of comfort until she died. That man's name was Alben Barkley.

That, I think, is the perfect illustration of the case which the Senator from Maine has brought before us.

Mr. NELSON. Now to get back to the question of the extraordinary personal circumstances and the homes; I might say for the record at this point that the difference between the permissible income to be earned from honoraria and salary under this pending resolution with the 15-percent limit, and under the previous salary with the $25,000 limit, is $3,000. So the addition of the 25——

Mr. MUSKIE. What is the Senator's point?

Mr. NELSON. The Senator was talking about this man who had to sell his house, and he has referred for 3 days to a very dramatic cut in his income. Actually, in response to that, $11,600 would make the Senator whole if that were in the resolution, not $25,000.

Mr. MUSKIE. Mr. President, a couple of other differences, too. I really feel demeaned by this exposure of my own personal finances, and my case does not rest on my personal finances. My case rests on the equities. But I have no objection to getting into this if that is the only way the Senator can be persuaded to see the equities. I have no objection to being a showpiece case.

Let me make the point that the Senator's associate on this amendment, the Senator from Iowa (Mr. CLARK), voted

against the pay raise. I have not heard the Senator denounce him with respect to that. He presumably had the same reasons I did.

Mr. NELSON. Let me say to that——

Mr. MUSKIE. If the Senator will wait a minute, the Senator has raised that point and I would like now to address it.

Mr. NELSON. I did not denounce my good friend, the Senator from Maine. I was not prepared to shed any tears in behalf of the position of one who votes against the salary increase and comes to the floor to complain about the outside earned income. That is all.

Mr. MUSKIE. If tears are the test, then I am afraid I cannot summon up any for the people whose interest the Senator is protecting, either.

With respect to the pay raise, there are two additional items that one must consider in comparing it with lecture fee income. No. 1, the contribution to retirement is enormously heavier. It is not that I do not like to look forward to a healthy retirement, but if the choice is to deprive myself now so that I have difficulty getting to the retirement point, it is no real choice, as far as I am concerned. The fact is that the retirement contribution from $10,000 of additional pay and from $10,000 of lecture fees, which is related to social security, is far different, substantially different. More than half of the pay increase that we now have we shall never see. It goes in the form of taxes to the Federal Government, taxes to State government, and increased retirement. It does not mean—the difference between the pay before plus $25,000 and what we now have if the committee proposal passes is much more substantial than the Senator suggests. I suggest that he take it up with his bookkeeper or accountant.

Mr. NELSON. I do not have a bookkeeper or accountant.

I was on the question of what is an extraordinary personal circumstance. I wanted to get some idea from the Senator from Maine of what extraordinary personal circumstances would encompass.

For example, if Members of the Senate owned, as some do, three or four homes, a place on the Riviera, or in the Caribbean, and so forth, and the cost of the whole operation was more than their salary plus 15 percent would they be required to divest themselves of some of those properties? There are houses like that I am aware of, and so is the Senator. What would happen; is that an extraordinary personal circumstance?

Mr. MUSKIE. I have no more difficulty with that problem than the Senator has with mine. None whatsoever.

The Senator is putting a cap on my income. He is putting a cap on my income and he has not given a damn from what I can see as to what the consequences on my personal financial life or that of my family may be. He has not asked me, for example, whether the choice will be to send my son to a first-rate law school or to a third-rate, whether the choice is whether or not my wife can buy a new wardrobe this year or have to wait for next year or the year after, or whether or not I can afford to buy a new car or whether I may have to sell both of those I have.

The Senator has not asked me questions like that, but he is concerned about those of his friends who have places on the Riviera, people who have luxury homes, three or four of them scattered around the globe. The Senator is worried about those.

The unfortunate personal circumstance of which my amendment speaks, I think, would be a very easy one for the Ethics Committee to draw a line on, and I doubt very much that they would draw it in a way to permit the support of luxury homes around the world.

But that, unfortunately, is the price. The Senator can sell them, I suspect, mostly for a profit. He can put the profit in a trust. Is that unreasonable?

It is as reasonable as anything the Senator has proposed for me, or those in like circumstances.

I cannot even put the excess lecture fees into trusts to wait until I get back. They are lost forever. By the time I retire, there will be no demand for my services on the lecture circuit, probably. But that is of no matter. That is easy.

We all have got to make sacrifices, of course, in the interests of reassuring the public that the Senate is an honest place. So we all have got to be prepared to make them, and some of us can afford bigger sacrifices than others.

Mr. NELSON. Let me say to the Senator from Maine, I was thinking about his interests when he stood on the floor and voted against the salary increase, which brings many hundreds and hundreds——

Mr. MUSKIE. Senator, let me answer that.

Mr. NELSON. May I say to the Senator, I am yielding——

Mr. MUSKIE. I know, I am answering the Senator's questions. The ones he chooses. He wants me to answer some and not others.

Mr. NELSON. I want the Senator to answer the first. I understand they would have to sell the luxury houses.

Mr. MUSKIE. That is a decision for them to make. The Senator has not made my decision for me, but he may force it. I have not asked the Senator, should I sell my house? That is a decision for me to make and it is none of his business, frankly.

I am just saying he is creating the probability I may have to do it. But I am going to make the decision, not the Senator.

With respect to the poor millionaire whose fortunes concern the Senator so much, I am sure he is fully capable of making the decision. I doubt very much that he goes to the poorhouse and I doubt he loses money on the property he sells.

But if he wants to be a Member of this institution, he has got to be willing to demonstrate his honesty. The committee says there is only one way to demonstrate it and that is to put a cap on our income.

Mr. NELSON. The committee has not said any such thing and the Senator keeps repeating it.

But there is no use in repeating everything that has been said so many times.

I am not concerned about the wealthy. I do not know of anybody, any personal friend, with a house in the Caribbean.

I know people around here who do. I have never been there to stay in anybody's house.

Mr. MUSKIE. Neither have I.

Mr. NELSON. I just wanted to know whether or not the amendment meant that the wealthy ones would have to sell their homes.

There are wealthy ones with $300,000 homes here and a $300,000 one there. Six hundred thousand dollars at 8 percent is $48,000 in interest a year. That is just about the whole salary.

I just want to know what is going to happen to those houses, that is all.

Mr. MUSKIE. I think the Senator can evaluate the probabilities as well as I. I doubt——

Mr. NELSON. Well——

Mr. MUSKIE. Let me finish.

I doubt very much, if I were on the Ethics Committee, if the Senator wants me to pursue it that far——

Mr. NELSON. Surely.

Mr. MUSKIE. I doubt very much that I would regard the maintenance of those luxury homes as the kind of unforeseen personal circumstance that my amendment permits.

If I were to follow the committee's tactics, I would be very specific in these things. I would list the specific circumstances which might be anticipated. I might even say how much they could spend for a cancer operation, or how much they could spend for the threatened foreclosure of a home, how much they could spend to deal with any other long ilst of unforeseen contingencies, because if I were of the same mind as the committee, that is the only way to make a Senator honest, to keep his nose right to the line and make sure he does not spend or receive anything above a certain specific and very limited amount.

In the context of both kinds of restrictions, I say to the Senator that if my amendment is adopted, the flexibility represented by the phrase "unforeseen personal circumstance" would look like manna from Heaven for the millionaire as compared to people in my circumstances who are offered no such flexibility in the committee resolution.

Mr. NELSON. Of course, the Senator knows that there is no difference between the position of the Senator from Maine and the committee position. It is just a number of dollars.

The same argument could be made on this floor, although nobody is about to do it, saying, "Look, the $25,000 limitation that would result from the Muskie amendment tells me whether I have to sell my house, or tells me how much I ought to be able to set aside," and every single argument without exception made by the Senator from Maine could be just as logically made by somebody else out here on the floor who thinks he ought to earn $100,000 a year.

So the quarrel here is not whether we ought to draw the line some place. The Senator from Maine is drawing it himself. He just prefers his line to the place where the committee draws the line.

Mr. MUSKIE. The Senator apparently finds the pending amendment uncom-

fortable, so he now wants to pose a hypothetical proposal that the Senator from Maine is not at the moment proposing to the Senate.

But I say in response, can the Senator tell me whether or not there is any Senator who gets income, earned or unearned, in excess of $100,000? Can the Senator tell me?

Mr. NELSON. I thought the Senator just read some.

Let me tell the Senator this: Before the $25,000 limit which the Senator now wants to establish, there were Members who made $50,000 and Members who made more than $50,000. Every argument that the Senator is making with great moral indignation could be made just as logically against his limitation, with all the same examples—every argument identically—and it would be just as logical. So the Senator should keep his rhetoric in perspective.

Mr. MUSKIE. I suggest that test to the Senator from Wisconsin. The pending amendment is a limit on my income, on his income, on the income of Senators whose case histories I have put into the record. There is no proposal in my amendment to raise it to $25,000 or $100,000 or $150,000.

Apparently, the Senator finds it more comfortable to argue against my second amendment than my first one. He devotes very little time to the first one because he knows that in any comparison of the equities, his committee is wrong.

Mr. NELSON. The Senator from Maine and all other Senators, so far as I know, who have spent any time discussing it have talked about both issues; but most of the time has been spent on the second amendment, on the income limitation, which the Senator wants to lift to $25,000. The reason for that, as the Senator knows—and as Senator EAGLETON said last night—is that nobody really believes that, down deep in his heart, the Senator from Maine is serious about this amendment.

So we have been talking about the one——

Mr. MUSKIE. Let me straighten you out on that.

Mr. NELSON. Let me finish.

Mr. MUSKIE. Let me straighten you out on that, once and for all.

Mr. NELSON. Mr. President, I will not yield to the Senator. Will the Chair——

Mr. MUSKIE. You can yield. You can put your questions to other Senators.

The PRESIDING OFFICER. The Senator from Wisconsin is recognized.

Mr. NELSON. The Senator from Maine understands the rules.

Mr. MUSKIE. I do.

Mr. NELSON. I have allowed the Senator from Maine, time after time, to finish things he was saying. Just let me complete the sentence, and the Senator can have all the time he wants.

The Senator from Maine has had more time on this issue than anybody else. I do not begrudge him that. I know the case is tough to defend and takes more repetition and more time to make it sound plausible than the argument against it. I am willing to yield the time to him.

I just point out that everybody has been talking about both amendments. No one I have run into at least, takes the first amendment seriously. I cannot say that the Senator from Maine does not take it seriously. Obviously, that is his judgment. Perhaps he does.

Mr. MUSKIE. Mr. President, I yield myself 5 minutes.

I say to the Senator from Wisconsin with all the conviction of which I am capable, that this is a serious matter, not that I think it is wise policy. If I thought it was wise policy, I would support the committee proposal. But the only way I can demonstrate the lack of wisdom in this policy is to ask and to urge that all Senators be subject to the same provisions.

So I get all this talk about it being a gimmick, that it is a tactical policy. It is as serious as what you have done to us. But you do not want to do it to anybody else. You dismiss it as a gimmick so you do not have to, and you know that you have the votes. That makes it very easy for anyone who has the votes to dismiss the proposition which is being advanced against it and to ridicule it as something unimportant and not worth taking into consideration.

I say this to the Senator about what he is about to do to this Senator and future Senators: First, you are not dealing with all of the public's perceptions as to where there are conflicts of interest in this Congress or their source. You simply are not. You are throwing us to the wolves. For the time being, it may satisfy those who think we need a tough code of ethics; but you are not dealing, in any effective way, with all the public perceptions as to where conflicts lie.

Second, what you do to me is not important. I am not going to be around all that much longer; but I think of these young Senators we are trying to bring in here. Believe me, if you can anticipate all their potential needs for additional income and do it so precisely that you can play God and take away from them a source of income that has been honorable for 200 years, during the history of this Republic, and do it without any misgivings whatsoever, as to what you are doing to future young Senators who, as their families grow up, begin to feel the pinch of growing expenses, with no place to turn for relief—at least, my amendment gives some relief to even the very rich man who faces an unforeseen personal circumstance. What you are going to do is just to add that much more momentum to the movement which is making this, in the words of the Washington Post headline the other morning, a rich man's club.

Now, as to the question of the pay raise: I gather from what the Senator is saying that he has put this on as punishment to me. Because I voted against the pay raise, he thinks it is justifiable to impose this limit on earned income. I gather so. But let me make this point.

The Senator justifies everything that is in this code because he says—what? The public demands it. I voted against the pay raise because the public said it was wrong. You can be holier than thou, if you wish, about your response to the public mood. I simply was being a newly elected Senator, responding to the issues I encountered in my campaign and the promises I made in that campaign. So I am charged with cynically having voted to deprive the Senator from Wisconsin of income and now voting to protect mine.

There is another difference, I say to the Senator: A pay raise is not something you ever had or were entitled to or could earn without the approval of Congress and, through Congress, of the people. Outside earned income is something that, until now, we have been free to go out and earn. I still think I have a right to go out and earn, with the sweat of my own effort, my own time, and my own energy, income that obviously, on its face, is clean. But, no, we are going to abandon the work ethic in this. We are going to force Senators to become—what? Paid professional Senators. We are going to say, "From now on, no more citizen legislators; no more citizen Senators."

They will reduce that $8,500 to zero. I say to those of you on unearned income, they will zero in on you, too. They will zero in on you because this does not deal effectively with the abuses of unearned income; and, having taken care of us, they will zero in on you.

No more citizen Senators, not at all. Senators are going to be hirelings, employees, at a full-time salary. Before long, we are going to set the hours that we must work. We are going to be like any employee downtown, signing a contract, on a full-time salary. Maybe that is what we need. But that involves very serious philosophical questions that I do not think have been addressed in this debate of in the committee report.

That is the way we are moving, and we are moving toward a more expensive Congress, because if you are really going to provide for the legitimate expenses related to a Senator's activities and his responsibilities, his need for two homes, his need for travel, his need to cover all the unreimbursed expenses as a Senator, you are going to have to greatly increase either allowances or that salary at some point. I will not be around to vote one way or the other one it, but you are going to have to. You just cannot force these young Senators to absorb the costs, the expenses and the burdens you are asking them to assume. It is not realistic; it is not going to work. But if that is the way you want to go, I guess you are on your way to getting it.

The PRESIDING OFFICER (Mr. ANDERSON). The Senator's time has expired.

Mr. MUSKIE. I hope you are satisfied with your results.

The PRESIDING OFFICER. Who yields time?

Mr. PACKWOOD. I am controlling the time on this side, and I am going to yield myself——

The PRESIDING OFFICER. As I understand, the time is between the Senator from Wisconsin and the Senator from Maine.

Mr. PACKWOOD. Mr. President, will the Senator from Maine yield me 10 minutes?

Mr. MUSKIE. Of course.

The PRESIDING OFFICER. The Senator from Oregon.

Mr. PACKWOOD. Mr. President, I want to put this once more in perspective, although I cannot do it as eloquently as the Senator from Maine, while we are in this box, and I do not know where we are headed, because the Senator from Maine was right.

We are not done here today if this limitation is voted. We are not done until we have completely reduced the Senate to being political eunuchs, totally paid, probably unionized [laughter], totally paid by the public purse, our campaigns totally funded out of the public purse.

We will log every letter we receive, from whom we received it, and the answer, and every telephone call. Only then will those who want total disclosure be satisfied and then, to their horror, they will discover they have not achieved what they wanted to achieve.

I do not know where we are going to turn when we have passed this limitation and the public perception that has been cited so often of Congress does not go up. We are still 19th, just ahead of used car salesmen. I cannot remember what we were below, but it was almost everybody else.

What, again, are the arguments that have been raised in the last 3 days? As a full-time Senator you owe your obligation to the Senate 7 days a week, 24 hours a day, all the time, and you should not spend your time any place else. Especially you should not spend your time writing articles for money and giving speeches for money.

You would think at least in consistency they would say this is a full-time job and you should not spend your time any place else. But oh, no, no, they do not say that. It is all right to run your farm; it is all right to spend every Saturday and Sunday on your farm, all the time you want, produce as much income as you can from it through your personal labors. You are not subject to this limitation.

It is all right to manage, as one Congressman does, five townhouses in this city, which he freely indicated to me took 3 to 5 days a month to manage them. That is perfectly permissible. The fact that that takes infinitely more time than writing or speaking is irrelevant.

It is all right to have other outside earned income. We have made an exception for what we call creative or artistic work and, very specifically, when the issue was raised it was freely acknowledged that Senators GOLDWATER and BAKER, both of whom are excellent and expert photographers, can spend their Saturdays and Sundays taking pictures, developing them, and selling them for whatever price they will bring. That is all right.

You can even write books for money, books—thick things; but you cannot write little articles because that is going to corrupt you.

I was intrigued with a book that Senator MCGOVERN had published after the 1972 campaign which was a collection of his speeches, and I thought to myself it is immoral and unethical apparently to write one speech for money and give it to some publisher, but if you write 10 and give it all to a publisher that is all right.

Or most importantly, what is the one thing, the one single thing, that causes more Senators to miss votes than any other single thing? It is running for President. That is not barred. You can spend the better part of 1 year out of 4, with 8 to 10 people in this Chamber missing vote after vote, and that is all right. Just do not write any articles or make any speeches for money.

Hogwash. Time was never a serious argument, not by those who proposed this, not by anybody else who took it seriously or they really would have put constraint on what you can do with your time.

The second argument is public perception. Over and over and over this Harris poll has been cited about the public perception and the public being bothered by people making speeches for money. But when the question was asked:

Would your concerns about this situation be substantially satisfied if voters in his district were made fully aware of his situation and could vote for or against him at the next election?

Fifty-seven percent of the voters said yes, that would satisfy them.

If a Senator wants to go out and make speeches and run the political risk of making them, run the political risk of speaking to groups that have conflicts of interest, and that is disclosed as it is now anyway, and then go back and try to explain that to the voters at the next election, that satisfies the voters. So let us get over this hogwash about public perception and the public somehow trying to say that disclosure is not enough. They are satisfied. Those who apparently are not satisfied are the proponents of this resolution in this Chamber.

Apparently, if it is conflict of interest they are after, they could easily change the statute, this rule, this resolution, to say simply that we cannot speak at all to any group that presents a conflict of interest. In this very resolution in the gift section we have been prohibited from taking gifts from those who are registered under the Registration of Lobbyists Act or from anybody who has a political action fund.

Those are the groups we are after; and if you really wanted to stop the appearance of a conflict of interest, then do not allow the Members of the Senate to make $8,700 speaking to that group, because that is being half pregnant. Cut it off entirely, because nobody objects to speaking to the University of Iowa, that is not a conflict of interest in most people's minds; or the National Prayer Breakfast, for which a Senator was paid $1,000. I ask you where is the conflict in speaking to the National Prayer Breakfast? Who is the conflict with? Nobody.

Now, the real goal—and this is the disheartening thing; the Senator from Maine was so right—of those who are pushing this is not $8,700; it is zero, and it is not just honoraria, it is all earned income.

I cannot state it any better than Common Cause did. I said yesterday, and I say again today, this is basically a Common Cause code, and without Common Cause, without it, we would not have this particular provision. Here is the exchange in the committee hearings:

Senator PACKWOOD. I want to go back now to the outside income issue, the honoraria and whatnot, because I am a little confused about your position. You said you accept the Obey 15 percent limit on outside earned income, but you totally eliminate honoraria; is that right?

The reply by David Cohen, president of Common Cause:

If we were as powerful as some people might think, what people think we are, our will would be to ban honoraria.

Senator PACKWOOD. Would you also ban all outside earned income?

Mr. COHEN. We would ban all outside income as well.

All; the Senator from Maine is right. As soon as they get the earned income, they are going to go after the unearned income until we have leveled this place to a common denominator.

First, we will seek to limit and equalize income, and then we will seek to limit and equalize wealth, and none of us will have an advantage over anybody else. Eventually one day we will all come in here with a salary uniformly set for everybody. We will have barred anybody from admission to this Chamber who has not divested himself of everything he owns. We will prohibit them from receiving any private money, no matter how small, for political campaigns.

Again I was talking to a Common Cause member in Portland—they are large supporters of public financing of campaigns—and I said:

If you really want to limit large donations in campaigns why don't you eliminate all contributions from any committees, union committees, business committees—limit contributions to $500 or $1,000 at the outside from individuals, and give people a $200 or $300 tax credit dollar for dollar in their income tax if they give a contribution to a political campaign?

That would encourage private participation in small amounts. The Member responded:

I am not interested in encouraging small contributions to campaigns. I am interested in banning all private contributions to campaigns.

And they may achieve it.

Then one day those who were pushing this amendment will have had their way. What their motives are in pushing it I do not know. Whether it be jealousy because some Senators are more popular on the speaking circuit than others, whether it be fear—fear of what? Fear of public reaction; fear of something. Perhaps fear of the majority leader of the Senate, who has talked to every single Democrat. In at least three instances Democrats who have talked to me who were initially supporting us on this have changed their mind, because of what they said was pressure brought on them by the majority leader. Be it a combination of any of those, jealousy, fear, pressure, the proponents are going to try to bend everyone in the Senate to a common denominator.

I hope they are unsuccessful, because the day that they do will be the day that this Senate starts down the road to mediocrity.

Mr. President, I yield the floor.

The PRESIDING OFFICER (Mr. ANDERSON). Who yields time?

Mr. NELSON. Mr. President, I shall add just one word before I yield to Senator CLARK.

The distinguished Senator from Maine stated correctly that this committee resolution did not deal with all the public's perceptions of where conflicts lie, and the Senator from Oregon correctly observed the same. I, as chairman of the committee, agree. We had no time under the schedule of the resolution, to consider all, or even a major part of, the public's perceptions of where conflicts lie, even if we knew what all the public's perceptions were respecting conflicts of interest.

We dealt as best we could within the constraints of time imposed by the Senator with the specific provisions in the charge of the resolution. So that is correct. We did not deal with all of them. We did not attempt to deal with all of them. This Senator is not even sure of what all of them are.

I am a little puzzled, I must say, by the reference here by the Senator from Oregon and the Senator from Maine that there will no longer be citizen Senators. I did not know, whatever we may be described as today, that earning lots of honoraria suddenly makes one a citizen Senator. That sounds to me like a classic nonsequitur. But in any event I wish to understand how one becomes a citizen Senator by speaking for honoraria but a kind of civil servant Senator if he does not spend much time or any time speaking for honoraria.

I yield the floor.

Mr. SCHMITT. Mr. President, will the Senator yield briefly on that point?

Mr. NELSON. For a question or a comment?

Mr. SCHMITT. For a brief comment on the citizen Senator.

Mr. NELSON. Does the Senator from Maine wish to yield to the Senator from New Mexico on his time for a comment?

Mr. MUSKIE. I am beginning to run out of time. But is the Senator beleaguered?

Mr. NELSON. I yield 2 minutes to the Senator.

Mr. SCHMITT. I simply mention that I think the distinguished Senator from Wisconsin may have missed the point about the citizen Senator or the citizen legislator. The point is that if one were not a Senator and this code as presently configured was in existence, would he consider running for the U.S. Senate? It is not a question of whether he is going to leave if it is passed. But would he consider running for office if it existed? And I think that the distinguished Senator from Maine is trying to make us realize that we are doing something to ourselves that is going to affect the future, not just the present, that the citizen legislator will disappear; at least for a large segment of the population, those professionals and others who may have made their way with earned income and professional services, now if they want to run for the Senate they will have to divest themselves of those activities. That is the limitation on the citizen Senator or the citizen legislator.

Mr. NELSON. I am very happy to have the Senator's definition of a citizen Senator. I thank him very much.

How much time does the Senator from Iowa wish?

Mr. CLARK. I think about 15 minutes.

Mr. NELSON. I yield 15 minutes to the Senator from Iowa.

Mr. CLARK. I thank the Senator very much.

Mr. President, let me say that it is with some hesitation that I rise in opposition to the amendment of the distinguished Senator from Maine. I hesitate because there are few men in this body who are more effective in debate—and in the legislative process generally—than Senator MUSKIE. There are few men who so consistently have provided the kind of progressive legislation on the most pressing issues confronting our Nation as ED MUSKIE. And there are few men whom I hold in as high personal and professional esteem as I would and do EDMUND MUSKIE.

I hesitate as well because I have considerable sympathy with the amendment Senator MUSKIE has offered. When he called up his amendment last Friday, I was in the Chamber, as were several other Members, to hear a very moving, personal speech delivered by the Senator from Maine. I found that speech moving, in part, because just as the limit on outside earned income will affect the Senator from Maine in a very direct and personal way, so will it affect me in a very direct and personal way. And while I cannot match the eloquence of the Senator from Maine, I wish to elaborate on that question for only a moment.

Certainly this is nothing to brag about, but my net financial worth is among the lowest—I am inclined to believe the lowest—of any Member of the Senate. I do a fair amount of public speaking for honoraria for that very reason. So the 15 percent limit on outside earned income will significantly affect my income.

It will not affect the incomes of many Members who derive considerable sums of money each year in return on investments. My income will be limited by this Code of Official Conduct, and theirs will not.

And, in a way, I think that is, indeed, unfair to me and to others in my position.

Like many other Members, I speak largely to college and university groups, and I see no real conflict of interest in that kind of speaking. Yet, under this Code of Conduct, I will be limited, as will every other Member, in the amount of income I can receive from this kind of activity and others.

On the other hand, a Senator may have $500,000 worth of stocks in a corporation and may vote in the Senate on legislation directly affecting that corporation. That would be permitted under this Code of Conduct—not encouraged; in fact it is discouraged, but it would be permitted.

Mr. President, there is some inconsistency, therefore, in this resolution. There is some unfairness. And, indeed, there is some inequity, That cannot be denied.

But our job on the Special Committee on Official Conduct was to restrict, as best we could, the potential in this body for conflict of interest. And our job also was to help restore, as best we could, the waning public confidence in this institution.

It was not our job to establish economic equity among Senators. It is not our job to tell people who come to this body with wealth to divest themselves of it.

The special committee found that there was a significant potential for conflict of interest if outside earned income was left unrestricted. We have dealt with that problem as best we could, I think in the most effective way we could have dealt with it. The 15 percent limit we have proposed is arbitrary—perhaps it should be higher, perhaps lower. But we think it is defensible, and we intend to stand by it.

We also found that there was a potential for conflict of interest in other forms of outside income, particularly investment income. We have dealt with that problem as best we could, in the financial disclosure rule and, to a limited extent, in the conflict of interest rule.

We did not deal with this problem well enough, in my judgment. But we had difficulty, in addressing the issue of conflicts with investments, in knowing where to draw the line. Do we bar farmers from sitting on the Agriculture Committee, or force them to sell their farms? Do we force members of the Finance Committee to divest themselves of all holdings which might be affected by tax legislation?

These are difficult questions, questions we could not adequately resolve in the 5 weeks we had to bring this Code of Official Conduct to the Senate floor. I daresay if we had had 5 years it would not have been easy to resolve most of them in a way that would be satisfactory to every Member of this body. I am hopeful that under the leadership of Senator STEVENSON and Senator SCHMITT the Select Committee on Ethics will seek more effective ways to eliminate these types of conflicts of interest.

If I felt that the amendment of the Senator from Maine would solve the problem of conflicts from investments I would vote for the amendment.

But, clearly, it does not, in my judgment.

The amendment does not prevent a Senator from voting on matters that affect his investments. The amendment does not force a Senator to divest himself of holdings which may be a source of conflict. The amendment only requires that a Senator must defer the income from his investments until he leaves the Senate. It is only punitive in nature. It says in effect:

> Because some of us are going to be forced to live on $66,125 a year, all of us must live on $66,125 a year.

That is all it does. It does nothing to prevent conflicts of interest.

Even so, I might be tempted to vote for

the amendment if I believed its effect would be to strengthen the limits on outside income.

But, let there be no mistake, that will not be its effect. If this amendment passes, there is little doubt that it will, of necessity, be followed by a motion to strike the entire rule dealing with outside income. And, no doubt, if the first amendment passed on the vote at 5 o'clock, that motion would prevail.

What is at stake in this amendment is not whether we should limit outside income further, but whether we should limit outside income at all.

As one member of the special committee, I believe that there are strong and compelling reasons for imposing the tight limitation on outside earned income that we have proposed. As this debate has graphically illustrated, in the Senate outside earned income generally means honoraria for public speaking.

Senator MUSKIE has provided us with a good deal of historical background on the great tradition in this country of speaking for pay, and he has done very well.

But great tradition or not, I believe there is a real potential for conflict of interest when a Senator takes large sums of money for speaking to groups who have a direct interest in legislation before this body. And just as the Chatauqua is a historical fact, so is this process a historical fact. All we have to do is look at the record. And if one looks through the list of honoraria and sees where the money comes from, it is clear that many groups who have very direct interests in legislation are paying very large sums of money in this process.

It is true that more money for honoraria comes from colleges and universities than from many other single source. But who else is prominent in the honoraria business? Here are some of the figures for honoraria sources, according to Congressional Quarterly:

For 1972, banks, bankers' groups, savings and loan associations, and similar organizations paid $49,650 to 18 Senators.

For 1973—$49,850 to 27 Senators;

For 1974—$70,388 to 28 Senators;

For 1975—$16,300 to 16 Senators.

For 1972, labor groups paid $21,390 to 17 Senators;

For 1973—$23,850 to 13 Senators;

For 1974—$32,046 to 23 Senators;

For 1975—$22,380 to 19 Senators.

For 1972, homebuilders, construction materials organizations and contractors paid $15,550 to 12 Senators;

For 1973—$21,850 to 12 Senators;

For 1974—$36,900 to 23 Senators;

For 1975—$10,000 to 8 Senators.

For 1973, medical, dental, and pharamaceutical associations paid $48,750 to 28 Senators;

For 1974—$38,610 to 22 Senators;

For 1975—$30,612 to 26 Senators.

One could go on and on with a list of special interest groups, what they paid, year after year, to Member after Member of the Senate.

I am sure that when the figures for 1976 become available we will be able to add to that list. And, as we move to limit the amounts that special interest groups can contribute to our political campaigns, I have no doubt that we will be able to add to that list even more; because the more we shut out the special interests in campaigns the more they will be looking for other ways to gain influence, unless we adopt the limitation propose in this code. It seems to me that will inevitably happen.

Now some people are willing to say: "Yes, there may be a conflict of interest in outside earned income. But there is also a potential for conflict in unearned income that is just as significant.

Mr. President, there is a potential for conflict in unearned income, as I mentioned earlier. But, in my judgment, the potential is truly of a greater magnitude where earned income is involved. Much investment income is derived from assets accumulated by a Member before he comes to the Senate. Earned income, obviously, is derived only when a Member is already in the Senate. A member will receive his stock dividends no matter how he votes on legislation affecting the stock of a particular corporation. He will receive those dividends whether or not he is in the Senate. That is not necessarily the case with honoraria. There is a big difference.

Which brings me to another point, Mr. President, because with honoraria, in many respects, we are "cashing in" on the fact that we are Senators. I say that about myself as much as anyone else, perhaps more than most. The Senator from Maine is a truly great orator, and a truly learned man. I have no doubt that he—and several others in this body—could command large speaking fees even if they had never been Senators. I could not say that about myself and I seriously doubt that I am the only Member of this body for whom that is the case.

Nobody would have paid me $1,000 or $2,000 a crack to speak about Africa, or agriculture, or election reform, or anything else before I came to the Senate. I doubt that they would have paid me even $10 or $20. And suspect that I am not alone in this regard. If there is any doubt, take a look at the list of where the honoraria come from. Even under the best of intentions, we are capitalizing on our elected positions.

And if this elected position, if this public office is, as has been said, a public trust, it sets us apart from others in this country. The Senator from Maine last week inserted in the RECORD a brochure from a talent bureau listing a number of prominent persons who were available for public speaking. The brochure listed people like Joe Namath, Ralph Nader, and Pat Paulsen. And the Senator asked, in effect:

Why are we being singled out? Why can these people make unlimited amounts in honoraria and we cannot?

In my judgment, there is a big, big difference between the Members of this body and Joe Namath or Pat Paulsen or Ralph Nader, or, indeed, Henry Kissinger.

We have a public trust to uphold. Joe Namath does not.

We have a public trust to uphold. Pat Paulsen does not.

We have a public trust to uphold. Ralph Nader does not.

They were not elected to serve the people of this Nation. Even Ralph Nader has not been elected. We have.

I am sure that most Members realize that no Cabinet officer, no Supreme Court Justice, indeed no high level executive or judicial branch employee may make speeches for honoraria. Not one single speech for pay from any policymaking position in the judicial or executive branch.

So the fact is that we—the Members of Congress—are being singled out among all other high-level Government officials as being allowed to receive honoraria, if the pending resolution passes, within the 15 percent limit.

Mr. President, if we knock out the limit on outside earned income—and that will clearly be the effect if pending two amendments carry—we all know how the headlines will read tomorrow: "Senate waters down Ethics Code," or worse. That is not to say we should always act to please the press or the public.

But we all know that public credibility in and respect for this institution are at an all time low. We have a huge rebuilding job to do in order to restore that public trust. And probably nothing we can do will be more important to this institution, or to this Nation.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. CLARK. May I have 2 more minutes?

Mr. NELSON. How much time do I have?

The PRESIDING OFFICER. The Senator has 40 minutes.

Mr. NELSON. I yield 2 more minutes to the Senator from Iowa.

Mr. CLARK. Mr. President, if we knock out this provision, we will, in my judgment, lend credence to the idea that we are self-interested, above the public interest. Senator NELSON spoke about this last Friday night. As there were only a handful of people in the Chamber, I would like to quote those words again.

It does not make any difference if some corporation with disreputable or questionable leadership manufactures a mousetrap. It does not make any difference what the public may think of that corporation and the corporation president. If they manufacture the best mousetrap at the best cost, the mousetrap will sell.

But we do not sell mousetraps in Congress, in the legislatures, in the city councils, in the county boards. We have just one capital asset—just the one and none other. That capital asset is confidence. When the public loses confidence in public institutions, there is nothing left. I am not suggesting that there is good reason for losing confidence. Nevertheless, the confidence is vital. That is a very fragile cloak that covers this institution, and we in government are obligated to take whatever actions we can to maintain it and restore it. Without that confidence, the difficult task of governing becomes impossible.

Mr. President, adopting a limit on outside earned income will not restore public confidence overnight. Nothing will, in my judgment. But it will help, and help is desperately needed.

At the bottom line, economic equity among Senators is not the basic issue. The basic issue is to do what we can to eliminate conflict of interest. The basic

issue is to do what we can to restore public trust and confidence in the Senate.

We can address these basic issues only by rejecting the amendments of the Senator from Maine.

The PRESIDING OFFICER. The Senator's time has expired.

Who yields time?

Mr. BAYH. Mr. President, the Senator from Maine suggested that while he is talking to some constituents, I may have a little time. If that is the case, I yield myself 15 minutes pending his return.

The PRESIDING OFFICER. The Senator from Indiana is recognized.

Mr. BAYH. We all know how the headlines will read. My good friend and colleague from Iowa is absolutely right. With that in mind, let me say that what I am about to say will not make good political sense; nevertheless, I think it will make good sense.

I think, frankly, that many of us are giving more attention to what the headline writers might say than to what the merits of the particular case might be. I say that without impugning anybody's motives, because if there is one thing you learn early in this job, it is that one of the real strengths of the Senate is the opportunity to have differing opinions based on conviction. Indeed, the element of the measure before us that concerns me most is that it will take away a significant amount of this individuality which has been one of the real strengths of the Senate.

Mr. President, I support the majority of the reforms which are contained in the comprehensive ethics package that the Senate has before it. I have long been concerned with the growing public cynicism and loss of public confidence in our elected officials. I believe many of the provisions we are considering today will go a long way to stem this disillusionment. I compliment the chairman of the subcommittee and its members for performing a very difficult task.

Mr. President, it seems to me the primary thrust of an ethics code is to deal with ethical questions in the purest sense as we have come to see them and feel them. Now, there are all types of speeches that can be made, if I might direct my colleagues' attention to the particular amendment of the Senator from Maine, of which I am proud to be a cosponsor, which deals with the limitation on certain kinds of income, honoraria. There are all sorts of speeches that can be made and articles that can be written. I think most of the Members of this body, when they write an article or accept a speech offer, are wise enough to see that there is no real or apparent conflict of interest. Let us assume, for the sake of the argument here today, that there may be some conflicts involved—unintentionally or by appearance, if not in fact.

Let us go one step further: Let us suppose, for the sake of argument, that all of the speeches given by Senator X show a really flagrant conflict of interest, inasmuch as he makes speeches before groups that have issues before this body. I would be very much concerned about that from an ethical standpoint. But I must say, if we are going to be concerned about that kind of conflict of interest, then we had better be concerned about the same conflicts that are going to be permitted to individuals who benefit from other kinds of income, for instance, income from writing books and selling them en masse to certain interest groups. Nothing prohibits that under this bill. Another example might be income from a family enterprise. I happen to have a small farm. It is not nearly as big as those of certain other Members of the body. I salute them and I feel sorry for myself, I guess, but I am proud to have had this. It has been in the family a long time. Yet I sit on farm legislation year after year. There is no prohibition against that.

Gains derived from dealings in property or investments, interest, rents, dividends—right down the list; there is no potential source in this category of excluded income that does not have one kind of legislative ax to grind or another.

The concern I have, if we are talking about conflicts of interest and the merit of the Muskie amendment, is that if we are concerned about a speech on a college campus, or to a United Jewish Appeal, or to some other kind of group that Senators speak before, then we better be equally concerned about the various other kinds of conflict of interest.

It seems to me if a fellow owns airline stock, we had better look at that income. If a fellow owns bank stock, we had better look at that kind of income. If a fellow owns oil stock, we had better look at that kind of income. If a fellow owns insurance stock, we had better look at that kind of income. If a fellow has real estate interests—right down the line.

Members of this body have these kinds of income, and if we are to establish an ethics code dealing primarily with the conflicts-of-interest question, which is the matter that concerns the people of this country—can a U.S. Senator be bought—then it seems to me we ought to apply the same standard to all kinds of outside income.

Having said that, let me say very frankly I do not believe any Member of this body can be bought for $25,000. I do not believe any Senator can be bought.

I think the honesty and integrity of this body is such that, although I might have disagreed with some of my colleagues basically on an issue, I have never thought that the honesty of any of them was in question.

But if we are concerned about the appearance, and I think the Senator from Wisconsin said the seemliness, if we are concerned about the seemliness or the appearance, we better be just as concerned about the seemliness of $8,000 worth of income, or $25,000 worth of income, from Exxon Oil as we are a collection of speeches on college campuses and to various civic groups.

The fact of the matter is that we do not apply the same test as far as ethics is concerned, as far as the temptation is concerned, as far as conflict of interest, real or apparent. The Senator from Maine would apply the same test.

If we are really concerned about ethical standards, we are going to fish and stop cutting bait, and we will support that amendment. If the ethical question is what we are concerned about, the conflict question, the Senator from Maine deals with it. With all respects, as hard as our colleagues have worked on this bill and as good as it is in many other provisions, they have not bitten the bullet in this effort.

But I ask my colleagues to step back a minute and ask, "Well, I wonder who really ought to decide this question of what is ethical and what is not ethical?"

Frankly, I decided that a long time ago. I think the constituents to whom we have the primary responsibility ought to make that decision.

We have had a lot of discussion back and forth about rich Senators and poor Senators and some in between. Well, God bless them all. I wish they were all rich, but unfortunately, some of us are not. I do not think any of us would trade places with rich people who are not in the Senate.

But I think we have to look at the question of who should decide and what should be the criteria. The net worth of a Senator, it seems to me, is irrelevant. The true test is to let the constituents know. That is why I think for the first time we have begun to deal with this important matter by disclosing—disclosing, putting it on top of the table.

I have done that for many years myself. I have been criticized by some because I had too much and by others because anybody in the Senate that had as little as I probably was not qualified to serve in the U.S. Senate. I accept that.

But let us let the people determine what they want their Senators to stand for as far as that particular kind of question is concerned—where he gets his money—but let us let them know.

I remember Bob Kerr. I did not know him very well because he passed away, unfortunately, as I was getting ready to be sworn in. He discussed on this floor and bragged about the fact that he represented oil. Everybody knew he represented oil. He did not try to hide it.

The people of Oklahoma had a determination to make every 6 years as to whether that is the kind of Senator they wanted. Apparently, they did, and who am I, from Indiana, to second-guess the people of Oklahoma?

One thing I say to the Senator from Maine: As he knows very well, there has never been a more thorough disclosure of any kind of income than that that is required of the kind of honorarium, the speeches and articles, he has expressed his concern about.

But whatever it is, I am not prepared to say, if somebody has airline stock or insurance stock, that that is bad. Let us let our constituents know, the same as they should know every time we make a speech and every place we earn a dollar; let us let them know and abide by their decision.

One factor that has been related to me in private, and to a lesser extent on the floor, which I think is in a lot of people's minds, is the time involved writing articles and making speeches.

We are, indeed, elected to be Senators,

not speakers or businessmen and women. Voting is our business.

Struggle with it as I may, I have found it awfully difficult to determine just how much time I have to spend to be a good Senator or how much time anybody else has to spend to be a good Senator. I never have enough time. We have voting, we have committees, we have constituent work, and all of the things we try to tend to day after day.

I suppose one criterion that is relied upon more than any other is the voting record. That is one test—one test that I suppose treats everybody with an equal degree of harshness.

If we are talking about the kind of problem that limited income presents as far as the convenience of the Senator is concerned, I think we have to look rather carefully.

There are all sorts of reasons for being absent. There are speeches for dollars. There are speeches for political purposes, business activities, family affairs, constitution services.

I have to confess that I watched my son in his senior year play in a championship football game, and I missed a vote. If my constituents want to criticize me for that, then there it is. They have known it, and my voting record went down one point.

There have been times when I have had to look at a pending vote and weigh it against constituent activities, high school speeches, Kiwanis, Rotary—yes, and maybe a Democratic fund-raising speech in the evening—to try to determine whether my presence here or the commitments I had made to my constituents were the more important thing.

I have had to weigh it every time and make the final determination based on what I felt in my own heart was right. But in the final analysis, if I made the wrong judgment, if my voting record would not stand the test, once again the most important leveler of us all, the constituents to whom I am responsible, would make that determination as to whether that test, that amount of time spent in the Senate was commensurate with what they expected of their Senator.

We are not applying the same test here. We are saying, "If the convenience of the Senate is in question, you shan't make speeches."

We are not limiting other kinds of absences. If we want to say everyone shall vote 100 percent of the time or start losing $100 a vote, or something like that, so that all absences are treated equally, then I will buy that.

Mr. President, may I have 5 more minutes?

Mr. MUSKIE. I already have made commitments to the point that I already am speeched out.

Mr. NELSON. Mr. President, how much time does the Senator from Wisconsin have remaining?

The PRESIDING OFFICER. 38 minutes and 2 seconds.

Mr. NELSON. Does the Senator want the 2 seconds? I yield 5 minutes to the Senator.

Mr. MUSKIE. I thank the Senator.

Mr. BAYH. I thank the Senator.

I was going to say this before the Senator from Wisconsin spoke, because he had important business in the cloakroom when I complimented him on the majority of his efforts, on his craftsmanship.

Mr. NELSON. I did not hear that. Will the Senator repeat that? I have never heard such nice things.

Mr. BAYH. May I do it on the Senator's time? I thank the Senator.

We all know of examples in which people, for their own personal convenience, the convenience of their family, have gone on a vacation. In the final analysis, I do not want to judge any other Senator. If that voting record gets to the point where it cannot stand the test, that Senator is not going to have a chance to consider any more votes, because he is going to be taken out of this body.

We should apply the same test. We should let each Senator be an individual and let his constituents decide if it is a conflict. If it is a poor voting record, let them decide. Let the public know. Let us put it on top of the table, as we are required to now, disclose it all, and then let the people decide.

As I said earlier, there are many features of this bill that I think are important steps forward, but this matter seems to have received most of the headlines and most of the editorials supporting or opposing the efforts of the Senator from Maine and the position of some of us.

I hope that no Member of this body who votes against the Senator from Maine's first amendment or his second amendment will believe that we can impose some sort of righteous code on ourselves, as a body or as individuals, and solve the problems that exist in this country today.

There are many ingredients of this ethics bill that are important, but let us not deceive ourselves that an $8,000 limit on speeches is going to make the Senate more honest as a whole or make any one Senator more honest than he was when he came here; $8,000 is not going to make the public trust us any more. We are kidding ourselves if we think that we can impose that kind of arbitrary limit on a particular kind of income. Indeed, I think it makes the public wonder this: Why ferret out one particular kind of income? We are going to limit that, but we are not going to limit all the other kinds of income that have a direct legislative purpose before this body day after day after day.

Mr. President, I yield back to the distinguished Senator from Wisconsin such time as I have remaining.

The PRESIDING OFFICER. Who yields time?

Mr. DOLE. Mr. President, will the Senator yield?

Mr. NELSON. Mr. President, the Senator from Wisconsin has how much time remaining?

The PRESIDING OFFICER. The Senator has 34 minutes and 8 seconds.

Mr. NELSON. The Senator from Wisconsin yields 5 minutes to the Senator from Kansas.

Mr. DOLE. Mr. President, the Senator from Kansas, like others in this body, is a party in interest and, perhaps from a selfish standpoint, has great interest in the outcome of the Muskie amendments. I am interested in both the first and the second amendment, but am particularly interested in the second.

I suppose that if we have demonstrated anything in this debate, we have demonstrated how ill-conceived some of the regulatory medicine might be as we have discussed how much of a dose we are willing to take ourselves. Perhaps we can reflect, as we go down the road, on what other taxpayers and citizens of this country experience because of some of the regulations we heap upon the American people.

We have talked about perceptions, we have talked about time, we have talked about everything but the test of leadership. This one issue has become a test of leadership.

How many arms have been twisted to vote against the Muskie amendment? This is a debate between the generals and the privates. This is also a contest between the House of Representatives leadership and the leadership in the Senate to see who can push through the so-called toughest ethics code.

Somehow, there is a feeling that you can impress the American people if we take a bird bath in the Senate, and we probably will take a bird bath in the Senate.

We can talk about being full-time Senators, and we can talk about our own personal situation; but before we address these points, it should be emphasized that the standards which these rules are meant to enforce are accepted by all of us.

I do not know of anyone in this body who wants to lower ethical standards, whether he be in a leadership position or not. They are paid a little more, and perhaps they deserve more. Some do not have to make speeches, they do not need to.

No Senator seeks anything less than the very highest standards of ethical conduct from Members of this body, and I would suppose that the public interest must be our sole guide. Whatever rules we adopt will guide our conduct.

So we are getting ready to take a dose of our own regulatory medicine. Before we swallow that dose without even reading the label, without even looking down the road at the possible dangers or discrimination, we should concern ourselves with the nature of the illness, if any, and with the proper dosage. Are we using the proper medicine? If so, how much is an overdose?

I commend the committee for handling a very difficult job well. I happen to believe that, for the most part, they had good judgment. But I think there are some areas—not just in this one area but in other areas—where they may have gone a bit too far.

Why should this be a contest of Senate leadership? Why should the leaders be arrayed on one side against some of us in this body unless there is some good reason? Why is it necessary that we have an ethics code with 23 major items that the House ethics code does not contain? Is there a contest between the House leadership and the Senate leadership? Why are we concerned about public im-

pressions? Are we concerned about a tradeoff for the pay raise? What is the concern of the leadership?

In fact, I note that neither the majority or minority leadership is on the floor.

I suggest that we take a look and ask some questions. Why the contest of leadership on this one issue?

Those of us who do some speaking stand indicted for some reason. I suppose that when we consider earned income and unearned income, we can go through all the arguments; but we are talking about two amendments to the resolution which have been offered by the Senator from Maine, and I support both of them.

If the object is to require a certain standard of full-time service, it is altogether illogical to bar earned income beyond a certain point and yet not endeavor to regulate other income-producing activities. Many of the so-called unearned income sources that are exempt from the proposed limitation can require a great deal of a Senator's time. If a Senator borrows money to engage in land speculation, he would not be restricted by the select committee's proposal. Yet the management of that investment would probably involve considerable time, and more important, considerable interest—personal interest far beyond an occasional speaking engagement. Even if we attempt to distinguish between the active management of investment income and the less active involvement in managerial decisions, the fact remains that the Senator is diverted by decisionmaking, which takes time and interest away from his duties, just as public speaking or writing a book may take time. Unless all outside income-producing activities are to be regulated, the full-time service argument is specious.

This Senator has listened very carefully to the talk about full-time Senators, but being full-time Senators is not the issue.

I have listened very carefully to the discussion on how we are perceived. I have heard it said that appearance is more important than the facts. The Senator from Kansas has never believed that to be true. I suggest that we have a hundred Senators in this body, all men of integrity, all men of the highest character, all having different ideas about their job and about their role in the Senate and what is and what is not full time. Each Senator does his job as he sees fit, to the best of his ability. Some expend more time and energy, some expend less, some are more effective, and some are less effective.

The PRESIDING OFFICER. The Senator's 5 minutes have expired.

Mr. DOLE. May I have 2 additional minutes?

Mr. RIBICOFF. I yield to the Senator 5 minutes.

Mr. DOLE. There is no rule or code which says that one way is the best or the other way is wrong. Ultimately, every 6 years, as the distinguished Senator from Indiana pointed out a few moments ago, the voters in a Senator's home State will decide how they perceive the Senator and the job he has done.

That is what the democratic process is all about. If the voters believe their Senator has not spent enough time on the job, or has not been effective, or has spent too much time speaking, or has spent too much time receiving unearned income, that he is too rich or too poor, then I assume they will make a judgment.

But it does seem to this Senator that there is discrimination within the committee's bill. I certainly have no quarrel with those who, through their own genius or wisdom or by virtue of an inheritance, have no problem at all, have no interest in speaking, or have no interest in outside earned income.

However, there is no reason why unearned income is more virtuous than earned income. Earned income, if anything, might be considered more virtuous than investment income in our society, because it is related more directly to the earner's work, as that term is usually defined. One should not be singled out for strict limitation when the other is not. If we are to have limitations, the same limitations should be placed on each.

Senators with earned income should be treated the same as those who have substantial unearned income. Equity between those two groups is the purpose of both Muskie amendments. The first Muskie amendment would place equal limitations on both types of income. The second amendment would eliminate the limitation and leave both types of income to be regulated through the conflict of interest and public disclosure sections of this bill.

CONFLICTS OF INTEREST

Let us turn now to the heart of any reasonable analysis of the subject, which is the conflict of interest argument. Here, too, we can all agree that conflicts of interest are to be avoided whenever possible. But the position of the committee is that a Senator can accept up to $8,625 in speaking fees from whatever source, but every dollar over that is branded unethical. Certain other types of earned income, and all manner of unearned income from whatever its source, are not to be subject to regulation or restriction. No one can seriously suggest that potential conflicts of interest do not exist equally for all sources of outside income, and from many other nonfinancial sources as well.

As Senator MUSKIE has pointed out, if one Senator retires from a real estate corporation that he founded but in which he continues to hold stock, while another sits on the board of a real estate corporation and receives a salary, both face an obvious conflict of interest problem any time an issue affecting real estate tax shelters comes before the Senate. But only the salary earned from the corporate directorship would be subject to the income limitation.

There is no basis for including earned income and excluding unearned income from whatever source in the proposed limitation. There is even less basis for the 15-percent exemption. If a Senator is going to be swayed by the payment of an honorarium, the $625 fee that brings his outside income to the $8,625 limit might be improper and the $375 that would bring his income, illegally, to $9,000 would be altogether innocent—and perhaps might even contribute to a better understanding by the listeners of the issues of the day.

UNEQUAL TREATMENT

But what bothers me most about this, and what should bother all of us, and is of concern to all, is the unequal treatment given two different classes of Senators: one that has investment income; another without investment income. The courts would call this an invidious classification. Confining our regulatory attention to those who come here with only their income earning capacity is reprehensible. Treating earned income one way and unearned income another is discriminatory. It penalizes one class of Senator without penalizing another. It is illogical. It is unfair.

Maybe we could justify that discrimination if it were based on any logical basis. But it is not. Maybe we could justify it if the limitations weren't so arbitary. But they are arbitrary. This is an arbitrary, illogical discrimination based on class within the U.S. Senate.

So, the distinction between earned and unearned income cannot be supported by the full-time service argument, and it cannot be supported by the conflict-of-interest argument. An hour taken away from his duties to manage his investments is the same as an hour taken to give a speech. The potential conflict presented by an investment is as great, and probably greater, than the acceptance of a payment for giving a speech.

In both cases, complete public disclosure of all outside sources of income would be an equally effective means of permitting the voters to decide what is and is not unethical.

So, Mr. President, this Senator certainly is willing to completely disclose earnings, assets, and health records; and I have.

PERCEPTIONS

It just seems to me we talk about confidence and we talk about polls, and we talk about the impression we are making on the American public, and that is what this is all about. It is perception—how will the leadership in the Senate be perceived if we do not have the same limitation that the Speaker achieved in the House? Will that mean our leadership is weak in the eyes of the public? That is what this is all about.

The Senator from Wisconsin told us on Friday that the necessity for the outside income limitation was, in fact, related to how the public perceives its Congress. But are we to legislate based on what the opinion polls tell us may be a public misperception of our outside income? Are we to abdicate our responsibility based on what the polls say? Are we to prescribe regulatory medicine without any more definite diagnosis than that?

Votes in this body are not sold. Voting commitments are not made in exchange for honorarium. Nor am I aware of any evidence of violations of the public trust associated with the earning of outside income.

The Senator from Wisconsin noted on Friday that he had not said, on or off the floor, that income from speaking fees

was bad per se. I agree. My distinguished colleague has participated in such speaking appearances for honoraria. I have and so have a number of our colleagues.

What do we know about the public perception of our outside earnings?

For the House commission that studied this subject, the Harris poll asked its respondents if they would be disturbed by responses varied, depending on whether Congressmen receiving honoraria. The the Congressman was receiving small fees for few speeches, large fees for few speeches, small fees for many speeches, and so forth. But 71 percent of the people said they would be bothered by members of Congress receiving large fees for many speeches. However, 57 percent of those who were disturbed said they would be satisfied if the voters in his district were made fully aware of his income sources and could vote for or against him at the next election. When disclosure, which we have right now without this bill, is introduced into the picture then a majority of those who were bothered by many large speaking fees are satisfied. So, the argument that public perceptions demand a limitation on such income is not supported by the Harris poll. Most people are either not bothered by the speaking fees in the first place or, if they are bothered, they are satisfied when the details are disclosed.

The polls generally tell us that the public approval rating of Congress is abysmally low. We all know that to be a fact. The message in this resolution seems to be that if we do something that is visible about regulating the personal finances of our Members, then our image will improve and the people will be happy again. That is not a fact. We will do more to bolster public confidence in Congress by improving our procedures and by dealing with our public problems in a reasonable manner. By making our committees more efficient earlier in the year, we did something substantive based on a real and not just a perceived need. The American people are wiser than we give them credit for. The best image manipulating devices will collapse if they are not supported by solid performance.

Some people may be under the impression that Senators are using their positions to get rich, either through earned or unearned income. I am aware that some anonymous staff member was quoted as saying that there was nothing that could be done about people who came to the Senate rich, but that we could do something about those who enriched themselves after coming here. Is it true that Senators are getting rich from speaking fees? If it were true, are they influenced by the groups which pay them fees? If they are, are they getting richer and are they more improperly influenced than other Senators who are getting rich from investment income alone? There is an absence of information about the answers to any of these questions.

TWO ALTERNATIVES

What we come down to then is a game of political one-upmanship between the other body and ourselves.

Some have indicated that this is a contest between the leadership of the two bodies to see which can appear the tougher in cracking down on unethical behavior that bothers some voters. The facts behind these public perceptions—the exact nature of the illness—are vague.

The real reason for this limitation on outside income is that we have to look tough by cracking down on something. And whose ox is easier to gore than those of us who did not come to the Senate as rich men and might now supplement our incomes with occasional speaking fees?

Either we should have a 15-percent limitation on all outside income, under the first Muskie amendment, or we should require only full disclosure of the sources of such income.

The limitation on earned income alone does not solve any problems and does not dignify the Senate. What it does do is discriminate between Senators who gave unearned income and those who do not. Some might point out that the same limitation on earned income applies to both classes of Senators. That reminds me of Anatole France's statement:

> The law, in its majestic equality, forbids the rich as well as the poor to sleep under bridges, to beg in the streets, and to steal bread.

The limitation on earned income may apply to both classes of Senators, but if affects only the class of Senators of which I am a part.

Let us face it, if it is wrong for a Member of Congress to receive outside income, either because of the full-time service or the conflict-of-interest concepts, then all outside income must be prohibited.

Beyond that, I oppose the outside income limitation provisions of this resolution altogether. It is the people of our States who sent us here and will either keep us here or replace us with someone else. There is now an annual dollar limit on income from speechmaking. There is now a requirement that the sources and amounts of these payments be recorded with the Secretary of the Senate. This information is a matter of public record, as it should be. Let the people of Kansas decide whether I have been unduly influenced by, or have devoted too much of my time to, speeches for a fee. Such a regulatory system would be open, reasonable, nondiscriminatory and easily enforced.

Mr. MUSKIE. Mr. President, I intended to yield to the Senator from Maryland, but I think the proponents ought to have some time now if they want to use it, and I would be happy to delay recognizing the Senator from Maryland.

The PRESIDING OFFICER (Mr. DECONCINI). Who yields time?

Mr. MUSKIE. Mr. President, I yield 5 minutes to the distinguished Senator from Maryland, if it is agreeable to the Senator from South Carolina.

Mr. THURMOND. That is all right.

Mr. MATHIAS. Mr. President, I thank the Senator from Maine for yielding me a few minutes to express the doubts that still prey on my mind. In fact, I must say the longer this debate has continued the more my doubts have increased.

I have no question about the proposition that some guidance on the private conduct of public persons is entirely appropriate, and I think it is reasonable that such guidance should include a limitation on the sources of outside earnings and income.

Since it may be very difficult to draw the distinction between an honorarium and an unlawful gratuity or even between an honorarium and a bribe, I think it may be prudent to prohibit any transactions at all between Senators and certain other persons.

Examples of such questionable sources of honoraria are business corporations and, perhaps, any individuals in any capacity. Even if there is a clear distinction between an honorarium and some other kind of payment, that distinction might not be universally perceived and, therefore, a suspicion might arise, or a question may be raised, or a dark issue be created. So I think it is reasonable to impose a restraint on any tainted source of income for any Member of Congress.

Of course, I have no question at all about the fact that income from any source and of any kind ought to be totally public. I myself have made that my practice. My wife and I have voluntarily made public a complete accounting of what we own and what we owe, and have done so for years. So I have no question but that all of it should be public.

But then we come to the question of what sort of dollar limit on earned income is reasonable. Undoubtedly, there ought to be some protection against outrageous earnings. Undoubtedly, there ought to be some prohibition against what would be an obvious abuse. But I do have serious questions about an overly restrictive dollar limit, because I am not sure what it is intended to do.

A very restrictive dollar limit does not insulate a Senator from the tainted source. A restrictive dollar limit does not in itself prohibit the relationships which are, I think, disparaged by all of us. So what does it do? Well, there has been some argument here that it is going to discourage travel outside of Washington, that it is going to keep people on the job.

But I have to ask, is this not done in a very fumbling kind of way? If a Senator is fortunate in being invited to speak for a $1,000 fee, then he makes eight trips out of Washington during the year. If he is less fortunate and is invited to speak for $500 fees, he makes 16 trips. If he is still less fortunate and only gets invitations to speak for $200 fees, he makes 40 trips. I think this is a very fumbling way to get at that problem and, of course, it ignores so many similar problems, like the quadrennial epidemic of White House fever we experience here, which is responsible for much more absence than all the lecture circuits combined.

I might say and I am not being entirely humorous about it, that it ignores the belief that the public has an interest in getting Members of Congress out of Washington every now and then. Any national capital, this one included, is a hothouse. It is an unreal atmosphere, and if you hole up all the Members of Congress 12 months a year in the city

of Washington and do not let them get out around the country to find out what real life is all about, we will have a much more unhealthy situation than we have today.

So, aside from whatever limited benefit a lecture audience might get out of the lecture, I think the public has at least an indirect interest in seeing that Members of Congress are not confined in a hothouse. There is a benefit here. I know that, when I have gone to speak myself, I have always come home from an appearance before a college audience feeling that I had been refreshed and educated far more than any information that I had transmitted.

There is a question being ignored, and it is a big question to my mind: What is really the implication of the approach we have taken?

For nearly 200 years the Senate has been an institution which has, by and large, been considered an assembly of honorable men and women. In that 200 years a handful have been shown to be perhaps less than honorable. Most of us have had days in which we have perhaps been less than honorable, but, by and large, the Senate has been an honorable institution and Senators have had the reputation of being honorable.

I simply ask the Senate, are we now for the first time in the history of the Republic undertaking an action——

The PRESIDING OFFICER. The Senator's time has expired.

Mr. MUSKIE. I yield 1 additional minute to the Senator.

The PRESIDING OFFICER. One additional minute is yielded.

Mr. MATHIAS. Are we now undertaking an action which raises the contrary presumption, which raises the presumption that we are, in fact, dishonorable and must be, in some way, put on a leash or restrained from conduct which we ourselves think will be reprehensible in advance? That is a very different presumption from anything of which I am aware that has gone before.

I have no compunction about any discipline that may be meted out to anyone who transgresses the code and violates the laws; I have no quarter to offer for that person, but I have a serious question about this advance restraint which reverses a 200-year-old presumption.

The PRESIDING OFFICER. Who yields time?

Mr. MUSKIE. Mr. President, I am pretty close to the end of my time. I wish to reserve some of it, if the other side is prepared to proceed at this time.

Mr. RIBICOFF. My understanding is from Senator NELSON that there is no demand for additional time.

Mr. MUSKIE. Mr. President, may I have more time?

Mr. RIBICOFF. Does the Senator wish to have more time?

Mr. MUSKIE. Yes.

Mr. NELSON. Sure, it is all right to yield Senator MUSKIE 10 additional minutes.

Mr. MUSKIE. Mr. President, at this time I yield 10 minutes from the time of the Senator from Wisconsin to the Senator from California (Mr. HAYAKAWA).

The PRESIDING OFFICER. The Senator from California.

Mr. HAYAKAWA. I thank the distinguished Senator from Maine.

Mr. President, I will not talk about inherited wealth or unearned income. I do wish to talk about lecturing and lecture fees, a subject with which I have had a lot of experience because lecturing has been my principal source of livelihood for at least 25 years before I became a college president. I have earned fees of up to $2,500–$3,000 for a single lecture.

There is a lot of experience goes into that. I did not get $2,500 for a speech because I was a Senator. This all happened long ago. I became a Senator because I am the kind of guy that can get $2,500 for a speech.

It happens that speaking publicly and being a university professor did not constitute a conflict of interest. One job though threw light on and enriched the other. The same, I am sure, must apply to the individual who holds elective office. He or she is a better legislator for having greater contact with the general public than the floors of Congress themselves can provide.

It is especially enriching for a legislator to be invited to States other than that which he or she represents, so as to be able to view problems from the larger point of view of the Nation as a whole.

Making money at another job, in contexts other than legislative, in the world outside is known as moonlighting. Policemen, school teachers, firemen, retail clerks, bus drivers, all sort of people take on extra jobs. Society places no limit on these earnings from second and third jobs except that employers may insist that the first job be done well.

I wonder if legislators are to be singled out for discriminatory legislation in this respect and limits placed upon their outside earnings.

I have said repeatedly that government should involve greater citizen participation, and this is a reason I joined with some of my colleagues to recommend a constitutional amendment to limit terms in the Senate and the House of Representatives to 12 years, so that more people can come in and go out of Congress. But if people are to be limited, indeed, to 12 years or less in Congress, they have to have their businesses to go back to when they are through with their 12 years. They cannot entirely neglect their outside interests, since politics is not intended to be their lifetime occupation.

It seems to me that all the provisions of the so-called ethics legislation have one message: They express over and over again the fear that we may all exploit our positions in Congress in order to achieve private gain. So the ethics legislation says to all of us:

We don't trust you, we don't trust you, we don't trust you.

And I say to Senators that if we accept this absurd attempt to legislate morality we are admitting to the world that we are not to be trusted. I for one refuse to make that admission.

The proposed legislation on ethics, so-called, is as it applies to me particularly ridiculous.

I talk about my own case. I hope I am not boasting, but let me state these things as a simple matter of fact because of the particular kind of career I have led. My speeches and my writings are worth money, and in the almost 3 months I have been in the Senate I am sure I passed up at least $25,000, probably more, in lecture fees, figuring, let us say, 10 speeches in 10 weeks at $2,500 a speech, which is not working very hard.

Now I have not done any of this because I have a job to learn here, and I am devoting full time to it. I have given up I do not know how much money as a writer since, instead of selling my writings as newspaper columns or as magazine articles, I have been giving my ideas away free in letters to my constituents, in newsletters, and in newspaper interviews. I shall continue to do so because that is what I came here for, not to make money as a writer or a speaker, but to serve the public as best I can with whatever talents I have, and I do not even slightly begrudge my losses. I did not come here to make money.

But let me say most emphatically that the ethics legislation, so-called, will serve only to dissuade able men and women, men and women of thought and of deep public conscience, from running for office at all. If our chief reward for offering our services to the public is to be surrounded by jealousy, by suspicions of our every action, and by cynicism of our every motive, how many of us would ever be willing to run again for public office?

One wonders what do the framers of this legislation want of Congress. It seems to me that they want speakers who would never be offered a lecture fee unless they were already Members of Congress. They want writers who cannot sell their writings. They seem to want businessmen who have over the years shown that they cannot make any money. They want lawyers who cannot find clients any other way.

They want investors whose investments are never profitable. They want consultants whose advice is not worth a damn, since no one will give them a fee for consultation. Indeed, if the people who are proposing this legislation have their way, we should have a Congress of mediocrity. It seems to me that there is no surer way of guaranteeing the collapse of a democratic society.

Thank you, Mr. President.

The PRESIDING OFFICER. Who yields time?

Mr. NELSON. Mr. President, how much time remains to the Senator from Wisconsin?

The PRESIDING OFFICER. The Senator from Wisconsin has 14 minutes and the Senator from Maine has 14 minutes.

Mr. HARRY F. BYRD, JR. Mr. President, will the Senator yield 30 seconds?

Mr. MUSKIE. I yield.

Mr. HARRY F. BYRD, JR. Mr. President, I commend the Senator from California for an interesting and sensible speech.

The PRESIDING OFFICER. Who yields time?

Mr. NELSON. Mr. President, I note the absence of a quorum and ask unanimous consent that the time be charged equally to both sides.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. STEVENS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Who yields time?

Mr. NELSON. Mr. President, of the 15 minutes left, I yield whatever portion of time controlled by the Senator from Wisconsin is necessary to conduct a very brief colloquy with the Senator from Alaska.

Mr. STEVENS. I thank the Senator.

Mr. President, I feel that those of us who supported the pay raise made a commitment to bring about a meaningful limitation on outside earned income. At the same time, I am very concerned about some of the amendments that have been proposed, and some of the concerns that have been raised, especially the concern raised by the Senator from Wyoming (Mr. WALLOP) and others who have family enterprises—farms, ranches, partnerships, whatever it might be—where their continuing relationship to that family enterprise is in the form of managerial decisions. I would like to ask the Senator from Wisconsin, the manager of the bill, if he is willing to have those who are involved—develop a colloquy which would make certain that the managerial decisions that are made—which, in my opinion, are in fact material decisions that relate to whether the business makes income or not—whether those decisions would not necessarily be the determining factor regarding whether or not income that is derived by these small family enterprises is, in fact, earned income?

I particularly mention that decision, for instance, involving when a crop is sold. That could be the material decision which would determine whether the farm would make money that year. If a Senator does make that decision, even though someone else plants the crop, raises it, tends it, and harvests it, he is, in fact, making the material decision determining whether or not the farm makes money. In my opinion, this is often the case. Many decisions made in terms of small family enterprises, are, in fact, material income-producing decisions, for example the decision involving when inventory should be sold. However, these decisions do not represent the type of involvement which puts a Senator in conflict with his service as a Senator. A decision such as this takes no more time than deciding whether or not to sell an investment and, in terms of a small partnership, for instance, whether or not to put more money into the partnership, or finally in making a decision whether or not to sell any portion of the partnership activity. Is the Senator willing, after this vote, to explore this and make certain that these people involved in family enterprises can be assured that we are not, in fact, putting them in a position where they are automatically going to be subject to some sort of Ethics Committee procedure by virtue of their relationship to their continuing family enterprise?

Mr. NELSON. Speaking for myself, the answer is yes.

Speaking for myself, it never entered my mind that if a Member who came here owned a ranch, or a dairy farm, or a small business that was his asset, it was never my judgment that we had any intention whatsoever of saying that he could not make the decisions that need to be made in that business—whether it is buying a tractor, buying some dairy cows, selling some cows, deciding what he is going to grow on that farm, switching 1 year to more acres of soybeans and less of corn or more of corn and less of soybeans. Managerial-type decisions or involvement in his or her small business. This kind of involvement was not intended by me to be proscribed or, rather, to be counted as earned income for the limitation. I can see the problem.

The language we are looking at in the report is on page 38:

> Paragraph 3(a) defines "outside earned income" for purposes of this rule. Generally stated, outside earned income is any income received as a result of personal services actually rendered if such services are material income-producing factors, and where the active and actual participation of the individual is involved.

As the Senator pointed out, if in fact you decide when to sell a crop, store a crop, buy some cattle, sell some cattle, buy some hogs, sell some hogs, or what have you, it may very directly be an income-producing decision. It was not my intention nor, do I believe, was it the intention of the committee to include that as earned income.

Though I can only speak for myself, I say to the Senator that I realize it has created confusion. There are different interpretations.

It should be clarified, and in making the clarification I am on the side of being sure those who do have small enterprises, small businesses, farms or ranches, are able to participate in their managerial decisions without being in any way in violation of the rule.

The PRESIDING OFFICER. All time of the Senator from Wisconsin has expired.

Mr. NELSON. May I have 30 seconds?

Mr. MUSKIE. I will yield whatever time the Senator wants provided I have 4 or 5 minutes at the end.

Mr. NELSON. Very well. I hope the Senator will interrupt, if necessary.

I say to the Senator if we can work out language that is clear enough, I am prepared, at least speaking for myself, to support the language. Maybe the rest of the committee would be, too. I never heard any discussion that expressed an intent on the part of the committee to keep the small businessman from making managerial decisions.

Or we could work it out in a colloquy. But, of course, it would require other Members.

Mr. STEVENS. I agree. I do not think this Senator is the one to be involved in that final colloquy. All I say is that I think it is important that we put this to rest before the vote.

The intent of the committee, as I understand it, is to prohibit the Senator from performing continuing services conflicting with his service as a Senator.

When this Senator came to the Senate, his law office closed the very day he arrived. And he has not practiced law since.

I understand that the sentiment involved in this is to take the same concept; that a Senator should not pursue a profession or business to the extent that he is involved in it in conflict with his service as a Senator.

But as I say, when family enterprises are involved, when certain members of a family are involved and the Senator's capacity, his managerial knowledge as to the background, is required to keep that family business going, then I do not think we ought to proscribe that kind of conduct.

Even if his judgment is the material income-producing factor in such an enterprise, where the time required is not in conflict with his service as a Senator, then I do not think this code of conduct should prohibit or proscribe that activity.

I thank the Senator.

Mr. NELSON. I agree with the Senator.

Mr. STEVENS. I thank the Senator from Maine.

Mr. THURMOND. Mr. President, will the Senator yield?

Mr. STEVENS. The Senator from Wisconsin has the time.

Mr. THURMOND. Will the Senator yield?

Mr. NELSON. The Senator from Maine wants to reserve 4 or 5 minutes at the end.

Mr. MUSKIE. How much time do I have left?

The PRESIDING OFFICER. The Sentor has 6 minutes.

Mr. MUSKIE. I yield 1 minute.

Mr. THURMOND. Mr. President, I want to call attention to the fact that on page 26 in 3(c), subhead (2), provides:

> Income from family enterprises if the services provided by the Senator or officer or employee of the Senate are not a material income-producing factor.

There is a limitation, so to speak.

We see the same wording under (10). We do not find that under rents, for instance. It may take just as much time to look after rents as it would income from family enterprises or shares in partnership income.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. THURMOND. I think if we eliminate the phrases under those two subheads, it would take care of that.

The PRESIDING OFFICER. Who yields time?

Mr. MUSKIE. Mr. President, may I ask my good friend from Wisconsin if he wants any more?

Mr. NELSON. Is there anybody who is opposed to the resolution who wishes any time at all?

If not, the Senator from Maine may proceed.

Mr. MUSKIE. Mr. President, all I want to do is very briefly remind Senators, some of whom may not have been

on the floor earlier, what this amendment would do and why.

What this amendment would do would be to apply to all income, earned and unearned, the same 15 percent limitations as the committee resolution would apply to earned income, particularly income earned from lecture fees.

With respect to unearned income, however, the mechanism is different than it is with earned income.

What would be required of Senators with income-producing assets is that they put those assets in trust under the complete control of a trustee. Their enjoyment of the income of the trust would be limited to 15 percent of their basic Senate salary, to the same extent that earned income would be limited.

There are differences, however, which make the discipline less restrictive with respect to unearned income, even with those limitations.

For example, income in excess of 15 percent would not be divested. It would simply be deferred. The Senator's enjoyment of the income would be deferred until the end of his Senate term.

Second, the amendment provides for three points of flexibility over the Senator's unearned income.

One, they could use income from the trust in excess of the 15 percent to pay income taxes on their income from whatever source.

Second, because of the Supreme Court decision last year on the use of personal funds for political campaigning, this amendment provides that funds may be used in excess of the 15 percent for that purpose which the Court says is mandated by the Constitution.

Finally, the amendment provides that income in excess of the 15 percent would be available for unforeseen personal circumstances. I suggest to my colleagues that is the kind of flexibility the committee resolution does not provide for earned income. But we do understand, those of us who sponsored this amendment, that any Senator can be hit by some unforeseen personal circumstances that ought to be taken into account with respect to restrictions on his income.

I take the view that ought to apply to those of us on earned income. Suppose we had a catastrophic illness in our family. What is wrong, may I ask, with going out on the lecture circuit and making a couple of speeches to a conflict-free audience for the purpose of meeting that emergency?

The committee recognizes no such emergency with respect to earned income, but my amendment does with respect to earned income, but my amendment does with respect to unearned income.

The whole purpose of this amendment is to treat all income, all outside income of Senators, the same.

This is not my idea of the right kind of discipline. The committee says it is with respect to some income, and I am willing to live with the restriction, as I am sure most Senators are, if it applies to all of us.

Mr. President, I have put in the RECORD today several editorial and newspaper columns or comments favorable to the point of view which I have been laboring to persuade the Senate on for several days.

The most recent that has come to my attention is the Wall Street Journal of today, which supports not my first amendment, unfortunately, but the second. The interesting thing is the philosophy in the column, the logic of this——

The PRESIDING OFFICER. All time on the amendment has expired.

Mr. MUSKIE. Then I will postpone reading that until we get to my second amendment.

I think we have talked the subject out, I am ready to vote, and I yield whatever time I have.

Mr. NELSON. Mr. President, have the yeas and nays been ordered?

The PRESIDING OFFICER. The yeas and nays have not been ordered.

Mr. NELSON. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the amendment (No. 93) of the Senator from Maine. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. ANDERSON (after having voted in the negative). On this vote I have a live pair with the Senator from Idaho (Mr. CHURCH). If he were present and voting, he would vote "yea." If I were permitted to vote, I would vote "nay." I therefore withdraw my vote.

Mr. CRANSTON. I announce that the Senator from Idaho (Mr. CHURCH), is necessarily absent.

I further announce that the Senator from Alasaka (Mr. GRAVEL), is absent on official business.

Mr. STEVENS. I announce that the Senator from North Dakota (Mr. YOUNG), is necessarily absent.

The result was announced—yeas 29, nays 67, as follows:

[Rollcall Vote No. 64 Leg.]

YEAS—29

Abourezk	Hatfield	Pearson
Bayh	Inouye	Riegle
Biden	Johnston	Roth
Dole	Leahy	Sarbanes
Domenici	Mathias	Sasser
Durkin	McClure	Tower
Garn	McGovern	Weicker
Goldwater	Morgan	Williams
Hart	Muskie	Zorinsky
Hatch	Packwood	

NAYS—67

Allen	Danforth	Laxalt
Baker	DeConcini	Long
Bartlett	Eagleton	Lugar
Bellmon	Eastland	Magnuson
Bentsen	Ford	Matsunaga
Brooke	Glenn	McClellan
Bumpers	Griffin	McIntyre
Burdick	Hansen	Melcher
Byrd, Harry F., Jr.	Haskell	Metcalf
	Hathaway	Metzenbaum
Byrd, Robert C.	Hayakawa	Moynihan
Cannon	Heinz	Nelson
Case	Helms	Nunn
Chafee	Hollings	Pell
Chiles	Huddleston	Percy
Clark	Humphrey	Proxmire
Cranston	Jackson	Randolph
Culver	Javits	Ribicoff
Curtis	Kennedy	Schmitt
Schweiker	Stennis	Talmadge
Scott	Stevens	Thurmond
Sparkman	Stevenson	Wallop
Stafford	Stone	

PRESENT AND GIVING A LIVE PAIR, AS PREVIOUSLY RECORDED—1

Anderson, against.

NOT VOTING—3

Church	Gravel	Young

So Mr. MUSKIE's amendment (No. 93) was rejected.

Mr. CRANSTON. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. THURMOND. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

AMENDMENT NO. 92

Mr. MUSKIE. Mr. President, I yield myself 5 minutes and I hope I might have the attention of my colleagues.

The PRESIDING OFFICER (Mr. ZORINSKY). Will the Senator allow the amendment to be reported?

Mr. MUSKIE. Mr. President, what is the pending business?

The PRESIDING OFFICER. The clerk will state the amendment.

The assistant legislative clerk read as follows:

The Senator from Maine (Mr. MUSKIE), for himself and others, proposes amendment No. 92.

The amendment is as follows:

On page 24, beginning with line 13, strike out all through line 24 on page 26.

Renumber proposed rules XLV through L (and cross references thereto) as XLIV through XLIX, respectively.

Mr. MUSKIE. Mr. President, I yield myself 5 minutes.

Mr. President, 67 Senators, if I heard the vote correctly, have just said in unmistakable terms that a limit of 15 percent on outside earned income is inequitable, unjust, and unjustified.

I would expect if those 67 Senators mean what they just said, not just as a matter of serving their own interests but in terms of wise and just public policy, those 67 will vote for this next amendment because that is exactly what this next amendment says with respect to all outside income, with one qualification that exists in current law. Under current law lecture fees are limited to $2,000 per lecture and $25,000 overall. So even with this next amendment earned income is subjected to more restrictive limitations than the unearned income which 67 Senators just voted to protect.

This vote also indicates probably that those of us in the group I am seeking to protect, including myself, are in a minority in this body. So the interesting question is whether or not the Senate will vote to protect the interests of a minority of Senators as well as the interests of a majority of Senators.

In the course of the day I have put into the RECORD many, many comments that are appearing in the press with respect to this issue.

I would like to call the Senate's attention to one that appeared in today's Wall Street Journal, a publication with which I do not find myself in very frequent agreement.

This is what the Wall Street Journal says with respect to the current situation, the committee resolution that limits earned income in the Senate vote.

Mr. NELSON. Mr. President, may we have order so that the Senate can hear the Senator?

The PRESIDING OFFICER. The Senate will be in order. Will Senators desiring to converse please adjourn to the cloakroom?

Mr. MUSKIE. So the Wall Street Journal has this to say about the current situation, which is a committee resolution that limits outside earned income and a Senate vote against limiting unearned income. This is what the Journal says:

The logic of this, we are told, is that a Senator is more likely to corrupt himself for a $1,000 fee than to protect his $250,000 investment in International Widgits. For a welcome change we find ourselves on the side of Senator Edmund Muskie of Maine, who wants no ceiling on outside income. We will trust the voters to decide at the polls whether or not they think their representation in Washington is suffering because of the outside activities of Senators and Congressmen.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MOST EXPENSIVE LOOPHOLE

The debate continues in our nation's capital on what kind of limits Congress should impose on the outside earnings of its members. We would like to point out why it cannot be done at all.

The House has passed a bill that would only permit a member $7,500 in outside "earned" income, above the congressional salary of $57,500. The majority of House members, after all, have neither the time nor the market power to earn more than $7,500 a year in speaking fees. But because most of them earn much more than that each year on stocks, bonds and real estate, they voted not to limit such earnings at all.

In the Senate, it is a similar story. The millionaire Senators, such as Edward Kennedy and Jacob Javits, are in such high tax brackets because of their investment income that it doesn't pay them to make a speech for a fee, since the federal and local governments confiscate most of it in income taxes. So they are quite prepared to be righteous and ethical and, like the House, limit outside earned income to $8,625, but do nothing about unearned income.

These limousine liberals have rationalized all this by saying it is obvious that speaking fees come directly from lobbies, and are thus influential. The source and influence of unearned income is "usually slight and remote," according to one line of reasoning. The logic of this, we are told, is that a Senator is more likely to corrupt himself for a $1,000 fee than to protect his $250,000 investment in International Widget.

For a welcome change, we find ourselves on the side of Sen. Edmund Muskie of Maine, who wants no ceiling on outside income. We will trust the voters to decide at the polls whether or not they think their representation in Washington is suffering because of the outside activities of Senators and Congressmen.

Even if Senators and Congressmen stopped up a few loopholes there would be others left unstopped. One that we wonder about, for example, is the capital gains lawmakers enjoy on the appreciation of their homes in the Washington metropolitan area. Given the tightness in the supply of classy housing near the federal triangle, all Congress has to do to send prices up is create another agency or expand the supergrades in the bureaucracy.

What with all the added demand, houses that once cost Congressmen or bureaucrats $25,000 are pushing upwards past $80,000. When we stop to think about it, this may be the most expensive loophole of all. It probably costs the taxpayers $10 million or more to add $1,000 to the net worth of a Congressman in this fashion. And we do not believe for a moment that members of Congress and the gilt-edge bureaucracy are unaware of what is happening. So much for ethics.

Mr. MUSKIE. Mr. President, in the course of 2 days, may I say to my colleagues, I have undertaken every effort at my command to elicit the justification for this discrimination between earned and unearned income, and the justification comes down to three points:

No. 1, public unhappiness with congressional ethics. That is a legitimate point. But all the evidence indicates the public does not focus on lecture fees as its only target of displeasure.

My good friend, the Senator from Missouri (Mr. EAGLETON), yesterday went through a catalog of public unhappiness with the Senate.

The PRESIDING OFFICER. The time of the Senator from Maine has expired.

Mr. MUSKIE. Five additional minutes. Not one related to lecture fees. Not one, and I reread the Senator's colloquy in the RECORD this morning.

The Lou Harris poll, to which reference has been made here, had a question, it is true, with respect to lecture fees, but I think there were 15 questions in all covering a range of public criticism of congressional behavior with respect to investment income, among others.

But the committee applies divestiture only with respect to lecture fees. Public unhappiness with congressional ethics, if it is a legitimate ground for limiting outside lecture fees, is a legitimate ground for limiting all outside income, and 67 Members of the Senate have just said no to that proposition. They have just said no. If no is the answer with respect to unearned income, it ought to be the answer, in all equity, to earned income.

The second test applies to the second element of justification. There is a risk that lecturing will take time away from Senate duties. I have spent 2 days putting my record in that respect into the RECORD. In the last 4 years I missed 4 days of a Senate session in 1 year because of lecture commitments, 4 days out of over 180; and the next 3 years I never missed more than 2 days out of the days the Senate was in session.

I remind our colleagues that I earned close to the limit on lecture fees. Last year I delivered 19, that is one every 19 days. And this committee says to me, "That is too much time to devote to your interests." If it is too much time, then I ask my colleagues how much less time do Senators enjoying unearned income spend on their investment portfolios, or on their family farms, or on their real estate ventures, or their oil and gas leases? How much less time do they spend on those than I spend earning whatever outside income I get? They just said that is no problem; 67 of them have just said that is no problem with respect to unearned income.

I say it is as much a problem with unearned income as with earned, and if their answer is no, as it has been, with respect to unearned income, it should be no with respect to earned income.

And then the third reason is the high risk of conflicts of interest.

I have been a target in this Chamber for 3 days because I said some things that Senators, and especially those on the committee, have found very uncomfortable. I have not heard anyone suggest yet that I have abused the public interest on the conflict-of-interest side. I suspect I could go over my 18 years on the lecture circuit and find some that I wish I had not made because of the appearance of conflicts, but I made a conscientious effort, a deliberative effort to avoid them, and I am not one to stand here and say there is no risk of conflict of interest with respect to lecture fees. But as to what kind of outside income is there no risk?

I put into the RECORD this morning a column by Walter Pincus in which he simply reviewed some of the outside interests of Senators who have voluntarily disclosed over recent years. Look that list over. Real estate ventures, land development partnerships, oil and gas leases, radio stations. I am not one to say that any one of the colleagues whose names are mentioned in that story was guilty at any time of a conflict of interest. But the test that has been applied to us is the risk, and if risk alone is enough to say you limit earned income, then it is enough to say you limit unearned income. I mean, what kind of a place has this become?

What kind of a place is it? When I came into politics, I made a deliberate decision to avoid the temptation of speculative investments, to close my law office, and to go on the lecture circuit because I regarded it on an historical basis as an honorable way to earn outside income. And now this committee tells me I made a mistake.

The PRESIDING OFFICER. The additional 5 minutes have expired.

Mr. MUSKIE. I yield myself 5 additional minutes.

I made a mistake when I sold my home the first year I was Governor. I should have used the proceeds to find a promising investment opportunity, however speculative, knowing that however speculative it might be I could find sponsorship that could reduce the risks of speculation, and Senators all know what I am talking about.

I deliberately did not.

That is not to criticize those who have investments, but then I arrive at this point in my Senate career, the 19th year, and I am told, "ED MUSKIE, that day you made a decision to avoid conflicts of interest, if only you had known how wrong you were, you were getting into the most conflict-of-interest-prone activity that the Senate of the United States in 1977 could imagine."

That is what the committee is saying, that the lecture circuit is the most conflict-of-interest prone of any outside

source of income. And they have not made their case.

The committee says in its report it did not have the time to conduct hearings or a survey to get the facts. No, they are going to correct the abuses the media has exposed; they are going to hang us in the press.

I hope this place is not what it seems to be, because if I detect the trend correctly it does not really matter what restrictions this imposes on me. I am not going to be around that much longer. But I can see future Senates made up of two groups of people: The very rich, who can afford to do anything they want, and maybe others who cannot do as well financially as with a Senate salary. For all those in between who have the talent, the drive, the energy to make a success of themselves in whatever form of activity they choose, from farming to practicing law, to engaging in any business, to engaging on the lecture circuit—and that is available outside the Senate of the United States—those people with special talents, skills, and energy——

The PRESIDING OFFICER. The Senator's 15 minutes have expired.

Mr. MUSKIE. Mr. President, 2 additional minutes. What are they likely to do?

The PRESIDING OFFICER. The Senator has made a unanimous-consent agreement not to take any more time until the last 15 minutes in the debate.

Mr. MUSKIE. Maybe this is a good time to sit down. I will wait until the last 15 minutes.

Mr. JAVITS. Mr. President, I would like to ask, who has control of the time on this amendment?

The PRESIDING OFFICER. The Senator from Wisconsin has control of the time.

Mr. JAVITS. Will the Senator yield 3 minutes?

Mr. NELSON. The majority leader asked for 15 minutes, I need 4 minutes and the minority leader has asked for 2 minutes. Where does that leave us? The Senator wants 3 minutes to ask a question?

Mr. JAVITS. Yes.

Mr. NELSON. I will yield this time but I cannot yield any more from our side.

Mr. JAVITS. Mr. President, I am inclined to be with the Senator on this point. I believe all of his arguments are pointed to this amendment and not the previous amendment. But this makes sense. I would like to be sure all Members understand what he is doing.

One, the Senator will leave the $25,000 and $2,000 per speech limitation; correct?

Mr. MUSKIE. That is correct. I do not believe we could change it if we wanted to.

Mr. JAVITS. In any case, the Senator will leave it.

Mr. MUSKIE. I leave it.

Mr. JAVITS. Second, the Senator will leave everything here about conflict of interest, so if a Senator accepted $50 for a speech and it was something that was nefarious, the Ethics Committee can haul him up and accuse him of it; correct?

Mr. MUSKIE. That is correct.

Mr. JAVITS. And last, and also very importantly, the Senator makes no change in the limitations on the professional services which Members may render, which is found at page 28, line 16 to line 19. That is, a Senator may not, to earn anything, act as an engineer, a real estate agent, an insurance agent, an attorney, a physician, an architect, a consultant, or activities of a similar character. Is that correct?

Mr. MUSKIE. The Senator is correct.

Mr. JAVITS. So the Senator is definitely on the question of honoraria. I think there he is dealing with a problem de minimis. It is true the other body went to 15 percent. There is nothing magic about that figure. One of the things that happens here, because of the position we occupy, is that we have more such opportunities and we are more in demand. The Senator would leave that opportunity for two reasons: One, to afford some opportunity for outside earnings for people who want to represent the big States where it costs a lot of money out of a Senate salary—and I have experienced it for years—and, second, and very importantly, to give a Senator freedom to bring his message to the people of our country.

Mr. MUSKIE. The Senator is correct.

Mr. JAVITS. I thank my colleague.

The PRESIDING OFFICER. The Senator from Wisconsin.

Mr. NELSON. Mr. President, I yield myself 5 minutes.

Mr. President, we went through this question backward and forward on Friday, into Friday evening, yesterday, and today, and anything that will be said from now on will be repetitious, just as the argument just made by the Senator from Maine was.

I might say, in listening to the Senator from Maine: He has done a magnificent job of destroying at least one straw man every hour. I have never seen such originality before in my life. And he has refuted every hour at least one argument that nobody is making.

We gave the Senator from Maine the last 15 minutes to speak, a very unusual unanimous-consent agreement. We did it out of good grace, good will, friendliness to the Senator from Maine.

Mr. MUSKIE. And perhaps out of agreement. [Laughter.]

Mr. NELSON. And we did it, too, out of compassion for the weakness of the Senator's case. We thought he ought to have the last word. [Laughter.]

I am not unmindful of the risks we took by allowing the eloquent Senator from Maine to speak last.

I know, we know, everybody knows his great capacity through his eloquence to make a bad case sound like a religious crusade against inequity and injustice. I have never heard anything like it.

Well, when he makes his closing remarks, as Senators watch his virtuoso performances, the music will be beautiful, absolutely beautiful. But I urge Senators to pay attention to the lyrics. The lyrics do not make any sense.

Last Friday night here in the Chamber we were entertained by a magnificent virtuoso performance. We were treated to everything from a soft shoe dance to a Nijinsky ballet. It was marvelous. And the music was superb, too.

Mr. MUSKIE. But does the Senator think that kind of a performance is worth some money? [Laughter and applause.]

Mr. NELSON. Yes.

The PRESIDING OFFICER. Let us have order in the Chamber.

Mr. NELSON. And if the Senator is that good every time, we will write an exemption in here for the Senator from Maine.

I listened to the music last Friday and again today. That presentation spanned the whole emotional spectrum, from pathos to ecstasy, with some funeral passages in the middle between the two.

I listened to that music that he was playing so beautifully here in the Chamber of the Senate, the low notes and the high notes, the loud notes and the soft notes. I shut my eyes, and I thought, "Isn't that beautiful, It sounds a bit like Mischa Elman playing on that golden Stradivarius, or maybe Kreisler, or Yehudi Menuhin, or Oistrakh's Star." It was absolutely magnificent.

Let me say, if Senators listened carefully to this beautiful orchestration they would have only one theme from yesterday and the day before yesterday. It has only one plain, simple, uncomplicated theme that did not have to be adorned with all of this entertainment that we received, which I appreciate. If he stuck to the theme, the real theme, and just ended it, it would take about 15 seconds. The theme is, "We want the right to earn more outside income. We want the right to earn $25,000 instead of $8,000."

There is no principle involved here. We have both agreed we will draw the line some place.

Senator MUSKIE does not like where the committee drew the line. That is his right. But that is what the argument is all about. That is what it is all about.

I yield myself 2 more minutes.

The question is not whether there should be no limit. It is just as valid for anybody to stand here on the floor and say, "I want $50,000," and every one of the arguments made by the Senator from Maine would apply with the same force that they applied to the limitation that the committee set out. So we have already established the limits twice: $15,000 once, $25,000 once, and now the committee made this proposal.

Now, that is the question: Should it be $8,600 a year, or should it be $25,000 a year?

Or just put it another way: The median income of the American family is $13,719, according to the Bureau of the Census. The question is, should we permit ourselves to earn a second income, beyond our salary, that is twice as much—twice as much—as the salary of the median income family in America?

My answer to that question, and the committee's answer, was no. Senator MUSKIE's answer was "yes."

The PRESIDING OFFICER. The additional 2 minutes has expired.

Mr. NELSON. I yield myself 2 more minutes.

I am aware of the fact that Congress does not adjust and has not adjusted

salaries of Members, judges, and top scientists and executives on any orderly basis, as we do for all other Federal employees, and as the private sector does. That has been our decision. I am aware, as is everyone here, that many expenses incurred in the course of the performance of official duties of the U.S. Senators are not reimbursed as they are by every business in America. For example, in paying for hotels and motels while on official business, everybody in the Federal Government, save the Senate, is reimbursed for it. When I travel with my staff, I rent a room and my staff rents a room. I pay for it; they get a per diem.

I am aware of all that. However, the answer to that problem is to adjust the salaries and pay for the expenses of performing the official duties of a U.S. Senator, not to create a system that permits, encourages, or compels—compels—one to earn large amounts of outside income.

That is where we are. That is the issue. It is up to you to decide whether Senator MUSKIE has set the right limit or whether the committee has.

The PRESIDING OFFICER. Who yields time?

Mr. NELSON. Mr. President, I yield 5 minutes to the Senator from South Carolina.

Mr. THURMOND. Mr. President, the point has been raised that it is just as fair to limit unearned income as earned income. In my opinion, it would be unconstitutional for this body to try to limit unearned income such as rents, dividends, interest, returns from stocks and other investment, returns from property. In my opinion, we cannot do that. I do not think that, under the Constitution of the United States, Congress can say to a man, "You cannot earn but so much from investments, and even though you earned it when you came here, you cannot earn it any more."

What is going to happen to it? I think it is clearly unconstitutional to try to do that.

I think it is constitutional, though, since we are Members of Congress, we are Members of the Senate, that we can limit the earned income. There is a nexus and relationship to our work. What is the purpose in that? The purpose in that is to devote more time to our Senate duties.

I have heard it argued how little time is taken. Maybe so, but I again say we have to appear right as well as be right. If we go out over the country, speaking or using our time to such a large extent in other things, the public is going to misunderstand the situation. They have already misunderstood it, because the Harris poll shows clearly that they want to see Congressmen spend their time on their duties.

I do not think there is any doubt that the salary here, since it has been raised—$57,500, and then a Senator can earn $8,600 more from earned income, making $66,125—do you think you can go out and tell any family in this country that $66,000 is not a reasonable salary for a Senator? Can you go out and explain to your constituents that $66,000 is inadequate and therefore you ought to increase it to $82,500?

That is exactly what we would do if we adopt this amendment of the Senator from Maine, because $57,500 now, with $25,000 added to it, is $82,500. I just do not believe the public is going to buy that.

Do we want a code of ethics or do we not? That is the question. If we want a code of ethics, then let us show the public we are going to give our time to the Senate and cut down on outside engagements. If we do not want a code of ethics, then I say vote for the amendment of the Senator from Maine.

Mr. BIDEN. Mr. President——

The PRESIDING OFFICER. Who yields time?

The Senator from Wisconsin has 14 minutes left.

Does he wish to yield any time?

Mr. NELSON. I yield the time to the majority leader, who had wanted 15 minutes.

Mr. ROBERT C. BYRD. I yield 2 minutes to the Senator from Delaware.

Mr. BIDEN. Mr. President, I rise as one who is going to vote against Senator MUSKIE's amendment, but I think it is fair to point out what I believe to be some of the hypocrisy that is occurring here on the floor.

The distinction between unearned and earned income seems to me to be a bit of a specious argument. Really, what the folks are concerned about is whether we have a conflict of interest, not how much time we spend or do not spend. The Senator from New Hampshire and I have an amendment to come up later that deals with limiting the kind of lecture fee you can accept, based upon whether or not it presents a potential conflict.

I am fascinated by the argument of the Senator from South Carolina. The argument is whether or not Senators should be able to earn $66,000 or $82,500, whatever it is. The fact of the matter is not every Senator can earn $25,000. I hate to shock you fellows, but a lot of folks do not want to hear you for $25,000.

The fact of the matter is, when the rate was down, it was brought up by fellows like Senator MUSKIE, who are in demand, whom people do want to hear. You are saying to them, "you cannot earn it." Yet you, in fact, can go out and have your private investment, your real estate transactions and all the rest, and say that somehow does not present a conflict.

I think it should be set straight. This is not a question of whether every Senator is going to have an $85,000 or $25,000 limit. How many of you guys were asked to speak $25,000 worth last year? It seems to me what it comes down to here is the folks who were not asked are the ones who are voting against it. The folks who were asked will vote for it.

It is on the record; I have made the limit every year since I have been here. The reason I have voted against the Senator is that I think I have painted myself into a box, quite frankly. The issue is conflict, not time. I cannot, in good conscience, vote against the limit of 15 percent unless we deal with the specific issue of whether or not a conflict exists. I, for example, have never accepted an honorarium, even though I have made the limit every year, from any group that potentially has a legislative interest before the Congress—nothing from a business, nothing from labor or any other group. There is nothing wrong with it; I just felt that, for me, the propriety was that I should not.

It really galls me when folks stand up here and say, when they have outside income—2 more minutes if I may——

Mr. ROBERT C. BYRD. Two more minutes.

Mr. BIDEN (continuing). That other folks in here who are asked to speak somehow are in conflict. Do you really think the folks believe that it is more of a conflict for me to speak as a Chubb fellow at Yale for a thousand dollars on the time that Congress is not in session than it is for one of my colleagues to have an oil lease?

Let us talk about conflict, not time; they think has more potential of conflict? This is a bunch of malarkey. It really is. It really is a little bit insane.

Let us talk about conflict, not time; that is a red herring. If the folks do not think we are spending enough time here, they can look at our voting record. They can make that determination. But let us set them straight that we are concerned about conflict.

But fellows, there is at least as much a conflict in unearned income as in my being a Chubb fellow at Yale for 2 days or a weekend. My Lord.

So, I have said enough.

The PRESIDING OFFICER. The Senator from West Virginia.

Mr. ROBERT C. BYRD. Mr. President, how much time remains?

The PRESIDING OFFICER. Ten minutes.

Mr. ROBERT C. BYRD. Ten minutes. I thank the Chair.

Mr. President, first I want to express appreciation to Mr. NELSON, the chairman of the Special Committee, and to all of the members of that committee on both sides of the aisle. They worked tirelessly. They worked long days. They worked weekends and they followed the guidelines that had been laid down in the resolution that was introduced by Mr. BAKER and myself creating the committee. In my judgment, the Senate is in their debt because of the dedication that they demonstrated to their responsibilities, which reflects well upon themselves and upon the Senate.

Mr. President, some reference to me has been made today by the distinguished Senator from Oregon (Mr. PACKWOOD) in which the transcript reads as follows:

> Whether it be jealousy because some Senators are more popular on the speaking circuit than others, whether it be fear, whether it be fear of the majority leader of the Senate who has talked to every single Democrat. In at least three instances Democrats who have talked to me who were initially supporting us on this have changed their mind because of what they said was pressure brought on them by the majority leader.

Well, Mr. President, I know how things are said sometimes in the heat of debate that, really, upon reflection and upon careful study might not have been said.

As to jealousy, may I assure the Members of the Senate that I am not jealous of any Senator who can command speak-

ing fees amounting to the maximum of $25,000. I have never been able to do it, but certainly there is no jealousy on my part in this regard.

For the purpose of the record, let me state that my lecture fees within the past 10 years run as follows: In 1968, $5,775; 1969, $7,121.25; 1970, $1,275; 1971, $9,650; 1972, $10,937.50; 1973, $10,250; 1974, $11,325; 1975, $12,900; 1976, $4,000; and to date in this year of 1977, $8,000, making a total of $81,233.75.

So it is not a matter of jealousy at all that compels me to oppose this amendment.

I think I should state that a considerable portion of that honoraria went to pay for U.S. savings bonds which I give to valedictorians in public and parochial high schools in West Virginia each year.

Since 1969, I have contributed out of this outside "earned" income $36,881.25 to the purpose of purchasing U.S. savings bonds which I have given to the valedictorians, as I have indicated.

So not only am I not jealous; I greatly admire those who are able to command such speaking fees, and I can understand their sincerity in arguing against the limitation that the committee has recommended.

But I have not exerted myself, may I say with respect to Senator PACKWOOD's reference to "fear of the majority leader," I have not exerted myself as majority leader on this issue any more than I did on behalf of the Federal pay increase.

I contacted many Senators individually in support of that pay increase and I have no apologies, no apologies whatsoever to make for my efforts in that instance, or for my efforts in connection with the current matter. In both instances I acted in what I thought were the best interests of the Senate as an institution.

As to the Federal pay increase, my statement in support thereof was made at the time I made the motion to table the amendment by Mr. ALLEN. That is a matter of record and I do not need to repeat at this time my reasons for supporting the Federal pay increase.

Last week I stated on the floor my support for the Nelson committee's recommendation with respect to a 15-percent limitation on outside income.

Now, I have indeed talked to some Senators about the two Muskie amendments. I have not talked to all Senators on my side of the aisle, because there was not time.

I first began calling Senators when I received a letter which had been signed by the distinguished Senator from Maine and three other very distinguished Senators—including Mr. PACKWOOD—in support of his amendments—one of which we are about to vote on and one of which we voted on just a moment ago.

But I did write a couple of letters to all Democratic Senators, one dated March 17, 1977, which closes in this fashion:

I shall, therefore, oppose any effort to increase that limitation, or eliminate it, or extend it to outside unearned income. I hope the Senate will stand by the Nelson Committee position in this important regard.

I wrote another letter today to all of my colleagues, the closing paragraph of which says:

I hope that the Senate will uphold the Nelson Special Committee on Official Conduct in voting against both amendments.

Mr. President, I ask unanimous consent that the two letters be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

U.S. SENATE,
OFFICE OF THE MAJORITY LEADER,
Washington, D.C., March 17, 1977.

The Honorable ----------,
U.S. Senate,
Washington, D.C.

DEAR ----------: As you know, I strongly supported the Congressional pay raise that was proposed by President Ford, based on the Peterson Commission recommendations. That pay increase also went to certain high level positions in the Executive Branch and the Judiciary.

I also support the 15-percent limitation on outside earned income recommended by the Special Committee on Official Conduct, chaired by Senator Nelson. I shall, therefore, oppose any effort to increase that limitation, or eliminate it, or extend it to outside unearned income. I hope the Senate will stand by the Nelson committee position in this important regard.

Sincerely yours,

ROBERT C. BYRD.

U.S. SENATE,
OFFICE OF THE MAJORITY LEADER,
Washington, D.C. March 22, 1977.

DEAR COLLEAGUE: A vote is scheduled to occur today at 5:00 p.m., on Senator Muskie's amendment to apply the 15-percent limitation to outside "unearned" income.

A second vote is scheduled to occur at about 6:15 p.m., on Senator Muskie's amendment to eliminate the 15-percent limitation on outside "earned" income.

I hope that the Senate will uphold the Nelson Special Committee on Official Conduct in voting against both amendments.

With warm personal regards.

Cordially yours,

ROBERT C. BYRD.

Mr. ROBERT C. BYRD. Mr. President, there have been some other comments and some remarks about a "Bird" bath in the Senate, all of which I take in perfectly good humor.

But, in no instance did I say anything that could create "fear of the Majority Leader," nor would it be possible for me to have done so. Senators know better than that.

Mr. President, my point is this, the Peterson Commission, President Ford, and President Carter, all supported the Federal pay increase. They tied that pay increase to an official code of conduct and, implicit in their support, was a limitation on outside "earned" income as a part of the code of conduct that they recommended.

I emphasize that one of the key principles of the code of public conduct as envisioned by the Peterson Commission was a "rigorous restriction on outside earned income, so that the public can reasonably assume that higher salaries proposed in the Commission's report represent substantially all the earned income which the public officials covered by the report will receive."

Mr. Ford specifically linked his recommendations for substantial pay increases for top Federal officials, including Members of Congress, to the adoption of a code of conduct in which there would be a strict limit on outside earned income.

As I say, I supported the salary increase. I feel it my duty now to support the committee's recommended limitation on outside earned income.

As a result of the salary increase, a Member's salary today is $57,500. The limitation of 15 percent on outside earned income—which is the same limitation that was adopted by the House of Representatives in its own code of conduct—brings to a total the amount of $66,125 which can be earned by a Senator or Member of the House of Representatives.

It is a salary that places U.S. Senators in the top 1 percent, the top 1 percent of the America public in terms of income. I think it would be extremely difficult to sell to the other 99 percent of the American people—those whose earnings are well below $66,125—the proposition that the 15-percent limitation on outside earned income will divest a Senator of enough income to affect his economic viability.

The distinguished senior Senator from Maine, Mr. MUSKIE, on last Friday discussed the economic hardship that will be placed on him by this limitation. Financial hardship is no stranger to me. It is no stranger to most of us here. I came to the House of Representatives in 1953. The salary at that time for Members of Congress was $12,500. We were reimbursed for one round trip to the home district a year. That is a statutory mileage payment which goes back to July 28, 1866.

My wife and I had to rake and scrape to buy a little house. We had to borrow money. I had to run every other year for reelection as a Member of the House of Representatives. I was a Member of that body 3 terms. We had two daughters to educate, and we put a Chinese orphan through college. We put me through night law school—all of this out of my income from salary and honoraria.

I know, therefore, firsthand the problems for the Members of this body and the other body—and especially new Members—confronted with the financial sacrifices that they have to make while serving in the Senate and House. I recognize the financial burden on these Members, but it is a burden that the pay raise has helped to alleviate. The fact that a Member may continue to earn up to 15 percent of his base salary in lecture fees, and so forth, will help further to alleviate the financial strictures of Members of the Senate.

Mr. President, reference has been made to the necessity of the lecture circuit to further the public dialog. That will not be hampered by the 15-percent limitation on outside earned income. A public dialog is now focused on the floor of the Senate. The days of the Chautauqua circuit are gone forever. The national news media now reports events simultaneously with their occurrence.

This is the finest and the best speech forum in the world.

Right up there sits an entire gallery of press media. The printed media, the television and radio media are at hand. We have our opportunities to get on the Sunday shows: Face the Nation, Issues and Answers, Meet the Press, and so on. We have every opportunity to get our views out to the public, and Senators are not prohibited from even the lecture circuit under the 15-percent limitation. They are only prohibited from earning more than $8,625 in honoraria by doing so.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. ROBERT C. BYRD. Mr. President, Mr. NELSON yielded 3 minutes to Mr. JAVITS, I believe.

Mr. MUSKIE. Mr. President, I yield to the Senator.

Mr. ROBERT C. BYRD. Not more than 3 minutes.

Mr. MUSKIE. I yield.

Mr. ROBERT C. BYRD. I thank my colleague.

Senators can continue to make as many speeches as they wish, even with this limitation. They can make as many as they wish, if they accept only the expenses and stay within the 15-percent limitation. Under the terms of the resolution, they can receive honoraria for speeches up to $25,000 a year, if that money is dedicated to charity and the tax deduction is not taken.

In closing, may I say that I have only the highest regard for ED MUSKIE, who is the author of this amendment. I know of no Senator who is more dedicated, more effective, more articulate, and more eloquent. No wonder he receives invitation after invitation to go out and speak.

His work as chairman of the Budget Committee, for example, has been truly one of the great landmarks of effectiveness and dedication in the Senate. I respect him for his work, for his strong convictions in regard to this matter, and for his impeccable integrity.

It goes without saying, therefore, that my opposition to this amendment is in no way directed toward him or any other Members of the Senate, and I say exactly the same thing about this committee, which has labored so long and so hard. The committee's work has been done out of dedication to the mandate that was laid down in the resolution, and was not directed against any Senator in this body today.

I close simply by thanking Mr. MUSKIE and thanking all Senators who have participated in the debate. I think it has been an excellent debate.

Also in closing, I urge Senators to vote down the amendment because, in my judgment, the American people expect the Senate to enact a strong code of ethics. I think a limit of 15 percent on outside "earned" income a necessary ingredient in that code and is a reasonable limit, especially when tied to the recent pay increase. I believe that for the good of the Senate, at this particular time in history, the Senate should uphold the Nelson committee's recommendation in this regard.

The Code of Official Conduct, Mr. President, is the standard for the present and the future, to guard against potential abuse. It will be viewed as a watershed in the Senate's efforts to strengthen itself as an institution.

Mr. LONG. Mr. President, will the Senator yield?

Mr. ROBERT C. BYRD. If I have any time remaining out of the 3 minutes.

The PRESIDING OFFICER. The time of the Senator from West Virginia has expired.

Mr. ROBERT C. BYRD. My time has expired. I am sorry.

Mr. MUSKIE. Mr. President, I appreciate the kind references of the distinguished majority leader. I wish he would permit me to send them to booking agencies. I also would like, if I might have permission, to send the remarks of the distinguished Senator from Wisconsin (Mr. NELSON) to the booking agencies, but only if this amendment is agreed to. [Laughter.] Otherwise, there is no point in selling what is not available.

I say to the distinguished majority leader these things:

First, he emphasized the point that $66,125 should be enough. However, 67 Senators, including the Senator from West Virginia, have just voted to the effect that $66,125 is not enough, except as to Senators with earned income.

I put a column in the RECORD this morning which reveals what some Senators had disclosed voluntarily: outside incomes of $125,000, $112,000, $74,000, $65,000; all incomes that are not limited by this 15 percent, not limited at all. But the limit is to apply to us, because apparently in the Senator's judgment lecture fees are more conflict of interest prone than any other form of outside income.

If that is the basis of his judgment, then I challenge his facts. If it is not the basis of his judgment, then I challenge the limit. I can see no justification, none whatsoever, for a limit on anybody's income if there is no conflict of interest.

That is my simple proposition. It has taken all the orchestration I can command—and I doubt that it is as good as my good friend from Wisconsin suggests—to get to that point.

I do not believe the American people demand that we prohibit income, earned or unearned, which involves no conflict of interest and which does not interfere with a Senator's duty as a Senator. I believe that if it meets those two tests, the American people would not want to prohibit, would not insist on a code of ethics that contains that kind of limitation. I do not believe it, and there is not a poll I have read that suggests the contrary. On the contrary, the Harris poll, which has been involved so much in this debate, says clearly, with respect to outside earned and unearned income, where there may be a conflict, that they would be satisfied with disclosure; and this committee says that at the heart of the code of conduct is full and complete public financial disclosure.

If that is sufficient for the public, and if it is a principle that the committee embraces with respect to everything in this code except earned income, then it is a principle that is sufficient to safeguard the public against conflict of interest from earned income unless somebody can show, and nobody has shown in 3 days of debate, that lecture fees are so fraught with the danger of conflict of interest that they have to be prohibited altogether.

This is simply a stepping stone on the road to complete prohibition. Common Cause, which is the behind-the-scenes force on this code of ethics, has said so, that is their objective; so that is the objective.

When they get us, gentlemen, they will get the rest of you, they will get after your incomes, your outside incomes, whatever. I say full disclosure is adequate.

Now, on this point that when you voted for the pay raise you voted for a code of ethics, what does that mean?

Did you at that moment consciously vote for each and every provision in the code of ethics or did you reserve to yourself some measure of judgment as to what is reasonable, unreasonable, effective, ineffective? When you cast that vote did you rubberstamp anything the committee might produce? When you cast that vote did you rubberstamp whatever the majority had in mind as to what would be a satisfactory code of ethics?

Of course, you did not. This code goes into great specifics about a lot of things. The question was raised the other day as to whether or not the public was not expecting some specific and not just generalities like full disclosure.

Well, look on page 2 of the committee report. I ask unanimous consent that the summary contained on page 2 be printed in the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY

Summarized briefly, these proposed Rules set forth in Title I would provide for:

1. Public financial disclosure by Senators or officers and employees of the Senate earning in excess of $25,000 per year. Reporting individuals would be required to list their earned income and the sources and categories of value of their income, other than earned income, and all other interests, assets, and holdings held for the purposes of investment or income production;

2. A prohibition on knowingly accepting a gift or gifts having an aggregate value of over $100 during a year from any individual or organization having a "direct interest in legislation", as defined in that proposed Rule;

3. A prohibition imposed on senators, officers, and employees of the Senate earning more than $35,000 from earning outside income in an amount exceeding 15 percent of their salaries;

4. A prohibition on members, officers, and employees earning over $25,000 from practicing their profession or rendering professional services;

5. A prohibition on the use of so-called "unofficial" office accounts;

6. A prohibition on the practices of so-called "lameduck travel" in connection with foreign travel;

7. A restriction on the use of the frank

to materials printed or paper purchased with government funds;

8. A prohibition on keeping officers and employees of the Senate on the Senate payroll while they are engaged substantially in campaign activities; and

9. A prohibition against discriminating on the basis of race, color, religion, sex, national origin, or state of physical handicap in employment practices in the Senate.

Title II sets forth certain amendments to S. Res. 338, agreed to in 1964, which established the procedure of the Select Committee on Standards and Conduct, now the Select Committee on Ethics. This procedure includes a provision designed to insure that every sworn complaint to the Select Committee will receive an initial review by the Committee; that if the Committee determines the complaint to be lacking in merit, the complainant and the accused will be informed; if the Select Committee decides that the complaint warrants a full investigation, a report to the Senate would be required. Title II also provides that if two members of the Select Committee disagree with a decision by a majority of the Select Committee, those members can bring the matter to the attention of the full Senate by offering a resolution which, if adopted, would instruct the Select Committee to hold a full investigation.

Title III sets forth recommendations that certain studies be made by various Senate committees to follow up in certain areas which the Committee did not have time to deal with fully. For example, in the course of studying the uses of "unofficial office accounts" and the resulting problems, the Committee concluded that the uses of such accounts were closely tied to relatively narrow restrictions on permissible uses of official allowances. For that reason, the Committee is recommending that the Committees on Rules and Appropriations study the adequacy and permissible uses of official allowances and report their recommendations to the Senate.

Mr. MUSKIE. There are more specifics in this code, aside from this one on earned income, and you are going to find it uncomfortable living with, believe me, if you have not already read it and reached that judgment yourself. There are all manner of specifics in here, and I support the bulk of them, but they are not going to be easy to live with, and there is plenty of specific evidence to give your constituents back home that you are an honest man.

That, after all, is what we are all trying to prove with our vote this afternoon, are we not? It is suggested that those of us who are going to vote for the Muskie amendment are somehow soft on ethics—let me repeat, somehow soft on ethics. Well. I challenge that, and I have got a public record that supports my challenge. The people I know in this body who are on the lecture circuit have public records to support that challenge.

We do not need to rubberstamp any committee, and if the Senate rubberstamps this committee it will be the first time in my 19 years in the Senate when I have seen a committee rubberstamped on a controversial issue by every Senator.

What makes this committee so special that it should be rubberstamped? I wish I could command that kind of power, to say to every Senator, "Unless you vote for my bill you are dishonest" or "you are unethical" or "you are soft on ethics."

Is that the power we are having waved around this Chamber this afternoon unless we rubberstamp this?

I told you earlier today about the six Senators I called when I got to my office this morning, and five of them said, "Ed, you are right, but I cannot vote for you."

Why could they not? One had made a commitment to the majority leader; two or three others had voted for the pay raise and were taking flak back home, and had to cast a vote that would offset that flak; and they were feeling the pressure of public dissatisfaction with congressional ethics. So even though they believed I was right on the merits, and that those reasons were irrelevant on the merits, they were going to vote with the majority leader.

I have a very strong feeling that if this amendment is defeated, it will be defeated notwithstanding the fact that a majority of the Senate agrees with me on the merits.

Mr. ROBERT C. BYRD. Mr. President, the Senator did not interrupt me, but may I interrupt him for a second?

Mr. MUSKIE. Of course.

Mr. ROBERT C. BYRD. In my calls to Senators and in my personal discussion with Senators I found several Senators who said to me they were already committed to the Senator from Maine, and so I left them alone when they said that.

Mr. MUSKIE. Well, I did not run into your tracks anywhere, Bob. [Laughter.] You are more adept at concealing it. But you have enormous influence here not only because of your position as majority leader but because you are a very persuasive man, too. But when your persuasion is added to the pressure of public dissatisfaction with congressional ethics generally what is created is sort of a lynch-mob environment in which people will just vote anything in the name of ethics, whether or not it is wise, and I just do not think that is the way we ought to be writing this policy.

But, as the Senator from Wisconsin has suggested, I have talked more than my share, and I apologize if I have overburdened my colleagues with the thrust of my arguments. Obviously I feel deeply about it. I do not very often engage in this kind of extended debate. I have tried not to repeat myself, but because the Senator from Wisconsin repeats himself I have to in order to respond. [Laughter.]

But in any case I thank you all for listening and for giving us your attention for the last hour. We have had an audience and I cannot complain about that.

ADDITIONAL STATEMENT SUBMITTED ON AMENDMENT NO. 92

Mr. HATHAWAY. Mr. President, I appreciate a number of the points made by my good friend and colleague from Maine. He has done an excellent job in illuminating many of the issues associated with the proposed Code of Conduct and its limitation on outside earned income.

This is a most difficult question of judgment and interpretation, but after careful analysis, I feel compelled to oppose his amendment which would strike from the code the provision imposing a 15 percent limitation on outside earned income.

I am opposed to the amendment because this particular provision is one of the most important in the proposed Code of Official Conduct. Perhaps more than any other provision, it helps to assure the people that their Senators are working for them full time and are devoting only a limited amount of their offwork hours to outside earning activities. This provision indicates that Senators will devote themselves first and foremost to the concerns of their constituents and will not be excessively diverted or distracted by other activities.

Such a provision is vital and necessary if we are to counter and reverse a public perception that elected officials are interested either primarily, or to an unhealthy degree, in personal gain, and only secondarily in the concerns of the people.

Certainly, this provision will cause some hardship; but I think we should all be willing to make this commitment as a condition of our serving in this body. As long as we are members of the Senate, we should be willing to put private affairs aside for the most part and concentrate instead on legislative duties and assisting our constituents.

It has been argued that the code, in limiting earned income but exempting unearned income, discriminates against those of us who did not arrive in this body as wealthy men and are not now wealthy men.

The code does treat these two kinds of income quite differently. But they ought to be treated differently since they have different characteristics and pose different problems in terms of their potential for creating conflicts of interest and conflicts of time, and for creating perceptions on the part of the public of apparent conflicts.

Unearned income, by definition, does not require that any personal services be rendered. Later, I intend to offer an amendment to insure that this code preserves this definition and insures that no personal services will be rendered in connection with exempt, unearned income. Unearned income is basically a return on capital—a return on passive assets which generate income to the possessor of those assets.

Earned income, on the other hand, represents a quid pro quo for actual personal services rendered which have a certain value to the recipient of those services. That value may be in terms of income ultimately produced to the recipient on the basis of the services rendered, it may be in terms of entertainment value of the services, or simply in terms of the market value of such services which are desired by, or necessary to, the recipient. Those who receive earned income must somehow fulfill the requirements, perform the job, or render the service for which they were hired and for which they are paid.

The committee, given the different nature of these two kinds of income, determined that outside earned income ought to be restricted to 15 percent of

salary, but placed no such limitation on unearned income.

This determination was a reasonable approach to this problem, although I do not suggest that there might not be others equally reasonable. Restricting outside earned income to 15 percent of salary, or an additional $8,600 per year, represents a reasonable device to insure that Senators devote only a limited amount of time to outside activities, and, within that $8,600 limitation, the $1,000 limitation on individual honoraria minimizes the potential that such speaking engagements will become vehicles for influencing a legislator in performing his official duties.

Further, it is important to note that the code does not totally ignore unearned income; its sources and categories of value must be disclosed, as must gains on the sale of such property. Under the code, Members and employees are precluded from using their positions to introduce or aid the progress of legislation which would further their direct pecuniary interest.

In deliberating these matters and in voting on the provisions before us, it is important to realize that we have not reached an ideal solution.

The code before us is not perfect and we have much work to do in the future to improve and refine it. But with the present effort, we have begun this important work. In an ideal world, we would insure that all Senators were totally divested of any assets which might cause the remotest potential for conflict. They would be stripped of all outside holdings and would depend solely on their salary which would be fully adequate to meet all of their financial needs. This solution is not practical, given our economic system and given our Constitution.

In the meantime, we must insure that the rates of pay received by Members of this body and by top-level Federal officials and Federal judges are fully equivalent and comparable to that received in the private sector for jobs of equivalent responsibility. We ought to do this not because we are greedy, not because we like to raid the Treasury for our own benefit, but because we want to insure that the U.S. Senate, the Supreme Court, and top-level civil service positions attract and hold capable people.

It is for this reason that I have supported cost-of-living pay increases for the executive, judicial, and legislative branches. But these increases have been resisted by many in this body and in the House of Representatives. Until the most recent increase took effect, we had a situation where the cost of living had increased by over 60 percent in 7 years, but our own salaries had gone up 5 percent. This situation caused a very significant decline in the real purchasing power of our pay and aggravated the impact which prior accumulated wealth, or the lack thereof, has upon service in this body. Given these circumstances, a number of us have augmented our salaries by delivering lectures.

But, rather than becoming speakers on the lecture circuit to ameliorate these economic facts of life, it is a more proper, more rational approach to allow for increases consistent with the cost of living, as is done throughout the private sector and the rest of Government.

We should be willing to do this on a direct and open basis. I supported the recent increase in executive, judicial, and congressional pay because I felt it contributed to a better quality of government in all three branches. I supported it openly and through a rollcall vote because I felt that any needed increases ought come from official salary, and not from other sources. We should not feel forced by political exigencies to vote against such proposals and then make up for the lost income through delivering speeches to outside groups and interests. If collectively we were willing to so act, the public would be assured that we were doing our job and we would avoid the appearance of being an adjunct to show business.

SEVERAL SENATORS. Vote! Vote!

The PRESIDING OFFICER (Mr. SASSER). All time has expired.

Mr. ROBERT C. BYRD. President, has all time expired? I was going to suggest if it had not that we proceed to vote.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Maine.

Mr. ROBERT C. BYRD. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The yeas and nays are ordered, and the clerk will call the roll.

Mr. ROBERT C. BYRD. Mr. President, before there is a response, there will be no more rollcalls tonight unless perchance this vote were to be so tight that there would be a motion to reconsider, and so on, which could occur. But I know of no Senator who wishes to have another vote tonight.

Mr. WEICKER will lay down his amendment upon the disposition of this matter and that will be the pending question when the Senate goes back to this issue tomorrow.

The PRESIDING OFFICER. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Idaho (Mr. CHURCH) is necessarily absent.

I further announce that the Senator from Alaska (Mr. GRAVEL) is absent on official business.

I further announce that, if present and voting, the Senator from Idaho (Mr. CHURCH) would vote "nay."

Mr. STEVENS. I announce that the Senator from North Dakota (Mr. YOUNG) is necessarily absent.

The result was announced—yeas 35, nays 62, as follows:

[Rollcall Vote No. 65 Leg.]

YEAS—35

Abourezk	Goldwater	Laxalt
Bayh	Hansen	Lugar
Byrd, Harry F., Jr.	Hatch	Mathias
	Hatfield	McClure
Curtis	Hayakawa	McGovern
Danforth	Heinz	Metcalf
Dole	Inouye	Muskie
Garn	Javits	Packwood
Pearson	Schmitt	Tower
Percy	Schweiker	Wallop
Riegle	Stennis	Weicker
Roth	Talmadge	Williams

NAYS—62

Culver	Magnuson	Stone
DeConcini	Matsunaga	Thurmond
Domenici	McClellan	Zorinsky
Durkin	McIntyre	

NOT VOTING—3

Church	Gravel	Young

So Mr. MUSKIE's amendment was rejected.

Mr. THURMOND. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. Under the previous order, the Senator from Connecticut (Mr. WEICKER) is recognized.

Mr. SCHMITT. Mr. President, may we have order?

The PRESIDING OFFICER. Let us have order in the Senate.

AMENDMENT NO. 86, AS MODIFIED

Mr. WEICKER. Mr. President, I send my amendment 86, as modified, to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Connecticut (Mr. WEICKER) proposes an amendment numbered 86 as modified.

Mr. WEICKER. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment, as modified, is as follows:

Strike out all after "Resolved," through page 32, line 10, insert in lieu thereof the following: "That this resolution may be cited as the 'Official Conduct Amendments of 1977'.

"TITLE I—CODE OF OFFICIAL CONDUCT

"SEC. 101. The Standing Rules of the Senate are amended—

"(1) by striking out rules XLI, XLII, XLIII, and XLIV; and

"(2) by renumbering rule XLV as rule XLI, and by adding after such rule the following new rules which shall be known as the 'Senate Code of Official Conduct':

"'RULE XLII

"'PUBLIC FINANCIAL DISCLOSURE

"'1. (a) (1) Each individual who for a period in excess of ninety days during a calendar year is a Senator, or an officer or employee of the Senate who is compensated at a rate in excess of $25,000 a year, shall file a report containing a full and complete financial statement for that calendar year.

"'(2) Each employee designated under rule XLIX to handle campaign funds during any calendar year shall file a report containing a full and complete financial disclosure statement for that calendar year.

"'(b) Each individual described in subparagraph (a) who during any calendar year ceases to occupy an office or position described in such subparagraph shall file a report containing a full and complete financial statement for that portion of such year beginning on January 1 and ending on the date on which he ceases to occupy such office or position.

"'(c) Any individual who seeks nomination for election, or election, to the office of United States Senator shall file in any year in which such individual has—

"'(1) taken the action necessary under the law of a State to qualify for nomination for election, or election, or

"'(2) received political contributions or made expenditures, or has given consent for any other person to receive political contributions or make expenditures, with a view to bringing about such individual's nomination for election, or election, to such office, a report containing a full and complete financial statement for the preceding calendar year.

"'(d) The Secretary of the Senate shall submit annually to the Select Committee on Ethics (hereinafter referred to as the "select committee") a complete list of Members, officers, and employees of the Senate who are required to file a report under this paragraph and shall submit at the close of each calendar quarter a list of individuals required to file such report who have begun or terminated employment with the Senate or been designated pursuant to rule XLIX.

"'2. Each individual shall include in the report to be filed under paragraph 1 a copy of the returns of taxes, declarations, statements, other documents, and amendments thereto, which he, he and his spouse jointly, his spouse separately, his dependents, or any fiduciary (regarding income received on behalf of such individual), made for such year in compliance with the income tax provisions of the Internal Revenue Code of 1954, except that the deduction for medical and dental expenses and for charitable contributions may in each case be shown only as the total amount of such expenses and contributions and the supporting information required therewith need not be disclosed. Each individual shall also include in such report a full and complete financial statement in such manner and form as may be prescribed by the Select Committee and which shall include the following:

"'(a) The identity and fair market value of each asset (other than household furnishings, goods, jewelry, and clothing) held during the calendar year which is in excess of $1,000.

"'(b) The identity and amount of each liability which is in excess of $1,000 owed at any time during the preceding calendar year.

"'(c) Each gift or aggregate of gifts from one source (other than relatives) received during the calendar year which exceeds $100.

"'(d) An itemized listing of all honoraria received by him in the calendar year.

"'(e) The identity of all positions held at any time during the calendar year as an officer, director, trustee, partner, adviser, proprietor, agent, employee, or consultant of any corporation, company, firm, partnership, or other business enterprise, any nonprofit organization, and any educational or other institution.

"'(3) For purposes of subparagraphs (a) through (e) of paragraph 2, an individual shall report each gift received, each item received in kind, each asset held, each liability owed, and each position held by him, his spouse, or any of his dependents, or by him and his spouse jointly, him and any of his dependents jointly, or his spouse and any of his dependents jointly, or by any person acting on his behalf.

"'4. Since it is the policy of the United States Senate that Senators and officers and employees of the Senate make full and complete public financial disclosure of financial holdings, it is the sense of the Senate that trusts established for the purpose of being "blind trusts", whether revocable or irrevocable, shall be dissolved by the creating party to permit the disclosures required by this rule.

"'5. (a) Each individual required to file a report under paragraph 1(a) for any calendar year shall file such report with the Secretary of the Senate not later than May 15 of the next year.

"'(b) Each individual required to file a report under paragraph 1(b) for a portion of a year shall file such report with the Secretary of the Senate on the last day he occupies an office or position described in paragraph 1 during such year.

"'(c) Each individual required to file a report under paragraph 1(c) shall file such report with the Secretary of the Senate not later than the thirtieth day following the day on which such individual first fulfills the filing requirements of such paragraph during such year or May 15 of that year, whichever is later.

"'(d) A copy of each report filed under subparagraphs (a), (b), and (c) shall be provided to the Select Committee by the Secretary of the Senate.

"'(e) Each Senator, and each individual required to report under paragraph 1(c), shall cause his report to be filed as a public document with the Secretary of State (or, if there is no Office of Secretary of State, the equivalent State offices) in the State which the Senator represents or in which the individual is a candidate for the position of Senator.

"'(f) The Select Committee may grant one or more reasonable extensions of time for filing any report but the total of such extensions shall not exceed sixty days.

"'(g) No later than July 30, the President pro tempore of the Senate shall cause the report of each individual Member to be published in a separate issue of the Congressional Record.

"'6. (a) The Secretary of the Senate shall make each report filed with him under this rule available to the public within fifteen days after the receipt of such report, and shall provide a copy of any such report to any person upon a written request.

"'(b) The Secretary of the Senate may require any person receiving a copy of any report under subparagraph (a) to supply his name and address and the name of the person or organization, if any, on whose behalf he is requesting such copy and to pay a reasonable fee in any amount which the Secretary of the Senate finds necessary to recover the cost of reproducing or mailing of such report excluding any salary of any employee involved in such reproduction or mailing. The Secretary of the Senate may furnish a copy of any such report without charge or at a reduced charge if he determines that waiver or reduction of the fee is in the public interest because furnishing the information can be considered as primarily benefiting the public.

"'(c) Any report received by the Secretary of the Senate shall be held in his custody and made available to the public for a period of seven years after receipt by the Secretary of the Senate of such report. After such seven-year period, the Secretary of the Senate shall destroy any such report.

"'(d) The select committee shall review all financial statements filed pursuant to paragraph 1 to determine whether such statements are filed in a timely manner and are complete and in proper form.

"'(e) The Comptroller General shall, under such regulations as he may prescribe, and which are approved by the select committee, conduct, on a random basis, audits of approximately 5 per centum of the reports filed with the Secretary of the Senate (other than those filed by a Member of the Senate).

"'(2) The Comptroller General shall, during each six-year period beginning after the date of enactment of this Act, audit at least one report filed by each Member of the Senate, except that no such audit shall take place during the calendar year such Member is up for reelection.

"'(3)(A) In conducting an audit under clause (1) or (2), the Comptroller General is authorized to request that the select committee issue a subpena to require the production of books, papers, and other documents.

"'(B) The Comptroller General may use outside consultants to assist him in his responsibilities under this subparagraph.

"'(4) The Comptroller General shall transmit the findings of each audit to the select committee and the individual being audited.

"'7. For the purpose of this rule—

"'(a) the term "assets" include, but is not limited to—

"'(1) any interest in real and personal property and commodities futures or securities, held directly or indirectly, and any patent, copyright, or contract or agreement for future employment, and

"'(2) the holdings and sources of income of a trust or other financial arrangement in which a Senator, officer, and employee has an interest, whether "blind" or not, and whether or not created by or under the control of the reporting Senator, officer, or employee or the spouse or dependents of such reporting individual except that the identity of the holdings and the sources of a trust's income need not be disclosed if—

"'(A) the trust was not created directly or indirectly by the reporting individual, his spouse, or dependents,

"'(B) the reporting individual, his spouse, and dependents have no knowledge of the contents or sources of income of the trust, and

"'(C) the reporting individual has requested the trustee to provide information with respect to the holdings and sources of income of the trust and the trustee refuses to disclose the information.

However, where the identity of the holdings and the sources of income of a trust need not be disclosed, the reporting individual must list the net cash value of his interest in the total trust holdings under subparagraph (a) of paragraph 2;

"'(b) the term "commodity future" means commodity future as defined in sections 2 and 5 of the Commodity Exchange Act, as amended (7 U.S.C. 2 and 5);

"'(c) the term "Comptroller General" means the Comptroller General of the United States;

"'(d) the term "dependent" has meaning set forth in section 152 of the Internal Revenue Code of 1954;

"'(e) the term "employee of the Senate" has the same meaning given to such term in paragraphs 2, 3, and 4 of rule XLVII;

"'(f) the term "gift" means a payment, subscription, advance, forebearance, rendering, or deposit of money, services, or anything of value, including food, lodging, transportation, or entertainment, and reimbursement for other than necessary expenses, unless consideration of equal or greater value is received, but shall not include (1) a political contribution otherwise reported as required by law, (2) a loan made in a commercially reasonable manner (including requirements that the loan be repaid and that a reasonable rate of interest be paid), (3) a bequest, inheritance or other transfer at death, or (4) anything of value given to a spouse or dependent of a reporting

individual by the employer of such spouse or dependent in recognition of the service provided by such spouse or dependent;

"'(g) the term "political contribution" means a contribution as defined in section 301 of the Federal Election Campaign Act of 1971 (2 U.S.C. 431);

"'(h) the term "relative" means, with respect to a person required to file a report under this rule, an individual who is related to the person as father, mother, son, daughter, brother, sister, uncle, aunt, great uncle, great aunt, first cousin, nephew, niece, husband, wife, grandfather, grandmother, father-in-law, mother-in-law, son-in-law, daughter-in-law, brother-in-law, sister-in-law, stepfather, stepmother, stepson, stepdaughter, stepbrother, stepsister, half brother, half sister, or who is the grandfather or grandmother of the spouse of the person reporting;

"'(i) the term "security" has the meaning set forth in section 2 of the Securities Act of 1933, as amended (15 U.S.C. 77b); and

"'(j) the term "transactions in securities and commodities futures" means any acquisition, transfer, or other disposition involving any security or commodity.

"'RULE XLIII

"'CONFLICT OF INTEREST

"'1. A Member, officer, or employee of the Senate shall not receive any compensation, nor shall he permit any compensation to accrue to his beneficial interest from any source, the receipt of which would occur by virtue of influence improperly exerted from his position as a Member, officer, or employee.

"'2. No Member, officer, or employee shall engage in any outside business or professional activity or employment for compensation which is inconsistent or in conflict with the conscientious performance of official duties.

"'3. No officer or employee shall engage in any outside business or professional activity or employment for compensation unless he has reported in writing, when such activity or employment commences and on May 15 of each year thereafter so long as such activity or employment continues, the nature of such activity or employment to his supervisor. The supervisor shall then, in the discharge of his duties, take such action as he considers necessary for the avoidance of conflict of interest or interference with duties to the Senate.

"'4. No Member, officer, or employee shall knowingly use his official position to introduce or aid the progress or passage of legislation, a principal purpose of which is to further only his pecuniary interest, only the pecuniary interest of his immediate family, or only the pecuniary interest of a limited class of persons or enterprises, when he, or his immediate family, or enterprises controlled by them, are members of the affected class.

"'5. A Member, notwithstanding the provision of Rule XII of the Standing Rules of the Senate, may decline to vote, in committee or on the floor, on any matter when he believes that his voting on such a matter would be a conflict of interest.

"'6. An employee on the staff of a committee who is compensated at a rate in excess of $25,000 per annum and employed for more than ninety days in a calendar year (unless hired on a per diem basis) shall divest himself of any holdings which may be directly affected by the actions of the committee for which he works, unless he has received permission in writing from his supervisor and the Select Committee on Ethics to retain such holdings.

"'7. If a Member, upon leaving office, becomes a registered lobbyist under the Federal Regulation of Lobbying Act of 1946 or any successor statute, or is employed or retained by such a registered lobbyist for the purpose of influencing legislation, he shall not lobby Members, officers, or employees of the Senate for a period of one year after leaving office.

"'8. If an employee on the staff of a Member, upon leaving that position, becomes a registered lobbyist under the Federal Regulation of Lobbying Act of 1946 or any successor statute, or is employed or retained by such a registered lobbyist for the purpose of influencing legislation, such employee may not lobby the Member for whom he worked or that Member's staff for a period of one year after leaving that position. If an employee on the staff of a committee, upon leaving his position, becomes such a registered lobbyist or is employed or retained by such a registered lobbyist for the purpose of influencing legislation, such employee may not lobby the members of the committee for which he worked, or the staff of that committee, for a period of one year after leaving his position.

"'9. For purposes of this rule—

"'(a) "employee of the Senate" has the same meaning given to such term in paragraphs 2, 3, and 4 of rule XLVII;

"'(b) an individual who is an employee on the staff of a subcommittee of a committee shall be treated as an employee on the staff of such committee; and

"'(c) the term "lobbying" means any oral or written communication to influence the content or disposition of any issue before Congress, including any pending or future bill, resolution, treaty, nomination, hearing, report, or investigation; but does not include—

"'(1) a communication (A) made in the form of testimony given before a committee or office of the Congress, or (B) submitted for inclusion in the public record, public docket, or public file of a hearing; or

"'(2) a communication by an individual acting solely on his own behalf, for redress of personal grievances, or to express his personal opinion.

"'10. For purposes of this rule—

"'(a) a Senator or the Vice President is the supervisor of his administrative, clerical, or other assistants;

"'(b) a Senator who is the chairman of a committee is the supervisor of the professional, clerical, or other assistants to the committee except that minority staff members shall be under the supervision of the ranking minority Senator on the committee;

"'(c) a Senator who is a chairman of a subcommittee which has its own staff and financial authorization is the supervisor of the professional, clerical, or other assistants to the subcommittee except that minority staff members shall be under the supervision of the ranking minority Senator on the subcommittee;

"'(d) the President pro tempore is the supervisor of the Secretary of the Senate, Sergeant at Arms and Doorkeeper, the Chaplain, the Legislative Counsel, and the employees of the Office of the Legislative Counsel;

"'(e) the Secretary of the Senate is the supervisor of the employees of his office;

"'(f) the Sergeant at Arms and Doorkeeper is the supervisor of the employees of his office;

"'(g) the Majority and Minority Leaders and the Majority and Minority Whips are the supervisors of the research, clerical, or other assistants assigned to their respective offices;

"'(h) the Majority Leader is the supervisor of the Secretary for the Majority and the Secretary for the Majority is the supervisor of the employees of his office; and

"'(i) the Minority Leader is the supervisor of the Secretary for the Minority and the Secretary for the Minority is the supervisor of the employees of his office.'".

On page 32, line 11, strike out "'RULE XLVI" and insert in lieu thereof "'RULE XLIV".

On page 33, line 14, strike out "RULE XLVII" and insert in lieu thereof "'RULE XLV".

On page 35, line 3, strike out "RULE XLVIII" and insert in lieu thereof "'RULE XLVI".

On page 37, line 10, strike out "'RULE XLIX" and insert in lieu thereof "'RULE XLVII".

On page 39, line 20, strike out "'RULE L" and insert in lieu thereof "'RULE XLVIII".

On page 54, strike out lines 15 through 18, and insert in lieu thereof the following:

"(c) Paragraph 6, 7, and 8 of rule XLIII of the".

On page 54, line 22, strike out "(e) Rule XLVI" and insert in lieu thereof "(d) Rule XLIV".

On page 55, line 5, strike out "(f) Rule XLVIII" and insert in lieu thereof "(e) Rule XLVI".

On page 55, strike out line 9, and insert in lieu thereof the following:

"(f)(1) Paragraph (1) of rule XLVII of the Standing".

On page 55, line 16, strike out "(h) Rule L" and insert in lieu thereof "(g) Rule XLVIII".

On page 55, line 19, strike out "(i)" and insert in lieu thereof "(h)".

Mr. WEICKER. It is the intention of this Senator to explain the details of this amendment at the commencement of the proceedings tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR BELLMON AND SENATOR DOMENICI TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that tomorrow, after the two leaders have been recognized under the standing order, Mr. BELLMON and Mr. DOMENICI be recognized each for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR JOINT REFERRAL—S. 1071

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that S. 1071, relative to establishing a national system of child and maternal health care and a system for protection against catastrophic health care costs, which was introduced yesterday by the Senator from Colorado (Mr. HART) and which was referred to the Committee on Finance, be jointly referred to the Committee on Finance and Human Resources. I understand this has been cleared with Senators LONG, KENNEDY, and BAKER.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR THE CONVENING OF THE SENATE AT 1 P.M. TOMORROW

Mr. ROBERT C. BYRD. I have been asked the question what time we will meet tomorrow.

I ask unanimous consent, Mr. President, that when the Senate convenes tomorrow it convene at the hour of 1 p.m.

The PRESIDING OFFICER. Without objection, it is so ordered.

OFFICIAL CONDUCT AMENDMENTS OF 1977

The Senate continued with the consideration of the resolution (S. Res. 110) to establish a Code of Official Conduct

for the Members, officers, and employees of the U.S. Senate; and for other purposes.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that upon the disposition of the amendment by Mr. WEICKER, Mr. BARTLETT be recognized to call up his amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, will the distinguished majority leader yield?

Mr. ROBERT C. BYRD. I yield.

Mr. BAKER. Mr. President, I inquired at the desk about the time remaining on the resolution. I was told, I believe, that there are 20 hours, approximately, remaining to the minority leader and about 18 hours remaining to the majority leader. I was also told that we have about 55 amendments at the desk. I have talked to the distinguished Senator from Connecticut, who is agreeable to reducing the 2-hour limitation on his amendment to 1 hour and 20 minutes which would be equally divided 40 minutes on the side. I wonder if the majority leader would be agreeable to that reduction in time in view of the time pressures we are about to encounter?

Mr. ROBERT C. BYRD. Yes. I thank the distinguished minority leader for reminding me of this conversation that we have had. I believe it is an excellent idea. We are being confronted increasingly with the time problem in connection with this matter. I would hope that we could complete our work on the rules of conduct this week.

TIME-LIMITATION AGREEMENT APPLICABLE TO CERTAIN AMENDMENTS

Mr. ROBERT C. BYRD. I ask unanimous consent, Mr. President, that the time on the amendment by Mr. WEICKER be limited to 80 minutes, to be equally divided in accordance with the usual form. I believe Mr. BARTLETT has indicated he would be willing to take a similar cut in his time.

Mr. BARTLETT. That is correct.

Mr. ROBERT C. BYRD. What would the Senator suggest?

Mr. BARTLETT. I would suggest the same for each side, 1 hour and 20 minutes total.

Mr. ROBERT C. BYRD. Very well. I make the same request.

Mr. JAVITS. Mr. President, I have five amendments and I will do the same thing.

Mr. ROBERT C. BYRD. I make the same request on behalf of Mr. BARTLETT and on behalf of each of the amendments to be offered by Mr. JAVITS.

Mr. HANSEN. Is the unanimous-consent request one that would provide a 40-minute time limitation or 80-minute time limitation?

Mr. ROBERT C. BYRD. Eighty minutes.

Mr. HANSEN. I have some amendments and that would be acceptable to me.

Mr. ROBERT C. BYRD. I make the same request with regard to the amendments to be offered by Mr. HANSEN.

Mr. SCHMITT. I am happy to join in the request.

Mr. ROBERT C. BYRD. I make the same request with regard to the distinguished Senator from New Mexico (Mr. SCHMITT).

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. I commend the majority leader for this agreement and I thank the majority leader for his time.

Mr. ROBERT C. BYRD. I thank the Senator.

Mr. SCHMITT. Mr. President, if the Senator will yield, I certainly think it would be useful if he would seek comparable agreements from Senators on both sides of the aisle who may have amendments.

Mr. BAKER. If the Senator will yield to me for just a minute, I intend, on our side, to see if we can meet that 80 minutes or better on future amendments. I shall canvass the Members on our side to see whether we can meet that.

The danger was pointed out to me by the Senator from New Mexico and others that with the remaining 20 hours on our side and 18 on the majority and 55 amendments, there is a real problem of making sure everybody has at least a minimum time for having their amendments considered. We shall do our best to be helpful in that respect.

Mr. ROBERT C. BYRD. Mr. President, I think this is a fine spirit of understanding and cooperation. We shall do the same on this side of the aisle.

I ask unanimous consent that the time, at this point, remaining on the resolution be equally divided between the majority and minority leaders. As I understood the Senator, he said there is more time on this side? Or was it just the opposite?

Mr. BAKER. No, sir, there are 20 hours on this side and 18 hours on the other side.

Mr. ROBERT C. BYRD. Then I withdraw my request.

Mr. BAKER. I have a generous spirit, but not that generous.

The PRESIDING OFFICER. The Senator from West Virginia has 973 minutes. The Senator from Tennessee has 1,115.

ORDER FOR RECOGNITION OF SENATOR DANFORTH UPON COMPLETION OF AMENDMENT BY SENATOR BARTLETT, AND FOR A TIME LIMITATION

Mr. BARTLETT. Will the Senator yield?

Mr. ROBERT C. BYRD. Yes.

Mr. BARTLETT. In connection with the request I made for 40 minutes on a side, I would like to make a further request that that be followed by the amendment of the Senator from Missouri (Mr. DANFORTH), which ties right in with the same subject on a matter that I shall bring up. He is willing to have a time limit of 15 minutes on a side.

Mr. ROBERT C. BYRD. Very well, I ask unanimous consent that upon the disposition of the amendment by Mr. BARTLETT, the distinguished Senator from Missouri (Mr. DANFORTH) be recognized to call up an amendment and that there be a 30-minute time limitation thereon, equally divided and in accordance with the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF CERTAIN SENATORS TO CALL UP AMENDMENTS TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I am going to have to take action to protect Members on my side of the aisle.

I ask unanimous consent that, following the disposition of those three amendments, Mr. HATHAWAY be recognized to call up an amendment, Mr. DURKIN be recognized to call up an amendment, and Mr. HUDDLESTON be recognized to call up an amendment if he so chooses at that time. I shall seek to get corresponding reductions in time on those amendments, if I can, tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

TIME-LIMITATION AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the time on the amendment by Mr. HATHAWAY be reduced to 1 hour, equally divided in the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR SCHMITT TOMORROW AND TIME-LIMITATION AGREEMENT

Mr. BAKER. I have a request of the Senator from New Mexico for three amendments, and he is agreeable to 1 hour, following the last of the Democratic amendments.

Mr. ROBERT C. BYRD. Three amendments, on each of which there will be 1 hour?

Mr. BAKER. Thirty minutes on a side.

Mr. ROBERT C. BYRD. I wonder if the distinguished Republican leader will allow me not to go further on this matter tonight? I am afraid that, in lining up amendments, I may be getting myself into some problems on my side of the aisle. Most of my colleagues have gone. I want to accommodate the Senator.

Mr. BAKER. That is true. I really hope the majority leader will accommodate this one. I had an earlier request from the Senator from New Mexico in this regard. As a matter of fact, I overlooked him in putting in the request for the sequence I already agreed to.

Mr. ROBERT C. BYRD. I ask unanimous consent that upon the disposition of the amendments by Messrs. HATHAWAY, DURKIN, and HUDDLESTON, Mr. SCHMITT be recognized to call up one of his amendments, on which there will be a time limitation of 1 hour, to be equally divided and controlled in accordance with the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

REFORMS IN THE ELECTION SYSTEM—MESSAGE FROM THE PRESIDENT—PM 55—ORDER FOR JOINT REFERRAL

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States:

To the Congress of the United States:

I hereby transmit to the Congress my recommendations for reforms in our Nation's election system.

The Vice President and I have developed these proposals in order to meet our commitment to the American people to work toward an electoral process which is open to the participation of all our citizens, which meets high ethical standards, and which operates in an efficient and responsive manner. I know that you in the Congress share these goals, and I applaud your efforts which are already underway to achieve them.

VOTER REGISTRATION

My first proposal, and the one on which I am proposing a specific bill to the Congress, is designed to open up our system of voter registration.

The basis of our democratic system is the right of every eligible citizen to vote. In the 200 years of its history, this Nation has greatly expanded the opportunity to vote to wider and wider groups of citizens.

Despite this progress, we have in recent years witnessed a disturbing trend toward lower and lower levels of voting by our citizens. I am deeply concerned that our country ranks behind at least twenty other democracies in its level of voter participation.

Our country's disappointing record cannot be remedied by any one solution or any single piece of legislation. But, millions of Americans are prevented or discouraged from voting in every election by antiquated and overly restrictive voter registration laws. We can take one immediate step toward solving this serious problem by removing antiquated and unnecessary obstacles which prevent voters from participating in the electoral process.

I am proposing to remove the unnecessary and unfair barriers by creating a method of universal voter registration. Under the legislation I will propose to the Congress, citizens qualified to vote under state laws could go to their polling places on the day of a Federal election and register there after proving their eligibility. The states would be encouraged to adopt a similar system of registration for state and local elections.

Under this plan, state and local officials will continue to administer voter registration and elections, and will still register as many voters as possible prior to election day in the usual manner, in order to avoid congestion at the polls.

We would offer financial assistance to the states to employ additional registrars and to help pay the cost of registration by mail, traveling registrars, or any other pre-election day registration efforts the state might choose.

State and local officials would also have the option of using the money they receive under the plan to modernize what are often outmoded and poorly equipped systems of election administration. A new office within the Federal Election Commission would distribute the Federal funds and oversee the program.

I also propose that we enact very strong safeguards to protect the integrity of the election process. Willful fraud in registering to vote should bear the strong criminal penalties of five years imprisonment and a $10,000 fine already found in the Voting Rights Act. Any person who takes part in a scheme to falsely indentify or register voters should be similarly punished, and multiple convictions should lead to even stiffer penalties. The government should seek injunctive relief in Federal court to stop any patterns of fraudulent activity which might arise.

States should be allowed to require all persons registering at the polls to prove their identity and place of residence by approved forms of identification. All registrants should be informed of the state's qualifications for voting and be required to sign a statement, under oath and criminal penalty, that they meet those qualifications.

While these safeguards are important and necessary, I am optimistic that they will rarely be tested and the record suggests that they will rarely be needed.

This system of election-day registration is already employed in a number of states, and the record shows that it has usually increased voter participation without increasing voter fraud. Four out of five states with the highest voter turnout rates in the 1976 election permitted citizens to register and vote on election day.

CAMPAIGN FINANCING

My second recommendation deals with the way in which we pay the costs of Congressional campaigns.

In 1974, Congress took the historic step of establishing a system of public financing for Presidential primary and general elections. I urge the Congress to extend this important reform to campaigns for both the House and the Senate.

The record of the first publicly financed Presidential campaign has demonstrated that public financing is workable and widely accepted by the American people. Public financing of candidates not only minimizes even the appearance of obligation to special interest contributors, but also provides an opportunity for qualified persons who lack funds to seek public office. It would be a tragic irony if the 1974 law, which reduced the pressure special interests could place on Presidential candidates, increased the pressures on candidates for Congress as the large contributors look for new means of gaining influence with their political funds.

The method we select should allow each American the option of deciding whether to participate in public funding. The check-off provision on the income tax form accomplishes this goal for Presidential campaign financing. The check-off method should also be used to raise the funds necessary to support Congressional candidates.

Congress is best suited to decide on an exact formula for financing campaigns. However, I believe there are several features which should be part of any plan:

First, the plan should require that candidates demonstrate substantial public support before they get public funds to help finance their campaigns. This would guard against frivolous candidates depleting the limited public funds available. The matching formula in the Presidential primaries provided a successful link between total public funds received and a candidate's ability to demonstrate citizen support through small private donations.

Second, the limit on overall expenditures should not be excessively low so as to prevent an adequate presentation of candidates and their platforms to the people.

Third, we should ensure that candidates who accept public financing are not placed at a serious disadvantage in competing with opponents who have extraordinarily abundant private funds. Under the recent Supreme Court ruling, if a candidate refuses to accept public financing, then no limitation can be imposed on the amount of personal or other private funds which may be spent on the campaign. But if a less wealthy opponent does accept public financing, stricter spending limits would be imposed on him than on his opponent. I hope Congress will address this problem.

Fourth, I favor the broadest possible application of public financing. It should apply to primaries as well as general elections. I hope the Congress will act soon to pass legislation so that public financing can be available for the 1978 Congressional campaigns. It is important to begin now with public financing for general elections, even if a plan for primaries cannot be adopted this year.

STRENGTHENING THE FEDERAL ELECTION CAMPAIGN ACT

While public financing of the last Presidential election was highly successful, my third suggestion is for certain modifications which our experience has shown could make the system work even better.

We noticed, for example, that there was less activity than in the past at the state and local level during the general election campaign. Opportunities should be available for more grass-roots participation in Presidential races. This could be accomplished by allowing Presidential candidates to designate one committee in each state to raise and spend a limited amount of money for campaign activities within the state. A reasonable limit for this activity might be 2 cents per eligible voter. Such committees could be allowed to delegate spending authority to local committees, but they should still be responsible for reporting contributions and expenditures. Also, when Congressional candidates mention in their advertising the Presidential nominee of their party, the expenditure should not have to be reported by the Presidential candidate.

Another useful change would be to grant Presidential candidates an additional amount to cover the great costs of complying with election laws—for example, filing the many necessary financial reports. We should prohibit the private raising of funds for this purpose.

We could also simplify the reporting of contributions and expenditures by directing the Federal Election Commission to establish common reporting and accounting systems to be used by all candidates.

Finally, we must clarify the law as it applies to the financial aspects of the delegate selection process. Contributions to delegates, or candidates for delegate, should be charged against a Presidential candidate only when such delegates are pledged to the specific candidate. Also, a delegate's expenses for attending a convention should not be considered as contributions or expenditures for the candidate he or she supports.

DIRECT POPULAR ELECTION OF THE PRESIDENT

My fourth recommendation is that the Congress adopt a constitutional amendment to provide for direct popular election of the President.

Such an amendment, which would abolish the electoral college, will insure that the candidate chosen by the voters

actually becomes President. Under the electoral college, it is always possible that the winner of the popular vote will not be elected. This has already happened in three elections, 1824, 1876, and 1888. In the last election, the result could have been changed by a small shift of votes in Ohio and Hawaii, despite a popular vote difference of 1.7 million.

I do not recommend a constitutional amendment lightly. I think the amendment process must be reserved for an issue of overriding governmental significance. But the method by which we elect our President is such an issue.

I will not be proposing a specific direct election amendment. I prefer to allow the Congress to proceed with its work without the interruption of a new proposal.

POLITICAL RIGHTS OF FEDERAL EMPLOYEES

My fifth and final recommendation concerns the political rights of Federal employees.

Over 2.8 million federal employees, including postal workers and workers for the District of Columbia, are now denied a full opportunity to participate in the electoral process. Unlike other Americans, they cannot run as a partisan candidate for any public office, cannot hold party office, and cannot even do volunteer work in a partisan political campaign.

I favor revising the Hatch Act to free those federal employees not in sensitive positions from these restrictions. There should be exceptions for those employees who must retain both the appearance and the substance of impartiality. For employees in such sensitive positions who are not subject to Senate confirmation, restrictions on political activity are necessary. Acting on standards prescribed by Congress, the Civil Service Commission should determine which positions should be treated as sensitive in all relevant government agencies.

Under such a Hatch Act revision, the vast majority of federal employees would be able to participate in federal, state and local elections and other political functions. But, federal employees have a special obligation not to abuse their public service responsibility. I favor strong penalties for any federal employee who attempts to influence or coerce another federal employee into political activity, or who engages in political activity while on the job. I also favor maximum reliance on a strong Civil Service Commission to vigorously prosecute employees who violate regulations against this kind of behavior.

JIMMY CARTER.

THE WHITE HOUSE, *March 22, 1977.*

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the message from the President of the United States transmitting to the Congress his recommendations for reforms in the Nation's election system, be jointly referred to the Committees on Rules and Administration, Finance, Judiciary, and Governmental Affairs, and that the draft bill attached, to establish a universal voter registration program, and for other purposes, be referred solely to the Committee on Rules and Administration.

Mr. BAKER. Reserving the right to object, do I understand correctly that the majority leader is asking for a joint referral on the message and a referral to the Committee on Rules and Administration for the resolution?

Mr. ROBERT C. BYRD. The Senator is correct.

Mr. BAKER. I have no objection.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE E, 95TH CONGRESS, 1ST SESSION—REMOVAL OF INJUNCTION OF SECRECY

Mr. ROBERT C. BYRD. Mr. President, as in executive session, I ask unanimous consent that the injunction of secrecy be removed from the International Convention for the Prevention of Pollution from Ships, done at London on November 2, 1973, together with annexes and related protocols—Executive E, 95th Congress, 1st session—transmitted to the Senate today by the President of the United States, and that the treaty with accompanying papers be referred to the Committee on Foreign Relations and ordered to be printed, and that the President's message be printed in the RECORD.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

To the Senate of the United States:

I transmit herewith, for the advice and consent of the Senate, the International Convention for the Prevention of Pollution from Ships, done at London on November 2, 1973, together with Annexes I and II thereof, and two related Protocols. The report of the Department of State is enclosed for the information of the Senate.

The Convention is one of the most important maritime environmental protection measures ever completed. It deals comprehensively with operational discharges from vessels, establishes strict controls over oil discharges, and imposes regulations for discharges of other pollutants. It also creates standards for the construction and design of ships which will carry these hazardous cargoes.

I feel that entry into force of this Convention will be an important step in controlling and preventing pollution from vessel discharges. I recommend that the Senate give early consideration to the Convention and give its advice and consent to ratification.

JIMMY CARTER.

THE WHITE HOUSE, *March 22, 1977.*

ANNOUNCEMENT OF POSSIBLE LONG SESSIONS AND SATURDAY SESSION

Mr. ROBERT C. BYRD. Mr. President, I believe that it would be only reasonable and fair to state at this point that the Senate may very well be in session late tomorrow evening—I said may very well be. It may be necessary, Mr. President, depending upon how much progress we make tomorrow and how much progress remains to be made, to come in earlier on Thursday and Friday in order to complete action on this code of conduct this week. I would not rule out a Saturday session. I do not say that by way of any empty suggestion; I just do not want this code of conduct to have to go into next week to be completed. Nobody wants a Saturday session any less than I do, but I think I at least ought to raise the possibility.

I ought to raise the possibility of long sessions beginning tomorrow, into the evening, and Thursday and Friday. With the spirit of accommodation and understanding that I have witnessed here in the last few minutes among Senators who wish to call up amendments and who are willing to reduce their time, I have a feeling that we shall be able to work our way through this measure in a reasonable way without a Saturday session. I think I just need to raise the possibility, at least.

Next week, we are going to have other matters that will engage our attention, important matters. We only have next week and the following week through Thursday before we enter into the Easter nonlegislative period.

Mr. THURMOND. "Recess" sounds better.

AUTHORITY FOR COMMITTEES TO FILE REPORTS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that committees may have until midnight tonight to file reports.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS UNTIL 1 P.M. TOMORROW

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate recess until 1 p.m. tomorrow, with the understanding that, after the two special orders, there will be a period for the transaction of routine morning business not to extend beyond the hour of 2 p.m., with statements limited therein to 5 minutes each, at which time, the Senate will resume consideration of the pending matters, with rollcall votes expected throughout the afternoon.

The motion was agreed to, and at 6:49 p.m., the Senate recessed until Wednesday, March 23, 1977, at 1 p.m.

NOMINATIONS

Executive nominations received by the Senate March 22, 1977:

DEPARTMENT OF DEFENSE

John C. Stetson, of Illinois, to be Secretary of the Air Force, vice Thomas C. Reed, resigning.

SMALL BUSINESS ADMINISTRATION

Arthur Vernon Weaver, Jr., of Arkansas, to be Administrator of the Small Business Administration, vice Mitchell P. Kobelinski, resigned.

CONFIRMATION

Executive nomination confirmed by the Senate March 22, 1977:

DEPARTMENT OF COMMERCE

Robert Thallon Hall, of Virginia, to be an Assistant Secretary of Commerce.

The above nomination was approved subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.

EXTENSIONS OF REMARKS

NATIONAL AGRICULTURE DAY, MARCH 21, 1977

HON. MARC L. MARKS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1977

Mr. MARKS. Mr. Speaker, I rise in tribute today, National Agriculture Day, to our Nation's 1½ million farmers and farmworkers. Special attention needs to be paid these fine people this year for the amazing job they perform. Although this group comprises only about 1½ percent of the total work force in the United States, they successfully produce enough food to both feed the balance of the U.S. population—at prices far below those in other industrial countries—and export produce and commodities in amounts valued in excess of $12 billion. As the sixth-ranking growth industry, it would be fair to say that agriculture is one of the primary supports of our economic freedom.

The year 1977 promises to be a red-letter year for the American farmer in a number of different ways. First, the 1977 farm bill will attempt to reauthorize or change traditional agricultural programs due to expire at the end of the 1977 crop year. Second, costs of farming are rising—land, machinery, fertilizer, feed, and so forth. The past few years' decreased profits will be aggravated by this winter's severe snowstorms in the East and drought in the Midwest; both will reduce spring crop yields and put an unbearable strain on the farmer's needed cash flow. USDA is already predicting further increases in the farm debt; in 1976 alone it rose 12 percent.

Coupled with the issue of how to structure Federal supports for agricultural production will be the need to consider the cost to United States and foreign consumers of our agricultural commodities. The first group is primarily concerned with maintenance of low food prices; the latter views U.S. agriculture in more absolute terms as a reliable source—either by outright purchases or in the form of U.S. food aid.

The one indisputable fact regarding American agriculture is that the United States must continue to export all that it cannot consume if farm income is to keep pace with real prices. There has been a good deal of discussion about returning agriculture to the free-market system and abandoning Government programs. Agricultural support programs have been in effect in varying forms since the New Deal era of the 1930's; it would realistically appear that some variation of these need to be continued to shield the agricultural producers from the ravages of wild price fluctuation. Furthermore, since we must export roughly 60 percent of our annual production, a prime Government role might be encouraging the expansion of foreign markets for our crops.

Of particular interest to farmers this year will be provisions in the farm bill concerning price supports, grain reserves, disaster payments, agricultural research, and food aid. Very often consumer and farmer views on these issues differ; the contention revolves around prices paid and received for agricultural goods. I would encourage each of us this year to carefully consider the best way to first, assure farmers a fair and adequate return in years of less than 100 percent of production world market demand—those years when overproduction depresses prices. Second, we must provide for programs flexible enough to make our agricultural goods competitive on the world market—our farmers would not benefit from overly high loan rates which would force a return to the era of accumulated Government stocks. The United States must remain a prime, not residual, supplier of world food needs. Last, we must bear in mind that taxpayers and consumers are the ultimate providers of agricultural support—both by taxation and consumption. A balanced agricultural price support plan will avoid the ever-escalating cost of maintaining Government-held reserves. The consumer could not benefit in the long run from expensive programs which tend to depress production.

Again, I would urge thoughtful consideration of the impact agriculture has on the American lifestyle today—from the food we eat to the economic implications for the balance of trade. Depending on Congress interpretation, we could make this year the best yet for our farmers.

DICK LONG, KING OF THE IRISH

HON. BRUCE F. VENTO

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1977

Mr. VENTO. Mr. Speaker, Mr. Richard Long is one of St. Paul, Minn's., outstanding community leaders. He is well known for his many civic activities, including tenure as Boreas Rex, the 39th, king of our justly famous annual winter carnival. Of course, that was a great honor but I am sure, considering Dick's heritage, that he much prefers his current designation as "Mr. Pat" at St. Paul's well-known St. Patrick's Day parade. It is an awesome task to preside over the Irish and the would-be Irish on St. Patrick's Day; particularly in St. Paul. I am sure he was equal to the task.

In addition to the activities and honors listed above, Dick Long has long been a volunteer probation officer for the juvenile court. He has counseled and helped many troubled youth to find their place in society, as mentioned in the article below. In addition to Gary Hiebevt's—Oliver Towne—comments, it should be noted that Dick Long handled a "caseload" of as many as four youngsters simultaneously. Indeed, I am grateful for the St. Paul Dispatch article and the attention paid to this side of the many-sided Dick Long and his numerous good works. His versatility is acknowledged by the fact that he officiated at both the winter carnival—and we are well known for our winters in St. Paul—and the St. Patrick's Day parade during our salubrious springtime. The realization that it snowed on March 17, although the chamber of commerce called it sleet, did nothing to quell the enthusiasm of parade participants and revelers. Truly, Dick Long is a man for all seasons.

The article follows:

LEPRECHAUNS CHAT ON JOHN IRELAND BOULEVARD

(By Oliver Towne)

I was standing on John Ireland Boulevard near the Cathedral and turned to the leprechaun next to me.

"Cead mile falta" (A thousand welcomes) I said.

"Bonjour, monsieur," he said.

"Wrong language," I said. "You're Irish and Thursday is St. Patrick's Day."

"Non, monsieur," he said. "To coin a phrase, we French are as Irish as you Americans."

"But you've got Bastille Day (July 14) for your own. Why muscle in on the Irish?"

"Ask the leprechaun next to me, monsieur, s'il vous plait."

"Isn't St. Patrick's Day for the Irish?" I said.

"Ya wohl . . . und auch unsere Deutsche," (Yes and also our Germans.)

I turned now to the third leprechaun and he made the sign of "V" for victory.

"Skol," he said.

"Don't tell me the Irish are really Swedish?" I said.

"You yust bettcha," he said. "Weren't you here Sunday afternoon when all those Irish men and women came running down Summit Avenue and this hill in their BVDs?"

"The St. Patrick's Day mini-marathon," I said.

"Ha," said the Swedish leprechaun. "Yust more of that Irish blarney.

"Those Irish were being chased by the Swedes from Minneapolis. We just about caught them, too."

"You mean," I said, "that maybe this year I ought to march behind Paul Villaume's French-Irish banner? Or the Volksfest Association? Or the Svenskarnasdag Sangerfest and Sytennde Mai Society?

"Oui, monsieur, you would be more Irish," said the French leprechaun.

"Gewiss. St. Patrick war ein Deutsche," (Certainly, Patrick was a German), said the German leprechaun.

"Skol," said the Swedish leprechaun.

"If you can find the Snuss Boulevard Buccaneers or Payne Avenue Patriots, you'd be more in the right ethnic if not firing range."

I turned to the last leprechaun.

"Ah, begorra lad," he said and I rejoiced because at last I had found a real Irish leprechaun.

"Ah, lad, 'tis true what they say. There is not one among us who is a true son of Eire. We are imposters—all of us."

"But O'Connor, Gallivan and Sweeney, Tim O'Gara and Cochran, Connelly and O'Connel . . . names like that."

"Lad, they're all Spaniards . . . you didn't hear any of those names used in Ireland until after the wreck of the Spanish Armada in 1588."

"But surely Dick Long, Mr. Pat, is pure 100 per cent green," I said.

"Lad, Dick Long comes from a long and nomadic ancestory. His compassion and assistance to boys in trouble as one of our most dedicated volunteers to the cause of helping young people find their way certainly is in the footsteps of St. Francis . . . who, of course, was from Assisi, which is in Italy."

"The Roman nose and look of the Emperor Constantine . . . who embraced Christianity," I said.

"But also . . . remember he sells Cadillacs and Cadillac is French . . . for the town of Cadillac in southwestern France near Bordeaux," said the green leprechaun.

"Then maybe he is really French."

"Oui, il est Francais (he is French)," said the little Bastille leprechaun.

"You don't hear the name of Long until after the invasion of Ireland by the Scandinavians with help from the Schleswig-Holsteiners," the green one said.

"Skol," said the Swedish leprechaun.

Ya wohl," said the German leprechaun.

"How did Long ever get to Scandinavia?" I said.

"How did anybody get anywhere then . . . by Cadillac, what else?"

He took something out of a plastic wrapper with the words: "Erin go braghshalom.'

It was a big, kelly green bagel.

"I see what you mean," I said.

"What you wee fellows are trying to say, I believe, is that there won't be an Irishman in Thursday's St. Patrick's Day Parade up Sixth Street and down Fourth?" I suggested.

"Starting with that Swede sheriff," said the little fellow from Eire.

TRIBUTE TO TED W. BARTLETT

HON. ROBERT E. BADHAM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1977

Mr. BADHAM. Mr. Speaker, I would like to call the attention of my colleagues to the extensive, dedicated, and selfless service to the city of Huntington Beach, Calif., made by my friend Ted W. Bartlett, who will complete 20 years as a member of the Huntington Beach City Council this year and whose signal accomplishments on behalf of his fellow citizens will be honored at a testimonial dinner, Thursday night, March 24.

Mr. Bartlett, a native of Oakes, N. Dak., came to Huntington Beach 49 years ago and has since that time enjoyed the friendship and respect of all those whose lives he has touched as an old breed of free enterprise small businessmen.

At times, Mr. Bartlett's tiny, one-man service station in the center of Huntington Beach, once a small, bustling oil boomtown and now a thriving metropolis of 150,000 residents, served as a second city hall, because Ted Bartlett was never too busy serving his customers at the gas pump to take time out for city or civic affairs.

During the 49 out of his 75 years spent in Huntington Beach, Ted Bartlett was mayor for 2 years, president of the chamber of commerce, where he holds the longest single membership. He was chairman of the Orange Council, Boy Scouts of America, and was named Mr. Huntington Beach in 1972 by the Boy Scouts for his 30 years of service.

Furthermore he was chosen man of the year in 1973 by the Huntington Beach Chamber of Commerce and was commended by resolution by the California State Assembly. In addition, Ted Bartlett has been chairman of the Community Chest in his city, has belonged to the Elks Lodge, Masonic Lodge, Rotary Club, and Toastmasters Club.

Mr. Bartlett's first service as a member of the City Council of Huntington Beach was in 1944, when he won his first election. He sat out a term, served 4 more years in the mid-1950's and then returned to the city council in 1966. He has won reelection each 4 years since then and will complete his 20 years as a councilman early in 1978.

It is with a sense of deep appreciation for the type of public-spirited service that men of Ted Bartlett's caliber give to their home communities that I rise to bring his extraordinary accomplishments to the attention of this honorable body. I am sure all will join me in saluting Ted, his wife Alice of 32 years, his two children and three grandchildren, as the citizens of Huntington Beach gather to honor a man of outstanding character and old-fashioned service to the city of Huntington Beach.

U.S. POSTAL SERVICE

HON. GLADYS NOON SPELLMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mrs. SPELLMAN. Mr. Speaker, at a time when seldom is heard an encouraging word about the U.S. Postal Service, it is a great pleasure for me to share with my colleagues an unsolicited tribute to one of the messengers who is deterred by "neither rain nor snow nor sleet" from his "appointed rounds."

Postman Rickie America contends not only with the elements but with a difficult route that is made up of "all hills, lots of steps, and a large number of uncontrolled dogs." In spite of the obstacles, Mr. America was commended by Mrs. Blanche M. Panella, a resident on his route, for making deliveries "promptly and properly."

She also praised him for handling checks and valuable items "extremely carefully—almost as if he were delivering his own personal possessions."

I would like to take this opportunity to join in commending Postman Rickie.

The correspondence follows:

POSTMASTER,
U.S. Postal Service, Adelphi Branch, University Boulevard, Adelphi, Md.

DEAR SIR: I have read and heard so much about the failure of the Postal Service to perform adequately, I feel in all sincerity I must write you of one of your employees who does a most remarkable job. This gentleman's name is Mr. Rickie America, and he has one of the most difficult routes imaginable—all hills, lots of steps and a large number of uncontrolled dogs.

Over the past 25 years we have had many carriers, but none can equal the competence of Mr. America. He is acquainted with his patrons and makes deliveries promptly and properly. In his absence, I have had important mail left at many different houses, although the mail was properly addressed. I feel very secure when I know Mr. America is on the route and I am expecting checks and valuable items. He handles such articles extremely carefully—almost as if he were delivering his own personal possessions.

This employee is truly a gentleman, capable and dedicated and is a credit to the Postal Service. You are indeed fortunate in having a person of his high caliber in your employ.

Thank you.

Sincerely,

BLANCHE M. PANELLA.

STICK WITH FREE TRADE

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. DERWINSKI. Mr. Speaker, some years ago, legislation to permit the executive branch to negotiate broader trade agreements with other nations was dramatized by the slogan, "Trade not Aid." Personally, I believe that this is sound philosophy now as it was then.

Therefore, I look with alarm upon the growing pressure for neoisolationism and at the short-term exponents of protectionism who are attempting to distort U.S. trade policy.

The Chicago Daily News of March 16 carried a very forceful editorial that effectively supports the case for free trade. The article follows:

STICK WITH FREE TRADE

Alarming recommendations are streaming out of the U.S. International Trade Commission, and they give cause for concern among consumers overburdened by rising prices as well as more cosmic thinkers who take it as an article of faith that free trade promotes international good will.

In recent days the trade commission has called for:

An increase in tariffs on shoes from 10 per cent to 40 per cent on all imports above the 1974 level.

An increase in tariffs on television sets from 5 per cent to 25 per cent for two years, down to 20 per cent for two more and 10 per cent for a fifth year.

A cut in the import quota for sugar from the present 7 million tons annually to a maximum of 4.4 million tons.

This is protectionism rampant, perhaps on a scale larger than anything since the 1930s, when a world sorely afflicted by high tariffs and severe quotas began moving toward freer trade to help pull itself out of the Depression.

In each case the commission justified its actions by ruling that domestic industries were being damaged by the foreign competition. Not unfair competition, just competition. The point is demonstrable statistically, and we don't take issue with it. But another point that needs to be stressed is that 220 million American consumers would pay to protect the jobs of a comparative few, if the recommendations are put into effect. To cite only one example, the higher tariffs

would raise the price of the average imported television set from $308 to $364.

It is true, as we have said, that foreign countries engage in unfair practices, outlawed by international agreement. The Japanese are accused of dumping—selling TV sets at home at a far higher price than they are sold abroad, with the difference rebated to the exporter by the Japanese government. If the charge was made to stick, and the supporting evidence in this case is strong, the United States could justifiably raise the tariff by the amount of the subsidy. But the trade commission shuffled this issue aside in favor of a wholesale boost.

If the commission's recommendations—on TV sets, on shoes, on sugar—are put into effect, they would invite retaliation by other governments against products America sells abroad. This should be of critical concern everywhere, but especially in Illinois, the largest exporting state in the Union.

President Carter has 60 days to accept or reject the recommendations, then Congress can overrule him if he doesn't go along with the commission. We hope both stand fast for fair, free trade.

RATIFICATION OF THE EQUAL RIGHTS AMENDMENT

HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Ms. OAKAR. Mr. Speaker, I have taken this time today to bring attention to the current ratification status of the proposed equal rights amendment. On this day, 5 years ago, the Congress passed this proposed constitutional amendment—both Houses voting overwhelmingly in its favor. Today, however, the amendment is stalled. Thirty-five State legislatures have voted favorably on the equal rights amendment. The measure requires ratification by three additional States. We, as Members of Congress, must work vigorously for the adoption of the equal rights amendment. As Representatives of all the people of the land, both male and female, we must speak out for equality of rights under law.

An equal rights amendment has been a congressional issue for more than 40 years. Even today, after the Congress has moved favorably on this amendment, we are faced with related equal rights legislation of every juncture. Our legislative tasks require the fine fine tuning of employment acts, civil rights acts, education acts as well as health and taxation legislation—all with respect to prohibition of discriminaion on the basis of sex.

Mr. Speaker, it is my belief that ratification of the equal rights amendment will be an aid in the expediting of legislation that comes before this House. It will eliminate the time spent on debate and amendment of bills with regard to sexual discrimination. More importantly, ratification of the equal rights amendment will reemphasize America's commitment to equality of rights under law.

I urge my colleagues to continue their efforts on behalf of the equal rights amendment. Our contribution to equal rights legislation did not end on that day in 1972 when this Congress passed the proposed 27th amendment to the Constitution. We must speak out on behalf of all Americans. The equal rights amendment is a measure whose spirit has always dwelled amidst us, but whose letter in the law is long overdue.

AID TO PRIVATE AIRPORTS

HON. BARRY M. GOLDWATER, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. GOLDWATER. Mr. Speaker, the number of privately owned U.S. airports open to public use has declined since 1971. There was a net loss of 104 in 1975 and 80 in 1976. As a result, many small communities are cut from air service vital to their progress. In addition, large cities have lost reliever fields that diverted light planes from congested air hubs.

This is a dangerous trend that has far-reaching implications for civil aviation in this country. Commercial aviation is a resource for world leadership, a fact that is not lost on the Soviet Union, which is expanding its civil aviation fleet.

As nothing is done to stop the decline, many more private fields are endangered. Last year a survey made at my request by the Federal Aviation Administration showed that 73 airports in the national aviation system plan in 17 States, including 15 big-city relievers, were threatened with closing.

In the drafting of the 1976 Airport-Airway Act, I and others urged amendments to extend ADAP funds, now open to publicly owned airports, to the privately owned public-use fields in the national aviation system plan. Action was deferred pending a survey to be reported next year, but it seems to me that we know enough to proceed now.

This year I introduced a bill, H.R. 374, to achieve this objective. The urgency is clearly shown by the FAA's annual airport figures, which were tabulated in the March issue of Airport Services Management, a professional airport magazine, in a report by Col. Kendall K. Hoyt, its senior editor in Washington. I commend this article to the attention of the Nation and my colleagues as follows:

U.S. LANDING PLACES STILL GAIN—BUT AIRPORTS OPEN TO PUBLIC USE DECLINE

(By Kendall K. Hoyt)

Once more, FAA's annual figures show a gain in the total of U.S. landing places. The gain is largely in small private fields and helipads. This shows increased use of light aircraft in rural areas and helicopters around cities.

But it is our unhappy task again to tell you, as others heretofore have not done, that the number of airports open to public use continues to decline, a serious handicap to future flying.

First the totals. Landing places as of Jan. 1, 1977, rose to 13,770, a gain of 519 during 1976, far better than the 189 increase in 1975.

	Jan. 1 1977	Net gain	Abandoned
Airports	11,555	331	199
Heliports	1,674	150	83
Stolports	41	6	0
Seaplane	500	32	14
Total	13,770	519	296

This means that 815 landing places were opened in 1976 for the net gain stated, compared with 438 in 1975, topping the 1974 total of 786. Among the 199 airports abandoned, 61 were publicly owned and 138 private.

Here are the totals for public and private ownership.

	Public ownership	Gain
Airports	4,136	41
Heliports	333	46
Stolports	2	0
Seaplane	196	7
Total	4,661	94

	Private ownership	Gain
Airports	7,419	290
Heliports	1,341	104
Stolports	39	6
Seaplane	304	25
Total	9,103	425

The number of airports with runways over 6,000 feet increased by 56. The heliport gain of 150, compared with 94 in the previous year, reflects the increasing use of helicopters for executive flying. Only 214 of the 1,674 heliports were open to public use and 170 were lighted.

Upgrading of airports continued in paving and lighting.

	Jan. 1	Gain
Paved	4,065	122
Lighted	3,302	109
Unlighted	763	13
Unpaved	7,490	209
Lighted	886	34
Unlighted	6,604	175

Total landing places by States as of January 1 and changes in 1976 were:

Alabama	131	2
Alaska	762	−7
Arizona	202	6
Arkansas	166	1
California	804	23
Colorado	255	25
Connecticut	104	13
Delaware	32	--
District of Columbia	16	--
Florida	391	36
Georgia	262	14
Hawaii	51	4
Idaho	187	6
Illinois	867	36
Indiana	293	56
Iowa	250	9
Kansas	334	16
Kentucky	90	3
Louisiana	280	−1
Maine	162	1
Maryland	135	7
Massachusetts	141	2
Michigan	421	21
Minnesota	312	11
Mississippi	148	3
Missouri	358	15
Montana	172	5
Nebraska	301	5
Nevada	118	5
New Hampshire	57	−1
New Jersey	239	17
New Mexico	139	5

New York	496	8
North Carolina	251	14
North Dakota	209	11
Ohio	558	10
Oklahoma	285	8
Oregon	286	9
Pennsylvania	644	35
Rhode Island	22	4
South Carolina	123	7
South Dakota	131	6
Tennessee	132	4
Texas	1,217	4
Utah	90	--
Vermont	61	-1
Virginia	240	10
Washington	334	27
West Virginia	58	7
Wisconsin	321	18
Wyoming	90	2
Puerto Rico	23	-2
SP	15	--
Virgin Islands	4	--
Total	13,770	519

Something might be learned. Why, for example, is Illinois second only to Texas in landing places? Better rural use of aircraft seems to have been developed here than in any other state. Someone must be doing something right.

We have pointed this out year after year. The idea seems to have spread into the neighboring state of Indiana? Otherwise, who bothers to inquire? The writer wonders if there is any point in the annual eye-strain of preparing these figures.

THE VANISHING AIRPORTS

Anyhow, after viewing the above plusses, let us look at the minus side. Year by year, FAA brings the glad tidings that the number of landing places has gained; then the aviation associations and papers blithely report that airports have increased, not the same thing.

Of major concern are the airports open to public use. That is where most of the traffic is and they have been on a decline since 1971 when growth stopped after many years of healthy gains. A net loss of 15 public-use airports followed in 1972, 39 in 1973, 36 in 1974, 85 in 1975, and 44 in 1976.

Public-use airports privately owned lost 70 in 1974, 104 in 1975, and 80 in 1976. Here are the trends.

		Change in		
	Jan. 1	'76	'75	'74
Public	3,979	36	19	34
Private	2,414	-80	-104	-70
	6,393	-44	-85	-36

The number of abandonments was of course higher than these net figures, mostly among small fields but including 31 over 3,000 feet of which 3 were in the 4,000-to-5,000 class and 3 over 5,000.

The drop in private fields includes some that went to public ownership. But most are lost never to be replaced. There is no set policy to save fields by public purchase, as there once was in the FAA Airports Service.

Since 1960, the writer has been dingdonging about vanishing airports especially at big cities. FAA's figures showed only those that were gone. What was needed was a list of those endangered that might be saved.

Last year, by aid of Congressman Barry M. Goldwater, Jr., we got the list through a quick survey by FAA offices. It showed that 73 NASP airports in 17 states were in trouble; told why, in each case; and stated how much was needed to save each salvagable field to a total of $158 million including $65 million for Burbank. Most were privately owned, a big loss among 400-odd such fields in the NASP.

These facts seemed enough to start a rescue program. But the aviation groups gave little more than a mention in their bulletins though NBAA did try to alert its members. Federal action awaits a survey ordered by Congress in the 1976 Airport Act. FAA gave the study contract to a minority firm to report next year.

Efforts to authorize ADAP funds for private fields failed last year in Congress. Now Congressman Goldwater has reintroduced a bill to this end in hope of getting hearings.

QUINCENTENNIAL CELEBRATION OF THE AMERICAS

HON. J. WILLIAM STANTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. STANTON. Mr. Speaker, the recent celebration of our Bicentennial has left as its mark a more united America. This event has rejuvenated the cherished values and beliefs upon which our country was founded. Its success speaks for itself.

Yet another historic event will soon be upon us. In 1992, it will have been 500 years since Christopher Columbus set foot on America, an anniversary which must not go unnoticed. We must plan for an unparalleled celebration in commemoration of the founding of our great land. Never before in history have so many people, with such a rich diversity of backgrounds, over so vast a geographical extent had so much in common to celebrate; 500 years of opportunity to build a new world in a new hemisphere.

A plan for the quincentennial celebration of the Americas has been submitted to me by a Mr. David Larson of Ashtabula, Ohio. He proposes having a variety of activities over the decade from 1982 through 1992. These activities are aimed to unify and provide a forum for understanding the various cultures which exist on the American continent. The events cover a large spectrum. It has been suggested that the decade include events such as the following:

LISTS OF EVENTS

1. Open the decade with a Pan American relay foot race from Prudhoe Bay, Alaska, to Punta Arenas, Chile, on the Strait of Magellan (the world's southernmost city, approximately 16,000 miles. A race covering 40 miles per day (four participants from each country running ten miles each) would take 400 days plus Sundays and holidays. Starting in the summer, it would be scheduled to end October 12 the following year. With each running for one week on alternate days there would be about 530 participants from each country for a total of about 15,000 contestants, enough to generate keen interest throughout the hemisphere.

2. Re-enact Columbus' first voyage of discovery August 3–October 12, 1992, using replicas of the Santa Maria, Nina and Pinta incorporating modern materials, safety flotation, two-way radio and motor power to keep the ships on schedule.

3. Organize a ten year program of intra-American cross cultural, cross economic and social class exchange visits for all levels of our society (subsidized where needed?) not limited to heads of states, the diplomatic corps, and top level management in industry and business. A plan for matching U.S. and Canadian cities with similar sized Latin American cities might be considered.

4. Expand the U.S. Bicentennial covered wagon train idea to include Latin American oxcarts (various styles), northern dog teams (pulling wagons rather than sleds), Red River Carts, and other colorful historic means of travel. Load them on specially built highway trucks for fast travel through sparsely populated areas. Include popular educational or tourist information features for caravaner participants, an improvement over the Bicentennial wagon trains.

5. With the aid of multi-media (including closed circuit TV) build into some of these caravans a TRAVELLING UNIVERSITY OF THE AMERICAS offering both non-credit courses and credit courses leading to a selection of DA, Doctor of Americas, degrees. Graduates would have taken a number of their upper class courses in-transit and on-site with local lecturers to gain a comprehensive Pan American mastery in their respective fields of specialization in understanding our New World hemisphere.

This is merely a few examples of the many possible events for such an important celebration.

There are many social, political, and economic advantages to such a ceremony. This would provide a chance for all countries of Pan America to work, learn, compete athletically, and celebrate together; a truly unifying experience. I hope that serious plans for such a celebration will win the approval of all Members of Congress, as well as all the people of the Americas.

AMERICANS CAN'T FEED EVERYONE

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. FINDLEY. Mr. Speaker, the February 1977 issue of Grain Producers News carried a brief article, entitled "Americans Can't Feed Everyone." I wholeheartedly share the sentiments expressed in this article. U.S. food handouts abroad will not solve the world food problem. Ultimately, the food-deficit countries will have to solve their own food problems; and their best hope for doing this is to embrace the market price system which made American agriculture preeminent in the world. I commend this article to the attention of my colleagues:

AMERICANS CAN'T FEED EVERYONE

There are those who say people in their parts of the world are hungry because Americans eat too much.

It's true that many Americans eat too much for their own good health. But they aren't taking food from mouths of the world's hungry. Americans are able to eat more because the efficiency of U.S. agriculture makes more food available to them. That same efficiency helps alleviate hunger in the world.

The U.S. cannot literally feed all those who need more food. But it can point the way toward solving food problems right where they exist. The roadblock in too many instances is failure of "Third World" governments to encourage adaptation of U.S. farming technology to local situations.

The following quotes from an article by syndicated columnist Patrick Buchanan pro-

vides ammunition for response to charges the U.S. is to blame for world malnutrition, hunger, starvation.

"Over the years, this nation has poured more than $25 billion into Food for Peace, a record unmatched in history. America's farmers, one-tenth of one percent of all mankind, are helping now to feed a fourth of all mankind . . .

"The reason we Americans are well fed is because American farmers are free. They are allowed to own their own land, to raise and produce what they wish, to sell to the highest bidder. In the Third World, this may be considered the essence of a corrupt system, but it has the advantage that it works. With only a tiny percentage of our population left on the farms, Americans are among the best fed people in the world.

"The Third World has two choices. It can have its anti-Western bigotry, its anti-capitalist ideology, its anti-American rhetoric—or it can solve its food problem by imitating the United States instead of calling us names."

LAUREL VOLUNTEER RESCUE SQUAD

HON. GLADYS NOON SPELLMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mrs. SPELLMAN. Mr. Speaker, in March of 1952, a small group of men and women in Laurel, Md., founded the Laurel Volunteer Rescue Squad which on March 26 of this year will celebrate its 25th year of continuous service to the citizens of its community. I know that my colleagues in the Congress, no strangers to the difficult and often thankless demands of public service, will want to join me in extending congratulations and best wishes to the dedicated members of the Laurel Volunteer Rescue Squad.

The fledgling rescue squad filled a vital need in the sparsely populated, but fast-growing area where it was not uncommon for accident victims to wait dangerously long periods before trained help arrived. Recognizing that dedicated people would have to fill the gap, Mr. James Alexander, who became the squad's first and only chief during these past two and a half decades, joined with a few concerned citizens to establish the volunteer rescue squad—the third independent squad to be incorporated in the State of Maryland. Although underfinanced and underequipped, the squad was certainly not lacking in desire or manpower. Indeed, Chief Alexander has remarked that the most difficult task he faced during those first few years was not that of reaching victims as quickly as possible, but rather it was figuring out how to fit 50 squad members into one ambulance. Amazingly, from that inauspicious beginning, the Laurel Volunteer Rescue Squad has gone on to become nationally recognized as one of the finest organizations of its kind in the United States.

During these past 25 years, the LVRS has been credited with many innovations which have helped volunteer squads across the Nation improve their effectiveness and which surely have helped save many lives. Among these innovations are the duty system, the sleep-in system, van-type ambulances, and a squad truck for heavy rescue. In addition, the LVRS has done remarkably well in international competition, a testimony to its superior abilities. I would like to stress that the squad has always depended a great deal on the talents of its women members, who have won four international championships. Because of its outstanding performance record, the Laurel Volunteer Rescue Squad regularly entertains officials of similar organizations from all across the country, who make their pilgrimage to find out firsthand exactly what makes the Laurel squad one of the best in the Nation.

There is no question in my mind that people who volunteer their time and energy almost invariably bring a greater degree of vitality and dedication to public service, and nowhere are there better examples of this fact than the hundreds of men and women who have worked tirelessly to make the Laurel Volunteer Rescue Squad the fine organization which it is today. As a neighbor and as a friend, and on behalf of all of Laurel's citizens and the Members of the United States Congress, I would like to extend my deepest gratitude and appreciation to these people for making the world a safer place in which to live.

I particularly wish to salute Chief Alexander who has now retired after 25 years of sterling leadership of this outstanding organization. Godspeed, chief!

HEARINGS ANNOUNCED ON PROFESSIONAL STANDARDS REVIEW ORGANIZATIONS

HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. STARK. Mr. Speaker, Chairman SAM M. GIBBONS, of Florida, of the Ways and Means Oversight Subcommittee today announced hearings for April 4 and 6 to discuss the progress of the Professional Standards Review Organization—PSRO—program and its relationship with the various government health utilization review programs. Representative FORTNEY H. "PETE" STARK, of California, will chair the 2-day hearings.

Both days of hearings will begin at 9 a.m. in the Ways and Means Committee main hearing room on the first floor of the Longworth House Office Building. On April 4, witnesses will include representatives of the General Accounting Office, the Institute of Medicine, and the Bureau of Quality Assurance of the Public Health Service. Witnesses on April 6 will include representatives from several Government agencies and the health profession.

Created by Congress in the Social Security Amendments of 1972, PSRO's are mandated to review health expenditures for services provided under medicare, medicaid, and maternal and child health programs. The PSRO program has not been fully implemented and results are just now becoming available by which Congress can assess its progress.

Testimony on April 4 will focus on three subjects: First, the need to assess the cost-effectiveness of the program; second, the status of implementation and the forces impeding its progress and third, a discussion of several evaluations of the program. There have been delays in implementing the program and obstacles preventing it from becoming fully effective.

The second day of hearings will address a specific problem in health care review—the relationships among the numerous Government health care review program. Testimony will suggest how the review programs may be duplicative, overlap in jurisdiction and place undue burden on insurance companies and hospitals.

IMPACT AID SHOULD NOT BE CUT

HON. MARJORIE S. HOLT

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mrs. HOLT. Mr. Speaker, every year the Congress becomes embroiled in a fight to restore Federal impact aid to the budget after a President has proposed cuts in this program. And every year hundreds of local school districts have trouble planning their budgets, because they are uncertain how much impact aid will be forthcoming. This is a very inefficient way to operate at both the Federal and local levels.

But this year is no exception. The fiscal 1978 Federal budget prepared by President Ford and revised by President Carter would cut approximately $300 million from the funding for impact aid. And those of us representing school districts that depend on such aid are working very diligently to have such aid restored to the budget.

Meanwhile, local school districts wonder and wait, forced to plan their own budgets for the next fiscal year without knowing how much will be available from this source. In my own State of Maryland, the cuts proposed by Presidents Ford and Carter would take $2.8 million from Prince Georges County, $2.6 million from Anne Arundel County, $771,881 from Baltimore City, and varying amounts from other school districts.

It is important to understand the purpose of impact aid. It is designed to compensate local school districts where Federal activities have a large impact on school enrollments. It recognizes a Federal responsibility to help local school districts carry the cost burden imposed by Federal activities.

Presidents from both political parties have been trying to cut impact aid for many years, because there are some inequities inherent in the formula. It should be revamped, but it surely would not be easy for some 375 to 400 school districts to lose this aid during the fiscal year.

Soon after I came to Congress 4 years

ago and started to wrestle with this problem, I introduced legislation that I believe would provide a better system to compensate federally impacted areas. I have reintroduced it in this session under the designation H.R. 931.

It would require Federal payments in lieu of property taxes to local governments where Federal property is located. The Federal payment would be equal to the amount of taxes that would be owed if the property were privately owned.

Mr. Speaker, there are obvious advantages to this kind of approach. It would be relatively easy to administer. Its fairness would not be in doubt, because it would be compensating local governments for Federal removal of property from their tax bases. And it would be a dependable source of local revenue, not subject to the annual whims of Presidents and Congresses.

However, the enactment of payment in lieu of taxes is in doubt, so we must make do with the present system. Impact aid should not be cut until a fair and equitable system to replace it is enacted.

THE HISTORY OF NATIONAL AIRLINES IN JACKSONVILLE, FLA.

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. BENNETT. Mr. Speaker, recently, Mr. L. B. Maytag, president of National Airlines, addressed the Jacksonville Chamber of Commerce. His interesting comments detail the city of Jacksonville's early connection with the aviation industry and with National Airlines in particular and discussed current problems facing the industry:

REMARKS BY L. B. MAYTAG

Thirty-eight years ago, National Airlines—and Jacksonville—quietly made some aviation history.

It concerned a 93-mile stretch of sky between here and Daytona Beach.

National wanted to fly it.

It would unite what was then two separate airline routes for National. One out of Jacksonville touching four States to New Orleans. The other out of our home base at the time—St. Petersburg—down as far as Miami and jack rabbiting across the State via five other cities to Daytona.

That 93-mile link could tie it all together.

It became the first route case to be heard before a fledgling board created by the U.S. Government to bring a new industry—commercial flying—out of Chaos: over-competition, accident-prone and generally adolescent behavior.

This gangling industry had a lot of talent. But it needed a direction and family ties—coordination of these Hatfields and McCoys—to build a network into which the public could directly tune. Aviation could then reach its full value.

The board was called the Civil Aviation Authority at the time—1939. It is called the CAB—Civil Aeronautics Board today.

Since receiving that route award, National has grown—to a 12,000-mile route structure serving 15 States and London.

And the U.S. aviation system has grown. You can walk up to any ticket counter of any U.S. Interstate airline, book your ticket and check your luggage to cross continent; to cities large and small, or to connect to the Mideast, Scandinavia or New Zealand.

Their network joins 58,000 pairs of cities in the United States alone.

Today you can get there from here.

But what about tomorrow?

That is a question concerning us all in aviation. And it is one with which the public—particularly you, the business leaders whose travel needs are heavy and, often, instantaneous—would be especially concerned.

There are those who optimistically regard the airline deregulation bills now before Congress as leading inevitably to cheaper fares and good-for-all. But they could wake up waiting for a bus in their hometown and wondering where their airlines went.

The advocates of current proposed deregulation bills have not only misread the statistics, they are navigating a faulty—and what could be for the public, fatal—course.

For it's not only so-called "small" communities which could lose their present accountable service. It threatens many medium size ones as well, and probably certain major cities, too.

Perhaps you feel secure in a city the size of Jacksonville.

After all, it is a banking-business-insurance heart of our state. It's big. It's important. Certainly important to National, and we have no plans to give it anything but more importance in the future. It is also a city with political strength.

Jacksonville would seem a logical city in line for the burst of airline competition which deregulation proponents say will be unleashed as soon as the present system is put aside for the new one of "free entry."

That is, any airline may fly into any market it desires. When and how depends upon the legislation proposed.

There would be a rush to the most profitable routes under "free entry."

Recent studies by the Government Accounting Office saying most of the airline-cited endangered cities are served by two or more carriers—therefore do not face loss of service—don't hold realistic water.

In a rush for profit, two cannot only live, but can drop routes, as cheaply as one. Not only could but probably would. Fierce competition on major routes would financially demand it. Airlines could not afford to do otherwise in their fierce battles for survival.

Under the current system, airlines are required to provide service to all types of routes in a network of public responsibility. The profits of one help offset the losses of the other.

But, say that system were—mistakenly—marked "Void."

Airlines would go down the list of statistics to learn which cities have the most traffic, plus the highest yield. These are the ones they want to serve.

What of Jacksonville?

According to the most current CAB data for a 12-month period, Jacksonville is 46th in the nation for most passengers boarded in the U.S.—about 1.2 million people. That's between Norfolk, Va.—45th—and West Palm Beach—47th.

But in city pairs, it's another matter. In traffic between Jacksonville and any other city in the nation, you stand 144th. That's correct: 144th. There are 143 cities ahead of you with more traffic prospects to lure an airline. That's a long line.

For under the proposed system of deregulation, the emphasis is on fewer destinations, fewer flights and fewer empty seats. It is designed to move greater masses of people at lower prices.

The emphasis is on high volume traffic flow to keep those seats filled.

We speak of our traffic flows in this industry in a peculiar concept. It is called origination and destination traffic. That is simply adding up all those people who choose to fly between two specific points—in both directions—for a given time period.

Jacksonville now is connected to 135 cities. Most give you multiple choice of arrival and departure times. But only five of those 135 cities could remotely be considered approaching a traffic-sustaining figure:

Atlanta, 68,000 round trip passengers in one year—your highest-traveled city pair; New York, 65,000; Miami, 47,000; Chicago, 24,000; and Washington, D.C., 23,000.

Generally, minimum ideal service is judged to be two nonstop flights in both directions. Using our smallest equipment, a Boeing 727 with 107 seats, we require about 47,500 round trip passengers a year between two cities to maintain such service with load factors profitable for our industry.

These load factors—percentage of seats occupied—would not be so high as to deny service to the communities on peak days and during peak periods.

Only two of your cities—in that critical index—exceed that figure. How big a rush do you, an astute businessman, think there will be to establish routes into your city?

There are changes in the industry we would like to see come about—faster decisions on route applications and fare requests, for example. These past lags appear to be closing somewhat. But the system itself works. It is still conceded to be—by both sides of the issue—the best air transportation system in the world.

Ours is not the only industry currently facing proposals of regulatory reform. Some of those proposals would affect many of the industries you here represent, specifically, banking and insurance.

But our industry—airlines—is more visible than most. And so it has had more political pressure and public exposure.

Most of the proposals assume that air fares are too high, and that more competition would bring lower ones.

Neither is true.

In a 15-year period ending in 1975, the average price to fly one mile on a U.S. airline rose only one-fourth as much as the consumer price index.

Open competition—as proposed—cannot manufacture a miracle of low fares. Costs are not going down to allow this to happen. Not the price of fuel. Not landing fees. Not production or operating costs. Not equipment. And those are the constants in our industry.

A more realistic result would be cutthroat competition. Smaller, financially weaker carriers would go under, leaving the field to larger airlines and whatever prices they may eventually set.

Alleged fare benefits are being vastly overstated in this debate. Deregulation proponents are ignoring the vital question of a total, integrated air transport system with all the working parts depending upon the other.

Our bottom line becomes increasingly important today. Airlines must interest lending institutions whose doors are now temporarily closed—due in no small part to the cloudy future of regulatory reform. For they must plan now for long term equipment purchases.

While we at National are in favorable position with one of the most modern fleets in the business—DC 10s and Boeing 727s, with no new aircraft on order—the industry's need for new equipment is vital and just around the corner.

National has applied for several new routes, including permission to fly directly from Miami to Paris. Last week the CAB granted us the authority. We will be the first U.S. flag carrier operating between those gateways, benefiting all Florida and the Southern tier states.

A bilateral treaty permitting such route entry already exists between France and the U.S. We begin service June 22 with four flights a week.

It is a route which will assist Jacksonville business travelers who frequently fly to Europe and the Mideast.

There have been a lot of changes both for National and for Jacksonville since we first began service here. It's always interesting to look back.

It was a cold, gray morning in 1934 when National first landed here. It was a Monday—November 19th.

The plane was a Ryan. A fat, rumbling monoplane which would have given today's environmentalists acute seizures. But it had its moments. It was the type aircraft which took Lindbergh to Paris.

And on pleasant weekends, Jacksonville residents lined the field—sometimes several hundred at a time—to watch this and its later cousins take off and land.

Aviation was that new.

There were no passengers that first day. Just a load of mail, for which Uncle Sam was paying 28 cents a mile. That was the financial base of airlines.

That Monday was the first time National flew that 93-mile link from Daytona. It took nearly an hour. Ryans flew at 135 miles per hour. Incredible speed in those days.

It was a low key inaugural. No festivities. No official greeters, except the men in sweaters who came out to refuel the plane.

For it was just a temporary route at the time.

National was named to replace a competitor which had lost a wing to a utility pole in Daytona. The power company had erected it during one night and forgot to tell the airport about it.

There are a lot of stories here about those early days. Some can remember "Henry" at Pensacola—a leg on the flight to New Orleans. Henry was a horse. He belonged to a nearby farmer, and just before a flight was due, Henry—who had a penchant for grazing on the runway—had to be rounded up and directed back to the barn so the airliner could put down.

Some of you may remember the Electras. They seated 10. You had to duck your head to get in the door. In fact, you had to keep ducking all the way down the aisle. It led to what became known as "the Electra crouch."

Later we flew Lodestars. The first set a speed record on the way to Jacksonville from its Burbank, Calif., manufacturing plant—nine hours and 29 minutes, including refueling time in Dallas.

When we added stewardesses, they served box lunches of fried chicken bought from the little restaurant down the field.

Thomas Imeson Field in those early days was bounded by the prison farm at one side, and a seemingly endless WPA project at the other. Its chore was to lengthen the runways. But for most of that period, it appeared to be a shovel detail turning over the smallest possible hill for the longest possible time.

National actually had three inaugurals here. The temporary route begining in 1934. The beginning of the Jacksonville-New Orleans route November 1, 1938. And the permanent link award between Daytona Beach and Jacksonville which we began April 3, 1940. And, of course, most of you know that for many years Jacksonville was our home base before we moved to Miami.

The multiplicity of inaugural dates has caused some confusion as to how long we have operated out of this city. Well, welcome to the 37th . . . 39th . . . or 43rd anniversary. Or, as one of our station agents says: "We've been flying here for quite some time."

They've been good years. Progressive years.

We look forward to another 37 . . . 39 . . . or 43 . . . and certainly beyond.

REASONS TO CURB TV VIOLENCE

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. STEIGER. Mr. Speaker, depiction of violence reached an alltime high on television last year. This is a problem which should concern all of us.

More and more, we are hearing of the negative effects on children, and on adults as well, that these televised depictions bring about. The amount of attention being directed to this problem is encouraging. As a parent, I know I am increasingly concerned about the programs offered by the networks.

TOM RAILSBACK's resolution, which I am cosponsoring, is a positive step in the effort to reduce televised violence without interfering with first amendment rights. Another congressional action on behalf of America's children came in the hearings held recently by the House Commerce Subcommittee on Communications. Various organizations have drawn attention of the TV violence question and a number of businesses have pledged not to advertise on shows with violent or antisocial behavior.

The Christian Science Monitor, in a March 7 editorial, made a very good analysis of the issues involved in the television violence debate. I hope it will receive thoughtful consideration by all who read the RECORD.

REASONS TO CURB TV VIOLENCE

The mounting torrent of concern about the unfavorable effect of television violence now is hard to ignore and we, for one, are glad that it is being voiced openly. Criticism most recently was on display in Washington at a session of the House Commerce Subcommittee on Communications, where it was pointed out that violence on the three major U.S. television networks reached a new peak in 1976 and that children who watched programs with a high ingredient of violence show a high level of physical aggression.

"I would like to hear that you people are concerned," freshman Rep. Edward J. Markey of Massachusetts told heads of the three networks, "but the impression I get is that no one wants to take the credit for violence on television."

The network officials claim they constantly review programs and try to eliminate violence but, as one of them said, "unfortunately, the efforts of broadcasters in reducing incidents of violence on television have seemingly gone unnoticed." Maybe, but statistics gathered by a study at the University of Pennsylvania School of Communication certainly point the other way. They say violence depicted last year broke the record high of 1967.

Another network defense is that violence in some cases is a necessary fact of life and relevant to the programs. Television, it is asserted, should not be "the scapegoat for persistent and historical social problems." Does this make the parade of violence justifiable? We think not. As one of the congressmen stated, there now is more violence on TV in totality than before the family viewing hour was introduced; he felt that was "a gimmick to fool the American public."

But the House hearings were only part of the growing criticism of violence on the tube. A child development survey found that 25 percent of youngsters 7 to 10 years old said they were afraid of "TV programs where people fight and shoot guns," suggesting a relationship between violent TV programs and children's fears. Nicholas Zill, the psychologist in charge of the survey, said the findings reinforced the belief that TV violence should be curbed in some "big way," not merely with a "family hour or 'Sesame Street.'"

In addition, the Parent Teachers Association, the National Citizens Committee on Broadcasting, and the American Medical Association all have joined the campaign against TV violence. And a recent Gallup poll found over 70 percent of the public in favor of picturing violence only after 10 p.m.

Inevitably this strong sentiment constitutes an influence on the advertisers who sponsor shows containing excessive violence. According to Advertising Age, some large accounts already are refusing to be associated with such shows.

All of which is a strong indication that awareness of the situation is on the increase, that opposition to unbridled violence is gathering momentum, that public concern is beginning to be felt by the networks, and that this is a good time to keep up the drive to damp down the excesses.

More parental guidance for the young about avoiding shows that emphasize violence, obviously is in order; one survey indicated half the children are allowed to watch whenever they want, and a third claimed they could watch whatever they chose. But the television industry itself must make a greater effort to weed out excessive violence, which can affect adults as well as children.

SAVE OUR SEALS

HON. STEWART B. McKINNEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. McKINNEY. Mr. Speaker, last week, the Canadian Government opened the annual harp seal hunting season. During the 6-week season, at least 170,000 seals—the quota established by the Canadian Government—will be clubbed to death, cruelly, senselessly and unnecessarily.

Traditionally, the hunt for the seal has been synonymous with adventure, danger and bloodshed of both men and marine mammal. As American author George Allan England observed from his experiences aboard a sealing ship in 1922—

Not for mere gain do men endure such miseries as the hunt entails . . . it is their annual carnival . . . of bloodshed.

Despite the institution of certain so-called humane techniques of slaughtering the seals, the flagrant cruelty of the seal hunt has not been suppressed.

The slaughter of the harp seal threatens the very survival of the species. At the turn of the century there were approximately 10 million harp seals off of the coast of Newfoundland. Today, it is estimated there are fewer than 1 million remaining. Conservationist and animal welfare groups dispute the effectiveness of the Canadian quota system, charging

that the harp seals will be extinct as early as 1985 if the present rate of killing continues. Despite efforts by the Canadian Government to supervise the hunt, it is impossible to monitor the thousands of commercial seal hunters to insure that 170,000 ceiling it has set will not be exceeded.

In addition to the direct slaughter of the harp seal, man has further threatened the species' existence by becoming a serious competitor for the fish that constitutes the food for the seal's survival.

The Marine Mammal Protection Act, which Congress passed in 1972, prohibits the importation of harp seal skins into this country. But it will not proscribe the cruel clubbing of 170,000 harp seals this spring. The Canadian quota system has been neither effective in preventing the inhumane manner in which these marine mammals are being slaughtered nor in protecting the species from almost inevitable extinction. This is why I join with my colleagues today in requesting the Canadian Government to reassess its policy of permitting such slaughter in Canadian waters.

NEXT YEAR IN JERUSALEM

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. RANGEL. Mr. Speaker, as the joyous Passover season approaches, Jews throughout the world look forward to celebrating this special holiday. Passover commemorates the exodus of the children of Israel from Egypt almost 3,300 years ago.

The spirit of this holiday is dampened by the harsh reality of Soviet harassment and oppression of their citizens of Jewish descent. The Soviet Union has undertaken a determined campaign to eradicate every vestige of Jewish life within its borders. To this end, they have closed almost every synagogue, forbidden the publication of religious books, and the making of religious devotional articles in an attempt to destroy the once thriving Jewish community of the Soviet Union. In fact, they have gone so far as to forbid the production and sale of Pesachdich food which is requisite in the observance of Passover. Additionally, they have forbidden the importation of Pesachdich food which until recently, they had permitted.

Many of the over 3 million Jews in Russia wish to peacefully exercise the right of emigration which is guaranteed under the Helsinki Accords. To these people, the final chorus of the Passover will have special significance—next year in Jerusalem. Hopefully, those Soviet Jews who cannot celebrate Passover this year will be fortunate enough to have their prayer answered and be free to fulfill the ancient Jewish dream of celebrating the Passover in Jerusalem.

I urge my colleagues to support House Concurrent Resolution 97, which would facilitate the freer movement of people.

OUR POLICY IN THE ZAIRE CRISIS?

HON. DAVID C. TREEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. TREEN. Mr. Speaker, I do not fancy myself an expert in foreign affairs. I have neither the experience nor the background for formulating a comprehensive foreign policy. But, as a Member of Congress who is deeply interested in the security of the United States and the progress of humanity throughout the world, I have tried to learn more and understand more about the effects of our actions in this complicated field of foreign affairs. And, the more I learn and the more I see, the deeper becomes my concern.

Today, along the Angola-Zaire border there are developments which pose serious short-term and long-term threats. I am not sure what our reaction should be with respect to the recent invasion of Zaire by forces operating from Angola. The situation poses quite a dilemma for the present administration and for Congress. We have already granted some $2 million in assistance. Zaire has requested additional help. Should we respond with further help? If so, should it be limited to medical supplies, clothing, food and communications equipment? Should it include small arms? If we are going to invest that much, should we consider even more formidable assistance in terms of major weapons?

The seeds of our dilemma were sown not very long ago in Angola. The Ford administration commenced a program of military and economic assistance to the prowestern forces during the recent contest for power in Angola. This assistance was furnished without official public acknowledgement, but the appropriate committees of Congress were duly informed. Our policy of assistance then began to unravel. Congress forced the termination of the assistance program. The pro-Marxist group, aided by Russia and Cuba, succeeded in gaining power. Now that power is being used against Zaire, a nation that also attempted to thwart the pro-Marxist MPLA.

Our efforts in Angola were secret, but, as pointed out above, were reported to the appropriate committees in Congress consistent with existing law. The reaction among many in Congress, after the administration was forced to make public acknowledgement of our involvement, was one of great trembling and fear that our country would become involved in another conflict like the one in Vietnam. (Never mind that there were substantial differences in the two situations.) The administration was condemned for acting in "secrecy," and Congress, in a great demonstration of outrage and umbrage, canceled our assistance program.

Perhaps our efforts in Angola would not have been successful. On the other hand, they might have been. But that's not the crucial issue. The question is: what does that decision by Congress portend for the future?

Does our experience in Vietnam mean that we will never again intervene in other parts of the world when our interests dictate that we should? Or when the rights of other members of the human race are seriously imperiled? Does the action of Congress in prohibiting assistance in Angola mean that we will never again permit clandestine—but duly reported to Congress—help for forces friendly to our interest and our values? If so, Congress will run headlong into conflict with President Carter's personal choice to head the Central Intelligence Agency. Our new Director of the CIA, Stansfield Turner, said on the CBS television program "Face the Nation" 2 days ago—according to the Washington Post of March 21—that:

> Foreign aid sometimes in secrecy is a very common and very legitimate tool of foreign policy.

Have we let the Vietnam experience freeze us into a rigid posture of nonintervention? If so, what happens if another Hitler commences racial genocide?

I do not urge a policy of consistent intervention, but a policy of consistent nonintervention would be disastrous. Our policy should based upon our security and other interests. Among our other interests is our concern for humanity—including human rights—throughout the rest of the world. A policy that absolutely forbids intervention would signal all our adversaries, existing and potential, mighty and petty, the Brezhnevs, the Fidel Castros, and the Idi Amins, that they need have no fear of resistance on the part of America. A declared policy by the United States that we will never intervene—not openly nor clandestinely—will give a green light to aggressors throughout the world. That signal may have already been given by our timidity in Angola.

Mr. Speaker, as I said at the outset, the complexities of foreign policy are monumental; no one can assert himself in this area without a degree of self-doubt. Certainly not I. But I believe that I express the opinion of many in this country when I say: a perception of American unwillingness to act when our interests dictate could result in great calamity for our country.

On this subject I found the essay of Rowland Evans and Robert Novak, which appeared in the Washington Post on yesterday, of interest. These columnists have been observing our foreign policy for many years and I find them to be most perceptive. Their column on the subject of Zaire follows:

ZAIRE: DOOMED TO THE FATE OF ANGOLA?

(Rowland Evans and Robert Novak)

Even after early warning signals from both Western-allied Zaire and pro-Western elements in Marxist Angola, the U.S. was helpless to interfere with the invasion of Zaire's copper-rich Katanga province by battle-hardened veterans—now Cuba-trained—of the old Moise Tshombe Katangan constabulary.

That helplessness shows that the impact of the Vietnam war, followed by the Central Intelligence Agency investigations, traumatize Congress today as they did during the 1975 Angolan civil war. Congress remains transfixed with fear that U.S. aid will lead to military intervention, and is still unwilling to use the undercover CIA option. So,

there is no effective response to the invasion of Zaire.

Accordingly, U.S. and Western European experts here have already conceded this result in the two-bit war over a king's ransom in copper; the fall from power of Zaire President Mobutu Sese Seko, whose hapless "army" cannot begin to turn back the Soviet-armed, Soviet-supplied Katangan troops.

This may well be only the first of several agonizing results. If Mobutu does lose the presidency under the shock of losing the richest part of his huge country, the momentum of that loss would expose much more of Zaire to ravage by the Katangan forces. Backed by Angola's own Cuba-directed army and supplied by huge Soviet military resources, the old Tshombe constabulary may now be accompanied by Cuban and Angolan leaders.

President Carter has been strongly urged by European allies to solemnly appeal to Moscow to halt the invasion. U.S. officials are unsure, as we write this, how deeply Moscow was involved in the decision to invade Zaire. Nevertheless, there is strong presumption that a word from Moscow could stop the invading force dead in its tracks, by merely threatening to withhold supplies.

But diplomats here have little hope that the Soviets will lift a finger in response to such a request from Carter any more than they did in reply to Henry Kissinger's plea to stay out of Angola in 1975. Indeed, cooperation by the Kremlin is made all the less likely by repeated Soviet embarrassments from Carter's human rights campaign.

Nor does the mood in Congress incline Moscow to defer to U.S. wishes. The skeptical, even frightened, attitude on Capitol Hill over foreign risk-taking was dramatically evident last week when Secretary of State Cyrus Vance testified before the House International Relations Committee on fattened aid for Zaire.

In response to Vance's request for $32.5 million in military aid for Zaire, liberal Rep. Don Bonker (D-Wash.) informed him that Zaire's army was corrupt "from top to bottom" and that Mobutu did not have the confidence of his people.

Bonker later told us that was the prescription that led the U.S. into Vietnam. But Bonker's was the formulation that led Congress into shrugging off any responsibility for Angola.

Vance's aid request has not yet been authorized, but it is now too late for it to have any impact on the military situation in Katanga (now called Shaba province). Moreover, even if Bonker overstates the weakness of Mobutu's army, the fact that it is not an effective fighting force is well known here. It may indeed be too late for rehabilitation.

With Havana and Moscow watching to see how well the old Katangan constabulary performs in Shaba province, success is expected to gain their support from more extensive operations. "The game is to destabilize Mobutu," one diplomat told us, "and after he is destabilized, the avenue is wide open for many nefarious purposes."

A glance at the map of southern Africa shows why. The fall of Shaba province to the Communist-backed Katangans would surround Zambia, the only other Western-leaning black state in southern Africa, with black states that all lean heavily toward Moscow and away from Washington: Angola, Tanzania and Mozambique. So, in any civil war in Zaire between a U.S.-backed force (under Mobutu or some successor) and a Soviet-backed force, the U.S. force would be operating under most unfavorable circumstances.

In fact, however, there almost surely will be no U.S.-backed force there because the still-traumatized Congress would not permit it. Vance's aid request for Zaire will be cut by Congress; in addition, the "human rights" block will challenge it on the basis of alleged repression by Mobutu.

So Zaire, or at the least its vital cooper-rich heartland, seems doomed to go the way of Angola, in the familiar pattern of a Secretary of State crying for help and Congress turning away.

FORTNEY H. (PETE) STARK, JR. CONGRESSIONAL RECORD INSERT ANYTHING BUT COFFEE WEEK

HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. STARK. Mr. Speaker, I would like to call my colleagues' attention to an issue which involves all of us who enjoy the indulgence of one—or several as the case may be—cups of coffee a day.

As most of you are probably aware, coffee prices to the consumer have more than doubled in this last year alone. Continuing wholesale price increases indicate that consumers may be paying as much as quadruple the present cost within the upcoming months. Brazilian and Columbian coffee producers blame frost damage to crops for the coffee shortage they are ostensibly experiencing, which in turn is responsible for price hikes. But consumer groups claim that coffee stockpiles indicate ample supplies. Because of these conflicting reports, the International Coffee Organization has ordered a full investigation of the supply-and-demand problem.

Some of us might recall the spiraling beef and sugar prices of a few years past, and the consumer boycott which ensued. The lack of purchases of those products seemed to have a direct effect on the price increases. In a similar move, the Alameda County Consumer Affairs Commission of California is attempting to organize a coffee boycott in that State of wide-based popular support for 1 week. Public outcry over soaring coffee prices has already caused the U.S. coffee industry to abandon plans for a $8 million promotion campaign to encourage consumer acceptance of price hikes. Organizers hope that through a widespread, week-long coffee boycott, consumer solidarity will be further expressed both to consumers at large, and to coffee producers across the international market; and will force the industry to keep prices down to an acceptable level.

The California Legislature has sanctioned this move through their resolution scheduling April 3–9, 1977, as "Anything But Coffee Week." It is their hope, along with the Consumer Affairs Commission, that the coffee boycott, as an organized resistance to skyrocketing prices, will present an example of consumers asserting their importance as a vital link in our commercial and industrial chain, with an equally vital right to participate in decisions for price increases. I urge my colleagues to support this effort to control coffee price hikes by joining California citizens in their protest for the week of April 3–9.

ONE HUNDRED CONGRESSPEOPLE JOIN IMPACT AND FIGHT

HON. HERBERT E. HARRIS II

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. HARRIS. Mr. Speaker, I am pleased to announce to my colleagues today that a bipartisan coalition of 100 Members of the House have joined me in writing the distinguished chairman of the Labor-HEW Appropriations Subcommittee, urging the subcommittee to restore the $395 million cut in impact aid education funds, proposed by former President Ford and President Carter for the coming school year.

Impact aid cuts are cuts into the very heart of school's operating budget. Unlike most Federal programs, Impact Aid is general aid, not "categorical" aid for special targeted needs. These funds pay teachers salaries, heating and utility bills and buy instructional materials. The cost of heating our schools has doubled in the last four years. The cost of children's library books has gone up 39 percent. Local expenditures for school lunches have jumped 35 percent. Our school budgets are feeling a real pinch. They have run out of places to cut. A cut in impact aid would be particularly devastating since this is one of the few Federal programs that helps schools pay their bills.

To make up for this loss in impact aid, property taxes would no doubt have to be increased. I have calculated that, for example, in one school district in my congressional district, halving the Federal impact aid budget would mean a $68 boost in the average property tax bill. The family budget has just undergone the ravages of an unusually severe winter, on top of a 50-percent increase of food prices in the last 5 years. It would be unconscionable for the Congress to, in effect hit our families with a higher property tax bill by not restoring these funds.

Finally, what is particularly disturbing about the elimination of these funds is that in essence the executive branch—by asking Congress to eliminate all funding for "B" children—is asking the Appropriations Committee to make a substantive change in the authorizing law which would be subject to a point of order on the House floor. The 1974 amendments (Public Law 93–380) addressed the problems raised by impact aid critics. It is an abuse of the legislative process to ask the Appropriations Committee to make a policy decision that should be handled by the Educational and Labor Committee.

Impact aid is a sound program that has existed for 27 years and goes to 4,300 school districts in every State of the United States. I will continue to work for adequate funding of the program and hope my colleagues will add their name to the impact aid effort.

The Representatives who support restoration of impact aid funding in fiscal 1978 follow:

Daniel K. Akaka, Hawaii.
Glenn M. Anderson, California.
Max Baucus, Montana.
Edward P. Beard, Rhode Island.
Jonathan B. Bingham, New York.
David R. Bowen, Mississippi.
Clair W. Burgener, California.
John J. Cavanaugh, Nebraska.
William (Bill) Clay, Missouri.
Cardiss Collins, Illinois.
David L. Cornwell, Indiana.
Baltasar Corrada, Puerto Rico.
Norman E. D'Amours, New Hampshire.
Mendel J. Davis, South Carolina.
Ronald V. Dellums, California.
William L. Dickinson, Alabama.
Norman D. Dicks, Washington.
Charles C. Diggs, Jr., Michigan.
Robert W. Edgar, Pennsylvania.
Joshua Eilberg, Pennsylvania.
Glenn English, Oklahoma.
Allen E. Ertel, Pennsylvania.
Frank E. Evans, Colorado.
Dante B. Fascell, Florida.
Walter E. Fauntroy, District of Columbia.
Joseph L. Fisher, Virginia.
Ronnie G. Flippo, Alabama.
William D. Ford, Michigan.
Lee H. Hamilton, Indiana.
Mark W. Hannaford, California.
Herbert E. Harris II, Virginia.
Augustus F. Hawkins, California.
Cecil "Cec" Heftel, Hawaii.
Ken Holland, South Carolina.
Harold C. Hollenbeck, New Jersey.
Marjorie S. Holt, Maryland.
James J. Howard, New Jersey.
William J. Hughes, New Jersey.
John W. Jenrette, Jr., South Carolina.
Harold Johnson, California.
James R. Jones, Oklahoma.
Walter B. Jones, North Carolina.
Abraham Kazen, Jr., Texas.
Martha Keys, Kansas.
Edward I. Koch, New York.
Peter H. Kostmayer, Pennsylvania.
Robert (Bob) Krueger, Texas.
Joseph A. Le Fante, New Jersey.
Robert L. Leggett, California.
Jim Lloyd, California.
Trent Lott, Mississippi.
John J. McFall, California.
Matthew F. McHugh, New York.
Gunn McKay, Utah.
Edward R. Madigan, Illinois.
Ron Marlenee, Montana.
Lloyd Meeds, Washington.
Helen S. Meyner, New Jersey.
George Miller, California.
Norman Y. Mineta, California.
Parren J. Mitchell, Maryland.
Austin J. Murphy, Pennsylvania.
John M. Murphy, New York.
Michael O. Myers, Pennsylvania.
Bill Nichols, Alabama.
Robert N. C. Nix, Pennsylvania.
Leon E. Panetta, California.
Jerry M. Patterson, California.
Shirley N. Pettis, California.
W. R. Poage, Texas.
Larry Pressler, South Dakota.
Melvin Price, Illinois.
Charles B. Rangel, New York
Frederick W. Richmond, New York.
Ted Risenhoover, Oklahoma.
Robert A. Roe, New Jersey.
Teno Roncalio, Wyoming.
Charles Rose, North Carolina.
Edward R. Roybal, California.
Harold Runnels, New Mexico.
Fernand J. St Germain, Rhode Island.
Jim Santini, Nevada.
Patricia Schroeder, Colorado.
Bud Shuster, Pennsylvania.
B. F. Sisk, California.
Gladys Noon Spellman, Maryland.
Fortney H. (Pete) Stark, California.
Tom Steed, Oklahoma.
Newton I. Steers, Jr., Maryland.
Louis Stokes, Ohio.
Morris K. Udall, Arizona.
Lionel Van Deerlin, California.
Wes Watkins, Oklahoma.
Theodore S. Weiss, New York.
Richard C. White, Texas.
Bob Wilson, California.
Timothy E. Wirth, Colorado.
Antonio Borja Won Pat, Guam.
C. W. Bill Young, Florida.
Don Young, Alaska.

THE SACCHARIN BAN: TIME TO REVISE FDA PROCEDURES

HON. ROBERT E. BAUMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. BAUMAN. Mr. Speaker, I am enthusiastically joining with my many colleagues from both sides of the aisle in cosponsoring legislation to permit the continued use of saccharin and to significantly change the process the Food and Drug Administration employs to determine the safety of food additives. This legislation, originally drawn up by my distinguished colleague from North Carolina, Mr. MARTIN, is in response to the FDA's recent ban of saccharin.

This legislation provides a new mechanism whereby a ban of a food additive by the FDA could be appealed. Upon reconsideration, the FDA could then authorize continued use of the product only if the public benefits of such use clearly outweigh the public risk. The legislation does not repeal the Delaney clause, which currently governs banning procedures, but modifies the procedures by which it is implemented.

The FDA's saccharin ban is yet another in a long line of abuses by a Federal agency over-reacting to the symptoms of a few laboratory rats fed enormous amounts of an everyday product found in millions of American homes for the past 80 years.

The saccharin ban was based on a study conducted by Canadian scientists who found fewer than 10 percent of 200 study rats developing tumors after being fed substantial daily amounts of the product. Saccharin is the sole remaining dietetic sweetener allowed by Federal authorities to be sold on the grocer's shelf. Previous decisions by the FDA, beginning in 1969 with the cyclamate ban, eliminated other sugar-substitutes.

Did the evidence from the Canadian study justify the FDA's action? I think not. For you and I to equal the amounts of saccharin consumed by those rats, we would have to drink more than 800 12 ounce cans of diet drink a day, or eat more than 1,850 packets of the low-calorie sweetener per day. When you consider that drinking a mere 50 cans of pure, EPA-approved water can kill you, it becomes obvious just how absurd the FDA's action is in this matter.

Mr. Speaker, just as important is the serious situation the FDA has created for the more than 10 million Americans who suffer from diabetes. Without saccharin, these people are left without a product absolutely necessary for their health. I think it is time the bureaucrats started to show a little more concern for human needs and a little less for caged-up laboratory rats.

I hope the House acts swiftly to rescind this ban and to change FDA's procedures and powers.

TREATY ASSURANCES FOR PANAMA CANAL WORKERS PROMULGATED

HON. RALPH H. METCALFE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1977

Mr. METCALFE. Mr. Speaker, on Tuesday, March 15, an important event, though one little noticed in the U.S. press, took place in the unfolding story of Panama Canal treaty negotiations. On that date Gov. Harold R. Parfitt of the Canal Zone issued to employee leaders in the Canal Zone a list of assurances, or protections, which are the minimum acceptable rights and benefits to be accorded to U.S. citizen and non-U.S. citizen employees of the Panama Canal organization in any new Panama Canal treaty arrangement.

The list of assurances provided to canal employees is significant. Even though it may not contain all of the benefit provisions for which canal employees have striven, and will strive, this list is an affirmation of the concern of the U.S. Government for the canal employees who have served with dedicated competence over the years. As an expression of concern for U.S. and non-U.S. employees of the canal organization, perhaps the assurances will stem the very detrimental tide of U.S. citizen resignations and retirements which could threaten the operational efficiency of the Panama Canal.

Mr. Speaker, the canal treaty issues which are discussed more often in our news media, issues such as the permanent neutrality of the Panama Canal, its defense, and the duration of a new treaty relationship, are all very important. But all of these issues are relevant only if the canal is efficiently operated by a work force with technical competence and high morale, and only if proper attention is paid to the human dimension of things. Indeed, if more attention had been paid to human and social factors on the Isthmus of Panama many years ago, I am convinced the political climate for canal operations would be better today.

Credit for the issuance of canal employee treaty protections belongs to the negotiators in general for their correct perception of apprehensions on the Isthmus of Panana. Credit is due to the labor and civic organizations who have made known the apprehensions of their memberships and constituencies. Credit is especially due to Gov. Harold R. Parfitt of the Canal Zone, who has continuously emphasized the need for consideration of the employees in canal treaty negotiations.

On January 14, 1977, the Board of Directors of the Panama Canal Co., acting in consonance with the urgings of Governor Parfitt and Department of

the Army officials, passed two resolutions relating to employee protections and canal treaty negotiations. By approving the issuance of 15 assurances for canal workers, the appropriate authorities in the administration have begun to act on those resolutions. It is my hope the administration will continue to adhere to the resolutions by providing applicable information to canal employees, by communicating with the AFL–CIO—who have a comprehensive position on these matters—and by avoiding any erosion of employee benefits.

The following list of treaty assurances and resolutions of the Board of Directors of the Panama Canal Co. are only parts of the very involved process required for effectuating a new canal treaty arrangement. But despite the work and negotiation yet to be done, they are indeed positive signs in the context of matters which are so beset with obstacles:

ASSURANCES FOR PRESENT EMPLOYEES OF THE PANAMA CANAL CO./CANAL ZONE GOVERNMENT UNDER A NEW PANAMA CANAL TREATY

[Given to Canal Employees by Canal Zone Governor Parfitt on March 15, 1977]

The following list of assurances for present United States citizen and non-United States citizen employees of the Panama Canal Company/Canal Zone Government are derived from the United States position. They represent those assurances on fundamental items of particular interest to Canal employees which would, as a minimum, be provided in the context of any new treaty relationship. Obviously, all treaty provisions are subject to negotiation, the ratification process, and such Congressional implementing legislation as may be appropriate.

No formal, comprehensive agreement has been reached between the United States Government and the Republic of Panama regarding this issue or any other.

These assurances are not intended to be final or all-inclusive. Other areas of concern are continuing to be examined. These assurances should, however, provide employees with a general understanding of the minimum level of benefits and protections being sought.

1. Schooling and medical care provided by the United States Government will continue to be available for United States citizen employees and their dependents.

2. United States citizen employees will continue to be provided with adequate housing at a reasonable cost. Residential areas will be managed in such a manner as to maintain a mix of United States and Panamanian residents.

3. United States citizen employees and their dependents will continue to enjoy duty-free import and purchasing privileges concerning items for private use. They will also be authorized use of military service facilities.

4. United States citizen employees and their dependents will be exempted from Panamanian tax on any income derived from

The Canal operation or other United States Government agencies, and

Sources outside the Republic of Panama.

5. In connection with offenses arising from acts or omissions punishable under the Laws of the Republic of Panama, United States citizen employees and their dependents will be entitled to specific procedural guarantees, such as prompt and speedy trial, specific charges, cross-examination of witnesses and legal representation of choice.

6. United States citizen employees and dependents who may be considered to be dual nationals will have the same status under the new treaty as those of exclusive United States citizenship.

7. Non-United States citizen employees automatically will be covered under the Panama Social Security System, except that those with five or more years of United States Government service as of the effective date of the new treaty will have the option to retain U.S. Civil Service retirement coverage in lieu of transfer to Panama Social Security coverage.

8. Panamanian citizens will be employed in increasing numbers at all levels of the management and operation of the Canal.

9. Increased Panamanian employment in the operation of the Canal will not be used to displace current United States citizen Canal employees.

10. All eligible employees are guaranteed by current regulation, reduction-in-force and reassignment right, transfer or function rights, and discontinued service retirement following involuntary separation. In addition, the Civil Service Commission will be requested to grant approval of and/or waivers for "early optional retirement" or liberalized severance pay coverage for employees of Canal enterprise activities which are scheduled for elimination, reduction or transfer. Employees whose working conditions are so adversely affected by the treaty that special consideration is appropriate may also be included in this commission request.

11. Civil Service Commission approval will be sought to provide any present United States citizen employee requesting such assistance with priority placement consideration for appropriate vacancies in federal government agencies.

12. To the extent consistent with sound management, the terms and conditions for the employment of non-United States citizen personnel will, as a matter of policy, conform with the general principles contained in the labor laws of the Republic of Panama.

13. The Government of the United States will ask that special placement assistance be offered by the Republic of Panama to any non-United States citizen employee who may be displaced by reason of the treaty.

14. The Canal management will conduct its relations with recognized employee unions representing Canal employees in accordance with Executive Order 11491, as amended, and/or other mutually acceptable form of collective bargaining.

15. Recommendations, if appropriate, will be made to the Office of Management and Budget for legislative action found necessary to prevent an erosion of the general level of employee benefits and conditions of employment under any new treaty.

RESOLUTIONS PASSED UNANIMOUSLY BY THE BOARD OF DIRECTORS OF THE PANAMA CANAL COMPANY ON JANUARY 14, 1977

RESOLUTION NO. 1

Whereas, representatives of the government of the United States and the Government of Panama are currently negotiating a new treaty for the future operation, maintenance and defense of the Panama Canal; and

Whereas, these negotiations involve many issues and decisions directly affecting the careers and living conditions of Panama Canal Company and Canal Zone Government employees and their dependents; and

Whereas, the American and Panamanian employees of the Canal enterprise have rendered long and faithful service in operating the Canal efficiently for the benefit of all nations without discrimination, thus providing a vital link in the lanes of international commerce; and

Whereas, the Board recognizes the importance of retaining the unique skills and invaluable experience of these dedicated employees in order to maintain the high standards of efficiency that have characterized the operation of the Canal as well as to help train future generations of workers; and

Whereas, there are certain assurances that the U.S. Congress or Executive Branch can make unilaterally to employees without regard to any treaty;

Now, therefore be it resolved, that the Board of Directors of the Panama Canal Company cause to be spread on the records of the Corporation the assurance to all its employees that, consistent with good management practice and applicable statutes, the Board will endeavor to preserve existing employee rights and benefits pending completion of the on-going treaty negotiations; and that the Board strongly urges that appropriate agencies of the U.S. Government take action to provide assurances of retention of the rights and benefits to employees as long as the United States operates the Canal.

RESOLUTION NO. 2

Whereas, representatives of the government of the United States are currently engaged in negotiations with representatives of the Government of Panama regarding a new treaty for the operation, maintenance and defense of the Panama Canal; and

Whereas, the American and Panamanian employees of the Canal enterprise have a vital interest in decisions resulting from these negotiations which directly affect their rights, benefits and future employment security; and

Whereas, it is recognized that treaties are never negotiated in public, and therefore the United States Government has felt itself unable to keep Canal enterprise employees informed of many issues in the negotiations and there has thus developed a climate of uncertainty and apprehension exacerbated by continuing announcements in the Panamanian press with no comment by U.S. spokesmen; and

Whereas, the U.S. negotiators have publicly expressed the intent to protect the benefits and interests of Canal enterprise employees and to provide them continued assistance through the difficult and uncertain times ahead; and

Whereas, it is equally beneficial to management in maintaining an efficient work force to provide employees with sufficient information on matters pertaining to a treaty to allow the employees to formulate personal decisions based on fact rather than rumor and speculation;

Now, therefore, be it resolved, that the Board of Directors of the Panama Canal Company cause to be spread on the records of the Corporation the very strong recommendation to the President of the United States that employees of the Canal enterprise be more fully informed of treaty issues and decisions directly affecting their living and working conditions.

MRS. MARY HEATH—101ST BIRTHDAY

HON. DOUGLAS APPLEGATE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. APPLEGATE. Mr. Speaker, Mrs. Heath will celebrate her 101st birthday on March 26, 1977. She came to our community of East Liverpool, Ohio, in 1879, when she was 3 years old. She had been born in Red Wing, Minn. This means she has witnessed a great deal of progress and development along the Ohio River.

She married William Heath in 1896 and they had two children: Ariel, a daughter born in 1900, and Norman born in 1906. She has survived them both.

However, her family is carried on by her late son Norman's wife, Louise, a granddaughter, Mrs. Susan Hendershot of St. Cloud, Minn., and a great-granddaughter, Amy Louise Hendershot, age 3.

She is a living piece of history in Columbiana County, Ohio. Mrs. Mary Heath has observed in her lifetime the transition from travel by riverboat to train to rocket, an amazing thought. Mr. Speaker, it gives me great pleasure to honor Mrs. Mary Heath on her birthday.

TANKER SAFETY

HON. PHILIP E. RUPPE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. RUPPE. Mr. Speaker, I have been appalled at the growing threat to our marine environment and the inconsistent efforts to cope with a burgeoning armada of some 3,000 tankers a year that come into our ports from overseas. The spate of oil spills brought into focus with the *Argo Merchant* casualty has emphasized the necessity for Congress to take affirmative action and address various feasible and reasonable measures to protect our various national resources.

About a year ago during oversight hearings at Sault Ste. Marie, Mich., into the adequacy of Coast Guard search-and-rescue facilities in the Great Lakes, I focused on apparent deficiencies that were brought to light by the tragic sinking of the now legendary Steamer *Fitzgerald* in November 1975. At that time I stated that a 'need—had become—evident for a preventative vessel traffic control system including winter advisory services that will lessen the need for on-scene assistance." I noted then that "Innovative navigational aids such as *Loran* might lessen a dependence on other manned aids" and that "an automated vessel reporting system will trigger assistance when needed."

I have pursued the idea of mandatory vessel traffic control systems, using transponders and satellite techniques, through observance of the Coast Guard's Mini-Loran system under development for the St. Mary's River in Michigan and through discussions with John Hopkins Applied Physics Laboratory about the Transit navigational satellite system developed for and now being installed in U.S. naval vessels. The results of this effort are reflected in the Federal Tanker Safety and Control Act of 1977 that I have introduced today and are applicable on the Great Lakes as well as upon the oceans within our newly established fishery conservation zone.

In my bill I have recognized the need for continued training of shipboard personnel and a competency manning philosophy that should be given increasing recognition in the broadest of terms. Additionally, I have, in spite of some opposition, retained requirements for segregated ballast tanks and double bottoms. I feel that it is technically possible to cope with some of the stability and explosive vapor concerns of opponents and have noted the increasing trends toward such construction standards even in the absence of mandatory requirements. Oil transporting vessels in the Great Lakes region have double bottoms and, I believe, in some instances double hulls that have averted ecological disaster. For example, this winter a grounding in Grand Traverse Bay resulted in minor spillage of oil, because the tanker involved had a double bottom.

Attention of late has been focused on tankers; but in the areas of concern, tank vessels and barges do not operate in isolation from other traffic. In spite of every precaution applied to or by tank vessels, their safety and that of our natural resources can be seriously hazarded by other vessels not similarly equipped and not participants in a traffic control system. Accordingly my bill calls for a study by the Secretary of Transportation that will address these hazards.

The provisions of my bill should be of significance to the most fragile of environments, the fresh waters of the Great Lakes region with some 95,000 square miles subject to U.S. jurisdiction and a shoreline of some 5,480 miles that exceeds the entire eastern coastline of the United States. Storms are as severe, the seas as violent, and the navigational hazards as great as in any other maritime region. Ships here are continuously in pilotage waters and as the transportation of energy resources by water is increasing, concern is heightened.

Quite recently, I had a survey made of the magnitude, frequency, and point sources of oil and chemical spills during calendar year 1975 into Great Lakes waters. The results were surprising to me and have spurred my interests in more stringent tanker regulations and vessel controls; they have also impressed me with a need to look at problem areas, other than vessels. I would like to share some of the heretofore undeveloped data. During 1975, there were 42 spills in excess of 1,000 gallons reported from all sources. Eleven of these spills were classified as major, that is, exceeding 10,000 gallons. Vessel and barge discharges, without regard to quantity, involved 5 foreign vessels and 28 U.S. vessels. These discharges occurred during cleaning and ballasting, refueling, and transfer operations. Point sources include rail vehicles, onshore refinery and oil storage facilities, and pipelines as well as vessels of all classes. The causes of such spills run the gamut from hull or tank leakages to other structural, pipeline, and pump failures.

The bill I have introduced addresses one area of major concern in a comprehensive manner but we must, and I will, be giving attention to other areas that may have been overlooked in our rush to address the onslaught from the seas.

FEDERAL IMPACT AID

HON. DANIEL K. AKAKA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. AKAKA. Mr. Speaker, as you know, in President Carter's budget proposals submitted to the Congress on February 22, 1977, the President eliminated $395 million in budget allocations for section 3(b) entitlements of Public Law 81–874, the so-called Federal impact aid legislation. The purpose of the funding provided in this portion of Public Law 81–874 is to reimburse local school districts which have numerous students whose parents live or work on Federal property. I call attention to this matter because such an omission from the fiscal year 1978 budget will have a serious and detrimental affect on educational systems throughout the 50 States. In the State of Hawaii alone, the proposed cut will amount to a $5.5 million loss to the State. Such a budget cut will mean that 327 teachers will become jobless and a minimum of 8,551 students will be adversely affected. Class sizes will swell and the burden on an already tight educational budget will greatly increase.

Yet Hawaii will not be alone in attempting to provide quality education to students while budget cutbacks continue. Federal impact aid goes to 420 congressional districts and over 4,300 school districts, so that almost every local educational system will suffer from the loss of funds.

Opponents of 1978 impact aid appropriations would argue that many local educational agencies which receive large section 3(b) entitlements are among the most prosperous regions in the country, particularly those which are adjacent to the Washington, D.C., area. However, studies have demonstrated that not only do these presumably wealthy districts have some of the largest school districts in the country, but that a loss of only 3(b) payments to the same school districts would increase local property taxes by over 20 percent.

Mr. Speaker, I urge my colleagues on the Subcommittee on Labor-HEW Appropriations of the House Appropriations Committee, as they commence their hearings today on school assistance in federally affected areas, to restore the reductions in the 1978 impact aid appropriations as proposed in the Carter budget. I also appeal to my House colleagues on both sides of the political aisle to join with me and others to insure that these funds remain in the final fiscal year 1978 budget, for the sake of local school districts throughout the Nation.

VOLUNTEERS IN THE NATIONAL FOREST

HON. WILLIAM L. ARMSTRONG

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. ARMSTRONG. Mr. Speaker, provisions of Public Law 92–300, the Volunteers in the National Forest Act of 1972, limit the Forest Service to spending $100,000 annually on volunteer programs.

While such knowledgeable organizations as the National Hiking and Ski Touring Association have conducted two summer volunteer programs in four States, with positive results, this effort has reached its limit because of the statutory limitation.

I am not proposing any more spending—far from it.

Removing the spending limitation would simply give the Forest Service the option of spending existing appropriations for administration and coordination of volunteer programs.

While the present limit of $100,000 sounds adequate for these purposes—it is not—not when the funds must be spread over 146 national forests and 187 million acres. It seems right to me—as well as cost effective—that the Forest Service should be allowed to use dedicated and knowledgeable volunteers in its efforts to maintain the national forest system.

For these reasons, I am reintroducing legislation which would remove the $100,000 limitation.

This is not controversial legislation. Both the Department of Agriculture and the Office of Management and Budget have endorsed this bill—and reported favorably on it late in the 94th Congress.

In 1975, for example, volunteers did more than $1 million worth of work in the national forests—and the cost to the Government was $100,000. The Forest Service had to turn away competent and qualified help. This is especially serious now, when the Forest Service has been closing trails and other sections of national forests because of inadequate maintenance.

The use of volunteers could help ease the manpower crisis faced by the Forest Service—without "any additional direct costs to the Federal Government," according to the Department of Agriculture.

This type of creative solution is long overdue, and I would like to urge wide support for this bill.

HOW TO INCREASE TAX REVENUES FROM THE RICH

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. KEMP. Mr. Speaker, one of the arguments most commonly used against efforts to cut tax rates across the board is that this will amount to a gift to the rich. The truth is actually quite the opposite because the only way to get the rich to pay more taxes is to make it worth while for them to take their money out of tax loopholes and put them into productive enterprises.

By way of illustration, consider the following figures which show the percentage of all income taxes paid by those earning $100,000 and up:

Percent of Federal tax revenues paid by incomes of $100,000 and above

1962	5.1
1963	5.1
1964	6.3
1965	7.6
1966	7.5
1967	8.5
1968	9.2

As one can see, beginning in 1964 there is a sharp rise in the amount of total tax collected on those who are generally considered rich. It is interesting to note, however, that the tax rates on these incomes were actually going down. Before 1963, the highest tax rate was 91 percent on incomes above $200,000. In 1964, this rate dropped to 77 percent. In 1965, it dropped to 70 percent, where it is today. President Kennedy advocated reducing the tax rates in order to stimulate investment and production. It worked, plus added revenues to the Treasury.

I think that this is very persuasive evidence that the reduction in tax rates actually led to an increase in taxes on the rich. This results simply from the fact that with lower tax rates it was more worth while for wealthy people to take their money out of tax shelters like tax-exempt municipal bonds and invest in profitmaking enterprises.

Knowing full well that there are other reasons as well, I think that this is something the Congress should consider very carefully the next time someone starts talking about closing tax loopholes and soaking the rich. The way to reduce loopholes is lower the rates to more reasonable levels where enterprise is encouraged and revenues flow into the Treasury.

CONGRESSIONAL TERMS OF OFFICE

HON. BOB STUMP

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. STUMP. Mr. Speaker, I have introduced legislation today that would change the term a U.S. Representative could serve to three, 4-year terms.

The best way to protect against the shortcomings associated with excessively long tenure in office is through a fixed limitation of terms. The 22d amendment to the Constitution, which limits the number of terms a President may serve, was a step in the right direction; but only a step. In limiting the total number of terms that a Congressman may serve, we insure that the Congress will remain responsive to the people. A recurring turnover in the office will give many more people the opportunity envisioned by the Founding Fathers to trade private life for public service, and yet never be so far from private life that the problems and aspirations of the district are forgotten.

The demand for a 4-year term for Representatives is long standing. Ever since the Constitutional Convention, it has been argued that the 2-year term is too short a time for Members to acquaint themselves with their duties. Four-year terms would allow Representatives to devote more of their time and attention to legislative responsibilities.

The 12-year period would allow each incoming Congressman ample time to learn the rules and procedures of the Congress, to gain greater insight on a national scale and to implement programs which caused him to seek office. If a Member is still interested in public office, after serving 12 years in the United States House of Representatives, he could run for office in the Senate or some other elective office.

The 4-year term would reduce the total campaign cost per Member, saving thousands of dollars for candidates, and their contributors.

More of the citizens in private and public life would be eager to compete for this public office if they were partly freed from the prospects of financial and physical strain of never-ending campaigning. This increased competition could better challenge entrenched political machines, and bolster the two-party system.

OUR TIES WITH CANADA AND MEXICO

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. LAGOMARSINO. Mr. Speaker, I would like to bring to the attention of my colleagues the following column by my constituent, Gen. Henry Huglin. General Huglin is a retired Air Force brigadier general and syndicated columnist. He comments on America's relations with Canada and Mexico:

OUR TIES WITH CANADA AND MEXICO

(By Henry Huglin)

Sensibly and wisely symbolically, President Carter scheduled his first two meetings with other heads of government with President Jose Lopez Portillo of Mexico and Prime Minister Pierre Elliott Trudeau of Canada.

By habit, we Americans usually take our closest neighbors, the Canadians and Mexicans, much too much for granted.

For decades we have been focusing mainly on hot spots abroad in Europe, Asia and, more recently, Africa. Meanwhile, in this hemisphere, particularly in Canada and Mexico, things have been relatively quiet, in respect to our interests.

Good relations with our neighbors are, of course, very important. We share long borders with them. We are closely linked economically. And their problems and ours affect one another, whether they are mutual problems, such as energy, or not. For example, both Canada and Mexico helped in our recent energy crisis—brought on by the severe cold in our Midwest and East—by making emergency shipments of oil and natural gas to our country.

For many sound reasons, it is proper and prudent for us to understand better and pay more attention to these neighbors of ours than we have been doing.

With Canada we have more trade than with any other country in the world—and more than with all of Europe.

And we have political and mutual security links with Canada through NATO and bilateral agreements, including our combined North America Air Defense Command.

We are Mexico's top trading partner and she ranks as our fourth. Further, within the U.S. are as many as six million Mexicans, of whom many are here illegally. And the problems are complex and serious concerning these Mexican immigrants—and the growing traffic in drugs from Mexico, as well.

Also with Mexico we have politically and security ties through the Organization of American States and the Rio Treaty.

Both countries are dependent on our military strength, political skill, and will for their ultimate security. And neither has any real concern over our country being a threat, though we are now a superpower and heavily armed. Our long borders are not military defended frontiers and there are no tensions along them—in contrast with the borders between Russia and China and between many other countries.

Both the Canadians and Mexicans have mounting problems which may spill over into

problems for us, if they cannot cope with them well. On some they need our help.

Mexico faces severe economic, and in turn social and political, strains from her burgeoning population. Twenty-five years ago there were 25 million Mexicans; now there are 63 million; and 132 million are expected by the year 2000.

Mexico is potentially a rich, dynamic nation. She has made remarkable economic progress in recent decades, and she has been the leading nation in development in Latin America. Further, great new oil reserves have recently been found. But her population explosion is creating massive economic and social problems, outstripping her economic gains and resulting in 25% unemployment and growing unrest.

Canada's political stability, continuity, and economic unity are in prospective jeopardy, because of the possibility that the residents of the province of Quebec may decide by 1981 to split off from Canada as a separate nation. If such a separation should occur, Canada could break up, with the further possibility that some of her provinces would bid to become states of our Union.

Also, with a new nationalistic fervor, the Canadians are concerned over the impact of $26 billion investment from the U.S. on their economic independence. Their rising tide of nationalism has also led them to invoke some measures of attempted financial, trade, and cultural protection.

But regardless of the Canadians'—and Mexicans'—concerns over dominance of their economies through our financial investments, they need continued heavy inputs of our capital to maintain the pace of their economic development. Yet, they swing between seeking it and discouraging it for nationalistic pride reasons.

For our national interests, we are clearly interested in political, social, and economic stability and progress in Canada and Mexico—for our economic health, continued flow of needed imports and exports, and quietude and security in our mutual North American continent homeland.

So, as we think more and more of the interdependence of the world—as we must—we ought to stop taking our close neighbors, the Canadians and Mexicans, for granted and recognize our particularly close interdependence with them. They are marching to their own drumbeat but, with mutual understanding and cooperation, we all need to march in step as much as we can, for our overall best interests.

AMENDMENT TO FEDERAL RECLAMATION LAW

HON. JOHN KREBS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. KREBS. Mr. Speaker, my colleague, the Honorable B. F. SISK, and I are pleased to introduce legislation to modify the 160-acre limitation mandated by Federal reclamation law enacted over half a century ago. The bill incorporates a 160-acre class I equivalency provision into the 1926 law.

Our proposition allows those with a tract of land of lesser quality than class I to own up to a maximum which would correspond, in terms of potential productivity, to 160 acres of class I land.

The present limitation simply is not realistic nor equitable in many areas of the country. As we are all aware, the productivity of a parcel of land can vary substantially as a result of a number of variables, such as soil composition, topography, and climate. We believe it is unfair to require individuals with class II or poorer quality land to compete with others owning parcels of prime agricultural land.

An equivalency concept has been incorporated into the authorizations of some 18 specific reclamation projects. Our bill will simply fill in the gaps, by making the concept uniformly applicable to all reclamation projects in the Western United States.

SPEECH BY THE HONORABLE WILLIAM MOORHEAD OF PENNSYLVANIA

HON. JERRY M. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. PATTERSON of California. Mr. Speaker, my distinguished colleague, Mr. WILLIAM MOORHEAD with whom I serve on the Committee on Banking, Finance and Urban Affairs, recently addressed a meeting of the American Bankers Association held here in Washington, D.C. He expressed a concern shared by many of us on the committee stemming from the failure to produce any meaningful financial institution reform in the 94th Congress. I urge all Members of the House to read and carefully weigh his remarks:

REMARKS OF CONGRESSMAN WILLIAM S. MOORHEAD BEFORE THE AMERICAN BANKERS ASSOCIATION, FEBRUARY 23, 1977

When General MacArthur made his historic appearance before a joint session of Congress after President Truman relieved him of his command in Korea he made the famous statement "old soldiers never die, they just fade away". I have heard that paraphrased about bankers that "old bankers never die, they just lose their interest".

That paraphrase about bankers is obviously wrong for two reasons: (a) ever since I have been in Congress, the bankers I talk to seem to be getting younger and younger and (B) you have demonstrated the fact that you have not lost your interest by coming to this early, wintry Washington Breakfast.

Even before I came to Congress in 1959, congressmen and administrations of both political parties, academicians and businessmen have expressed the opinion that the structure of our financial system is in need of a thorough overhaul. The hearings on the financial institutions act of 1957 (held before I came to Congress) established this beyond a peradventure of a doubt but to this day nothing of note has occurred. In the years following 1957 we considered, by and large, only piecemeal bits of legislation.

We did it again last week.

Last week, the House Banking Committee approved a bill that contained three matters of real concern to the banking community: 1) an extension for 12 months of the law that authorizes deposit rate ceilings for thrift institutions; 2) language extending what are essentially checking accounts to federally chartered thrift institutions in New York State only; and 3) a title enlarging the lending activities of credit unions, including giving them real mortgage lending authority.

Lobbyists in Washington, primarily those representing small and large commercial banks, have been congratulating themselves since Thursday because they were able—along with some help from thrifts which did not want the power—to kill proposed language in the bill that would have granted checking powers to federally chartered thrifts in Pennsylvania and New Jersey.

Let's examine what really happened last week and put it in the context of your mission here to develop an ABA legislative position with regard to NOW accounts, credit union activity, and extension of thrift rate control authority—which means the ¼ point differential.

In defeating the Committee's original plan to begin allowing thrift institutions NOW account power—and for the time being let's not discuss the issue of interest bearing versus NINOWs—you failed to stop 12 additional months of the ¼ percent interest that thrifts can offer. You failed to hold back the growing credit union movement. And you succeeded in retaining the image of the ABA as being a negative lobbying force—that is, what you were against was pretty clear but what you are for never surfaced.

Now some may think that the banking industry will never get what it wants from the Congress so it might as well just marshal its vaunted resources and spring into action every time something develops that it opposes. This standard operating procedure has worked in the past so why not just continue?

Well the reason is, that the Congress is tired of the squabbling among financial lobbyists that immediately occurs whenever any legislation of substance is proposed. I am tired of being told by every banker, savings and loan official and mutual savings bank president, and now add credit unions to the list, that a particular piece of legislation, if it passes, will mean the end of western civilization as we know it.

This takes me back to last week's action by the Banking Committee. I don't think that was a victory for you.

You lost two big issues, the differential for 12 months and credit union expansion.

And don't kid yourself, the differential will continue for 12 and 18 months at a time unless you help break this cycle by supporting a positive bill that can pass.

I say this now because I believe there still is a chance that the House Committee bill might just become a simple three month extension of the differential—or Reg Q—as it is popularly but incorrectly entitled.

The Senate still must act on this bill and we all know what happens once the other body gets into its togas and begins decorating their Christmas trees.

The clash of a Senate bill full of goodies and the House bill which we reported last week might just mean a deadlocked conference that can only agree on a short extension of the differential.

This could be an opportunity for you and me to come up with some major items you support and would be willing to see included in a larger package.

I, for one, would not be disappointed if the Congress passed a three or six month extension of the differential and nothing more—for the time being.

This would allow us some time to put together what I believe to be a more meaningful package of proposals which benefit each element of the financial industry and brings a bit more rationality to our national financial structure.

What I would then propose for your consideration is a bill that contains language to accomplish the following items:

1) a resolution to the matter of the differential enjoyed by thrift institutions;

2) nationwide NOW or NINOW approval;

3) payment of interest on your FED reserves;

4) a continued federal moratorium on state taxation of national banks;

5) credit union powers—no greater than

currently appear in the House Banking Committee bill;

6) federal chartering of mutual savings banks;

7) increasing the amount of mortgage loan thrifts can make; and

8) A more equitable tax treatment between banks and S&L's which want to expand their powers.

Now to put some flesh on the bones of the Moorhead Act.

Frankly as long as thrift institutions continue to remain the overwhelming source of home mortgage loans I believe they should have the benefit of a differential.

There are few savings and loans that could match your banks if the ¼% did not exist. You would decimate most of them with your multitude of services and investment possibilities. So let's be honest if the differential goes then the S&L goes too. And as I said as long as they are the only ones lending for housing, they should not be regulated out of existence.

However, proposals have been put forward in the past that call for ending the differential in five years or so in return for a broadening of S&L authority. These are not without merit and you might consider supporting one.

I also would include national NOW account language or even universal NINOWs. I know this matter causes ulcers, heartburn, angina pectoris, and stroke among bankers but following the Fed's lead, NOWs may be an idea whose time has come.

I know all of the stories about "no free lunches" and somebody has to pay for NOW's but I envision any lifting of the ban on checking account interest to be accompanied by the Fed payment of interest on your reserves. The comparative numbers can be worked out but it is essential that one must help pay for the other.

My package also would contain language to allow state chartered mutual savings banks to convert to federally chartered institutions; a proposal that would bring the home mortgage loan amounts closer to what it costs today to purchase a house; and new credit unions powers including the ability to make mortgage loans.

Now I would include in the bill, too, an extension of the Federal moratorium on state taxation of national banks. Your existing nightmarish regulatory situation would not be eased by suddenly having to pay taxes—and do the necessary paperwork—in every state where a loan was secured, acquired or made.

The House now employs a new process of referring bills to committee called sequential referral. At bottom what this means is that two committees can work on a single bill simultaneously—as long as their work is limited to that portion of the bill within their committee jurisdiction.

This procedure would allow me to include in the bill I propose language that—along with increased powers—grants just and equitable tax treatment to all institutions.

For those S&L's that want to break out of their constraints and compete with the banks, I say they should. But at the same time they cannot continue to enjoy tax treatment reserved for the type of institution they no longer are. By the same token, a small S&L that wants to stay that way forever, borrowing short and lending long, making mortgage loans within their community should be encouraged—through the tax system—to do just that.

Now I've thrown a lot of ideas your ways this morning and before finishing I want to make a few observations on the Carter economic proposals and the state of the economy in general.

There are other economic questions—particularly international economic questions upon which, because of time, I will not touch today. However, it is quite obvious that any domestic economic policy can be greatly affected by international economic forces.

With that caveat, let us look at the Carter Administration economic stimulus package and ask four questions:

1. What is the package and what are its pluses and minuses;

2. What will Congress do with the package.

3. What will the Federal Reserve do as a result of the answers to questions 1 and 2; and

4. What will be the effect of the foregoing three on the United States economy?

As a member of both the Joint Economic Committee and the Banking, Finance and Urban Affairs Committee, I am in a unique position to give you reasonably well informed answers to the first three questions. As a member of these two committees I have heard testimony from the Chairman of the Counsel of Economic Advisors, the Director of OMB, the Secretaries of Treasury, Commerce and Labor, the Chairman of the Federal Reserve and members of the business, finance, labor and academic communities.

If I can give you correct answers to the first three questions, I hope that you, with your expert knowledge and experience, can give me the answers to the fourth question—"What will be the effect on the United States economy?"

The objective is clear and universally agreed upon—sufficient stimulus to improve a lagging economy without speeding up inflation.

To be completely fair, let me give you the bias which I bring to this universally agreed upon objective.

I believe that it is terribly important to distinguish between, on the one hand, matters of short-term, urgent priorities and, on the other hand, matters of long-term importance.

Recession and unemployment should be classified as short-term and urgent.

Control of inflation is a long-term important problem—especially for political democracies.

Let us examine the Carter package in light of the foregoing.

The package can be divided into two parts—1) tax cuts and 2) increased job oriented expenditures.

As we do so we should be asking ourselves: (1) whether the stimulus is too large or too small; (2) whether the mixture between, on the one hand, tax cuts (temporary and long term) and, on the other, increased job focused expenditures (temporary and long term) is the proper mixture; and (3) whether the timing allocation among fiscal 1977, 1978 and future years is the best timing.

Let's look at the tax picture first.

It is divided into two parts 1) short-term rebates and 2) long-term tax reductions.

Intellectually, the $50 rebate is the hardest to defend. Will it be spent and hence stimulative or squirreled away and not effective? How can we justify an untargeted nationwide largess when some parts of the nation are better off than others?

I think that I and other members of Congress can rise above (or below) these intellectual objections and look at the practical.

1. It addresses the urgent problem of recession and unemployment quickly;

2. It is a one shot solution which by itself has no long-term inflationary effetcs.

The second part of the tax package is permanent and hence potentially inflationary in the longer term.

It is a permanent $6 billion package divided roughly $4 billion for individuals and $2 billion for business.

A. The $4 billion for individuals can only be justified on two grounds.

1. Inflation has pushed the average wage earner into a permanently higher tax bracket and hence this is a reasonable proposition.

2. It means for many the simplification of the tax form.

B. The $2 billion for business.

I don't think the latter in dollar terms is very important—but in phychological terms it is terribly important because it demonstrates that the Carter Administration is not anti-business.

C. Not a part of the Carter tax package but which was made part of it by Ways and Means Committee action is the proposed tax credit for up to 20% of the wages of all "new" employees hired by businesses. I hope this will not continue to be a part of the package. Not only is it not targeted toward the greatest need, it may be wrongly targeted. General Motors which is healthy economically and going to expand will receive a government subsidy whereas American Motors which is barely holding its own would not. Firms in the prosperous and expanding southwest would receive benefits but firms in the declining northeast would not.

Let us now look at the jobs portion of the Carter package. It is divided into four general programs: (1) public service jobs; (2) public works; (3) training and youth programs; and (4) counter-cyclical revenue sharing.

1. Public Service: I seriously question the value of a rapid expansion of this program. The program is not well targeted and hence not strongly anti-recessionary. It does not have any automatic phase out and hence may have a future inflationary impact. It does have the virtue of producing jobs less expensively but these jobs tend to be make-work with no future for the job holder and no lasting benefit to the community.

2. Public Works: A public works program can be targeted to areas of need and is targeted to the depressed construction industry. The Administration believes that the vast majority of expenditure will not occur until fiscal 1978. Many members of Congress, myself included, believe that because of the number of public works projects already planned and submitted by the localities under the previous bill that this program can be quickly accelerated. Finally, this program, because it would automatically terminate, need not have a long term inflationary impact.

3. Training and Youth Programs: The President proposes to raise spending on these programs from $2.8 billion to $3.1 billion in this fiscal year and to $4.4 billion in fiscal 1978. This program is targeted to groups such as young people, minorities in the cities and Viet Nam war veterans. These programs should increase the productivity of the persons benefited by them, and, in the long run, should have no inflationary impact.

4. Counter-cyclical Revenue Sharing: I am particularly interested in this program because the idea originated in the Joint Economic Committee in the Urban Affairs Subcommittee, which I chair. The idea behind this program is to help coordinate state and local economic policies with Federal economic policies. It is estimated that this program preserves from 70,000 to 97,000 jobs per $1 billion. Again, this program should not by itself be inflationary because:

A. It is targeted to the areas of greatest need and;

B. Because it phases down as national unemployment rates decline and is eliminated when the national unemployment rate drops below 6%.

The stimulus program need not by itself accelerate the rate of inflation. Current inflation is not the result of excessive demand, a tight labor market or of shortages which would be exacerbated by increased government spending. In fact there is great slack in the economy with manufacturing capacity at 80 percent, millions of workers idle, and no shortages of key commodities.

The important aspect of the inflation problem lies in the way business and labor respond to the stimulus package. If business views the increase in demand generated by the program as an opportunity to raise prices rather than expand output, inflation and not reduced unemployment will be a product of the program. Similarly, if labor takes the opportunity of increased demand to raise wages and not the numbers of employed, inflation will be a product of the program. Success of the stimulus package then will rest importantly in the willingness of business and labor to forego short-run gains in prices and wages for longer run gains in employment and total income.

In discussing the proposed economic stimulus package, I would have to admit that I haven't given you an optimistic point of view. It may be that the program is too little and too late to do much good, or it may be that the consequences will be to add to the present inflationary pressures.

The purpose of my discussion with you, however, was to point out that members of Congress do recognize that, in addition to the short-term problem of recession and unemployment, it is necessary to take into consideration the long-term problem of inflation. A carefully balanced program is what is needed. Let us devotedly hope that we strike that proper balance. Thank you.

MANDATORY SENTENCES FOR FIREARMS MISUSE

HON. HAROLD S. SAWYER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. SAWYER. Mr. Speaker, as a freshman Member of Congress and former county prosecutor, one of my principal concerns is the growing crime rate throughout our Nation and the need to have on the record tough judicial laws, particularly, crimes involving firearms.

I am introducing legislation to establish mandatory prison penalties for a person who commits a felony while in the possession of a firearm. My proposal would require a mandatory minimum sentence of 2 years for the first offense, 5 years for the second conviction, and 10 years for third and subsequent convictions. Furthermore, this sentence shall not be suspended nor shall the person be eligible for parole or probation during this mandatory term.

This is, I believe, the proper approach to a serious problem and will go far toward reducing the number of crimes committed with firearms. Many would propose controversial programs that would challenge the right of private citizens to bear arms. It must be remembered, however, that guns do not commit crimes, people do. By making it very clear that we intend to severely penalize those who misuse guns. I believe we will let the criminal know he will go to jail with a mandatory sentence and will provide clear guidance to the courts in the administration of justice.

This type of statute was recently adopted by the State of Michigan and was supported by representatives of several Government, citizen, and legal concerns. Enactment of similar provisions in the Federal Criminal Code will serve as a model for other States in updating their own criminal laws.

My own personal experience has shown me the wisdom of this approach in reducing crimes related to the illegal use of firearms, I commend it to my colleagues.

EQUAL TREATMENT MYTH

HON. DAVID E. SATTERFIELD III

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. SATTERFIELD. Mr. Speaker, there have been reports about a survey conducted by the Building and Construction Trades Department of the AFL–CIO of public opinion concerning the common situs picketing bill scheduled for floor action this week. An editorial from the Richmond Times-Dispatch, Sunday, March 20, 1977, raises a serious question about the survey's validity. The editorial follows:

"EQUAL TREATMENT" MYTH

A new nationwide public opinion survey discloses that the public, by a margin of nearly two-to-one, favors changing the federal labor law to give construction workers the right to picket an entire construction project instead of being limited to picketing the employer with whom they have a grievance.

So claims the Building and Construction Trades Department of the AFL–CIO.

The claim, made in a recent news release, was surprising, since only last year a survey conducted for the National Right to Work Committee by the highly respected Opinion Research Corporation of Princeton, N.J., showed 73 per cent of persons questioned opposed to changing the law to permit common situs picketing, as it is called, and a mere 16 per cent favoring such a change.

The mystery was cleared up when we saw the wording of the question in the survey done for the AFL–CIO.

Here's what the questioner read to each person polled:

In an industrial plant, if people on one type of work have a legal dispute with their employer, they are permitted by law to appeal to people on other types of work in the same plant to join them in withholding their services.

There is a different situation on a construction job. Here, if people on one type of work have a legal dispute with their employer, they are prohibited by law from asking people doing other types of work on the same construction job to join them in withholding their services.

Some people say that the labor laws should be changed so that construction workers will have equal treatment with industrial workers. Other people say the present situation should remain as it is.

How do you feel about this? Should the labor laws be changed or should they remain as they are?

With the question worded like that, it is surprising that only 51 per cent of the respondents said they favored a change in the law, while 29 per cent said they felt the law should remain unchanged, and 20 per cent had no opinion.

It is surprising that the vast majority of the respondents didn't come out for "equal treatment" of construction workers. How can anyone justify unequal treatment?

The truth is that the "equal treatment" argument being made for construction unions is totally fallacious.

The argument goes like this:

If, say, the electrical workers in an industrial plant decide to strike, they are permitted by law to picket the entire plant and thus close it down if other craft unions don't cross the picket lines. Therefore, the argument continues, if the electrical workers on a building being constructed have a grievance with their employer, they should be permitted to picket the entire construction project and close it down if other union members don't cross the lines.

But there's a major difference between the two situations:

In the industrial plant, the electricians and all the other employes have the same employer. In sharp contrast, on the construction site there are many different employers (subcontractors), and none of them, except the one employing the electricians, is responsible for any grievances the electricians have with their boss. So the federal law rightly prohibits "secondary boycotts" against subcontractors not involved in a labor dispute.

H.R. 3500, now pending in Congress, would change the law to permit common situs picketing, or secondary boycotts. It is a bad bill, and its passage could do harm to the construction industry and to the economy. But it almost certainly will be passed by this labor-oriented Congress unless there is a powerful demonstration of opposition on the part of the American people, who should not be fooled by the phony and misleading title: A bill to protect the economic rights of labor in the building and construction industry by providing for equal treatment of craft and industrial workers.

THE NEED TO REFORM THE REGULATORY AGENCIES

HON. ELLIOTT H. LEVITAS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. LEVITAS. Mr. Speaker, an interesting article has come to my attention from the Washington Post of March 6, 1977. It is an article on the so-called independent agencies and commissions, and it is of particular note since its author is a chairman of one of those agencies, William T. Bagley, Chairman of the Commodity Futures Commission. Mr. Bagley makes a number of good points about the need for reform of those agencies.

One of his most pertinent points is in agreeing with the need for "sunset legislation," an idea which I strongly support as a cosponsor of H.R. 85. This sunset legislation, plus some form of congressional veto review power over agency rules and regulations of the sort I have offered with well over 100 House cosponsors, embodied in H.R. 959, should take care of the problem of runaway rulemaking on the part of agencies so independent that we in Congress have a hard time getting a handle on them. The question is basically one of accountability. At present these agencies are really accountable to no one, and certainly are not accountable to the American people. Their rules and regulations go into effect, governing the everyday lives of us and our constituents, without ever being

passed upon by any elected body of legislators, and without any meaningful accountability to Congress or the President.

What is even worse, if possible, is that frequently these agencies are not even run by the Commissioners who come and go, but rather by totally unaccountable, anonymous staffs who stay there forever making policy decisions for millions of Americans.

I commend the article, "Reforming Regulatory Agencies," to the reading of all the Members and would like to have it included in today's RECORD:

REFORMING REGULATORY AGENCIES

(By William T. Bagley)

This town suffers from a hardening of the categories, with each little executive institution perpetuating itself and procreating its congressional counterparts.

This will make it difficult for President Carter to keep his sincere and fervently expressed campaign promise—reorganization of our governmental process, specifically regulatory reform—and not be totally frustrated by the jealous jurisdictional jungle that exists.

A quick-fix solution is for the President to declare a moratorium on all upcoming regulatory agency appointments until reform is effected. This, at least, would lock out new five- and seven-year appointees who, being given a stake in the status quo, would join the jungle and spread "Carter's glue" on all existing institutions. The President thus could dramatize his and the public's desire for reform and take advantage of what may be his single opportunity to achieve long-term results.

The problem of regulatory reform has its genesis in the so-called "independent commission," accountable to no one and having a near-zero constituency.

The independent commission was conceived and enacted into law in 1889 by Sen. John H. Reagan (D-Texas) who did not trust President-elect Benjamin Harrison. He thus removed the fledgling Interstate Commerce Commission from line accountability within the Department of the Interior and created a commission.

Now there are 10 independent business regulatory commissions. None of them, except perhaps the SEC, with public equity investors numbering perhaps 25 million, has a broad public constituency. While this independence has supposedly removed commissions from "politics," its real effect is to eliminate almost all line accountability to the executive.

Consider the Commodity Futures Trading Commission (CFTC). How many people other than "the industry" wake up in the morning worrying about how or even whether we are doing our job. Because we are new (22 months), we may be the bright star in the regulatory galaxy, but that won't last. In time, we will either be captured by those we regulate or by our own regulatory malaise. I don't know which is worse.

Of course, "politics" is never removed, nor should it be in the better sense of the word. But what can and does happen is that the politics involved becomes less direct, less open and thus potentially much more pernicious. Over the years, presidential staffs are importuned to recommend commission appointees. In the process, power among existing commissioners and accountability of sitting commissions to any President is diffused—all in the name of independence.

The fact that five men (almost always men) are appointed to vote on regulatory matters does not make for constituent democracy—it is simply government by the luck of the draw. And after a period of years there is no one President, no one chairman and no one commission to credit or blame.

Because there is no broad constituency and not even a commonality among commissioners, as is true of legislative bodies, either the industry or the internal staff (they are often the only people a commissioner talks to) is bound to prevail over time. And at times industry and staff can become almost one and the same. Politics, instead of being practiced out in the open with direct accountability, is subtly practiced with no real chance of public view or participation.

Because commissions "legislate" as part of the regulatory process, the thought has been to have multi-membered agencies—with different and differing members voting. But this, too, is a facade because such agencies have no public basis for their decisions.

Unlike a congressional committee or even a city council, there is no ongoing public political force or combination of somewhat overlapping political forces to set the tone. Even the most divergent congressional districts have threads of commonality—i.e., labor, business, age, civil rights, etc.

As a former legislator, I have a real respect for Congress. But it has an ad hoc function at best. Congress, with all the problems it faces, can't possibly ride daily herd on the maze of regulatory problems and commissions, despite its resolve to do so.

Before I propose solutions, let me pose one more serious problem—"due process." Commissions legislate by rule and regulation, but they also are the enforcers. We are the "commodity cops." In that latter role, we receive initial "evidence" of wrongdoing, authorize formal investigations on the basis of "facts" supplied by staff, bring a formal accusation and then sit on appeal from hearing officers to judge the very administrative proceeding we have instituted.

There is nothing new about this "prosecutor, magistrate, jury and judge" role. But that fact does not correct the very real "due process" deficiency. Internally and almost daily, I hear CFTC hallway conversations about "this crook and that crook," referring to cases (i.e. people) we are prosecuting. These are the same cases which we the commission will ultimately decide.

How, out of all of this, do you effect regulatory reform? The answer is that you can't without changing the whole concept involved. The only long-run solution, far beyond any one President's desire to appoint "responsive commissioners," is to tear down the entire facade.

Put the politics up front and out in the open. Replace the 10 regulatory commissions with a cabinet-level secretary for regulatory affairs; combine present commission functions into several single-headed agencies (i.e., under-secretary level) for financial institutions, transportation, communications, etc.; provide that these single-headed agencies promulgate regulations and bring enforcement actions, but be directly accountable to the secretary and the President (and to the Congress and the public), and bring and hear all cases from all such agencies before an omnibus administrative court, with appeal rights to the federal court system. Instantly, a public visibility, a broader constituency and line accountability would be realized. And the due process problem would be solved.

Let me also offer some shorter-run thoughts.

Again, the inherent problem of commissions is the lack of a broad constituency and any real accountability. If we have to live with the disease for a while, then let us at least attack some of the symptoms.

Open government would help. An atmosphere of openness can be nurtured if all commissioners would fully embrace the spirit of the new "Sunshine Act," consciously rejecting the Washington mind-set of secrecy. If commissioners would avoid superficial devices to close meetings (i.e., "We are just meeting as a committee"), refuse to meet or even individually speak at any facility which discriminates and refuse to hold executive sessions on budgetary priorities even though the Office of Management and Budget says they are supposed to be secret, then each agency could develop a real constituency.

Accountability can be achieved more directly by imposing the sudden death concept of "sunset." Though congressional budget committee review now exists, sunset laws would call up the question of the organic existence of every commission. At the least, these "independent" agencies would then be subject to automatic review by congressional policy committees (not just budget) and perhaps some restructuring would take place.

The overwhelming mechanical problem of real congressional review is acknowledged. Nonetheless, if independent commissions are to continue to exist it is not too much to suggest that they be subject to policy committee review every 10 years or so.

None of this is calculated to eliminate regulation as such. That is a separate and much more complex subject. What I do seek is to make the regulatory functions of government more visible, more understandable to the public and therefore more credible. Then a vigilant public, a vigilant media and in turn a vigilant Congress and President might be able to get a better handle on regulatory affairs.

If that were to come to pass, we would achieve a more credible governing process. I believe this is what the public really wants and what government is all about.

IN HONOR OF GUS MASCARO

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. OTTINGER. Mr. Speaker, on Friday evening, March 25, the many friends of August "Gus" Mascaro will gather to pay tribute to him as he retires from the New Rochelle Boys Club, having served as its executive director. I am pleased to bring to the attention of my colleagues the following article which appeared in the local paper, the Standard Star:

IN HONOR OF GUS MASCARO

Friends of August E. Mascaro, who is retiring as excutive director of the Boys Club of New Rochelle, are planning a testimonial dinner dance in his honor. Mascaro is concluding 55 years of service with the Boys Clubs of America, more than 30 of which have been spent in charge of the New Rochelle Boys Club.

Frederic B. Powers Jr., dinner chairman, announced the dinner as a community expression of appreciation to Mascaro for his service.

Powers also announced that Tony Tyrone, a distinguished alumnus of the New Rochelle Boys Club, will be the main speaker at the dinner. Tyrone, a native of New Rochelle now lives in Denver, Colo., where for many years he was president of Hamilton Mutual Funds Inc. and associated with the University of Denver, the Colorado Center for Rehabilitation, the Children's Hospital and the Denver Boys Club.

Tyrone has kept contact with the Boys Club in New Rochelle, where 48 years ago he was a charter member and became a leader at the age of 15. Since 1958 he has

been a member of both the Board of Directors and the Board of Trustees of the club. He received the club's "Man of the Year" award in 1963 at a dinner given in his honor at The Fountainhead in New Rochelle.

Son of the late Mr. and Mrs. Joseph Tyrone, he attended New Rochelle schools. On Powers' committee arranging the dinner in honor of Mascaro are William P. Clarke, journal chairman; Walter A. Peek, program; Vincent Matturro, dinner arrangements; Joseph V. Miressi, tickets, and Elmer Miller, publicity. Raymond D. Calgi, former president of the New Rochelle Board of Education, will be the master of ceremonies.

The New Rochelle Boys Club was founded in 1929 and Gus Mascaro became director of its activities in 1932. He previously served as a volunteer worker in the Boys Club of Mount Vernon and then as physical director of the Brooklyn Navy Yard Boys Club and of the Washington (D.C.) Central Branch and as director of programs of then new Eastern Branch in Washington. After 10 years in New Rochelle, he became director of the then new Georgetown Branch in Washington. In 1955 the Boys Clubs of America assigned him to Newton, Mass., and two years later he accepted an invitation to return to New Rochelle as executive director, the post from which he is retiring.

Mascaro said he plans to remain in New Rochelle and be available to assist the club in the future. He expressed his appreciation to all those affiliated with the Boys Club of New Rochelle at the 48th annual meeting of the Boards of Directors which was held recently.

Mascaro also thanked the City Councils since 1929 which have supported the work of the Boys Club. He also cited the support of the members of the Wykagyl Country Club which for the past 14 years has made its facilities available to the Boys Club for golf and dinners.

AMBASSADOR OR ANTAGONIST?

HON. ROBERT E. BAUMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. BAUMAN. Mr. Speaker, no U.S. Ambassador to the United Nations has ever delivered as many astounding remarks about the world situation as has Andrew Young. Since his appointment by President Carter, Mr. Young has amazed his fellow citizens by claiming that Cuban mercenary troops, now widely believed to be on a march of conquest from Angola through Zaire, promote a "certain order and stability" and that racism, not Communist imperialism, is the greatest threat to the African continent's future peace and security.

I have previously called upon the Ambassador to clarify his views in these matters and to explain why, assuming his sincerity in holding these absurd views, he should not resign immediately. I continue in that call today.

There may yet be a faint glimmer of hope for Ambassador Young, however, if the gentleman is willing to submit himself to an education in the facts of international life. One excellent place for the Ambassador to commence this crash course is found in the good sense Mr. Michael Novak regularly puts forth in his column for the Washington Star.

Mr. Novak, in his column of March 13, suggests that in foreign affairs, "the easy, almost flip, morality" embodied in Mr. Young's insistence upon "majority rule" in Africa must soon be moderated in the light of experience. The record of the past 20 years of democratic experiments in Africa demonstrated that majority rule has generally lasted only so long as it took for the Communist powers to arm one warring tribe against its soon overpowered neighbors.

Mr. Novak questions whether Mr. Young means democratic rule as it is known in the civilized West or simply rule "by those of whatever race is in the majority?"

Mr. Novak's full column follows:

ANDREW YOUNG AND EASY MORALITY IN FOREIGN AFFAIRS

(By Michael Novak)

En route to Nigeria, UN Ambassador Andrew Young refused to associate himself with Daniel Patrick Moynihan's charge that Idi Amin is a "racist murderer." A few days later, the papers were filled with news of the apparent murder by Amin of an Anglican archbishop and two talented Ugandan officials, all black.

Well, at least Idi Amin isn't a racist. Most of the 50,000 or more persons he has murdered, in a state smaller than North Carolina, are of the same race as he. (African leaders like Kenneth Kaunda have called Amin a "racialist.")

Next, Ambassador Young, who has made Pat Moynihan seem discreet and wise and reticent, informed a credulous world that racism is the greatest political threat in the world. Not Soviet power, nor nuclear destruction, but racism. What is the evidence for his assertion.

One can understand that Ambassador Young, for all his short life, has been preoccupied with questions of race. Communism, he confessed, "has never been a personal threat to me." Yet if each of us were to interpret world realities by personal experiences, as the ambassador seems to do, what a jungle of selfish viewpoints would be in conflict. No view larger than the self would be possible.

In most of the trouble spots of the world, racism is demonstrably not at issue. Northern Irish and the IRA are not divided by color, Christian and Moslem Lebanese are not of different color. Turks and Greeks are not. Cambodians and Vietnamese are not. Chinese and Taiwanese are not. Nigerians and Biafrans are not. The three warring tribes of Angola are not. Cubans and South Africans are not. Not even Arabs and Israelis are different racial stock. Both are Semites.

Whence does Ambassador Young derive the notion that race is the No. 1 issue in international affairs? In South Africa and in Rhodesia, this is the case. In how many other places?

Ambassador Young is, again, full of moral fervor about majority rule in South Africa and in Rhodesia. But what precisely does he mean by this? Does he mean democratic rule, or simply rule by those of whichever race is in the majority? "Majority rule" may be a democratic concept, or a merely racist concept. As columnist John Roche has pointed out, "majority rule" in the American South was not democratic or just.

And what about "majority rule" in Czechoslovakia, and China, and Lithuania? Ambassador Young is surely just as shocked by systematic repression in such places.

Ambassador Young, again, would not permit the U.S. to trade with Rhodesia, so long as blacks are excluded from governance. Two questions follow.

(1) When white rule ends in Rhodesia, will democratic governance prevail?

(2) If a black-ruled Rhodesia is not democratic, will the U.S. continue to boycott Rhodesian chrome?

The question, in other words, is whether U.S. policy should be governed by racial considerations. Is it U.S. policy to refuse to trade with tyrants who are white, but to trade openly with tyrants who are black? Is it the race of tyrants that makes them unacceptable? Or is it, on the other hand, their tyranny?

If the latter is the nub of U.S. foreign policy, then we must soon cease trade with most of the nations of the world. Most nations today, irrespective of race, are tyrannies. Exceedingly few nations have a free press, free elections, trial by jury and due process, a free intellectual life, and other basic elements of democracy.

It is imperceptive to hold, despite the evidence, that race is the No. 1 international problem. The spread of tyranny and the increasing totalitarianization of terror to establish and to maintain tyranny, is independent of race.

The easy, almost flip morality of Andy Young's "new politics" will change. Young's experience has been narrow, but he learns quickly. His education educates us all.

EX-SECRETARY: ALL-VOLUNTEER ARMY WORKS

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. STEIGER. Mr. Speaker, Martin Hoffman, Secretary of the Army during the Ford administration, was interviewed in the Washington Star's "Q and A" column March 21. Martin Hoffman is a veteran Defense Department official, and he has excellent insights into the status of today's all-volunteer military and the contrast to its predecessor, which relied on conscription to meet manpower needs.

If anyone is an expert on the volunteer military, it is Martin Hoffman. He points out in the course of the interview that the Volunteer Army is a success, both quantitatively and qualitatively.

Perhaps his most important answer is the question of why there are now so many people attacking the Volunteer Army. He cites three reasons:

1. Despite the all-volunteer force's successes, some adjustments do need to be made. The strongest supporters of the concept acknowledge this.

2. Many people predicted the Volunteer Army would fail. They want to see their predictions come true, so they pick at the few disappointments since the draft ended in January 1973.

3. There has been a lot of misinformation about the allocation of money for active-duty military personnel. All raises since 1964 in the manpower area have been blamed on the volunteer force, despite the fact it did not go into effect until 1973. In fact, the share of the Defense Department budget going to active military forces has decreased since the advent of the volunteer force by a substantial amount.

Marty Hoffman makes a number of other very important points in the in-

terview. I hope his comments on this important issue are most carefully considered by all who read the RECORD:

EX-SECRETARY: ALL-VOLUNTEER ARMY WORKS

Martin Hoffman, a veteran Defense Department official and secretary of the Army during the Ford administration, was interviewed by Washington Star Staff Writer Vernon A. Guidry Jr.

Question: When you were secretary of the Army, it was official policy to say that the all-volunteer Army was a success. Was it a success?

Hoffman: It was official policy to say it was a success because—pursuant to a policy of telling things the way they were—it was a success. It was a success in a number of regards. We demonstrated the capability to maintain the strength of the services with quality enlistments under a volunteer system for the active force. That had not only been demonstrated but it had been done up until the time Congress undertook to cut the funds. . . .

Q: What fund cuts do you refer to?

A: In the fiscal 1976 budget there was a cut. In the 1977 budget there had been a tremendous cut, based on the congressional pressures to do so, by the administration. The total cut between fiscal '75 and fiscal '77 was 22 percent. As anyone who is in the manpower business today can tell you, if you're going to be competitive in the marketplace you've got to spend money to be selective and to get your story across. There are a number of opportunities for qualified youth today in the country, and if you're not competitive you won't get the kind of quality in the numbers that you need. We demonstrated that we can do that but there is a reticence to take and put monies in the front end of the recruiting process to attract and be selective about these young men. The result is that we're paying more in terms of losing people, high attrition, having to have a training base that is larger than we would need if we had the highest quality people we could get.

Q: If it is successful, why are we hearing so many attacks from so many people?

A: There are a number of sources of that. First, having said it's successful to date doesn't mean we don't have to make some adjustments to the all-volunteer force and to the draft itself. Second, there are a number of people that had predicted it would fail at the outset who would like to see that prediction come true. That's human nature. They look at the disappointments. I don't say that it has satisfied everybody but on balance it has been hugely successful. So you have a number of people that are looking at the quarter of the glass that is not full rather that the three-quarters that is full. The third reason is that there is a lot of misinformation with respect to the allocation of monies. And those that think that too much money is being spent for manpower these days assign all the raises that we've had since 1964 in the manpower area to the all-volunteer force. That simply isn't true. There are some problems that we do have to face. We do have to modernize the draft, but that doesn't mean that the all-volunteer force has failed to date or that we shouldn't keep the volunteer institution as we have it today and bring the draft up to date so that it represents the portion and capability in the manpower area that we ought to have.

Q: Much of the criticism concerns salaries. Isn't that a mixed bag—including the so-called comparability levels legislation passed by Congress which did raise the salaries independent of whether or not there was a draft and pay raises for the lower grades that was aimed directly at an all-volunteer force?

A: It is, to some extent, a mixed bag but the general thrust behind the increases since 1964 was to do equity to the individual who was called to serve his country when not all his contemporaries were called to serve. The Gates Commission pointed this out after the Lyndon Johnson Commission on the draft had designed the lottery system and called for greater equity in salaries. There were arguments raised about raising salaries by those who supported the all-volunteer force who said, "we should do this and the only way you can do it is to have high enough salaries to support it." It has helped the volunteer force, there's no question about that. The question remains: Would you not have had to do that anyway—volunteer force or no volunteer force?

Q: And the answer?

A: The answer is yes. The American people were simply unwilling to have those young men and women who were called paid a very low salary and, in effect, taxed because they were called to serve the national defense's interest while their contemporaries who were not called or were not qualified were in better financial position. It hasn't been equalized yet and you can't make it directly comparable and I would argue that we shouldn't. But on the other hand to just take the total increase and ascribe it to the all-volunteer force is faulty reasoning and does a tremendous disservice to the tremendous success the all-volunteer force has had to date.

Q: Whatever the reasons for the individual elements of the personnel cost package, there are those who say it's too high—among them the current secretary of defense. Is it too high and what can be done to bring it down within the all-volunteer force concept?

A: The first thing is where do you get the 65 percent or the 60 percent or 50 percent figure they're using? The fact is that the cost for active military pay is 24 percent and the cost for direct hire civilians is 18 cents out of the Army dollar. You can add in such things as uniforms and such things as training costs or equipment that you give those people because they're soldiers rather than stenographers. You can get the figure up like that. Retirement is going up, that is the largest percent of increase. The Defense Department is the only agency in town which budgets as a line item its retirement funds. If you took every other agency and took the retirement from whatever source—the executive retirement or civil service retirement—you would see that those costs are escalating too. Look at other industry. Look at the railroads, where the figure for salaries of people is nearly 50 percent of the operating expenses of the railroads. This is happening throughout America.

Q: But the figure is, nonetheless, high.

A: Yes the figure is too high if there are ways to lower it. I think that under the bills proposed by the last administration to start to make some reforms in retirement in a system set up for the military in World War II, there could be some savings taken there. But to sit back and look at a percentage—which is highly questionable in my judgment—without regard to what's happened in the society at large and to undertake to penalize one department on that account doesn't comport with the facts. We've got to make what reasonable savings we can in personnel costs but they should be taken in contemplation of the fact that the society is changing, that inflation is changing things, that we do have to and will have to pay a cost for defense under an all-volunteer force concept that is competitive at least in the marketplace.

Q: What about the reserve forces, where shortfalls have numbered in the tens of thousands, where some have said the problem has reached crisis proportions?

A: The shortfalls in reserves are approaching crisis proportions. The shortfalls in the individual ready reserves (IRR), that pool of individuals you would call on in the event of mobilization, has, I think, probably reached crisis proportions. That problem arose this last year as everyone had predicted it would because the supply of obligated reservists from the Vietnam era would expire. We knew that. I asked for hearings on the all-volunteer force to address that problem. We addressed it in our posture statement. That is the next area that has to be looked at, to see how we will attract the number of people in the reserves that we will need. With respect to the IRR, that mechanism depends on the draft for calling them. The individuals are in the society—the question is getting the lists and having a mechanism to produce them. It currently takes upwards of 130 days before we can get the first man called available to the military and that's simply too long.

Q: Do you think the idea of a reservist draft is feasible?

A: I don't know. There have been suggestions that this be considered and I think that it should be considered to see what might be done in the future. But until we've had a chance to hold hearings to see what the possibilities are through modest expenditures to bring our reserve recruitment into line with our active recruitment, I don't think we should consider bringing the draft back for the reserve forces.

Q: Statistics indicate that with the population breakdown in the 1980s, there will not be enough young people to man the new slots in the all-volunteer force. Is that a real consideration?

A: If you make the judgment as you made it—the pool will be too small to support the all-volunteer force—then you're right. On the other hand if we continue to improve the quality of military service the way we have and the way we can, if we continue to make military service competitive, I think there are a number of things going on which are going to help the military services. This society is urbanizing at a tremendous rate. The opportunities for young people to get into a job where they can demonstrate or learn basic leadership abilities, where they can learn a skill, travel, where they can get out of their hometown with a profession to pursue and look at their future through more objective eyes—those opportunities are shrinking. I don't see that there will be a problem, particularly if through negotiations with the Soviets we'll be able to mutually reduce our deployed forces in Europe and hopefully take other steps in the next decade to reduce our needs for military people.

CONSISTENCY URGED ON COURTS IN DEALING WITH CHURCH-STATE ISSUES

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. EILBERG. Mr. Speaker, recently the National Labor Relations Board ordered the Roman Catholic Archdiocese of Philadelphia to hold a representation election to determine whether or not lay teachers in 269 Catholic elementary schools wish to be represented by a union for the purposes of collective bargaining.

It is not my intention, Mr. Speaker, to address myself to the merits of the dispute between the Association of Catholic Teachers and the Catholic Archdiocese. As a matter of fact, I am encouraged by a statement made to me by Msgr. George S. Wierzalis, on behalf of the pastors' committee of the archdiocese, that—

Neither the archdiocese nor its pastors are opposed to collective bargaining representation for lay teachers.

My concern, Mr. Speaker, is with the inconsistency with which the Federal Government approaches the issue of parochial schools. On the one hand, we find the National Labor Relations Board asserting its jurisdiction in this case on the ground that it could find no merit in the claim of the Catholic schools that they were "completely religious" in nature, and therefore beyond the reach of the Labor Board. On the other hand, we find the Supreme Court repeatedly denying governmental aid to parochial schools precisely because of their "religious" character.

Msgr. Wierzalis, in a letter to me on behalf of the archdiocese and the pastors, puts his finger on the issue when he declares that "government cannot have it both ways." I agree, Mr. Speaker. I think that if the Government is going to involve itself in the problems of these parochial schools, it must involve itself all the way—in their financial problems as well as their labor-management problems; and if the Government is going to take a hands-off policy in one area, it must take a hands-off policy in both.

This is a matter which is now before the Federal courts, and it must ultimately be resolved there. My plea, however, is for a measure of consistency on the part of the courts. Consistency means predictability and those of us with any familiarity with the law know that the most important ingredient is that people be able to predict, with some reasonable assurances, how the courts will act in given areas.

Mr. Speaker, Msgr. Wierzalis has provided me with some cogent arguments which the Catholic Archdiocese of Philadelphia will present in court in urging a consistent policy toward the parochial schools, not only of Philadelphia but throughout the Nation. I commend these views to my colleagues, and at this point I introduce into the RECORD the text of Msgr. Wierzalis' letter:

FEBRUARY 28, 1977.

Hon. JOSHUA EILBERG,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE EILBERG: On January 17, 1977, the National Labor Relations Board (NLRB) issued an order for an election to determine whether the elementary lay teachers in the 269 parish schools in the Archdiocese of Philadelphia wished to be represented by the Association of Catholic Teachers (ACT) Local 1776 American Federation of Teachers.

In its decision the NLRB said it finds "no merit" in the contention that parish elementary schools are "completely religious."

"The Board's policy is to decline jurisdiction over religiously sponsored organizations 'only when they are completely religious, not just religiously associated.' Roman Catholic Archdiocese of Baltimore, Archdiocesan High Schools, 216 NLRB 249 (1975). The record shows that the major part of the elementary school curriculum is devoted to the same kinds of nonreligious subjects as are taught in public schools and that the subject of religion accounts for less than 15 percent of the schools' weekly schedule. Furthermore, the parishes comply with the Commonwealth requirements regarding curriculum and number of school days per year. The schools offer various activities, including sports and field trips, similar to those available to students attending public schools. In these circumstances, we find that the elementary schools of the Archdiocese of Philadelphia while religiously associated, are not completely religious and are of the type over which the Board has asserted jurisdiction."

Over the past several years the United States Supreme Court has been saying that these very same parish elementary schools are not entitled to substantial governmental aid because they are:

1. An integral part of the religious mission of the Catholic Church" (Lemon v. Kurtzman, 1971);

2. Institutions "in which religion is so pervasive that a substantial portion of their functions are subsumed in the religious mission." (Meek v. Pittenger, 1975);

3. "Religion—pervasive institutions whose very purpose . . . is to provide an integrated secular and religious education, the teaching process is, to a large extent, devoted to the inculcation of a religious values and belief." (Meek v. Pittenger, 1975);

4. Institutions providing a secular education which "goes hand in hand with the religious mission that is the only reason for the schools' existence. Within the institutions, the two are inextricably intertwined." (Meek v. Pittenger, 1975);

5. Institutions so operated that "it would simply ignore reality to attempt to separate secular education functions from the predominately religious role performed" by the schools. (Meek, v. Pittenger, 1975);

6. "Predominantly religious in character." (Meek v. Pittenger, 1975);

7. Institutions in which secular "teaching cannot be separated from the environment in which it occurs." (Lemon v. Kurtzman, 1971);

8. Institutions in which "inculcation of religious values is a substantial if not the dominant purpose of the institutions." (Tilton v. Richardson, 1971).

The position of the pastors of the 269 parishes and the Archdiocese is: government cannot have it both ways.

Neither the Archdiocese nor its pastors are opposed to collective bargaining representation for lay teachers, but they are opposed to governmental interference in parish schools. The government is interfering in the schools now by arbitrarily deciding that Catholic parish elementary schools are not religious enough to avoid interference by a federal regulatory agency but too religious to merit state or federal aid.

The parish pastors have voted unanimously to resist any interference by the NLRB in parish schools. The Archdiocese concurs with this decision.

I am acquainting you as a Member of the House with a very important situation occurring in your district.

We are anxious to know what you, as a Member of the House, are willing to do to stop the NLRB from intruding into parish elementary schools. We are asking for your assistance and help, and await your reply.

Sincerely,

Rev. Msgr. GEORGE S. WIERZALIS.

EIICHI NAKAO

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. DERWINSKI, Mr. Speaker, as an active member of numerous parliamentary groups, I have been privileged over the years to work with many of our counterparts from the legislative branches of other countries.

One of the outstanding members of the Japanese Parliament. Eiichi Nakao, who is the representative of the Japanese House of Representatives at numerous parliamentary meetings at the U.N., is especially interested in the security and stability of East Asia and in particular the situation in South Korea.

He recently addressed the Sixth General Assembly of the Japan-Republic of Korea Parliamentarians' Association in Tokyo. I am pleased to insert his remarks made on that occasion:

REMARKS OF EIICHI NAKAD

Mr. Chairman, honored guests of the National Assembly of Korea, my colleagues in the National Diet of Japan, ladies and gentlemen: On behalf of my colleagues and myself, I wish to extend to our distinguished visitors from the National Assembly of Korea, lead by the Honorable Kim Johng Pil, a warm and sincere welcome to Japan. It is, indeed, a privilege and pleasure to have you as honored guests in our country. I hope your visit here will be both productive and enjoyable. It is my hope that the discussions of this Organization will provide both of our countries inspiration, guides for future action and contribute to strengthening the friendship and relationships between us.

I want to express by deep appreciation for the honor of being invited to speak to this Organization.

Today, I want to speak on one of our mutual problems which is a matter of deep concern to me and which is probably the main theme of this meeting. The problem to which I refer is the peace and security of East Asia and teh proposal of the new United States Administration to withdraw U.S. ground troops from the Republic of Korea. If our policy on this problem is not realistic or if we take too easy an attitude in facing this problem it will affect the destiny of both of our countries and the security and prosperity of all of East Asia.

[When I use the term East Asia I mean the Republic of Korea (South Korea), Japan and the Republic of China (Taiwan). I realize the term "East Asia" has several different meanings. In this speech I use the term East Asia to mean only the three free countries of East Asia given above, i.e., the Republic of Korea, Japan and the Republic of China.]

When Vice President Mondale visited Tokyo on behalf of President Carter, I delivered a personal letter to the Vice President stating that, as a member of the National Diet of Japan, I strongly opposed the withdrawal of U.S. troops from South Korea as this will strongly affect the peace and security of all of East Asia unless there are strong and effective measures to avoid any destabilization of East Asia.

The Japanese Government tried to avoid this matter because of the domestic political situation in Japan. However, my letter to Vice President Mondale was leaked to newspapers. That ignited public discussion of the question of the withdrawal of U.S. troops from South Korea which has shaken somewhat the apathy of the public.

The withdrawal of U.S. ground forces from South Korea affects not only the security of South Korea but also the security of Japan and all of East Asia. It is a matter which also affects the security of the United States itself. So it is a matter of vital interest to all of us, the three free countries of East Asia and the United States itself. It is a factor in the international balance of power. Most important: Is the withdrawal a signal that the United States is changing its established global defense and strategic policies? This is matter of major concern to East Asia. Also, the withdrawal raises again questions of American credibility.

Before I state my view of the situation, let me first tell you one fact of cold reality which has shocked me.

Within 72 hours of the inauguration of

the new Carter Administration, President Carter sent Vice President Mondale on a special mission to visit the principal allies of the United States in Western Europe and to Japan whom the U.S. considers its principal ally in East Asia.

However, in following and comparing the actions of Vice President Mondale in Western Europe and in Japan I have found a shocking difference. Do you realize what he did in Europe? There is a clear difference between his attitude in Western Europe and his attitude in Asia—in Tokyo. I found there is a very vital difference which I can't understand.

In Western Europe the Vice President, accompanied by other high American officials, first visited NATO headquarters to encourage NATO and confirmed continued U.S. support of NATO. After the visit to NATO headquarters he then visited the EEC headquarters. Then the Vice President went to Germany and confirmed U.S. support for the defense of West Germany and West Berlin.

To dramatize this reconfirmation of continued U.S. support of NATO and West Germany, Vice President Mondale flew to West Berlin to visit the Berlin Wall. Then, having taken such a dramatic action, in front of the Berlin Wall, he expressed U.S. determination to continue support of NATO and to defend Western Europe.

I was impressed by this dramatic action for this is the way the leader of the free world should act. NATO and the Western Europe allies of the U.S. will feel safer because of this.

But what about East Asia?

The shocking contrast between the Vice President's actions in Western Europe and Japan began in Paris. Before departure from Paris, a member of the Mondale mission announced that the U.S. wanted to withdraw 5,000 U.S. ground troops from South Korea as soon as possible and wanted Japan to understand this withdrawal. In Japan, we thought that, perhaps, this was only a trial balloon, but it was shocking nevertheless.

Of course, Mondale said there would be consultation with South Korea and Japan, but it was announced after his return to Washington that consultation was to be only on the questions of timing and number of troops to be withdrawn NOT on the basic question of the withdrawal itself. In this I see a huge difference in his enthusiasm between the support of NATO and the defense of Western Europe and the defense of East Asia.

Ladies and Gentlemen, has any American blood been spilled at the Berlin Wall? Why didn't Mondale express the same confirmation for the defense of East Asia by visiting the DMZ in Korea? In Korea, thousands of Americans died in the defense of South Korea and East Asia. The DMZ has a symbolic significance in East Asia similar to the Berlin Wall in Western Europe.

This difference between Mondale's visit to the Berlin Wall and his actions in Tokyo exemplify how very serious the problem is for East Asia.

Because of these contrasting actions of Vice President Mondale, as President Carter's representative, I am very concerned about the destiny of the three free countries of East Asia, South Korea, Japan and Taiwan.

Before the inauguration of the new administration, President Carter and Vice President Mondale stressed that in relations with Japan there would be no more "Nixon shocks". But, is this true?

The matter of the withdrawal of U.S. troops from South Korea is a matter of the most basic concern to East Asia for it shakes the U.S. free world strategy which has been in effect since the late 1940's. It creates concerns for the future and raises questions of American credibility. The U.S. treaties with East Asia countries are all bilateral treaties. They provide for strategic consultation as well as consultation on technical details. However, the present case of U.S. withdrawal from South Korea appears to be a unilateral decision by President Carter based on his campaign promise and without strategic consultation with South Korea.

Ladies and Gentlemen, even though we are all aware of the Nixon Doctrine should we accept unilateral decisions on free world defense strategy made only by America? Or by consultation on only small details? Ladies and Gentlemen, this is obviously a characteristic of the Carter Administration on this matter (withdrawal).

Sometimes we can not help thinking that the withdrawal of U.S. troops is only because of a promise which President Carter made during the last election campaign in the U.S. He made the promise without considering how such a withdrawal could be made without affecting the security of not only South Korea but all of East Asia. How could such a withdrawal be made without endangering the poltical stability of East Asia? Hasn't he considered how it will also affect the defense of the U.S. itself? I must ask such questions.

In considering the question of withdrawal of U.S. troops from South Korea and its impact on the peace and security of East Asia, we should examine how West Germany and NATO have faced the same problem in Western Europe.

According to our understanding, one of the characteristics of the Carter Administration was to be consultation with America's allies before decisions were made. This we appreciated.

As you know, Western European countries not only in economic affairs through the EEC but in defense affairs through NATO made their opinions known to President Carter and this resulted in Mondale's statement at the Berlin Wall.

As for East Asia, President Carter has frequently expressed the desire for consultation with Japan on East Asia affairs. So it becomes a matter of how Japan meets these expectations.

The problem involves the attitudes of the Japanese to frankly face up to this. For example, how does the withdrawal of U.S. ground forces from South Korea affect East Asia? How do changes in the situation on the Korean Peninsula affect Japan? The (Japanese) Foreign Minister has spoken of "The necessity of easing tension on the Korean Peninsula and preparing the international atmosphere". But in this, how can Japan influence the U.S.S.R. and the Peoples' Republic of China? So concerning such a vital problem, Japan must express her beliefs to the U.S. very strongly and must be careful to keep up U.S. willingness to listen to Japan on Asian affairs.

Therefore, it became a matter of how Japan would react, of how Japan would view the withdrawal of U.S. troops from South Korea. At a time when it is known that North Korea has more than 2,000 heavy tanks close to the DMZ ready for a rapid advance into South Korea, how can the security of South Korea be guaranteed if U.S. troops are withdrawn? In this situation what should be the attitude of Japan towards the security of East Asia? Japan needs to think about its role in the peace and security of the world.

NATO countries made clear their defense needs. By contrast, Japan only said this was a bilateral matter between the U.S. and South Korea but hoped any U.S. withdrawal would not disturb the stability of the Korean Peninsula. Such a reply makes it look as if Japan is missing the dialogue for such a serious problem. I worry about such an attitude for such a reply can mislead Washington. I believe, and as Washington expects, Japanese politicians with a concern for world peace, can not escape this responsibility. In international politics to maintain independence and progress, whatever one believes must be strongly advocated. The present attitude of the Japanese Government may lose the political confidence of America. So I worry about this.

I know my brother legislators from Korea share my concern, so as a Japanese, I must say they should strongly oppose the U.S. withdrawal from South Korea.

I trust the capability of both President Carter and Prime Minister Fukuda. They are fine leaders. But there are times when politically they must consider their domestic positions. I believe it is President Carter's true heart that he wants to listen to the consultation of America's allies. When Prime Minister Fukuda says, "I don't want the balance of power destroyed in East Asia", I believe that is his real belief in this matter.

In South Korea the memory of the Korean War is still vivid. Day and night, Koreans must think about their national survival and the threats from Communist countries. Recently the Korean Government announced they must move the capitol from Seoul because of the threats. So now I would like to urge you Korean statesmen that you should do your utmost best to persuade the American people of the seriousness of the withdrawal of troops from Korea as well as the matter of non-consultation on the question of withdrawal. At the same time, Japanese statesmen and politicians who share the same opinion, without fearing the noise from the mass communications media, should do their utmost best to influence Prime Minister Fukuda to arrive at a correct judgment and urge him to stand up and express very frankly our worries on these matters. This will be to meet American expectations of Japan, as the U.S. is publicly asking for consultation.

I have a good personal relationship with Prime Minister Fukuda and I believe he understands all of this very well. But his political situation is very delicate.

Ladies and Gentlemen, based on an understanding of the facts of this problem, Japanese, Korean and, also, American statesmen and politicians must give attention to the facts and concepts of the two following points I wish to make. I believe these two points can contribute to a new structure of peace in Asia and, also, contribute to an easing of tensions.

First, the economic power of the three countries of East Asia, Japan, South Korea and Taiwan, is now equivalent to that of the EEC. The economic growth rate of East Asia is greater than that of Western Europe.

This economic power contributes not only to the growth of the international economy but is a factor of international security and the balance of power. The productive capacity of East Asia is used largely by the free world though the three countries of East Asia face the two Communist giants. This geographical nearness to the Communist countries affects the daily life of all the countries of East Asia. We must not be conquered by them.

Considering the economic power and importance of East Asia, why has the Carter Administration treated East Asia so differently from the EEC—for Vice President Mondale visited the EEC immediately after his visit to NATO.

I believe the difference in the treatment of the EEC and East Asia is that Japan, South Korea and Taiwan don't yet know how to utilize their economic power effectively. In the EEC even a small country has an effective voice. The three countries of East Asia should join together to use their collective economic power more effectively in their international relations.

In East Asia, defense is on a bilateral basis between each of the three countries of East Asia and the U.S. So the U.S. can enforce its decisions concerning the defense and security of East Asia as it chooses.

East Asia countries should seek ways for coping more effectively with American uni-

lateral decisions and, if I may be so blunt, with occasional unintentional American tyranny, which so shake and disturb the stability of East Asia. Real and effective consultation on basic problems, not administrative details, has become an urgent need between the countries of East Asia and the United States. It appears that in United States world defense strategy the difference between the treatment of Western Europe and East Asia lies in the bargaining power of Western Europe.

To summarize my first point, the three free countries of East Asia need to utilize their economic power more effectively. The EEC in Europe provides a lesson to East Asia in this matter. With better utilization of our own economic power and industrial resources, many of our small problems will simply fade away.

My second point relates to the global system of security and defense in the free world which was established by the United States and of which the United States is the leader.

The defense of East Asia is the western defense line of the United States itself. This East Asia defense line begins with the DMZ in Korea, goes down through the Straits of Taiwan to the Philippines, then through the Indian Ocean to the Atlantic where it joins the eastern defense line of the U.S. and NATO. The security and defense of East Asia is only one segment of America's global security and defense system.

U.S. troops in East Asia and South Korea are a part of this global defense line of the U.S.

We should take notice that even the Peoples' Republic of China supports the presence of U.S. troops in East Asia as a counter balance to large Soviet forces along the Manchurian border. Public reports indicate there are approximately 45 Soviet divisions along the Soviet side of Manchuria plus a substantial number of air bases and missile bases. If the United States withdraws its forces from East Asia, especially if there is a pullout of American troops from South Korea, this could force the People's Republic of China to reassess its relationship with the U.S.S.R. It could stimulate a rapproachment between Peking and Moscow despite the deep antipathies and distrust between them. A rapproachment between Peking and Moscow would change the balance of power. In such a shift of the balance of power it is conceivable that the whole of East Asia would come under the domination of the U.S.S.R. In such a case, the U.S.S.R. could then shift a major portion of the military forces it now has in eastern Siberia to Western Europe where it confronts NATO forces. This would change the balance of power in Western Europe.

From the establishment of the U.S. system of global defense and security in the late 1940's and early 1950's there has been political stability in East Asia. This political stability made possible the economic development of East Asia, the so-called "economic miracles" of Japan, South Korea and Taiwan. Political stability is necessary for the continuation of these economic developments in East Asia.

The reduction or withdrawal of U.S. ground forces from East Asia, especially from South Korea, seems certain to create instability and tension and to upset the present balance of power. It is the physical presence of U.S. forces which reassures the people of East Asia that the United States intends to meet its commitments to maintain peace and stability here. American troops should not be reduced by so much as a single soldier without adequate guarantees to protect the stability of East Asia.

So we must educate the Carter Administration and say very firmly that a hasty withdrawal of U.S. troops will result in confusion and instability. There should be no withdrawal until the countries of East Asia, especially South Korea, are satisfied that a withdrawal will not upset the stability of East Asia.

I believe that everyone here, whether Korean or Japanese, believes the same as I, that we must protect the political stability and balance of power which has made possible the economic development of the three countries of East Asia who now add so much to the world economy and to the international balance of power. Together we must work to maintain the stability of East Asia.

We must make no mistake about the challenges facing us in the months immediately ahead. However, let us approach these challenges with confidence, vigor and a sense of our destiny as bearers of ancient civilizations with our own great cultural, social and historical traditions handed down to us from our ancestors.

I thank you for your kind attention.

ITALIAN CULTURE WEEK

HON. LEO C. ZEFERETTI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. ZEFERETTI. Mr. Speaker, the city of New York is currently observing Italian Culture Week, which is a source of pride for the millions of Italian Americans in New York and throughout the land.

Certainly the contributions of Italians and their descendants are far too numerous to mention at this time, but allow me to cite a few of the more renowned people—in all walks of life—whose achievements have helped shape our lives here in America and around the globe.

Italians became active participants in America's struggle for freedom during the very first days of the Republic, and numerous Italian names are found in the regimental lists of the Continental Army.

We in New York are particularly proud of the first Italian American to achieve national recognition in the field of public service—Fiorello LaGuardia, U.S. Congressman and mayor of New York City. Presently, there are 31 Italian Americans serving in Congress.

More recently, each of us is familiar with the dedicated service rendered by Judge John Sirica during the Watergate trials, and certainly one of the great lawmakers of our time is my esteemed colleague, PETER RODINO, whose leadership was the primary force in guiding us through those difficult months.

The Capitol Building in which we serve—the heart of our National Government—was made beautiful by the Italian American artist Constantino Brumidi. His masterful artistry decorates the walls and ceilings of the Capitol, viewed and cherished by millions of visitors each year.

America's stage and screen have both been dominated by men and women of Italian origin, including the immortal Caruso in opera and Frank Capra in motion pictures.

Band leader Guy Lombardo has been referred to as the man who creates "the sweetest music this side of heaven," and the great Frank Sinatra, after 30 years of stardom, is still king of the music world.

The outstanding contributions of Italian Americans in the world of sports is undisputed. Vince Lombardi, his career cut short while still in his prime, is already a legendary figure in the football world. Joe DiMaggio, the Yankee Clipper, dominated the baseball scene for two decades and remains a popular figure today.

From just these few names that I have mentioned it is obvious that Italian Americans have stood out in all fields of endeavor including science, education, business—the list goes on and on. These achievements have often been overlooked by our history books, but these men and women stand tall in the hearts of us all.

Mr. Speaker, I feel that the contributions made by individuals of Italian descent are all too often forgotten by the people of America. Having helped found this great Nation, they continue to play a vital role in the strengthening of our country. I am proud of my Italian heritage, and I want to take this opportunity to applaud New York City for saluting Italian Americans and our rich culture.

U.N.—THIRD WORLD OUTRAGE

HON. ROBERT E. BAUMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. BAUMAN. Mr. Speaker, the editor of the Baltimore News-American considers the United Nation's Human Rights Commission's recent refusal to investigate Idi Amin's blatant and systematic massacre of his countrymen and finds it "impossible to express the contempt which the United Nations frequently evokes" in such episodes.

The editorial asks the question an increasing number of Americans think is the crucial issue in this country's relationship with the world body:

What use is the UN itself when its majority power blocs repeatedly makes a mockery of the decency and justice the UN was founded to protect and promote?

We must be honest with ourselves and with whatever is left of the candid world once free. The U.N. as it is presently structured and operated by its Third World and Communist majority, is a sham and a hypocrisy. That body has made a mockery of every principle of humanity and justice.

The editorial follows:

OUTRAGE IN GENEVA

It is impossible to express the contempt which the United Nations frequently evokes by its actions—or lack of action—in situations which cry out for vigorous application of the basic moral principles on which the world organization originally was founded.

The latest in a long list of shameful episodes came in Geneva last week when the 82-nation UN Human Rights Commission, after four days of closed-door meetings, announced it had rejected a demand that it probe the horrendous situation continuing in Uganda.

Great Britain, backed by the United States, had called for the investigation as a clear

responsibility of the commission under the UN charter. It was rejected as the result of concerted opposition by the majority block of Soviet, Arab and eight African nations.

Britain has reacted by submitting a new resolution to the same effect which, technically, would require open debate. Its diplomatic staff, however, is virtually resigned to having its Uganda probe demand pigeonholed for "further consideration" at the next commission meeting in 1978, if ever.

So—meanwhile—Idi Amin's massacre of his accused enemies in Uganda not only escapes official UN censure but, in effect, gets a green light to continue. For the UN Human Rights Commission has held that Amin's mass murders, tortures and other terrors do not justify its intervention.

The commission's refusal to act in such a notorious situation indeed defies any expression properly conveying the contempt it deserves. It also underscores the need for a reassesment by this country of its massive financial support to the entire United Nations operation.

Of what use is a UN Commission on Human Rights if it votes its unconcern with the dreadful abuses of human rights taking place in Uganda? And of what use is the UN itself when its majority power blocs repeatedly make a mockery of the decency and justice the UN was founded to protect and promote?

An additional question suggests itself in the Uganda matter. Andrew Young, our new ambassador to the UN, has been extremely vocal in advocating the cause of his fellow blacks in their battles against what he sees as the tyranny of white regimes in Rhodesia and South Africa.

How come he has not been equally vehement in his condemnation of that arch tyrant, Idi Amin, the mad monster of Uganda? He could, if he would, call a session tomorrow of the UN Security Council—another presumed agency of world justice of which he happens to be chairman.

IS THE ALL-VOLUNTEER MILITARY A SUCCESS?

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. STEIGER. Mr. Speaker, increasingly we are hearing the question, "Is the All-Volunteer Military a Success?" The answer is very firm yes.

Former Secretary of the Army Martin R. Hoffmann clearly detailed the success of the All-Volunteer Army in the March 12 issue of the Baltimore Sun. Using a number of criteria, he pointed out that it has met or exceeded most Americans' expectations.

As former Secretary Hoffmann noted, the strength of the active military forces has been maintained without compulsion, and the quality of the forces has been maintained or improved by nearly every measure.

He said:

The Army as one affected institution has been buoyed by the dynamics of all-volunteer makeup. Increasing esprit, more realistic, creative and retained training, and greater per capita capability than any previous peacetime Army have resulted.

The AVF is working, and we must all seek to make it better still. There is no need for conscription, and those who suggest there is a need are simply ignoring the facts. Former Secretary Hoffmann, who held his post until only a few months ago, is intimately familiar with the progress of the AVF in the more than 4 years since Congress ended the draft. I hope his views will receive careful consideration. The article follows:

IS THE ALL-VOLUNTEER MILITARY A SUCCESS?

(By Martin R. Hoffmann)

The prospect of a national debate on the all-volunteer force (AVF) is a welcome one. Hearings to get facts and debate issues—rather than debating facts and fears—are long overdue and should proceed promptly. Senator Nunn is to be commended for calling them.

The all-volunteer force (AVF) is a success to date. True, it has not met all of everyone's expectations held when it started. But, on balance, it has met or exceeded the expectations of at least a majority of Americans. Note the following national benefits:

First, the strength of the active military forces has been maintained without compulsion. Following on the heels of more than 30 consecutive years of conscription and in the aftermath of the war of most divisive and discouraging impact on our people and our military establishment, demonstrating this can be done in a free society is no small accomplishment.

Second, the quality of the forces has not only been maintained, but the ability to increase quality has been demonstrated and should be allowed to continue. The Army as one affected institution has been buoyed by the dynamics of all-volunteer makeup. Increasing esprit, more realistic, creative and retained training, and greater per capita capability than any previous peacetime Army have resulted.

Forgoing the draft has hastened the national ability to focus on present, urgent military realities in the face of a burgeoning Soviet threat. In short, whatever the results of President Ford's clemency program and President Carter's amnesty directive, their combined result cannot approach the healing accomplishments of successfully putting aside conscription during this tumultuous period in the nation's history.

This is not to say the AVF has no problems. Need for greater congressional understanding of the AVF is one of them. Revisions obviously must be considered to assure accomplishment of future national requirements. But the debate on future manpower policies should not be based on assumptions of massive failure of the AVF any more than it should be concluded by a simplistic choice between the volunteer force and the draft.

There currently are condemnations alleging that the AVF is falling short of quantity and quality goals for the Army. Shortfalls exist, but not because the AVF does not work. The major reason is the 21 per cent cuts taken in the recruiting budget over the last two years. Congressional assertions of AVF failure in this vein must be regarded with the skepticism due one who, having disposed of his parents, pleads in mitigation that he is an orphan.

Recruiting money is a matter of *allocation* of resources: If sufficient money is spent to recruit a quality force, the increase and more will be saved by recruiting fewer men and decreasing the losses that ought to be expected from a less-selectively recruited force. The improving economy has had an effect on recruiting. This is an obvious effect which should surprise no one. An opportunity to assess the impact of an improving economy on recruiting has been missed.

Assertions of the huge increases in AVF costs in most cases are based erroneously on expenses that are not the direct result of the volunteer force. Only $300 million per year would be saved by returning to conscription for the active forces, out of a Defense budget of $112 billion.

Undoubtedly, costs have gone up. The most rapidly escalating military personnel cost element is retirement. But this has nothing to do with the volunteer force: The retirement system has remained virtually unchanged since World War II.

Moreover, ascribing the increase in soldiers' pay since 1964 to the volunteer force concept is incorrect. Pay for soldiers was increased as a matter of equity prior to the end of the draft. It was an attempt to do equity to those drafted, when not all their contemporaries were called to serve.

Continuation of the volunteer force does not mean continued inattention to the draft. The country badly needs a modernized, up-to-date draft mechanism to assure availability of required manpower quickly in the event of emergency.

The congressional hearings on the volunteer force will help to put in perspective the relationship the draft can have in future manpower policy. Hearings will be more constructive if they proceed with the confidence that we as a nation mean to make the AVF work, rather than with dire predictions that conscription as a national policy is inevitable.

PADUCAH, KY., SUN-DEMOCRAT SUPPORTS ENERGY COMPETITION ACT

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. KASTENMEIER. Mr. Speaker, America's traditionally competing sources of energy are becoming concentrated in the hands of the monopolistic oil companies. Since energy is so crucial to our Nation and its security, the oil industry domination of competing sources of energy is extremely dangerous both to the national interest and to the functioning of the competitive system.

Congressman PAUL SIMON and I have introduced H.R. 3166, the Energy Competition Act which prohibits any oil company from owning or acquiring any coal, uranium or geothermal power asset.

The Paducah Sun-Democrat recognizes the importance of competition in energy production, and it has endorsed the Energy Competition Act.

Mr. Speaker, I call to the attention of my colleagues the Sun-Democrat editorial of March 15, 1977.

GOOD PLACE FOR MORE COMPETITION

Our Southern Illinois neighbor, 24th District U.S. Rep. Paul Simon, a Carbondale Democrat, is co-sponsoring a bill with Rep. Bob Kastenmeier (D-Wis.) that is aimed at stimulating much-needed competition in the critical area of energy production.

Most energy production in the U.S. is monopolized by petroleum companies which also have substantial interests in coal, uranium and other energy sources. This is helping drive up the already high price of energy to consumers.

Kastenmeier and Simon's "Energy Competition Act" (HR 3166) would force the oil companies to divest themselves of coal, uranium and other "geothermal power assets" within three years after its enactment. The measure also would prohibit oil companies from acquiring additional non-petroleum energy holdings as soon as it became law.

Violators would be subject to stiff fines or imprisonment.

The two congressmen believe this "horizontal divestiture" will help restore competition in energy production and bring down energy costs.

Big oil's slice of America's energy pie is enormous. Six of the 10 largest oil companies are involved in producing all four major domestic fuels—oil, gas, coal and uranium. Oil companies own about half of the known uranium reserves in the country.

Eleven large oil producers also operate coal companies. Continental, the ninth largest oil company, owns Consolidation Coal, the nation's largest coal company. Exxon, Kerr-McGee, Atlantic Richfield, Shell and Sun Oil also own huge coal reserves. Several oil companies, too, have interests in oil shale, tar sands and underground steam—promising future energy sources.

All the while, the oil producers are spending millions for advertising to convince the public they aren't monopolistic but are firm believers in competition and free enterprise. If the oil companies mean what they say, they should welcome the Kastenmeier-Simon bill because it's a healthy dose of free enterprise.

YOUTH EDUCATION

HON. THOMAS N. KINDNESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. KINDNESS. Mr. Speaker, the Junior Achievement movement has long been recognized as a major force in educating our youth on the basic concept and strengths of the free enterprise system. Recently, I purchased a share of stock in a unique JA company that is learning firsthand about one of the most important institutions in our economic system—the stock market.

This Junior Achievement Co., Wall Street Investment Counselors, is made up of 18 teenagers in Middletown, Ohio. They have established what is believed to be the first mutual fund ever by a Junior Achievement Co. anywhere in the United States. Since organizing last October, the company has sold over 300 shares of stock at $10 a share. The company has a portfolio of approximately 1,200 shares in about 13 companies, the issues held changing as the company buys and sells.

Several of the stocks held are from ARMCO Steel Corp.; Diamond International and Aeronca Co., which are headquartered in Middletown, Ohio. Most, however, were selected for their low price and their volatility. While this sounds like a recipe for financial disaster, as of the end of February the market value of a share of stock was about $9.75 and had been above $10. This is a more significant achievement than it seems. After commissions and broker fees, the company is only left with $7.60 to invest out of each $10 share purchase. So, the actual funds it has invested have increased by almost a third in the past half year. Before it liquidates in May, the company hopes to bring each share's value up to $11, so that it can return a profit of 10 percent on each share purchased.

The company receives advice from both its broker and advisers, but makes all decisions on which stocks to buy or sell. Company members follow the usual market publications, read annual reports, and generally do a thorough job of homework before making a decision as a committee of the whole on a stock. To sell the stock, company members call on local companies, their school friends and teachers, parents and neighbors, even addressed a meeting of the local Rotary Club.

Stock in the company is now being held by individuals in 14 States and several countries. The company's advisers are employees of ARMCO Steel Corp., which in the 1940's played a major role in supporting the spread and growth of the Junior Achievement idea. These young people and their company have my commendation—and I hope yours—for their confidence and commitment to the free enterprise system.

COSPONSORS TO H.R. 4444, DINGELL-BROYHILL

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. DINGELL. Mr. Speaker, Representative JAMES BROYHILL of North Carolina and I are pleased to announce that our legislation, H.R. 4444, to amend the Clean Air Act mobile source emission control provisions has the support of 48 cosponsors in the House. The companion bill in the Senate is S. 919, introduced by Senators DON RIEGLE and ROBERT GRIFFIN. We welcome additional cosponsors to H.R. 4444 and S. 919, which have the support of both labor and the auto manufacturing, supply and service industries.

The cosponsors of H.R. 4817, identical to H.R. 4444, are:

The Honorable James J. Blanchard of Michigan.
The Honorable William D. Ford of Michigan.
The Honorable William S. Broomfield of Michigan.
The Honorable Dale E. Kildee of Michigan.
The Honorable Bob Traxler of Michigan.
The Honorable G. William Whitehurst of Virginia.
The Honorable David R. Bowen of Mississippi.
The Honorable Carroll Hubbard, Jr. of Kentucky.
The Honorable Thomas N. Kindness of Ohio.
The Honorable William M. Ketchum of California.
The Honorable Lucien N. Nedzi of Michigan.
The Honorable William F. Walsh of New York.
The Honorable Thomas L. Ashley of Ohio.
The Honorable Mark Andrews of North Dakota.
The Honorable Charles H. Wilson of California.
The Honorable William M. Brodhead of Michigan.
The Honorable Robert L. F. Sikes of Florida.
The Honorable Teno Roncalio of Wyoming.
The Honorable Robert E. Badham of California.
The Honorable Elford A. Cederberg of Michigan.
The Honorable Thad Cochran of Mississippi.
The Honorable James G. Martin of North Carolina.
The Honorable Clarence J. Brown of Ohio.

The cosponsors of H.R. 5108, identical to H.R. 4444, are:

The Honorable James C. Cleveland of New Hampshire.
The Honorable John J. Duncan of Tennessee.
The Honorable Jack Edwards of Alabama.
The Honorable Frank Horton of New York.
The Honorable Charles Whitley of North Carolina.
The Honorable Glenn English of Oklahoma.
The Honorable Philip E. Ruppe of Michigan.
The Honorable Harold Runnels of New Mexico.
The Honorable Tom Bevill of Alabama.
The Honorable Charles Wilson of Texas.
The Honorable Edward J. Derwinski of Illinois.
The Honorable Willis D. Gradison, Jr., of Ohio.
The Honorable Guy Vander Jagt of Michigan.
The Honorable Robert S. Walker of Pennsylvania.
The Honorable Dan Daniel of Virginia.
The Honorable Bob Stump of Arizona.
The Honorable Austin J. Murphy of Pennsylvania.
The Honorable Gene Taylor of Missouri.
The Honorable Mike McCormack of Washington.
The Honorable James R. Jones of Oklahoma.
The Honorable James M. Collins of Texas.
The Honorable Steven D. Symms of Idaho.
The Honorable Donald J. Mitchell of New York.

THE EQUAL RIGHTS AMENDMENT—FIVE YEARS ON

HON. HELEN S. MEYNER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mrs. MEYNER. Mr. Speaker, since 1923, some form of the equal rights amendment has been introduced in nearly every Congress. It took 49 years but, on March 22, 1972, Congress finally passed and sent the ERA to the States for ratification. Today, 35 States later, we mark the fifth anniversary of the ERA's passage. This proposed amendment, which is so basic to the principles upon which our Nation was founded, is too important to be ignored.

When the Constitution first became the law of this land, only those who were white, adult male property owners—a small percentage of the population—were deemed fit to exercise the right to vote and have a voice in government. Eventually, the ownership of property was dropped as a requirement and, later yet, adult black males received the franchise. Women were unable to vote until more than a century after the Constitution was written.

But freedom and justice encompass more than just the right to vote. Black Americans know this, and the civil rights struggle continues for them today.

Women know this also, and that is what the ERA is all about. Women are demanding the full protection of the Constitution, with both the rights and responsibilities of freedom. We ask for no more, and we will accept no less.

The course of history is continuing to move in the direction of full human rights, and toward an improved quality of life for all peoples. Despite recent ERA setbacks, I firmly believe that it will become the law of the land; our country, the leader of the free world will not and cannot fail its own citizens.

Two years remain before the March 22, 1979, deadline for ratification of the ERA. I call upon the States in which the ERA remains unratified to prove that the United States—which has shown its dedication to freedom around the world—is willing to stand up for the rights of its own people.

BILL TO REGULATE TRAPS AND TRAPPING ON FEDERAL LANDS

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. ANDERSON of California. Mr. Speaker, in the 94th Congress, I introduced a bill which would discourage the use of painful devices in the trapping of mammals and birds. Almost 100 of our colleagues responded to the growing nationwide concern for the humane treatment of our wildlife, and cosponsored the bill. For the first time ever, congressional hearings to consider trapping legislation were held before the Subcommittee on Fisheries, Wildlife Conservation, and the Environment, of the Committee on Merchant Marine and Fisheries. Because a number of difficult questions concerning that bill were raised at the hearings, I have prepared a new bill which I am introducing today. Let me explain briefly what the new bill seeks to accomplish.

First, my bill attempts to discourage the use of cruel traps and trapping methods by instructing the Secretary of the Interior to issue regulations for the trapping of animals on Federal lands. Included are provisions for the designation of "approved" traps, and for establishing visitation times, trap identification, and catch reports. A seven-member advisory commission, appointed by the Chairman of the Council on Environmental Quality, would assist the Secretary in preparing these regulations.

Second, the bill provides for trap research program to develop more humane traps.

Third, the bill would halt the entrance into interstate commerce of all traps not approved by the Secretary, and would prohibit the interstate commerce of all furs, pelts, hides, et cetera, not trapped according to the regulations issued by the Secretary.

In addition, since the States have traditionally reserved the right to manage resident wildlife, I have devised a State/Federal cooperative arrangement whereby States may follow their own trapping regulations if they are at least as strong as the Federal regulations.

Last year's bill set rigorous standards for the approval of traps by allowing only those traps which capture painlessly or kill instantly, and which minimize, to the extent practicable, the possibility of trapping animals not intended for capture. This year, my bill recognizes that it may be difficult to acquire such a trap, and thus allows the use of traps which instead provide the most humane capture method available.

To determine and develop the most humane trap, we must provide for a research program. The Canadians have long recognized the need for research, and in 1968 formed the Humane Trap Development Committee to begin the initial testing. Since then, about one-half million dollars have been spent on trap research and development in Canada. The work is now being carried out by the Federal-Provincial Committee for Humane Trapping, a Government-sponsored committee consisting of representatives of the Provinces and a full-time professional staff.

While some of the information gathered by the Canadian researchers will be valuable in the United States, many of the trapping conditions in this country are different and require different solutions. The U.S. Government has, to date, spent only a small amount of money to develop more humane traps for taking predatory animals. I proposed in this bill that we commit $500,000 toward this goal.

Last year some people felt that the Federal Government should not assume a significant part of the responsibility that is presently reserved the States for managing resident wildlife. Yet the precedence has already been set for Federal intervention. In 1973, the Endangered Species Act was passed to provide for the conservation of threatened and endangered species of fish, wildlife, or plants. The need for Federal action to halt the accelerating decline of many species of wildlife was critically evident at that time—the need for Federal action to assure the humane treatment of our wildlife is equally evident now.

There are currently no restrictions at all on the use of the steel leghold trap during the open session in 10 States. Sixteen States have no limits on the length of time an animal may remain in a trap; only 22 States require daily visits to the trap. Identification marks on traps, which are necessary for the proper enforcement of regulations, are mandatory in only 27 States.

I believe that this legislation introduces some reasonable restrictions on the use of traps; restrictions which will move toward mitigating some of the pain and suffering endured by trapped animals, yet reasonable enough as not to adversely affect in any way our Nation's economy. If you have any questions, or wish to add your name in cosponsorship, please contact my legislative assistant, Mark Theisen, at 225–6676.

CHANGE MUST COME TO THE SOCIAL SECURITY SYSTEM

HON. BARRY M. GOLDWATER, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. GOLDWATER. Mr. Speaker, on January 1, the social security tax rose once again to $965.25 for workers earning $16,500 or more. Our respected colleague, BARBER B. CONABLE, JR.—who is now the ranking Republican member of the Ways and Means Committee—has just recently pointed out that the estimated income for the year 1977 from the social security tax is $83 billion while the estimated outgo is $86.8 billion. This means that the likely deficit for the Social Security Administration for this year will be about $3.8 billion. Last year's deficit was $3.3 billion. According to Congressman CONABLE, at this rate, unless Congress acts, the social security trust funds will be completely empty by 1984.

I know that a great many of our colleagues are very seriously concerned about the future of the largest pension plan in the history of the world; our fellow-citizens are depending upon us to insure that they will receive the benefits in their old age that they have paid for, in good faith, during their working lives.

I believe the time has come for Congress to begin serious consideration of the long-range reforms which will be necessary in order to save the system from going the way of New York City. As one contribution to the needed debate and the reexamination of the present system, I would like to call to the attention of our colleagues a perceptive article by Robert Bleiberg, entitled "Farewell to Ponzi? Change Must Come to the Social Security System" which appeared in the January 3, 1977, issue of Barron's:

FAREWELL TO PONZI?—CHANGE MUST COME TO THE SOCIAL SECURITY SYSTEM

Effective Jan. 1, 1977, an estimated 19 million breadwinners earning more than $15,300 per year found themselves hit with a higher Social Security tax. Specifically, the wage base upon which the levy is imposed has just gone up to $16,500, raising the maximum tax by $70.20 to $965.25 (for the self-employed, by $94.80, or from $1,208.70 to $1,303.50). Within the next few days, meanwhile, the U.S. Treasury will quietly publish a new Statement of Liabilities and Other Financial Commitments of the U.S. Government. According to our Washington correspondent, Shirley Scheibla, it will show an increase in 15 month's time, from $2.7 trillion to $4.1 trillion, in the unfunded liabilities of the Social Security system.

Most of the bulge in the shortfall, of course, will reflect a change in assumptions about such long-range, and eminently uncertain, developments as wage and price inflation and the fertility of women of childbearing age, rather than some fresh stroke of legislative folly. By law, moreover, the projections must go out as far as 2050 AD, between now and when, we freely concede, much that is unpredictable may happen. Nonetheless, the available data also ominously suggest that if current trends persist, the Social Security system will be in serious difficulties long before. In particular, under the most realistic of three sets of official assumptions, the $6 billion Disability Insur-

ance trust fund will be exhausted within the next three years. By the same token—despite an unprecedented increase in recent years of the burden on the taxpayer—the Old Age and Survivors Insurance trust fund, which currently totals some $35 billion, sometime in the mid-Fighties is slated to go broke.

While scarcely graven in stone, such estimates should give pause to even the most eager apologist for this so-called New Deal reform. And, in view of the many millions of people potentially affected, they surely constitute one of the more burning isues of the day. Yet prior to and throughout the Presidential campaign, Social Security, with fine bipartisan accord, wound up so to speak on the back burner. True, challenger Ronald Reagan, by his pioneering and promptly distorted proposal to invest the OASDI trust funds more wisely, at least hinted that something was wrong. Gerald Ford, to his credit, sought to face up to things by recommending yet another boost in the payroll tax, as well as changing the rules—"decoupling," in the jargon—whereby wage-earners, in the name of protection against inflation, enjoy a vast and mounting benefits windfall.

From the Democratic powers-that-be, however, little constructive has surfaced to date. Far-out party members presumably are getting ready to re-introduce a spate of bills which, at incalculable cost, would blanket housewives under the program. As chairman of the Social Security Finance subcommittee, then-Senator Walter Mondale, now Vice President, opposed the White House program and urged, in effect, that his colleagues go slow. As to Jimmy Carter, he has largely contented himself with issuing a position paper which "pledges to Americans around the country that as President, I will preserve with the assistance of Congress the financial integrity of the Social Security system." If not, as Playboy magazine has caustically observed, perhaps the Easter Bunny or the Tooth Fairy will provide.

Like any federal agency which deals in something for nothing or more for less—over $4 trillion worth at latest recknoning—Social Security does smack of fantasy or Alice in Wonderland. Concerned about the unfunded prior service cost of U.S. industry (which for a handful of corporations runs to nearly half of net worth), and the few isolated cases of pension fund abuse, Congress in 1974 passed the sweeping Employe Retirement Income Security Act (ERISA). Yet it has chosen to ignore the worsening plight of a body the liabilities of which exceed the assets by roughtly 75 to 1. Again, even as the OASDI trust funds head straight for extinction, the Social Security Administration (out of those dwindling funds, by the way), is spending—so charges the National Taxpayers Union, citing a report by the General Accounting Office—$68 million to erect a superfluous building to house $400 million of unneeded computers.

Housekeeping expense, to be sure, is the least of the system's woes. In the workaday world, runs Parkinson's Law, expenditure may rise to meet income, but in the never-never land of Social Secuirty, never the twain shall meet. Even when the tax burden grows more onerous year by year. Since 1965, to illustrate, the Social Security tax has shot up from 4.4% on the first $6,600 of earned income (levied on employer and employe alike) to a combined 11.7% on the first $16,500. (Since 1960, it has increased by 572% all told, or a staggering 12% per annum compounded.) What's more, under the program which President Ford sent to Capitol Hill last June (a plea he soon is likely to renew), the combined rate would rise to 12.3%. And under existing law, the earnings base mounts every 12 months, hand-in-hand with inflation.

Yet, thanks to the lavishness of Congress, there never seems to be money enough. Back in 1972, the lawmakers passed a bill which raised benefits by 20% across-the-board. It also tied future payments for the retired to the Consumer Price Index, and, in what now is universally deplored as overkill, mandated a comparable adjustment in future benefit levels for those still on the job, a wildly liberal and ill-conceived provision which, if allowed to stand, will let people retire with more money than they earned while working. In consequence, the Social Security system's unfunded liabilities have soared, while outgo of the OASDI trust funds, by any estimate, has begun to exceed income. If current trends continue, as noted, both funds will be gone in less than a decade.

It's plainly time for a change, and, though the Democratic majority may dig in its heels, change is a foot. Whatever may or may not happen on the Hill, indeed a significant shift has occurred in informed (if not yet necessarily public) opinion. Once the ultimate in sacred cows, Social Security lately has come under increasingly pointed attack. Besides the critical piece in Playboy cited above, U.S. News has run an article headlined "Social Security, Promising Too Much to Too Many," while a book has come out titled "Social Security: The Fraud in Your Future." And a surprising consensus over what should be done—ranging from "decoupling;" which alone might wipe out half of the unfunded liabilities, to a gradual step-up in the retirement age—has emerged. One way or another, most authorities (if not politicians) agree, the longest-playing Ponzi scheme on record must come to an end.

Some of the most provocative ideas have come from the University of Chicago's Arthur B. Laffer and R. David Ranson, whose views have influenced both Secretary of the Treasury Simon and President Ford. In "A Proposal for Reforming the Social Security System," rather less modest than those we set forth above, Messrs. Laffer and Ranson go straight to the heart of the matter. "Morality is an integral part of political economy. Whatever the economics involved, any policy proposal affecting the more vulnerable or the less advantaged members of society that does not address the moral question explicitly is remiss . . . Inflating the promises to the disadvantaged often is less moral than maintaining restraint. It is an immoral act for a society to promise the undeliverable. It is especially immoral if the people to whom the promises are made are exceptionally vulnerable . . . A system that is constructed with known technical deficiencies such as a massive unfunded liability borders on exploitation, no matter how politically expedient the solution may appear in the short run."—Robert M. Bleiberg.

PUSHES HUMAN RIGHTS IN AMERICA

HON. BRUCE F. CAPUTO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. CAPUTO. Mr. Speaker, House Concurrent Resolution 97, of which I am a cosponsor is grounded in the basic principal of promoting and advancing human rights.

In the past 2 years, Congress has attached amendments to legislation on foreign economic and military assistance requiring the U.S. Government agencies to "promote and advance human rights" and terminate aid to countries exhibiting a "consistent pattern of gross violation of internationally recognized human rights."

This must not be an empty effort. The United States is obligated under law to chastise those countries permitting infringements of human rights. The United States must take the initiative to facilitate immigration of Soviet Jews and other minorities.

At the same time we must not be selective in our criticism and our actions. A denial of human rights in one country is as grave as in another, and deserves equal treatment. However, there is one Nation which deserves more intense and constant scrutiny than all others and that Nation should also be the first criticized and chastized by this Congress when its actions transgress on human rights. That Nation is our own. We must not allow ourselves to fall into the error of self-righteously criticizing others while ignoring our own faults.

HEARING SCHEDULE FOR SUBCOMMITTEE ON GENERAL OVERSIGHT AND ALASKA LANDS

HON. JOHN F. SEIBERLING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. SEIBERLING. Mr. Speaker, I am today inserting in the RECORD for the information of Members the schedule of activities of the Subcommittee on General Oversight and Alaska Lands of the Committee on Interior and Insular Affairs for the period April–July, 1977.

This subcommittee, which I have the honor to chair, is charged with a general oversight responsibility over the Department of the Interior and its many component bureaus, agencies, and offices. The subcommittee also has legislative jurisdiction, under the rules of our committee, over implementation of section 17(d)(2) of the Alaska Native Claims Settlement Act. This means that we will be considering the important question of which Federal lands in Alaska are to be set aside for the benefit of future generations by being designated as national parks, national forests, national wildlife refuges, as wild and scenic rivers, and as wilderness areas.

Mr. Speaker, when the Congress passed the Alaska Native Claims Settlement Act in 1971, we imposed a deadline of December 1978, for the designation of what parts of the vast lands of Alaska are to be included in these several systems. It is my firm intention, and the intention I believe of all the members of our subcommittee, to meet that deadline. Toward that end, we intend to pursue the schedule which is set out below, and later this summer we intend to spend several weeks of field trips and hearings in the interior of Alaska so that the subcommittee members may become more familiar with all the many areas we will be considering. It is our intention to have a bill ready for the consideration of the

House during this session of the 95th Congress.

No conservation and outdoor recreation issue before the 95th Congress will have a greater importance than will this matter of the designation of the Alaskan national interest lands. What we do in this session will determine just how much of the great scenic, recreational, and wildlife values of these lands will remain unspoiled for our own and future generations.

Because these are matters which are of importance to people in every part of the Nation, our subcommittee will not be confining our hearings to Washington, D.C., and Alaska; rather, we will be traveling to other parts of the country so that citizens of every region will have an opportunity to appear and to testify. We will also utilize these trips to exercise our oversight responsibilities by visiting regional offices and facilities of the Department of the Interior and obtaining a better insight into the field operations of the department.

Other members of the Committee on Interior and Insular Affairs may wish to take part in one or more of these oversight visits, and, of course, the subcommittee will welcome their participation.

Mr. Speaker, Iexpect soon to have available our subcommittee's schedule for the August field trips and field hearings in interior Alaska; when it is ready, it will be placed in the RECORD for the convenience of members. The April–July schedule follows these remarks:

SCHEDULE: SUBCOMMITTEE ON GENERAL OVERSIGHT AND ALASKA LANDS, APRIL–JULY 1977

WASHINGTON, D.C.

April 21, 22, 25, 28, Hearings in Washington, D.C. on H.R. 39, 1324 Longworth H.O.B.

CHICAGO

Fri., May 6, Oversight visit and inspection of Indiana Dunes National Lakeshore.

Sat., May 7, Public hearing on H.R. 39, Ceremonial Courtroom (#2530a), Federal Building, 219 S. Dearborn Street.

ATLANTA

Fri., May 13, Oversight visit, Interior Department offices and inspection of proposed Chattahoochee River National Recreation Area (or, Kenesaw Mountain National Battlefield).

Sat., May 14, Public hearing on H.R. 39, House of Representatives, Georgia State Capitol.

DENVER

Fri., June 3, Oversight visit to Denver Service Center and overflight inspection of Eagles' Nest Wilderness Area, Arapahoe and White River National Forests (or, proposed Indian Peaks Wilderness Area, Arapahoe and Roosevelt National Forests).

Sat., June 4, Public Hearing on H.R. 39, Auditorium (2nd floor), U.S. Post Office, 19th and Stout Streets.

SAN FRANCISCO

Fri., June 17, Oversight visit to Interior Department Regional Offices and inspection of Golden Gate National Recreation Area (or, Point Reyes National Seashore, or, Muir Woods.)

Sat., June 18, Public hearing on H.R. 39, Board Room, San Francisco Board of Education, 135 Van Ness Avenue.

SEATTLE

Sun., June 19, Inspection of Alpine Lakes National Recreation Area, Wenatchee and Mt. Baker, Snoqualmie National Forests (or, Olympic National Park).

Mon., June 20, Public hearing on H.R. 39, Olympic Room, Seattle Center Building.

SOUTHEAST ALASKA

July 1, 2, 3, and 4, Field Trips to proposed wilderness areas.

July 5, Public hearing on H.R. 39 in Sitka, Alaska.

July 6, Field trip to Admiralty Island and Village of Angoon.

July 7, Public hearing on H.R. 39, Juneau, Alaska.

July 8, Field trip to Misty Fjords Area.

July 9, Public hearing on H.R. 39 in Ketchikan, Alaska.

July 10, Return to Washington, D.C.

VERLYS DIXON McPARTLAND

HON. GOODLOE E. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. BYRON. Mr. Speaker, last Friday, an outstanding citizen of Allegany County, Md., was honored by several hundred people. I had the honor of attending the testimonial dinner for Mrs. Verlys Dixon McPartland at the Ali-Ghan Shrine Club in Cumberland.

Mrs. McPartland was honored for her untiring work and dedication in her profession as a dance instructor. In performances around the Nation and in Canada, Mrs. McPartland and her students have brought honor, recognition, and pride to the Queen City of Cumberland and to all Allegany County.

I wish to share with my colleagues in the House of Representatives an article which appeared in the Cumberland Evening Times:

VERLYS DIXON MCPARTLAND TESTIMONIAL TO BE FRIDAY

Mrs. Verlys Dixon McPartland will be honored at a testimonial dinner on Friday at 6:30 p.m. at the All-Ghan Shrine Country Club, according to G. Louis Baker, committee chairman.

Mrs. McPartland, who operates the Dixon Dance Studio, 81 Greene Street, has taught dancing since 1935, and brought widespread recognition to Cumberland. Her pupils have performed in Maryland, Virginia, West Virginia, Pennsylvania, New York and New Jersey.

Through the years, the Cumberland Dixettes have gained national recognition with appearances on the Ted Mack Show on TV, at the World's Fair in New York City, Expo '67 (American Pavillion), Montreal, Canada, and also by performing at the Shenandoah Apple Blossom Festival which was witnessed in Winchester, Va., by President Johnson. Over the past 28 years, these young dancers have performed on The Steel Pier in Atlantic City for the Tony Grant Show. The week has come to be known as "Cumberland Week" in the New Jersey resort city.

Mrs. McPartland is the daughter of Mrs. Arch J. Dixon, Midland. She has one son, Edward J. McPartland, and one granddaughter, Shannon.

Mrs. McPartland attended St. Joseph's School, Midland, and is a graduate of Ursuline Academy.

She is a member of Dance Masters of America, Dance Educators of America, National Association of Dance and Affiliated Artists, and Professional Dance Teachers of America.

Mrs. McPartland is being honored in recognition of her untiring work in her profession as a dance instructor, and the favorable publicity gained for the City of Cumberland due to the performance of her students throughout the area, Mr. Baker said. Entertainment following the dinner will feature "The Cumberland Dixettes.

FIVE CLEVELANDERS RECEIVE MERIT AWARD FROM CUYAHOGA COUNTY BAR ASSOCIATION

HON. LOUIS STOKES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. STOKES. Mr. Speaker, I rise on this occasion to bring to your attention and to the attention of my colleagues in the U.S. House of Representatives the outstanding work of five Clevelanders who have devoted their professional careers to the justice system.

On Wednesday, March 16, 1977, the Cuyahoga County Bar Association honored the awardees at a luncheon ceremony at the Cleveland Plaza Hotel.

Mr. Speaker, this year's award winners are as follows:

Carmen Ivans, chief clerk, birth registrations, probate court;

Ignatius J. Gagliardo, chief deputy bailiff, municipal court;

James F. Kilroy, central scheduling, common pleas court;

Edna Maver, receptionist, domestic relations, common pleas court; and

Jeanne Walsh, office manager, child support, juvenile court.

So that my colleagues in the House can familiarize themselves with the work of these five dedicated individuals, I would like to take a moment to share their professional records with you:

Miss Ivans has spent more than a quarter of a century in Probate Court. Following her studies at Notre Dame Academy and Ursuline College, Miss Ivans began her Probate career in June 1951 as a Posting Clerk, handling mail, typing, counselling and cashiering. Later, she was advanced to Chief Clerk of the Birth and Marriage Records Division of the Court where she has observed all the human emotions from joy through sadness with people in all walks of life. Attempting to ease the public's misunderstanding of the necessity of legal forms and procedures, she professes, has brought her the most satisfaction from her job.

Ignatius J. Gagliardo, 67, as Chief Deputy Bailiff of Cleveland Municipal Court directs the activities of all the personnel in the Bailiffs department. He learned the business of Municipal Court after starting as a Deputy Clerk in 1951. His prior experience included being a Deputy State Treasurer, 1939–1940; Shipping Clerk, Tip Top Brewery, 1941–1946; and Accounts Reviewer in the Collection Department, Cleveland Retail Credit Board, 1949–1951. He has handled various supervisory roles in the Bailiff's office which he now heads, including that of Field Supervisor of Outside Bailiffs. His associates fondly refer to him as "Gag," and call him the Heart of the Cleveland Municipal Court because of the compassionate understanding he has for the troubled persons who seek justice there.

James F. Kilroy, 57, joined the Cuyahoga County Sheriff's Department as a Deputy in

1950. After 7 years of service in the Criminal Courts, Kilroy transferred to the Court of Common Pleas where for the past twenty years he has mastered the many aspects of docket assignments and central scheduling techniques. Kilroy is a graduate of Parmadale and West Tech High School. He spent one year with CCC Camps and three years with the U.S. Army 3rd General Hospital. He also divided eight years with White Motors as a machine operator, and as a construction laborer, before beginning his affiliation with Cuyahoga's Courts.

Edna Maver, mother of two, and grandmother of 3, began her public service as a Clerk at the County Board of Elections in 1941. After eleven years, she joined the Department of Domestic Relations in 1952. For the past 25 years she has performed varied clerical duties in the numerous divisions of the Court. Her present position as Receptionist for the Court includes enrolling the name of each attorney, litigant and witness entering Room 470 Terminal Tower, and directing them to the Judge or Referee assigned to their case.

Edna's husband, Roman Maver, worked for Gould, Inc. (Cleveland Graphite Bronze) before his retirement six years ago. Her son Robert, is studying for his Doctorate while employed as a teacher in the Cleveland Public School System. Her daughter, Diane was a lab technician in the Department of Microbiology at Western Reserve University before joining the Cleveland School System also as a teacher.

Jeanne Louise Walsh was hired for secretarial work in the Child Support Department of Juvenile Court in 1949, following graduation from Brookside High School in Sheffield Village, Lorain County. The vexing problems of the Court continue to amaze her, but nothing phases her, she says, after finishing her first year. Today, her position of Office Manager is indicative of how well she learned the different duties assigned to her in her 28 years with the Court. In May 1958 she married John P. Walsh, and they reside in Independence, Ohio.

Mr. Speaker, the Public Servants Merit Award Luncheon annually attracts more than 1,000 well-wishers. It is my understanding that the association bestows an embossed certificate of appreciation and an engraved silver bowl to the recipients. I would also like to take a moment to mention the gentlemen who worked so hard to make this occasion a success. They are Franklin A. Polk, chairman, William A. Weiss, Harry Auslander, Leo G. Chimo, Bernard J. Nosan, Andrew J. Lukcso, David Arnold, and Lucien B. Karlovec, Jr.

Mr. Speaker, at this time I would like to ask my distinguished colleagues to join me in congratulating the merit award recipients of the Cuyahoga County Bar Association. Their hard work and dedication has a profound impact on the continued success of this Nation's system of justice.

PERSONAL EXPLANATION

HON. STANLEY LUNDINE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. LUNDINE. Mr. Speaker, I was unable to be present for the vote on H.R. 3437, the Vocational Education Act technical amendments and would like to offer an explanation at this time.

I feel it is ironic that the reason for my absence was that I was meeting with the Under Secretary of Labor to discuss my bill, H.R. 2596, the Human Resources Development Act. This bill, like these vocational education amendments, seeks to further the concept of better transition between education and work.

Had I been present, I would have voted "yes."

AG-LAND PLAN DROPPED: PUBLIC SPIRIT LIVES IN PRIVATE SECTOR

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. FINDLEY. Mr. Speaker, on March 11, 1977, the Continental Illinois National Bank & Trust Co. of Chicago dropped its controversial plan for an agricultural land trust known as Ag-Land fund. I strongly opposed this proposal as a threat to rural America which would drive land prices further out of sight and would make it harder for farmers to compete in the marketplace. I also perceived the Ag-Land proposal as a threat to food consumers throughout the United States. The concentration of farmownership and production control resulting from a proliferation of such plans most certainly would have led to higher retail prices at the grocery store. But not once did I doubt the sincere desire of Continental Illinois National Bank to help the agricultural community. My confidence is vindicated.

Printed below is the text of Continental Illinois Bank's statement announcing its withdrawal of the Ag-Land proposal. I commend this statement to the attention of my colleagues as an excellent illustration of the fact that a public spirit does indeed live in the private sector:

CONTINENTAL WITHDRAWS IRS APPLICATION FOR AG-LAND TRUST FUND

CHICAGO, March 11.—Continental Bank in Chicago said today it withdrew its application on March 7 to the Internal Revenue Service requesting tax-exempt status for employee benefit plans investing in the bank's proposed Ag-Land trust fund.

The announcement was made after bank officials met today with Secretary of Agriculture Robert Bergland.

"We have decided not to proceed with the plan after discussing the proposal with various members of the business and agricultural communities and government leaders," a bank spokesman said.

"There is a belief that while capital problems may exist in American agriculture, the immediate need is for more detailed discussion to address those problems and the effects it may have on various constituencies," the spokesman continued.

"We believe the capital problem affecting American agriculture is an evolving one. As a midwestern bank with over a century of experience in agricultural lending, we believe we occupy a unique vantage point from which we may continue to contribute to the discussion of the issues involved.

"We view the dialog that has already taken place as constructive, and appreciate the opportunities given us to discuss these issues with Secretary Bergland and Congressmen Richard Nolan and Paul Findley," the spokesman said.

FANNIE LOU HAMER

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. EDWARDS of California. Mr. Speaker, I would like to commend to the attention of my colleagues the editorial about Fannie Lou Hamer in the Washington Post.

As I mentioned on March 16 after learning of her death, my family and I cherished Mrs. Hamer not only as a vibrant and dedicated leader in the struggle for human rights, but as a warm and good friend.

Mrs. Hamer once said that she could not hate anyone and "hope to see God's face." I know with certainty that she has now seen God's face. But we shall miss her terribly.

The editorial follows:

FANNIE LOU HAMER

When one thinks of Mississippi as it was a little more than a decade ago, one thinks of the oppression: several civil rights workers were lynched practically in broad daylight, most Negroes could not vote and the rigid segregation of the races was the order of the day. Of the many forces that came together to alter those conditions, none was more impressive than the poor black people themselves. They rose in righteous but peaceable anger and demanded to be free. And when thinking of them, it is impossible not to think of Fannie Lou Hamer, a stout stalwart sharecropper, born of that soil, who fought against all odds for a better tomorrow. She died Tuesday near her Ruleville home at the age of 59 after suffering from diabetes, breast cancer and heart trouble.

The Mississippi Mrs. Hamer leaves behind is changed in great measure because of the strength and leadership she gave to sharecroppers like herself who earned subsistence wages under conditions that owed more to slavery than to the Declaration of Independence or the Bill of Rights. Indeed, it was their pursuit of happiness that threatened their lives time and again. Many of the outsiders who came to Mississippi to help those impoverished farmers either were well-known when they arrived or became famous in the process—Martin Luther King, Andrew J. Young, Stokeley Carmichael and John Lewis, among others.

There was little fame and celebrity for the local blacks. They stayed on long after the celebrities left and finished the job as best they could, helping as Mrs. Hamer did to unify the Mississippi Democratic Party and working in other ways to heal their society and seek justice. Their names are mostly forgotten, but the image of Fannie Lou Hamer, her voice thunderous, pleading to be seated at the Democratic National Convention in 1964, will remain fixed for many of those who heard her simple, powerful eloquence. And anyone who ever heard Fannie Lou Hamer sing "O, Freedom," will have little difficulty remembering her.

She had been beaten and jailed many times, but she said she could not hate anybody "and hope to see God's face." Her special brand of courage, a courage equal to the demands of her time, is best summarized in the story of how she came to leave the plantation. She knew that if she continued her civil rights works, she would be thrown off and separated from her livelihood. She came to church one day and reported on the consequences of her persistence. "They kicked me off the plantation," she said. "They set me free. It's the

best thing that could happen. Now I can work for my people." Except she worked for more than her people. She worked for all of us.

DELAWARE VOICE OF DEMOCRACY CONTEST WINNER

HON. THOMAS B. EVANS, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. EVANS of Delaware. Mr. Speaker, each year the Veterans of Foreign Wars of the United States and the ladies auxiliary conduct a Voice of Democracy contest. Each year nearly 500,000 secondary school students participate in the contest for prizes which include a $10,000 scholarship. This year the theme of the contest was "What America Means to Me."

This year's Delaware winner was Mr. Kevin Lee Hopkins of Milton, Del. Mr. Hopkins, who is a student at the Cape Henlopen High School in Lewes made what I consider to be an excellent speech on the precious freedoms in our country and I include his remarks at this point in the RECORD:

THE 1976-77 VFW VOICE OF DEMOCRACY SCHOLARSHIP PROGRAM

As I look back through the pages of the past, a blurred picture is beginning to focus on the screen of my mind. I can see our American structure take root and sprout upwards to where it is today. I can see our forefathers sowing the seeds which blossom into the ideas of a democracy. I can also see the seeds, bud, and then branch out, making the tree an even stronger structure. To me, America represents this strong structure. As the redwood tree has gradually grown to its height capacity, America has also grown larger and stronger, over the past 200 years.

America also represents unification, and firmness, resembling that of a forest. As a forest is a home for many different kinds of trees, America is my home, and the home of many different nationalities of people. The forest, for millions of years, has represented this unity and solidness, and America has also. Each tree in its environment, plays a specific role as we do in our society. When the tree doesn't fulfill its duty, it weakens this structure. Our government, like the mighty redwood, is a product of many years of formation. While the tree grows, it beautifies, and betters its surroundings. Its limbs branch upward to the sky, and its roots become securely planted within the soil. As America grows, it branches outward also, building and strengthening our structure of democracy.

Just as a tree reaches its height capacity, America gives me the confidence of knowing that I, too, can fulfill my highest hopes and dreams, if I have the ambition to do so. While the tree shoots upward towards the stars, America gives me the reassurance that I can, also. I am allowed to vote, to voice my opinions in our government, and I am guaranteed certain inalienable rights that no man can take away.

America to me, means progress. Over the past 200 years, our government, and society have grown into a solid and sturdy base. We must continue to build this foundation tall, and sturdy as the large redwoods in a forest. We must also have that unification of the forest to remain a strong government.

As a branch is an essential part of a tree, we as citizens are essential to our country. We are those branches, which spread to make our country both larger and stronger. Even when some branches die, we must trim our tree so that this will not alter or blemish the growth.

As I look into reality, I realize that I am the Thomas Paine, or George Washington of today. I am the colonist, seeking to carry out the ideas of my forebears. I am that newly added branch to our framework. I have budded, and sprouted on the ideas of our forefathers. I must now grow, sending my branches upward, and making sure that each tree has properly sprouted on the ideas of a democracy. America has given me this sense of pride in knowing that I am a part of this framework, and that I must be concerned and dedicated in order to keep this framework from falling. We must remember that a house divided cannot stand, and that we must all be planters in order for American ideas and principles to root, sprout, and blossom into a sturdy and unified body.

HUMAN RIGHTS IN CUBA

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. McDONALD. Mr. Speaker, while much of the attention regarding human rights has been focused on the Soviet Union in recent years, Fidel Castro has been no slouch when it comes to creating living hells for his political prisoners. One of the more prominent of these prisoners has been Huber Matos. (See also my remarks on pages 5779-5780 of March 1, 1977, CONGRESSIONAL RECORD.) Recently, a group was formed at Georgetown University to focus on the lack of human rights in Cuba. I commend the attention of my colleagues to the activities of this group as reported in America's Future in its February 11, 1977, issue:

HUMAN RIGHTS IN CUBA

It is called *Of Human Rights*, and it will be published twice a year by a small group of exiled Cuban intellectuals at Georgetown University. Its purpose is to report on "human conditions in Cuba." As explained by the five editors, *Of Human Rights* will gather information from reliable sources about true conditions in Castro's Cuba. Its first issue, dated January, 1977, deals with documented evidence of executions and torture in Cuban prisons as collected by such diverse groups as the International Rescue Committee, the International League for the Rights of Man, Amnesty International and the Inter-American Commission on Human Rights.

The latter Commission recently reported to the Organization of American States, the OAS, on what it called the "inhuman treatment" of political prisoners in Cuba during the past five years. Instead of softening its treatment of these prisoners, says the report, the Castro regime continues "to reveal a complete disdain for the dignity of the human being." That is an enormous understatement. The 83-page Commission report itself cites evidence of numerous instances of death by torture or through denial of medical attention. In one letter smuggled out of a Cuban prison and delivered to the Commission, a group of prisoners told of being experimented on by Russian, Czech and Cuban communist doctors.

"They come to the cells to weigh us," said the letter. "They observe us, they evaluate our reactions, they alter our metabolism with unknown substances incorporated in the food." The letter goes on: "We are not men, we are spectres, skeletons covered with skin, human rags. . . . We have reflex problems, with coordination, lack of equilibrium; we have nervous and digestive disturbances of all kinds . . . Scurvy makes most of us hemorrhage in the nose just from sneezing."

As reported in *Of Human Rights*, the Commission cites evidence of a network of concentration camps and prisons strung across Cuba, "Gulag Archipelago" fashion. The evidence tells of how "Opponents of Fidel Castro's regime are shot, forced into 'confessions' by having their heads dunked in water until drowning is simulated. . . . Political prisoners sometimes finish sentences only to have new ones imposed." Prisoners' stories are related by relatives, by former prisoners and by those still interned who manage to smuggle out letters. One Cuban reported to the Commission that there have been "thousands of executions" since Castro came to power in 1959. The OAS report contained details of many of these executions. Also included was a list of nearly 500 names of prisoners being denied medical attention.

Of Human Rights has published a map of Cuba identifying the location of six maximum security prisons, one for each of the island's provinces. These are in addition to a larger number of "moderate security" work camps surrounded by barbed wire and armed guards Finally there are numerous labor projects called "fronts" where security is less stringent.

It is in the maximum security prison, "La Cabana," on Hanava harbor, that Frank Lunt, one of nine American prisoners, is incarcerated. In 1965, Castro sentenced him to 30 years, allegedly for spying. Actually, according to reliable evidence, Frank Lunt, a cattle rancher who had stayed on in Cuba's Pinar del Rio Province after the communist takeover, had criticized Castro's scheme of crossing Brahmin and Holstein cattle. All efforts by Lunt's wife and family, now in the U.S., to obtain his freedom have been unavailing. The State Department maintains mostly an embarrassed silence about the fate of Lunt and the other 8 Americans as well as the several hundred Cuban-Americans with dual citizenship in Castro's dungeons.

TERROR KNOWS NO BOUNDS

Of Human Rights reprints in full a letter smuggled from La Cabana prison by Major Huber Matos, a one-time officer in Castro's revolutionary army. In December, 1959 he was sentenced by a revolutionary court to 20 years imprisonment after he resigned from the army in protest against communist infiltration of the Castro government. Matos, who in private life had been a schoolteacher, is now half-blind and desperately weak in body—but not in spirit. In his letter, Matos speaks of his love for his family, for his fellow prisoners, and for his country, Cuba. Last December, two days after Christmas, a carfull of unidentified gunmen ambushed and wounded Huber Matos, Jr., the 33-year old son of Major Matos, as he entered his apartment in San Jose, Costa Rica, near the U.S. Cultural Center. Police blamed the attempted assassination on Castro agents trying to silence the young Matos' campaign for his father's release.

Another Cuban exile, Elena Mederos Gonzalez, helps edit *Of Human Rights*. She served as Cuba's Minister of Social Welfare for two months after Castro's takeover. Like Major Huber Matos, she also broke with Castro after becoming aware of his communist intentions. Though on Castro's long "enemy list," Huber Matos, Jr., Elena Gonzalez and numerous other freedom-loving Cuban exiles vow to continue speaking out, while there remains anyone who will listen.

MR. NEBRASKA SPORTS

HON. CHARLES THONE

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. THONE. Mr. Speaker, one sportswriter has been honored above all others in the Cornhusker State. Gregg McBride earned the title of "Mr. Nebraska Sports," while writing about athletics in the State for more than 50 years.

He was a fine writer. He was a person with innovative ideas. Perhaps most important of all, Gregg McBride was a man who was truly a joy to know. My first few hours with him were spent in a local watering hole in Estes Park, Colo.—the Dark Horse Inn. Before that day was ended, I am sure he felt that this University of Nebraska law student, "Thorn from Hartington," had a great future before the bar.

Gregg McBride died a few days ago, and I shall miss him very, very much. The Omaha World-Herald published an editorial tribute to him. The column not only alludes to some of his accomplishments but also gives an indication of his great sense of humor. I include this editorial at this point in the CONGRESSIONAL RECORD:

LAST RATING FOR MCBRIDE

Gregg McBride's memory of Nebraska sports was as detailed as an Andrew Wyeth watercolor.

The genial Scot retired in 1967 after 50 years of sportswriting and pioneering in the rating and record fields.

His ratings of high school athletic teams were widely respected, but they also stirred controversy.

While he worked long hours and knew every gym and football field in the state, he had ample time for fun and practical jokes. He liked to tell about the young man in western Nebraska who was sent into the big basketball game, removed his warmup suit and discovered there was nothing underneath.

Gregg once invented a mythical Eskimo high jumper named Mervyn Mendew. In an elaborate campaign, he kept the University of Nebraska track coach informed of Mervyn's startling feats. The coach is said to have actually made Mervyn a scholarship offer. Copies of that correspondence remain in the archives.

Retired photographer John Savage used to take football pictures atop the N.U. stadium. Gregg learned that John lowered the film with a fishing rod to a colleague at halftime for a speedy trip to the darkroom in Omaha.

McBride arranged to have an ancient mackerel attached to the line—and a game warden on hand to promptly arrest John for fishing without a license.

He had a serious side, but no one ever heard much about that. He was the confidant and adviser to countless athletes on the high school college level. He helped them out with personal problems and sought help for financial and other difficulties. He probably gave as much advice to the lovelorn as Ann Landers.

For many years, Mr. and Mrs. McBride spent their summers in Estes Park, Colo. McBride knew every waitress, bartender, operator of the shooting gallery, the postmaster, the local editor, the druggist—every one. And when friends arrived for a vacation, McBride was an early visitor, and always with a complimentary copy of The World-Herald under his arm. An amazing number of N.U. athletes held summer jobs there.

He was one of a kind—Mr. Nebraska Sports—an institution. He never did like gushy, sad obituraries and this will be remembered here.

We don't know if angels have flying contests. But if they do, Gregg will soon be rating them. Farewell to a talented colleague and good friend.

A RINGING TRIBUTE FROM AN IRISHMAN

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. DERWINSKI. Mr. Speaker, the Chicago Tribune's Perspective page periodically carries articles by citizens who wish to express their views on matters of current interest. This "Speak Out" column is an opportunity for individuals to contribute their views and place emphasis on matters of concern to them.

An article, which appeared in this column of the March 7 Chicago Tribune, is by a recent Irish immigrant, Flannan Lillis. Mr. Lillis comments on our telephone service which we often take for granted:

A RINGING TRIBUTE FROM AN IRISHMAN

(By Flannan Lillis)

The author of today's Speak Out is a mechanical set-up man in a tin plate factory. He is married and lives in Glen Ellyn.

Since I arrived in this country some three years ago, I can't help but notice that the Bell Telephone Co. is often criticized for poor service. Frankly I can't understand it.

Perhaps the fact that I am a native of Ireland and that I worked in the telephone company there will explain my bewilderment. I say the telephone company there, because with the exception of a few private firms, the phone company there is operated by the Irish government under the rather grandiose title, "Department of Post and Telegraphs."

I do not, under any circumstances, want to put my own native country or any of its facilities down, but the fact remains that Ireland is still but a growing young country and its technological development has been slow. I think maybe by showing some of the conditions that exist not only in Ireland but also in Great Britain and quite a few other European countries, perhaps what I consider to be an excellent telephone service here will be appreciated a little more.

In quite a few areas in Ireland and other countries, the magneto system is still in operation. Possibly the older people here will remember this type of telephone, with the handle on its side and dry cell batteries underneath. The handle has to be cranked several times to contact the operator who will then, if you are lucky and the line is not down, put you in touch with the desired party. For the dubious distinction of owning one of these antique beauties the waiting list is a year or so.

In Ireland, the directory assistance service is known as "Telephone Enquiries." For a city of 30,000, the maximum staff manning this facility is four. Unfortunately, this service is looked upon as a necessary nuisance by the company. They feel—perhaps rightly—that the people should be capable of finding a number by themselves.

It has been my own unfortunate experience to have had to call this service on a few occasions. After dutifully looking in the book first and not being able to find the number, I have timidly called "Enquiries." The reason I say timidly is these operators have been known to cut people off abruptly if they feel the caller's voice does not sound humble enough.

This particular time, after the customary lengthy wait, I asked for a number. The operator asked me sharply, "Well, have you looked for it yourself?" I replied meekly, "Yes." After another lengthy pause she said, "The number you want is on Page 176, second column, five rows down," and she hung up.

When I think of some of the freaks and perverts that humiliate female operators in directory assistance here while they sit there, not being allowed to cut them off, I think they deserve praise indeed.

There are numerous other contrasts I could made, such as repairs. If your telephone is out of order in Ireland it can take weeks to repair. Here it's just a few days.

I do not mean to ridicule my own country, or charge that every operator there is like the one I mentioned. Neither do I wish to imply that the American people are inconsiderate, I have encountered nothing but kindness since I came here. I just want to make a few points in old "Ma Bell's" favor.

EQUAL RIGHTS AMENDMENT

HON. GLADYS NOON SPELLMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mrs. SPELLMAN. Mr. Speaker, 5 years ago today, the Congress of the United States passed the equal rights amendment to the Constitution. It was, many Members said then, an idea whose time had long since come. It still is.

The amendment is a simple statement of equality for the majority of our society's citizens. I am proud to be here today as a Representative of the State of Maryland, which ratified the ERA less than 1 month after congressional passage. Indeed, the Maryland State Senate ratified it on March 31, 1972—less than 10 days following action by the Congress.

Eloquent testimony to Maryland's commitment to equality is the fact that, we are a comparatively small State, we have more women Representatives in this body than any other State.

For myself, I cannot comprehend the fury of the controversy that has raged around the amendment. It simply says:

Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex.

Substitute for the word "sex" the words "race, religion or age." Can you envision State legislatures refusing ratification to an amendment which forbade discrimination on any of those grounds?

The answer is obvious. What ERA opponents have done is build a series of strawmen which they then demolish with great emotion and fanfare.

I hope and pray, Mr. Speaker, that on

this anniversary date next year, we can all rise to salute final ratification of the ERA. If we cannot, we will be consigning our female majority to a continuing twilight struggle—law by law, regulation by regulation—line by line to achieve the rights already enjoyed by the rest of our citizens.

SUPPORT FOR CARTER ADMINISTRATION PROPOSALS ON ELECTION REFORM

HON. EDWARD I. KOCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. KOCH. Mr. Speaker, I was delighted to learn today of President Carter's recommendations dealing with election reform which were communicated to the Congress by Vice President MONDALE this morning. I believe the proposed voter registration legislation, the Universal Voter Registration Act of 1977, the broadening of public financing to cover congressional campaigns and the revision of the Federal Hatch Act are all very important proposals which deserve the Congress immediate attention.

I want to bring special attention to the President's suggestions dealing with the modification of the Federal Election Campaign Act based on our recent experience in this past campaign. I wish to quote from the President's message to the Congress:

> We noticed, for example, that there was less activity than in the past at the state and local level during the general election campaign. Opportunities should be available for more grass-roots participation in Presidential races. This could be accomplished by allowing Presidential candidates to designate one committee in each state to raise and spend a limited amount of money for campaign activities within the state. A reasonable limit for this activity might be 2c per eligible voter. Such committees could be allowed to delegate spending authority to local committees, but they should still be responsible for reporting contributions and expenditures. Also, when Congressional candidates mention in their advertising the Presidential nominee of their party, the expenditure should not have to be reported by the Presidential candidate.

The issue that the President raised in this portion of his message is one that I have been concerned with ever since my congressional campaign committee, "New Yorkers for Koch," printed 3,000 Carter-Mondale-Koch buttons in the fall of 1976. When I was informed that the Federal Election Commission had directed candidates to remove billboards which included the names of Presidential candidates, I requested a ruling from the Commission on my buttons. The Commission ruled only that I could give out my buttons, but declined to make a broader ruling.

I wholeheartedly agree with the President that such expenditures need not be reported by the Presidential candidate. I have introduced H.R. 3752 to address this particular problem and I hope that this bill will be considered along with the other proposals currently pending before the Congress and those made by the Carter administration. The text of H.R. 3752 follows:

H.R. 3752

A bill to amend the Federal Election Campaign Act of 1971 to provide that payments made with respect to certain campaign materials shall not be considered to be contributions under such Act. and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 301(e)(5) of the Federal Election Campaign Act of 1971 (2 U.S.C. 431(e)(5)) is amended—

(1) in clause (H) thereof, by striking out "or" immediately after the semicolon;

(2) in clause (I) thereof, by inserting "or" immediately after the semicolon; and

(3) by inserting immediately after clause (I) the following new clause:

"(J) any payment made or obligation incurred by any candidate for nomination for election, or election, to any Federal office or any State or local elective public office, by the principal campaign committee of such candidate in the case of a candidate for Federal office, or by any political organization of a candidate for State or local elective public office which engages in activities with respect to such candidate which are substantially similar to activities engaged in by a principal campaign committee, for—

"(i) any political campaign button or motor vehicle bumper sticker which advocates the election of both such candidate and any other individual who is a candidate for Federal office; or

"(ii) any other political campaign advertisement which advocates the election of both such candidate and any other individual who is a candidate for any Federal office, except to the extent that the aggregate cost of all such advertisements with respect to the election involved exceeds—

"(I) an amount equal to 2 cents multiplied by the voting age population of the State in which such election is held (as certified under section 320(e)), in cases in which the names of both such candidate and such other individual will appear on the election ballot in each of the political subdivisions of such State; or

"(II) $6,000, in cases in which the name of either such candidate or such other individual, or the names of both such candidate and such other individual, will appear on the election ballot in fewer than all of the political subdivisions of such State;".

(b) The second sentence of section 320(c)(1) of the Federal Election Campaign Act of 1971 (2 U.S.C. 441a(c)(1)) is amended by inserting "and the amounts specified in section 301(e)(5)(J)(ii)" before "shall be increased".

SEC. 2. (a) Section 9002 of the Internal Revenue Code of 1954 (relating to definitions) is amended by adding at the end thereof the following new paragraph:

"(13) The term 'contribution' does not include any payment or obligation referred to in section 301(e)(5)(J) of the Federal Election Campaign Act of 1971.".

(b) Section 9032(4)(E) of the Internal Revenue Code of 1954 (relating to definitions) is amended—

(1) in clause (i) thereof, by striking out "or" immediately after "candidate,";

(2) in clause (ii) thereof, by striking out the period and inserting in lieu thereof ", or"; and

(3) by adding at the end thereof the following new clause:

"(iii) any payment or obligation referred to in section 301(e)(5)(J) of the Federal Election Campaign Act of 1971.".

SEC. 3. Section 591(e)(5) of title 18, United States Code, is amended—

(1) in clause (D) thereof, by striking out "or" immediately after the semicolon;

(2) in clause (E) thereof, by inserting "or" immediately after the semicolon; and

(3) by inserting immediately after clause (E) the following new clause:

"(F) any payment or obligation referred to in section 301(e)(5)(J) of the Federal Election Campaign Act of 1971;".

SUGAR INDUSTRY NEEDS HELP

HON. RAYMOND F. LEDERER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. LEDERER. Mr. Speaker, the recent depressed state of the American sugar industry is a matter of great concern to us all. However, even more troubling is the so-called solution of the International Trade Commission which recommended restrictive quotas on all foreign sugar imports. This recommendation came last Friday in the ITC's report to the President on investigation No. TA–201–16 Under section 201 of the Trade Act of 1974. Not only is this solution blatantly anticonsumer and economically inefficient, it will also fail to assist the American cane and beet sugar farmer who the International Trade Commission is supposedly trying to protect. Moreover, the import quota would at the same time wreak havoc on the domestic sugar refining industry.

In the aforementioned investigation by the ITC, the effect of their recommendations on the American consumer has been totally ignored. Conveniently lost in the passage of time were those painful months in 1974 when the consumer was expected to pay between 70 and 80 cents for a pound of sugar. The consumer is left by the ITC without any assurance that the 1974 sugar crisis will not reoccur in 1977. A 1977 sugar crisis would be further acerbated by the recent FDA ban on saccharin, a sugar substitute whose present use is equivalent to approximately one-quarter million pounds of sugar annually. To force the American consumer to shoulder such a burden is not only unconscionable, but economically irresponsible when viewed with its inflationary ramifications.

In addition, import quotas are probably the least efficient mechanism by which the Federal Government can protect the cane and beet sugar growers of the United States. If we need to aid the domestic sugar farmers, the Government can protect the growers, the consumer, and the domestic sugar refining industry, by granting Treasury subsidies and price supports to the farmer rather than by artificially raising the price of sugar through tariff and import quotas. The cost to consumers of raising the price of sugar 1 cent a pound through the tariff or import quota mechanism would, according to industry estimates, be in excess of $286 million.

On the other hand, the U.S. Cane Sugar Refiners Association estimates that for each penny a pound for sugar borne by U.S. Treasury subsidies, rather than through tariff or import quotas, the cost to the Treasury would be $124 million. The efficacy of the subsidy rather than the tariff or import quota mechanism is substantiated by the U.S. Department of Agriculture which states in the

summary of its publication Sugar Policy Options for the United States that:

The compensatory payment scheme is the least costly of the specific price assurance options, but costs are borne by the Treasury rather than by the consumer, per se.

Certainly, Mr. Speaker, the subsidy mechanism is a far more viable alternative for the consumer, the Government, the sugar refining industry, and indeed the cane and beet sugar grower, than the import quotas recommended by the ITC.

Moreover, such import quotas will fail to assist the domestic cane and sugar farmer that they were designed to protect. The domestic corn sirup industry, already successfully competing with the cane and beet sugar growers, would be placed in a position to receive huge windfall profits from any tariff or import quotas on sugar. By artificially raising the price of sugar through tariffs or import quotas, the Government would simply be awarding the corn sirup manufacturers a larger share of the domestic sugar market. The higher domestic cane and beet sugar prices would simply force industrial sugar users and consumers to a cheaper alternative source—that of corn sirup sweeteners. Thus it is not only conceivable, but probable that the cane and beet sugar farmers of the United States would lose a large share of the market that they had enjoyed before an imposition of import quotas. This would leave these growers in a worse position than before any import quotas were implemented.

Additionally, these import quotas would severely damage the second tier of the sugar industry, that of the sugar refiners. Reducing the imported sugar supply would involve layoffs and reduced hours of work in the sugar refining industries, whose plants are located in areas already suffering intolerably high levels of unemployment.

The import quota recommendations made by the ITC would have a devastating impact on a national economy already ravaged by inflation. It is an economically inefficient mechanism which does not achieve its goals. Most tragically, these import quotas will damage the very sugar industry that they were implemented to strengthen. If the Government wishes to revitalize a depressed domestic sugar industry it must do so in a manner responsible to all the interests involved. Tariff and import quotas in this case are responsive to none of them. It would behoove the Congress to urge the Carter administration to reject any such recommendations for our ailing sugar industry.

BILL TO ELIMINATE UNFAIR PRACTICES IN SOCIAL SECURITY PAYMENTS

HON. EDWARD P. BEARD

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. BEARD of Rhode Island. Mr. Speaker, I am introducing today a bill that is intended to eliminate four widespread and unfair practices that currently exist in social security payments. The Social Security Recipients Fairness Act would alleviate hardships caused by the problem of lost, stolen, or delayed social security chceks, eliminate outrageous delays in processing claims for disability in many parts of the country, extend these protections to recipients of black lung benefits and protect recipients from undue economic hardship due to accidental overpayments.

When we talk about delays in handling complaints, we are talking about 6 weeks to 6 months in many cases. When we talk about disability claims, we are talking about 6 months to 2 years. This must and can be stopped and I believe the provisions of my bill will do it.

COMMON SITUS PICKETING

HON. MICKEY EDWARDS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. EDWARDS of Oklahoma. Mr. Speaker, this week the House will vote on H.R. 4250 and decide the question of whether labor union leaders are to be given immense new powers as negotiators with management.

Common situs picketing legislation has many faults, among them a lack of support by the general public as well as the American union member. After many months of debate on this issue, advocates of common situs picketing legislation have failed to present a convincing argument for this bill, or even to produce a cause for such legislation. Two national opinion surveys, one commissioned by labor union leaders themselves, show that there is no strong support for the bill.

As the debate over the merits of common situs picketing draws to a close, I urge my colleagues to evaluate all the arguments, because your vote will have great impact on the national economy and on the balance that now protects organized workers and small businessmen alike.

I also ask that you give careful consideration to the following statement by Mr. Dudley Mitchell, executive vice president of the Associated Builders and Contractors of Oklahoma, Inc., who speaks for many concerned Americans who are knowledgeable about the misconceptions planted by advocates of common situs picketing:

STATEMENT BY MR. DUDLEY MITCHELL

(1) The true intent and effect of HR 3500 has been clouded by union rhetoric.

The unions claim in the preface of HR 3500 that the intent of the bill is "to protect the economic rights of labor in the building and construction industry by providing for equal treatment of craft and industrial workers."

Hogwash! They already have the same leverage as other unions in that they have the right to strike against their employer and to shut down the operation of that employer at a construction site.

Of course supporters of this bill say that one union can shut down an entire plant, even if that plant's employees belong to several unions. They further say they should have the right to shut down an entire construction site.

The critical difference in these comparisons are, of course, ignored. An industrial plant is a single employer with some control over his labor relations policies, but a construction site operates differently. The construction site involves many independent contractors, often called subcontractors and also many different skilled crafts, and no single employer on the construction site has control over the labor relations policies of all the various contractors on the site.

(2) The proponents of this bill are quick to tell everyone that this bill, H.R. 3500, has built-in safeguards that protects minorities, prevent strikes and reduce picketing.

I cannot for the life of me find one single acceptable safeguard in this bill. Let's look at each of the so-called safeguards:

A. Protects minorities: According to several governmental surveys, private surveys and personal observance, this is like giving the wolf the key to the sheep pen. There is a far greater percentage of minorities on the payroll of merit shop and open shop contractors than has ever been under the union shop. Also, there is adequate regulations requiring equal opportunities for minorities already in our laws.

B. Prevents strikes: Supporters of this bill say that this bill requires approval of the national union before striking, but in the same vein this bill would remove all liability for the national union, even if the local union engages in illegal activities during a strike. This is some kind of protection, and how does it protect or safeguard against strikes? In my opinion, this is nothing but whitewash. So they have to notify their national union, but the national union is absolved of any liability, so the end results would be unauthorized pickets that effectively block work at the construction site. There is no responsibility, so where is the control?

C. Reduces picketing: Horrors, this is sickening. How stupid do the supporters of this situs picketing bill think our Congressmen and the public are? Can you imagine a situs picketing bill to authorize entire site picketing is going to reduce picketing! During the situs picketing bill of last year, the then Secretary of Labor testified that unless the situs picketing bill was passed and became law that the construction industry could expect the greatest number of work stoppages in history, that the construction industry would be crippled. Nothing is farther from the truth. After the failure last year, we had the fewest work stoppages that I can ever remember. The exact opposite of their claims is true. If situs picketing is passed, we will then see the greatest number of work stoppages in history and the construction industry along with our entire economy will be crippled.

(3) If HR 3500 becomes law, Oklahoma along with the rest of our country, will suffer. We in the merit shop and open shop part of the industry will be the subjects of constant intimidation, coercion and pressures from all points. The first few months would be total havoc for the free enterprise, independent contractor. Aggravation picketing would be the general rule rather than the exception, owners would be threatened and intimidated and extreme pressure would be made to force them to cancel their contracts with merit shop and open shop contractors and renegotiate them with closed shop contractors. It would result in a real mess, battle lines would be drawn and the entire industry polarized. Then as the smoke settled opportunities would develop where both open shop and union shop contractors would be bidding on the same job. When this happens, the union shops cannot compete and the great difference in philosophies would become apparent. In fact, I believe that

within a period of less than two years closed shop union contractors would be doing only public work jobs, and open shop free enterprise contractors would be doing only private work.

Is this what Congress wants? Are union shop or closed shop contractors better than open shop contractors? Are union craftsmen entitled to the work and non-union craftsmen not entitled to pursue their chosen lines of work? Why is it that Congress cannot leave the free enterprise system alone and let the industry seek its own level? There is room for both philosophies.

Frankly speaking, if situs picketing offers all the protections that supporters claim, what good could it possibly do them? None! If it does not offer those protections, why on earth does Congress believe that they have got to give union complete control of our economic system. Sure, labor bosses made large contributions and supplied large amounts of help to get many of our Congressmen elected, but do they owe them all this?

This bill is an attempt to legislate union wages, working conditions and control of the entire construction industry, something unions cannot do for themselves. Gentlemen, we cannot allow this to occur. I request all effort, influence and votes be used by right-thinking Congressmen to defeat this blatant attempt.

Situs picketing is not acceptable to me or my associates in any form, fashion or situation. Please defeat HR 3500.

COMMON SITUS PICKETING

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. DERWINSKI. Mr. Speaker, tomorrow the House is scheduled to take up the consideration of the common situs picketing bill.

This bill has received more pro and con discussion than any other piece of legislation in this session of the Congress.

In the event, there are any Members who are still undecided as to how to vote on this bill, I direct their attention to an editorial against the common situs picketing bill, broadcast by WGN Radio-TV Continental Broadcasting Co. of Chicago. This editorial was carried on their March 15 news programs:

AGAINST COMMON SITUS PICKETING

A legislative priority of organized labor is being considered again on Capitol Hill. It is a bill which could bring disruption to the construction industry, an industry still trying to recover from the recession of 1974 and 1975. It could also force small subcontractors and their employees into collective bargaining whether they want it or not.

What the proposed legislation would allow is something called common-situs picketing. It works this way.

A large construction project is well underway. The general contractor has subcontracted for concrete, brick-laying, structural steel, electrical, plumbing, tile and carpentry work. Each sub-contractor is dealing with different crafts. If his workers are unionized, each subcontractor is dealing with a different union. Let's suppose the tile masons go on strike. At present they may picket their employer only. The other building trades continue to work. But, under common-situs picketing, they would be able to picket the construction site, with the other trades honoring the picket line, stopping all work.

In essence, under common-situs picketing, a union would be picketing more than the company which employs it. It would be picketing several firms, something we think is unfair.

We think the common-situs picketing bill should be defeated.

AT THE ENERGY CROSSROAD

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. ROSENTHAL. Mr. Speaker, this freezing winter has given us a stark reminder of America's vulnerability in our growing dependence on oil and gas. The immediate shortage may be blamed in large part on energy companies that withheld supplies desperately needed in the East and Midwest. It would be a tragic mistake, however, to explain away our entire energy dilemma with this shortsighted answer.

Instead, we must recognize our fossil fuel resources are not going to last forever. A comprehensive policy must be set without delay to attain greater energy efficiency through tough conservation measures and greater public control of existing supplies. We also must commit the country to a massive program for development of permanent energy sources like solar energy.

Congress made some progress toward such a comprehensive energy policy when it passed the Energy Policy and Conservation Act in December 1975. That law requires auto manufacturers to improve the efficiency of cars, authorizes a standby petroleum reserve in case of future embargoes, requires energy efficiency labeling on appliances and sets up machinery to coordinate state energy conservation plans and the collection of energy data. The result, while encouraging, is still a patchwork of well-meaning efforts and not a clear statement of policy goals.

The need for a broad national policy is urgent. Domestic oil production peaked in 1970. Domestic natural gas production peaked in 1974. Just to stay even—to keep the level of imports the same as they were in 1976 and maintain the same level of consumption—we would have to discover 3.1 billion new barrels of oil each year. We have been discovering only about one-sixth that amount while rapidly depleting old reserves.

We must turn first to the safest, most reliable and least polluting form of immediate energy—conservation.

In 1975, Americans wasted more fossil fuel than was used by two-thirds of the world's population. We annually consume more than twice as much fuel as we need to maintain our standard of living.

Conservation will not damage our economy, as some alarmists fear. We can travel as many miles, stay as warm, operate as many appliances and eat what we now eat—yet do it with more energy efficiency.

We do not have to live in a cold house—we can have well-insulated homes with efficient heating systems. We do not have to shut down factories and powerplants—we can harness the enormous amount of waste heat they produce but squander. We do not have to give up cars—we can trade a 7-mile-per-gallon guzzler for a 40-mile-per-gallon compact.

Our energy policy also must provide strong incentives, such as tax credits and loan programs, for consumers to switch to energy-efficient products and habits, as President Carter will suggest on April 20. Change is needed in those Federal transportation regulations and utility rate structures that promote inefficient energy use. Industry must be made to comply with tough production requirements that need not be elaborate. If all new buildings in the next 12 years are constructed properly—by using a large south window as a simple type of "passive" solar collector, for example—we will save about as much energy as we expect to pump out of the Alaskan North Slope.

As a second step, the new policy must acknowledge that our natural resources are in fact national resources and should be treated as such. Price controls on oil and gas must be extended to safeguard the consumer, who is not buying his energy from a competitive industry operating in a free marketplace. The bidding procedures for leasing federally owned lands should be revised to open the public's vast fossil fuel reserves to small, independent firms. Vigorous antitrust action is needed to decentralize energy giants and make them responsive to national policy interests.

We also must eliminate the tax loopholes, oil depletion allowances, foreign tax credits, and other governmental rules that subsidize the oil and gas companies.

The revenue generated from forcing the energy companies to pay their fair share of taxes can help in the third and most important task: developing the means to make ours a society powered by sustainable energy sources like the Sun, wind, the oceans, or the heat below the Earth's crust. These are not "exotic" forms of energy—they are the hard currency that will buy a comfortable future. While research finds techniques to make these renewable energy sources commercially feasible, our plentiful coal reserves can help us through the transition. But instead of spending billion of research dollars on energy-wasting techniques that convert coal to oil and gas, coal can and should be burned directly and cleanly.

Without a farsighted energy policy that deemphasizes oil and gas technologies, we face energy and even financial bankruptcy. After we have stripped our lands bare, laced our landscape with high voltage power lines and nuclear plans and plundered our oceans, we will have only a society built around nonexistent fuels.

Continued dependence on past energy patterns will consume a large portion of our investment dollars while realizing little longrun return. Just building more oil and gas facilities and danger-laden nuclear powerplants would cost about two-thirds of all net new capital generated between now and 1985, according to some economists. These huge expenditures would kick off higher prices, deprive industry of the money it needs to

invest in less wasteful technologies and spawn another result we do not need—higher unemployment. Investments in large energy facilities produce fewer jobs per dollar than any other investment we could make.

Continuing down this path also will not stem the relentless centralization of the energy industry. In 1975, the top eight energy companies controlled 53 percent of domestic crude oil production and 43 percent of natural gas production. In 1970, the eight largest firms controlled 41 percent of coal production and the seven largest firms controlled 65 percent of the crude oil production in the non-Communist world—an increase of more than 61 percent since 1953. Failure to act will leave America's energy policy in the hands of a few giant firms which, together with the OPEC cartel, can set arbitrary prices and production levels.

Much of the task of implementing a consistent energy policy falls to Government. President Carter has taken an essential first step in his proposal to reorganize the disparate and overlapping energy bureaucracies in Washington. I am one of the sponsors of legislation to establish a Cabinet-level Department of Energy.

How our time, skills, and money are spent now will determine whether the rest of this century and the next will be years of relative energy security. The United States cannot afford a disjointed policy that reinforces our present profligate and shortsighted ways.

WOODSTOCK THEFT DETECTING SOCIETY OF CONNECTICUT

HON. CHRISTOPHER J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. DODD. Mr. Speaker, I recently had the honor of addressing the Woodstock Theft Detecting Society of Connecticut—a group dedicated to the idea of community and neighborhood cooperation.

The society, first organized in 1793 and chartered by the State of Connecticut in 1834, originally provided for a means of recovering stolen property. Society members were supplied with horses and were obliged to follow thieves at a moment's notice.

Today, the society remains much the same, with the addition of women members in 1919 and associate members in 1950. In addition persons living in a 10-mile radius outside of Woodstock township limits receive the same benefits as amended in 1887.

Mr. Speaker, in the spirit and dedication of the members of the Woodstock Theft Detecting Society, I would like to include the history of the society in the RECORD.

THE WOODSTOCK THEFT DETECTING SOCIETY

HISTORY OF WOODSTOCK

Emma Aldrich[1] 1908–26, except 1920–21, when Mrs. Albert Henry Hibbard (Ellen Van Lew Cox) was Librarian:

The Woodstock Theft Detecting Society was organized May 20, 1793,[2] with the idea of recovering property stolen in town. A President, Vice-President, Clerk, Treasurer and six "Pursuers" were the officers chosen. Pursuers were provided with horses, and were obliged to follow thieves at a moment's notice. Gen. Samuel McClellan was the first President, Ejiah Williams the first Treasurer and Major Ebenezer Smith the first Secretary or Clerk. Elijah Williams, Ebenezer Smith, Hezekiah Bugbee, William Graves and Silas May drew up By-Laws. Meetings were held quarterly, alternating between Williams' Tavern (Hamilton Holt's house) on Woodstock Hill and Silas May's Tavern in East Woodstock, now the home of his great-grandson Chester E. May.[3] The Society was reorganized and incorporated in 1824.[4] The incorporators were William May, Jedidiah Kimball, Alfred Walker, Jonathan May, Theophilus B. Chandler, John Paine, William Flynn. Annual meetings the third Monday in December, with dinner, singing, speeches and the election of officers were held at Elmwood Hall, the Vestry of the Church in South Woodstock, in West Woodstock, and recently in the Community House, East Woodstock. Following are the officers of the Society during the past one hundred and thirty-three years (1793–1926):

FOOTNOTES

[1] The author is indebted to Mrs. May for information regarding the East Woodstock Library.

[2] References to the Society are in Larned's "Windham County," Vol. II: 455, 533. For list of original and all other members of the Society see Appendix 24, p. 632.

[3] "My Ancestors," by Lyman May Paine, Chicago 1914, p. 99.

[4] The Act of Incorporation was passed at the May session of the Legislature. At the annual meeting of the Society in 1829, during the Temperance Agitation, John F. Williams, Clerk, wrote in the Records: "No ardent spirits drunk today."

Presidents

1793–1796: Gen. Samuel McClellan.
1797: Nehemiah Child.
1798–1800: Gen. Samuel McClellan.
1801: Silas May.
1802–1803: Gen. Samuel McClellan.
1804: Capt. William May.
1805–1808: Capt. Ephraim May.
1809: Nehemiah Child.
1810: Capt. Christopher Bentley.
1811: Nehemiah Child.
1812–1814: Rensselaer Child.
1815–1820: Capt. Ephraim May.
1821: Capt. William May.
1822–1823: Theophilus B. Chandler.
1824–1825: Jonathan May.
1826: Rensselaer Child.
1827–1828: John Paine.
1829–1832: John Fowler, 2nd.
1833–1835: William Flynn.
1836–1838: John F. Williams.
1839: Ezra Child.
1840: John Fowler, 2nd.
1841–1843: Eleazar Litchfield.
1844–1846: Amasa Carpenter.
1847–1848: Nathan Austin.
1849: Oliver Saunders.
1850–1852: William Flynn.
1853–1854: Henry Wells.
1855–1857: Samuel Fenner.
1858: Stephen Potter.
1859–1861: John F. Williams.
1862–1865: Leonard M. Dean.
1866–1867: Zenas Marcy.
1868–1869: John E. Buckman.
1870–1871: Oliver H. Perry.
1872: Oscar Fisher.
1873–1875: Charles Harris May.
1876–1877: Dr. George A. Bowen.
1878–1879: Stephen D. Skinner.
1880–1882: Carlo May.
1883–1884: James B. Tatem.
1885: Francis W. Flynn.
1886: Edward T. Warner.
1887–1888: Ebenezer Bishop.
1889–1890: Finley M. Fox.
1891–1892: Henry K. Safford.
1893–1894: John H. Child.
1895–1896: William W. Webber.
1897–1898: Frank R. Jackson.
1899–1900: John F. Chandler.
1901–1902: Clarence H. Child.
1903–1904: Oliver A. Hiscox.
1905–1906: Leonard H. Healey.
1907–1909: Melancthon Riddick.
1910–1911: Albert Nelson Hammond.
1912–1913: Chester E. May.
1914–1916: George M. Sampson.
1917–1918: Edward L. Chamberlain.
1919–1920: Charles M. Perrin.
1921–1922: Benjamin R. Ritch.
1923–1924: Byron W. Bates.
1925–1926: Luther J. Leavitt.

Vice Presidents

1826: John Paine.
1827: William Bowen.
1828: John Fowler, 2nd.
1829–1832: William Flynn.
1833–1834: Theophilus B. Chandler.
1835: John F. Williams.
1836–1838: Ezra Child.
1839: Andrew A. Williams.
1840: Rhodes Arnold.
1841–1843: Amasa Carpenter.
1844–1846: Nathan Austin.
1847–1848: Oliver Saunders.
1849: James Lyon.
1850: John F. Williams.
1851–1852: Peleg C. Child.
1853–1854: John F. Williams.
1855–1856: Stephen L. Potter.
1857: Chester W. Paine.
1858–1861: George A. Penniman.
1862–1863: Jethniel Perrin.
1864–1865: Daniel Warner.
1866–1867: John E. Buckman.
1868–1869: Elisha M. Phillips.
1870–1871: Stephen D. Skinner.
1872: Charles H. May.
1873: Edwin S. Bugbee.
1874–1875: Albert C. Chandler.
1876–1877: Andrew F. Clark.
1878: Thomas Milligan.
1879–1881: William B. Lester.
1882: Waldo Phillips.
1883–1884: Edward T. Warner.
1885–1886: Alexander M. Bancroft.
1887–1888: William W. Webber.
1889–1890: William A. Weaver.
1891–1892: John H. Child.
1893–1894: William W. Webber.
1895–1896: Frank R. Jackson.
1897: Nathan E. Morse.
1898: John F. Chandler.
1899–1900: Clarence H. Child.
1901–1902: Oliver A. Hiscox.
1903–1904: Leonard H. Healey.
1905–1906: Melancthon Riddick.
1907–1909: Albert Nelson Hammond.
1910–1911: Charles Child Gildersleeve, M.D.
1912–1913: George M. Sampson.
1914–1916: Edward L. Chamberlain.
1917–1918: Charles M. Perrin.
1919–1920: Benjamin R. Ritch.
1921–1922: Byron W. Bates.
1923–1924: Luther J. Leavitt.
1925–1926: William M. Gallup

Treasurers

1793–1795: Elijah Williams.
1796: Jason Williams.
1797–1798: Elisha Lyon.
1799–1805: William Bowen.
1806: Elias Child.
1807–1825: William Bowen.
1826: Judah Lyon.
1827: John Fowler, 2nd.
1828: John F. Williams.
1829: Spencer Child.
1830–1834: John F. Williams.
1835–1843: Edwin S. Child.
1844–1847: John F. Williams.
1948: Lorenzo Litchfield.
1849: Hiram N. Brown.

1850: Averill Barlow.
1851–1852: Leonard M. Dean.
1853–1855: Charles H. May.
1856: Samuel M. Fenner.
1857: John F. Williams.
1858–1861: Jethniel Perrin.
1862–1865: George A. Paine.
1866: Caleb Fenner.
1867–1881: Nathan E. Morse.
1882–1919: David Aldrich.
1920–1926: Mrs. Frank A. Jordan.

Clerks

1793–1795: Elijah Williams.
1796: Jason Williams.
1797–1799: Elisha Lyon.
1800–1804: Elias Child.
1805: Theophilus B. Chandler.
1806: Elias Child.
1807–1823: Jonathan May.
1824–1827: John Fowler, 2nd.
1828: John F. Williams.
1829: Spencer Child.
1830–1934: John F. Williams.
1835–1843: Edwin S. Child.
1844–1848: John F. Williams.
1849–1852: Lorenzo Litchfield.
1853–1855: Lewis Chamberlain.
1856–1861: Jethniel Perrin.
1862–1865: Caleb Fenner.
1866–1871: George A. Paine.
1872–1877: Monroe W. Ide.
1878–1882: Henry T. Child.
1883–1886: Oliver A. Hiscox.
1887–1889: Charles H. Killam.
1890: Henry K. Safford.
1891–1892: Frank R. Jackson.
1893–1894: William A. Weaver, Jr.
1895: Oliver H. Perry.
1896–1900: Melancthon Riddick.
1901–1902: George M. Sampson.
1903–1906: George C. Phillips.
1907–1910: John F. Chandler.
1911–1913: S. Howard Peckham.
1914–1920: William M. Gallup.
1921–1922: Mrs. John S. May.
1923–1925: Mrs. Charles H. Potter.
1926: Mrs. Albert H. Williams.

IMPROPER EXPLOITATION OF BABY SEALS

HON. BRUCE F. CAPUTO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. CAPUTO. Mr. Speaker, inhumane treatment of animals is a subject of utmost concern to many Americans. Today the House considers a resolution, of which I am a cosponsor, House Concurrent Resolution 142, which urges the Canadian Government to reassess its policies regarding the harp seal. Certainly, we do not have the right to intervene in Canada's internal policymaking, however, we do have an obligation to voice the concern of the Congress and of the American public over present policies allowing newborn harp seals to be clubbed to death for their pelts. No use is made of the carcasses for food.

The possible extinction of this animal warrants congressional action. Improper exploitation of baby seals or any other animals must be rectified. I hope you will join with me and my colleagues who have cosponsored this resolution in addressing the problem and requesting a reevaluation and termination of current Canadian policies regarding the harp seal.

A TRIBUTE TO DR. ARIE J. HAAGEN-SMIT: THE DISCOVERER OF SMOG

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. BROWN of California. Mr. Speaker, I rise to note the death of a great scientist who has made a tremendous contribution to the public health and welfare. Dr. Arie J. Haagen-Smit was not only a noted biochemist; he was also a public servant. His dual career was a consequence of his discovery in 1950 that emissions from automobiles and industry, when mixed in the atmosphere and heated by the sun, resulted in new harmful chemical compounds then known as smog. It seems almost ludicrous today to think that this chemical transformation was once hotly denied by industry, but that is the way it was in the 1950's.

My own political career has crossed the path of Dr. Haagen-Smit many times. In 1954, when I was a city councilman from Monterey Park, in Los Angeles County, I saw Dr. Haagen-Smit demonstrate the chemical reaction before the city council. In those days Dr. Haagen-Smit's work was either ignored or attacked by polluting industries as being "unscientific." This familiar refrain is still being heard today in this body.

In spite of the early skepticism about the research on the causes of smog, further research confirmed what now seems so obvious, and the State of California began its 20-year-long effort to control automobile emissions. As we all know as we debate the auto emission standard deadlines again this year, the struggle that began with Dr. Haagen-Smit in 1950 is still going on today.

Once the need for controlling pollution became compelling, largely through citizen pressure upon politicians, Dr. Haagen-Smit was called upon to serve on numerous public bodies that were responsible for controlling or studying air pollution. Among one of his assignments was chairman of the California Motor Vehicles Pollution Control Board, which set auto emission standards in California in the late 1960's. He similarly served on numerous national committees, and continued his research which led to further restrictions on automobile and industrial air pollution. Throughout the history of modern air pollution control efforts, progress in cleaning up the air and Dr. Arie Haagen-Smit have been synonymous. It would be a pity if his death also marked the death of air pollution control efforts, as so many seem to desire today.

Mr. Speaker, at this time I place two articles about Dr. Haagen-Smit in the RECORD. I commend both items to my colleagues.

The articles follow:

[From the Los Angeles Times, Mar. 6, 1977]

THINK OF HIM WHEN SKY IS BLUE, AIR SWEET

(By Al Martinez)

"We will always have some bad days," he said, coughing and trying to smile. "But there are so many more good days now . . ."

The battle for clean air has been long and difficult for the man who never intended to fight a war in the first place.

All that Dr. Arie Haagen-Smit ever intended to do was indulge his curiosity. He wanted to know why trees grew, and why they died.

As a biochemist, life was his essential interest—its beauty and its processes.

And then one day, as a friend tells it, he stepped out of his ivory tower at the California Institute of Technology in Pasadena, and discovered air pollution.

That was more than a quarter of a century ago. It has never been the same for the man they call, with some irony, "the father of smog."

He was abruptly taken from the scholarly ambience of his scientific workshop into the chaotic public arena at a time when there were no winners on the ecological front.

Environmentalists fought him with the same ferocity as private industry.

"It was a case," says Haagen-Smit today, "of being handed your own death certificate. There was simply no point in arguing with anyone."

His simile has some chilling aspects. The Holland-born scientist, winner of all but the Nobel Prize—and there isn't one in ecology—is a dreadfully ill man.

A serious lung condition that causes spasms of coughing has sapped his strength and confined him mostly to his quiet and lovely home on a tree-lined street of Pasadena.

But it has not clouded the mind or crimped the humor of the "gentle Europena," nor has it dampened his optimism.

What Dr. Haagen-Smit, the man they call "Haggy," did back in 1950 was discover the sources and processes of air pollution and create them in a test tube.

No one had one that before ("Although someone would have done it eventually," he says modestly), and the subsequent attention was life-changing.

Haagen-Smit not only laid out in scientific principle what smog is—hydrocarbons and oxides of nitrogen—but also pointed a finger at who caused it. The prime sources, he told the world, were the oil and automotive industries. Then he waited for their reaction.

"At first," he said, "they were very quiet." Haagen-Smit leaned back in a contour chair and stared at the ceiling, half-smiling, remembering.

"Then they laughed at me and tried to discredit me." He brought the chair forward to face his interviewer. "Then there was a war . . ."

He entered that war reluctantly. To be a hero, and a target, in the environmental movement had not been the gentle European's intention.

"But I suppose," he mused, "it was not the intention of the fly to catch the fly-paper either, if you know what I mean."

Such was the impact of his discovery that Haagen-Smit, then a professor of biology at Caltech, was to become in 1968 chairman of the California Air Resources Board, a post he held until 1973, and a leader in the fight for clean air.

That the air remains polluted, to a lesser degree than it was 27 years ago, is no cause for distress, he says. What matters to him is that "the show is on the road."

"We will always have some bad days," he said, coughing and trying to smile. "But there are so many more good days now . . ."

Arie Haagen-Smit is 76. He received his Ph.D. in chemistry in the Netherlands and came to the United States for the first time in 1936 to lecture at Harvard.

A year later he was invited to join the faculty at Caltech, and was there until his retirement in 1971.

His primary concern was biochemistry. "I was interested in the problems of nature,"

he would tell a reporter. "Why does a plant grow? Why does a fly have red eyes?"

It was an interest based in his youth. He remembers running through the fields of Holland, picking flowers and trying to determine what they were.

"My interest was in me," he said, "and in the chemical processes that sustain it."

That interest was expanded in 1949 to include air pollution. The compelling force, he says simply, was curiosity.

"No one could miss smog in those days," Haagen-Smit said. "I felt it would not be difficult to find out what it was. And so I began."

The result was what some have termed "Haagen-smog"—that is, air pollution in a test tube. He had isolated the recipe for "goop in the air."

The first announcement of his achievement was carried inconspicuously in the press, and was greeted initially with only passing interest.

To Haagen-Smit, pollution was an affront to beauty, a stinking cloud that rolled across the landscape every afternoon. But to most it was a Jack Benny joke, a kind of Los Angeles symbol that no one was taking too seriously back then.

The mild response to his discovery did not trouble the slightly built Dutch scientist. He had satisfied his curiosity.

"As far as I was concerned," he said in a clipped accent, "it was then up to others to do the dirty work. I went back to the laboratory."

He was not to remain in peace much longer, however. The industries he had named as major polluters were beginning to react.

"They said my work was not scientific," Haagen-Smit said, never too concerned about their efforts to discredit him. "But major studies which cost much more than mine were undertaken and they all reached the same conclusion."

Then he added, not so much immodestly as factually: "You can't beat the truth."

As the impact of his discovery grew, Haagen-Smit ("A scientific Don Quixote," an industrialist once sneered) edged into center stage.

From a Chamber of Commerce scientific committee he stepped up to the state level, joining the new Motor Vehicles Pollution Control Board—a stepchild of his discovery.

It was an uneasy venture into public life. "I felt I was competent in chemistry," Haagen-Smit said, sipping water to control his cough, "but not in government. However, the job had to be done. I never walk away from anything."

That was to be his pervasive philosophy over the next several years, but he was never at ease in the uncertain environment of public formalities.

"I guess I'm just not a government man," he told an interviewer in the heat of one battle. "You can't let your hair down in government, and they can't just look at me and say, 'You're getting old, Haggy . . .'"

In 1968, the Motor Vehicles Pollution Control Board became the 14-member Air Resources Board and Haagen-Smit was its chairman.

The battle heated. Industry criticized him on one hand for being too tough, and the environmentalists were on him for being too weak.

But the shouters, he said with a small shrug, never influenced him one way or the other.

"They got awfully excited, but I just stayed quite. It's better not to talk back. You always lose."

What Haagen-Smit was doing instead was approaching the top men in the petroleum and automobile industries to get something done.

"I have found," he said, "that it does no good to go to anyone unless he is in charge. All a company president has to do to get something done is send out a little memo . . ."

The results of the "little memos"—and some legislative muscle—were gratifying to Haagen-Smit, and he is quick to compliment both industries for the actions they have taken to reduce air pollution.

He estimated in 1953 that they were each responsible for pumping 800 tons of pollutants into the air daily. The oil industry, he points out now, is down to about 150 tons a day and the auto industry down to 300 tons.

"It just proves," he says, "that if you give people time there is no reason to be pessimistic. The oil and auto industries learned that . . ."

Meanwhile, pressure was mounting for the unwieldly ARB to be reorganized, and it was. In 1972, the agency was reduced from a 14-member to a five-member board.

Haagen-Smit, who had retired from Caltech the previous year, wanted to quit the state job too but was prevailed upon to continue—still as board chairman.

"Let's face it," one member would say later. "His prestige alone was holding the whole thing together."

Haagen-Smit reached his decision to stay by facing a simple truth. "The public has a right to clean air. Perhaps I can help."

Despite high praise, an increasing number of scientific honors and the best of motives, they were not halcyon days for the soft-spoken Dutchman.

He was even accused of letting speakers ramble on too long at public meetings.

To such criticism, after one man had talked for 45 minutes, Haagen-Smit replied, "He's a human being. He would feel badly if no one listened."

That attitude continues today. "If they are public meetings," he asks simply, "should not the public be allowed to speak?"

He thinks about that for a moment and then adds: "My work was not so perfect, but I did the best I could."

At the time, Haagen-Smith conceded that perhaps it was time for someone else to take his place on the board—"someone with the ability to knock heads together in an acceptable manner."

Some agreed, some didn't. One board member liked the persuasive style of the "foxy grandpa." A national magazine said of him, "He undoubtedly knows more about airborne pollutants than anyone else in the world."

Once more, however, Haagen-Smit made his own decision, and that decision in 1973 was that he'd had enough. He retired from the ARB.

"I'm just an old sailor," he said, "who is fading away."

He didn't fade far. He was honored at an international symposium in Geneva, given the prestigious Smithsonian Medal, awarded the $50,000 Alice Tyer Ecology Prize and the Rhineland Award for Western Europe—all in recognition of his work on behalf of clean air.

More recently, a building at an ARB facility in El Monte was named after Haagen-Smit, to which he puckishly observes, "Everyone ought to have a pyramid."

He has no regrets about his time of public service. "They were exciting years," he says softly, "although they may have lasted a little too long."

Nor does he regret the intensive lab work that went on for years after his discovery, often with himself as the guinea pig in a smog chamber built to study the effects of air pollution on plant life.

Haagen-Smit is adamantly opposed to the notion that the tests had anything to do with his critical lung ailment.

He said then, "Smog is an aesthetic and economic nuisance that should be fought as such. Don't believe the stories that death in the form of smog stalks the streets of Los Angeles."

Illness hasn't changed Haagen-Smit's mind. He holds to the original contention and adds, "A chemistry laboratory is never a paradise of odors and chemicals. Sometimes I've had the skin peel off my hands from chemicals, and I've had to say to myself 'I must be more careful.'"

Is he satisfied now that the battle for clean air will one day be won?

Arie Haagen-Smit leaned back in his contour chair and thought about it.

"If the goal is zero smog," he finally said, "we'll never reach it. There will always be some contamination. But our air on the average is 50% cleaner than it was in 1970. We have made progress.

"From now on, progress will be slower," he added, thumbing absently through scientific journals on a table at his side. "The first gains are always easier. The battle will go on."

His own battle now is a lonelier one, far from the noisy public arena, in a chair by a window on a sunlit day. He fights the war against failing health with the love of his wife, four grown children and six grandchildren.

Beyond that—beyond the solitary nature of his struggle—he has become a towering figure in both scientific and political circles.

Charles Heinen, an executive with the Chrysler Corp. in Detroit, who has known Haagen-Smit as adversary and friend for 25 years, said:

"He was once my judge and jury, because I am an automobile company man. But never did I doubt his competence, integrity or humanity. Never did I question his dignity.

"All that I am trying to say is that Haagy is a special person. . ."

One whose concern in a private way is what his concern has always been in a public way. Life.

[From the Washington Post, March 20, 1977]

ARIE J. HAAGEN-SMIT, 76, DIES; SMOG SCIENTIST, POLLUTION FOE

PASADENA, CALIF.—Dr. Arie J. Haagen-Smit, who discovered how smog is formed and then tried to force the oil and auto industries to clean up urban air, died Thursday of cancer at his home. He was 76.

His laboratory creation of smog in 1950 at California Institute of Technology marked a breakthrough in the understanding of how sunlight acts on pollutants to form the brown haze that often blankets urban areas.

The biochemist had been ill for several years with cancer of the colon, which apparently spread to his lungs, said Graham Berry, spokesman for Caltech.

Dr. Haagen-Smit retired from Caltech in 1971, after having taught and conducted research there for more than 20 years.

After discovering how smog is created, he turned his efforts toward getting the auto and petroleum industries to build cleaner cars and refineries. His efforts were met with attempts to discredit his work.

"I felt I was competent in chemistry but not in government," he once said. "However, the job had to be done. I never walk away from anything."

He joined the Motor Vehicles Pollution Control Board which became, in 1968, the state Air Resources Board, and served as chairman until 1973.

He was chairman of a committee which sets air quality standards for the nation, the National Air Quality Criteria Advisory Committee for the Environmental Protection Agency. He was also a member of the Committee on Motor Vehicle Emission for the National Academy of Sciences, and he was on former President Nixon's Task Force on Air Pollution in 1970.

A native of Utrecht, The Netherlands, Dr. Haagen-Smit graduated from the University of Utrecht and received a Ph. D. in 1929. In

1936 he lectured at Harvard, then in 1937 joined the faculty at Caltech, where he taught until his retirement.

He is survived by his wife, Maria; four children, and a sister.

TRANSPORTATION ASSOCIATION OF AMERICA URGES ACTION ON AUTO EMISSION LEGISLATION

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. DINGELL. Mr. Speaker, the Transportation Association of America, in correspondence March 18 to Members of the House Interstate and Foreign Commerce Committee, has announced its support of legislation Congressman JAMES BROYHILL of North Carolina and I are cosponsoring in the House along with several other Members, H.R. 4444, the Mobile Source Emission Control Amendments of 1977. The companion bill in the Senate is S. 919, cosponsored by Senators DON RIEGLE and ROBERT GRIFFIN of Michigan.

The Transportation Association of America released to the Commerce Committee members the text of the letter, from its president, Paul J. Tierney, to Chairman PAUL ROGERS of Florida, Health and Environment Subcommittee. TAA urges immediate action on the Dingell-Broyhill bill, H.R. 4444, and Reigle-Griffin, S. 919. This is legislation which also has the support of labor and the automotive industries, including manufacturers, automotive suppliers and service industries.

The support of the TAA, its board of directors, and its organization of transportation users, investors and carriers is welcome and signifies the importance attached to the need for balance among environmental control and energy conservation objectives and consumer costs.

A cross section of businesses in the American economy are represented by TAA, including air, water, and ground carriers; banks, investment houses, and life insurance companies; auto supply fabricating and service industries; energy producing industries; major retail merchandising companies; and other related industries.

The text of the Transportation Association of America letter and its board of directors follows:

TRANPORTATION ASSOCIATION OF AMERICA,
Washington, D.C., March 14, 1977.

Hon. PAUL G. ROGERS,
Chairman, House Subcommittee on Health and the Environment, Washington, D.C.

DEAR CHAIRMAN ROGERS: The Transportation Association of America, a national policy organization made up of transportation users, investors, and carriers of all modes, is very much concerned about the adverse impact on the nation's economy if auto emission standards called for under existing law are not revised promptly enough to preclude disruption of 1978 production. The very sharp reductions called for by the Conference Bill of last year appear to us as being much too large from the standpoint of the public need, as well as the capabilities of the auto manufacturing industry. The overall economic costs of compliance, in our opinion, will far exceed the public benefits.

Our views on this important national transportation policy issue are based on the following policy position, which was adopted a short time ago by the 115-member TAA Board of Directors, a current roster of which is attached:

"TAA supports the concept that a positive benefit/economic cost analysis should be determined by legislative bodies and regulatory agencies prior to the enactment of laws or the promulgation of regulations pertaining but not limited to the movement of persons or things."

When Congress approved the present auto emission standards in 1970, it set goals that it believed to be probably unattainable by 1975. It provided for safety valve extensions which have proved necessary. While recognition certainly was given to other statutory obligations then placed on auto makers, subsequent technological demands imposed on them by both statutory and administrative regulations have made compliance with the emission standards far too difficult.

To illustrate this point, Congress passed legislation in 1972 that set new auto bumper safety standards, which were met but at the sacrifice of fuel economy because of the added weight. In 1975, Congress adopted progressively higher standards for auto fuel economy in terms of average miles per gallon—a goal that to date is being met but is in conflict with the auto emission statutes because the latter also means greater fuel consumption.

Despite the effect of these offsetting factors on the work of auto makers' technologists, they have made commendable progress to date in all three of the areas mentioned above. This includes, as of last year, a reduction in hydrocarbon and carbon monoxide emissions of 83 percent and nitrogen oxides of 40 percent from pre-1968 uncontrolled levels. As older, higher-polluting autos are junked and replaced by the new, less-polluting autos, the latter help to clean up the air. When new car sales do not provide replacements for older cars, the rate of cleaning up the air suffers.

We do not mean to infer that we oppose a further tightening of auto emission standards. TAA gave its support to the House version of S. 3219 that was passed in 1976 as a compromise measure. We similarly support bills currently being sponsored by Representatives DINGELL and BROYHILL (H.R. 4444) and Senators RIEGLE and GRIFFIN (S. 919).

In addition to the above, our reasons for supporting a temporary extension of 1977-model emission standards and phased-in changes through 1982 are, in brief, as follows:

Several independent and impartial studies by recognized authorities have concluded that auto emission standards have reached the point where further tightening will create costs far in excess of benefits.

A joint EPA–FEA–DOT analysis of the need for sharply reduced emission standards concludes it would result in a waste of energy, provide negligible air quality benefits, increase consumer costs, and discourage technological innovation. (This study was recently updated and confirms its earlier conclusions.)

This EPA–FEA–DOT analysis also concludes that adoption of a phased-in program, such as proposed in H.R. 4444, will save consumers billions of dollars and billions of gallons of fuel over the next five years.

Continuously changing auto pollution standards, according to the American Automobile Association and the EPA, have made it extremely difficult for auto mechanics to maintain vehicles and to learn required new techniques.

The adoption of phased-in standards will help hold down the purchase and maintenance costs of new automobiles, and it will encourage the scrapping by consumers of older, high-polluting autos.

Automakers should be given sufficient freedom to develop a wide variety of possible technological solutions to the auto emission problem, rather than be forced by tight time constraints to use the most expedient method.

Because of the major impact of the auto industry on the nation's economy (auto and related expenses represent approximately 10 percent of the nation's GNP), care should be exercised before imposing changes that can cause very serious disruptions.

Since there is an immediate need for legislation to revise the existing statutory auto emission standards, TAA urges separate consideration of the auto provisions in the Clean Air Act Amendments. Specifically, TAA favors the prompt passage of the legislation embodied in H.R. 4444, the proposed Mobile Source Emission Control Amendments of 1977.

We request that this letter be made a part of the record of hearings by your Subcommittee on bills relating to Clean Air Act Amendments.

Respectfully,

PAUL J. TIERNEY.

BOARD OF DIRECTORS

Henry A. Correa, Chairman, President, ACF Industries, Incorporated, New York, New York.

Paul J. Tierney, President, Transportation Association of America, Washington, D.C.

Stephen Ailes, President, Association of American Railroads, Washington, D.C.

Harold L. Albrecht, Vice President, Reynolds Metals Company, Richmond, Virginia.

A. G. Anderson, Transportation Association of America, New York, New York.

Grant Arnold, General Traffic Manager, Ethyl Corporation, Baton Rouge, Louisiana.

Dr. George P. Baker, Member, Board of Directors, Temple, Barker & Sloane, Inc., Wellesley Hills, Massachusetts.

Frank E. Barnett, Chairman Board of Directors, Chief Executive Officer, Union Pacific Railroad Company, New York, New York.

W. J. Barta, Chairman, The Valley Line Company, St. Louis, Missouri.

Henry Bartholomay III, Senior Vice President, Alexander & Alexander, Inc., Chicago, Illinois.

Theodore W. Brooks, Senior Vice President, The Chase Manhattan Bank, New York, New York.

Curtis D. Buford, President, Trailer Train Company, Chicago, Illinois.

Vincent C. Burke, Jr., Chairman of the Board and Chief Executive Officer, The Riggs National Bank of Washington, D.C., Washington, D.C.

William E. Callahan, Executive Vice President, International Harvester Company, Chicago, Illinois.

Walter F. Carey, Chairman of the Board, T.I.M.E.-DC & Janesville Auto Transport Company, Bloomfield Hills, Michigan.

Edward E. Carlson, Chairman and Chief Executive Officer, UAL, Inc., Chicago, Illinois.

H. T. Chilton, President and Chief Executive Officer, Colonial Pipeline Company, Atlanta, Georgia.

Thomas T. Church, Vice President, Transportation, Bethlehem Steel Corporation, Bethlehem, Pennsylvania.

Lee Cisneros, Director of Physical Distribution, The Firestone Tire & Rubber Company, Akron, Ohio.

William H. Clausen, President, Acme Fast Freight, Inc., Lake Success, New York.

Joseph A Cooper, Senior Vice President—Marketing, Delta Air Lines, Inc., Atlanta, Georgia.

Charles E. Coyl, Vice President, Transportation Division, GATX Corporation, Chicago, Illinois.

John A. Creedy, President, Water Transport Association, New York, New York.

Robert H. Cutler, Chairman of the Board, Illinois-California Express, El Paso, Texas.

Thomas E. Darnton, Vice President—Procurement and Production Control, General Motors Corporation, Detroit, Michigan.

John E. Drick, Chairman of the Executive Committee, The First National Bank of Chicago, Chicago, Illinois.

N. C. Nunn, Traffic Manager, Supply Department, Exxon Company, U.S.A., Houston, Texas.

J. Donald Durand, General Counsel, Association of Oil Pipe Lines, Washington, D.C.

William M. Fairhurst, Senior Vice President—Administration and Planning, Dana Corporation, Toledo, Ohio.

Peter Fanchi, Jr., President, Federal Barge Lines, Inc., St. Louis, Missouri

John P. Fishwick, President and Chief Executive Officer, Norfolk & Western Railway Company, Roanoke, Virginia.

Carl J. Fleps, Vice President—Government Relations, The Greyhound Corporation, Washington, D.C.

Adrian B. Palmer, Chairman, Rollins Burdick Hunter Company, Chicago, Illinois.

Michael Papadopoulos, General Manager, Transportation and Distribution, Shell Oil Company, Houston, Texas.

V. L. Petersen, Vice President. The Goodyear Tire & Rubber Company, Akron, Ohio.

John E. Phelan, General Traffic Manager, Anheuser-Busch, Inc, St. Louis, Missouri.

Robert W. Prescott, President, The Flying Tiger Line, Inc., Los Angeles, California.

William J. Quinn, Chairman of the Board, Chicago, Milwaukee, St. Paul & Pacific Railroad Company, Chicago, Illinois.

C. B. Ramsdell, Vice President—Group Executive, Transportation Systems Group, Westinghouse Air Brake Company, Pittsburgh, Pennsylvania.

John S. Reed, Chairman and Chief Executive Officer, The Atchison, Topeka & Santa Fe Railway Company, Chicago, Illinois.

James E. Reinke, Vice President—Government Affairs, Eastern Air Lines, Inc., Washington, D.C.

James J. Reynolds, President, American Institute of Merchant Shipping, Washington, D.C.

W. Thomas Rice, Chairman of the Board, Seaboard Coast Line Railroad Company, Jacksonville, Florida

Ronald G. Ross, Senior Vice President, Bank of America, Los Angeles, California.

Henry E. Seyfarth, Seyfarth, Shaw, Fairweather & Geraldson, Chicago, Illinois.

W. K. Smith, Vice President, General Mills, Inc., Minneapolis, Minnesota.

Wilbur S. Smith, Chairman and Chief Executive Officer, Wilbur Smith and Associates, Columbia, South Carolina.

Lee H. Sollenbarger, Chairman of the Board, Transcon Lines, Los Angeles, Calif.

William I. Spencer, President, Citibank, New York, New York.

Edwin F. Stadelman, General Traffic Manager, J. C. Penney Company, Inc., New York, New York.

W. Stanhaus, Chairman and Chief Executive Officer, Spector Industries, Inc., Bensenville, Illinois.

Robert L. Stone, Chairman and President, The Hertz Corporation, New York, New York.

Stoney M. Stubbs, Chairman of the Board, Frozen Food Express, Inc., Dallas, Texas.

L. D. Thomas, Vice President—Operations Planning & Transportation, Amoco Oil Company, Chicago, Illinois.

Robert E. Thomas, Chairman of the Board, MAPCO Inc., Tulsa, Oklahoma.

George F. Tidmarsh, Vice President, Physical Distribution Department, Sears, Roebuck and Company, Chicago, Illinois.

Stuart G. Tipton, Consultant, Pan American World Airways, Inc., Washington, D.C.

John L. Tormey, Chairman, Roadway Express, Inc., Akron, Ohio.

Kenneth L. Vore, Vice President—Traffic and Transportation, United States Steel Corporation, Pittsburgh, Pennsylvania.

Charles J. Walsh, Jr., Vice President—Service Company, Tulsa, Oklahoma.

Michael J. Walsh, Jr., Vice President—Transportation and Distribution, St. Regis Paper Company, New York, New York.

Hays T. Watkins, Chairman of the Board and President, The Chessie System, Cleveland, Ohio.

Charles A. Webb, President, National Association of Motor Bus Owners, Washington, D.C.

William G. White, Chairman of the Board, Consolidated Freightways, Inc., San Francisco, California.

Bennett C. Whitlock, Jr., President, American Trucking Associations, Inc., Washington, D.C.

George K. Whitney, Consultant, Massachusetts Financial Services, Inc., Boston, Massachusetts.

William C. Whittemore, Senior Vice President and Treasurer, John Hancock Mutual Life Insurance Company, Boston, Massachusetts.

Frederick C. Witsell, Jr., Vice President, Morgan Guaranty Trust Company, New York, New York.

NATIONAL ASSOCIATION OF MATURE PEOPLE

HON. MICKEY EDWARDS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. EDWARDS of Oklahoma. Mr. Speaker, I would like to take this opportunity to call attention to a very worthwhile organization headquartered in Oklahoma City. I am speaking of the National Association of Mature People, a nonprofit, nonpolitical organization serving senior citizens of the United States.

In less than a year and a half NAMP has expanded into a nationwide association, with a membership of more than 100,000 people belonging to chapters in 43 States. Its single goal is to help older Americans attain maximum fulfillment during what is too often a difficult period

of life; difficult because our society tends to exclude senior citizens from full participation.

NAMP regards older Americans with highest esteem. The name of its magazine, Best Years, reflects the attitude with which NAMP members approach this time of life. Through their network of chapters, older people are enjoying good fellowship and the encouragement to overcome barriers and reach toward their full potential as individuals and as a voice in matters that affect them.

The many services that NAMP provides its members include financial counseling and guidance, continuing education programs, group travel, low-cost insurance and pharmaceuticals, and job placement programs.

We are indebted to NAMP as we are to many such organizations that are helping provide the leadership for improving the quality of American life.

FACTS WILL END CONFUSION

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. HANSEN. Mr. Speaker, fact and fancy often become so hopelessly entwined as to do grave damage to the truth. The circumstances surrounding the recent congressional pay increase, stricter Federal campaign laws, and the new House Code of Ethics have been seriously misinterpreted by some elements of the press resulting in a climate of confusion which does a disservice to the public.

The following statement is a careful and objective analysis of the situation as a result of direct experience which I deem important to share with my colleagues:

FINDING THE LEGAL AND ETHICAL WAY

One of the major issues before Congress during the past few years and one which we are still wrestling with is the matter of funding campaigns for candidates for federal office and how to assure that government officials are as free as possible from compromise and corruption.

Charges fly daily regarding alleged violations of legal or moral standards in all branches of government and at all levels. Some of these charges are a matter for deep concern and cry out for immediate corrective action; others are phony accusations which cost the accusor little and heap great injustice on the accused.

One of the gravest injuries of this nature was inflicted upon Ed Gurney, a former Republican U.S. Senator from Florida. Gurney, a prominent member of Senator Sam Ervin's select committee investigating Watergate, underwent a most vicious harassment by partisans and overzealous federal prosecutors alleging bribery and political kickbacks. He found it necessary to forgo re-election and spent years defending himself in two major trials which finally found him innocent of any wrongdoing, but only after he was forced into a reported debt of some $500,000.

Former Governor John Connally of Texas who has held high federal appointments under Presidents of both political parties was seriously maligned in the public's eye by charges of political bribery involving milk funds during Watergate days. Connally took the matter to Court and proved his innocence, but only at considerable cost to himself. Connally, of course had the means to stand the expense without undue hardship, but Gurney is now using volunteers out of his home mailing appeal letters to people throughout the nation in an effort to salvage his personal situation. Personal liabilities is the name, but politics was the game—and it can be deadly.

The next day after John Connally's acquittal, Idaho Congressman George Hansen entered the same U.S. District Court room in Washington, D.C. and faced the same judge. Hansen's charges were minor by comparison, two unintentional technical bookkeeping errors—misdemeanors, not felony charges as with Connally and Gurney.

The Congressman pleaded guilty to filing a late campaign report (all other non-incumbents in Idaho's Congressional races were also late because forms were distributed late) and listing $2,150 of contributions on the wrong form. These were the only charges resulting from partisan political complaints and an exhaustive FBI investigation into personal, business and campaign accounts.

The over-reaction of the court in the Hansen case in the wake of the Connally acquittal is a matter of record. Congressman Philip Crane of Illinois placed the final conclusion in the Congressional Record of September 5, 1975. Crane's summary states, "three things come through loud and clear from the court's final deliberations . . . Simply stated, the court admitted its own 'improper technique,' expressed amazement that the case was even considered, and acknowledged 'that a correct reporting of receipts and expenditures was made.' The integrity of George Hansen is intact."

However, as in the Gurney and Connally situations, the integrity may be intact but the pocketbook takes a real beating in meeting legal and professional expenses, experiencing loss of income and other costs of a totally disrupted life.

The cases cited above are intended to demonstrate that any consideration of campaign reform and provisions to assure honesty in public office to protect the public should also include provisions to protect government officials and candidates for public office from partisan zealots who would turn a person's honest efforts for a term in office into the nightmare of a term in prison or at least bankruptcy.

In an effort to find what legal and ethical rights a person in elective public office has to gain reimbursement for unusual expenses far beyond the ability of any salary to reasonably absorb, your Congressman recently made official inquiry with the Federal Election Commission. It is a question that takes some degree of courage because of the fact that most persons in politics would rather casually maneuver campaign accounts to avoid unfavorable publicity and would rather steer clear of providing opportunities for speculative elements of the press to overreact. Nevertheless, in a day of more public awareness of political activity and government actions, it is increasingly important that provisions of the law be checked carefully and forthrightly to prevent unfortunate consequences from arising later on.

The FEC made the request a matter of public record and published it in the Federal Register inviting commentary. Action on the proposal is scheduled for March 24. Two protests have been filed, both from Idaho—one by Angela Neitzel, an active Idaho Democrat who recently managed the campaign for Congress of Stan Kress, and a second by Patricia Dorman of the Ada County Democrat Central Committee. A proposed position paper for the Commission states that the request does not deal with nor conflict with Federal Election Laws and hence they would have no jurisdiction nor objection. However, only final action by the FEC can determine what the results of the request will be.

In the meantime, the same request made to the FEC must be reviewed in terms of the regulations of agencies and commissions such as IRS, the Postal Service and the House Select Committee on Ethics. Appropriate efforts are underway in this regard. All of this should emphasize the point that everything possible is being done to find the legal and ethical way to solve unusual problems and this is not an exercise in finding loopholes for exploitation. In fact, the businessman, farmer, and average citizen, who also struggle under the rigidity, complexity and heavy requirements of the laws we live under, can no doubt see that public officeholders are now locked in pretty tight also.

Let us strive to assure justice and high moral standards in conducting the public's business, but let us also strive equally hard to maintain individual freedom and flexibility and prevent injustice. People should be encouraged to be a part of the system, not driven from it or have it used on them unfairly. This is our challenge as legislators of the law.

HUMAN RIGHTS IN VIETNAM: U.S. APOLOGISTS FOR STATE TERRORISM

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. McDONALD. Mr. Speaker, the Communist regime in Vietnam has been decidedly noncooperative in supplying information on the fate of over 2,000 American servicemen missing in action. The Vietnamese have, in violation of international standards of human decency, tied providing information on MIA's to U.S. diplomatic recognition and provision of extensive economic aid which will be used to consolidate the power of the Communists. Nor does the return of 12 dead begin to deal with questions of the continued captivity of living servicemen in labor camps or with the retention in Vietnam of brainwashed POW's.

The U.S. supporters of the Vietcong, Khmer Rouge and Pathet Lao opened a campaign in support of U.S. diplomatic recognition and provision of technical aid to the new Communist regimes in Southeast Asia virtually as the last American helicopter left Saigon. From the old Communist Party, U.S.A., dominated anti-Vietnam coalition called the People's Coalition for Peace and Justice—PCPJ, several overlapping coalitions were formed to target special issues such as amnesty for deserters and draft dodgers—National Council for Universal and Unconditional Amnesty, Recognition of and Aid to Communist Vietnam—Friendship, and Promotion of U.S. Disarmament, Abandonment of Overseas Bases and Defense Commitments, and a Policy of Nonintervention Against Soviet-bloc Aggression—Coalition for a New Foreign and Military Policy.

The so-called antiwar movement organizers were a mixed group of dedicated old and new left Marxist-Leninists under the direction of Havana, Hanoi, and Moscow; and various Socialist pacifists who excused the Communists' use of ter-

ror and military violence against the civilians of Southeast Asia on the grounds that getting rid of the free enterprise system and establishing a Socialist society of enforced "equality" was a "greater good." This group argued that violence and repression would end with a Communist victory and thus worked for U.S. abandonment of its South Vietnamese allies.

Anti-Communists who pointed to the continuing brutality and repression in every Communist society knew better: so did the Communists who know that terrorism cannot be rejected by Marxist-Leninists as a matter of principle. As Trotsky said in 1922 when as Lenin's right arm he headed the Red army:

A victorious war, generally speaking, destroys only an insignificant part of the conquered army, intimidating the remainder and breaking their will. The revolution works in the same way: it kills individuals, and intimidates thousands. In this sense, the Red terror is not distinguishable from the armed insurrection, the direct continuation of which it represents. The State terror of a revolutionary class can be condemned "morally" only by a man who, as a principle, rejects (in words) every form of violence whatsoever—consequently every war and every rising.

But currently a split within these groups has developed on the issue of whether or not to criticize the Vietnamese regime for its imprisonment of between 200,000 and 300,000 people on political grounds, including many religious and intellectual leaders who had supported the Vietcong and opposed the South Vietnamese Government but who are not members of the Communist Party.

The split developed after French Socialist journalist Jean Lacouture, after a visit to "unified" Vietnam in May 1976, wrote articles mentioning the hordes of political prisoners. Certain members of the U.S. antiwar movement leadership who had worked with total dedication for a Vietnamese Communist victory wrote a letter to the Vietnamese United Nations observer delegation expressing their concern. They received no response, although the Indochina Resource Center headed by D. Gareth Porter denounced the charges of political repression and human rights violations as unfounded.

Eventually a small group of virtually full time movement organizers headed by Jim Forest, editor of the Fellowship of Reconciliation magazine, Fellowship, circulated a petition asking Hanoi to permit United Nations or other inspection of the "reeducation camps" and to release various Socialist pacifist and Buddhist leaders jailed by Hanoi. Some 105 persons signed the petition. These signers have been viciously attacked by Marxist-Leninists who support the use of police state terrorism against the civilian population to maintain the Communists in power. A number of original signers, including Daniel and Philip Berrigan, have since retracted their signatures from the human rights appeal under pressure and receipt of "new materials from Vietnam which give us confidence that the new government is deeply concerned about human rights."

Among those who have taken public positions of support in favor of the Hanoi regime and who deny the validity of charges of gross human rights violations are Daniel Schecter, the vitriolic propagandist news director of WBCN radio in Boston who said he would like to see Forest imprisoned in a "reeducation camp of his choice"; John McAuliff, former head of the radicalized ex-Peace Corps group, the Committee of Returned Volunteers, who now runs the Indochina Program of the American Friends Service Committee—AFSC; Rev. Richard Fernandez, former head of Clergy and Laity Concerned—CALC, now on the staff of the Institute for World Order; Princeton's international law professor and Institute for World Order official Richard A. Falk who argues that all Socialist—the Vietnamese call themselves Communist—governments must mobilize every person to build the new society and must "deal with those who are dragging their feet" as Nat Hentoff reported; and Gary Porter, one of Hanoi's most dedicated propagandists.

Douglas Gareth Porter began his career as one of the first student interns at the then new Institute for Policy Studies—IPS—in 1964. IPS then claimed to be a "research headquarters, a neutral meeting place for scholars and Government officials;" but its function is to serve as a catalyst for the subversion and penetration of the executive and legislative branches of Government by its staff which includes a broad range of new leftists and leaders and members of Marxist-Leninist and revolutionary terrorist organizations.

Gareth Porter was active in the U.S. anti-Vietnam movement by 1968 when he signed an antiwar ad published in the New York Times. In 1971, traveling on a research grant from the Cornell University Southeast Asia Ph. D. program, Porter went to Saigon where his "research" work was exclusively writing pro-Hanoi propaganda articles for Dispatch News Service and the Swedish Nagens Nyheter newspaper. Porter's journalistic efforts included the "Myth of the Bloodbath" and "The Myth of the Hue Massacre" in which he argued that the discovery of mass graves of bound victims shot in the back of the head did not prove conclusively that the Vietcong and North Vietnamese had deliberately executed thousands of civilians in a mass terror campaign during the Tet offensive.

Porter returned to the United States in December 1971. With his Saigon associate Don Luce who had been expelled from South Vietnam 6 months earlier, and Fred Branfman, Porter set up the Indochina Resource Center, a pro-Hanoi propaganda mill, and its Indochina mobile education project, a traveling slide and picture show which argued that the violence of war would stop just as soon as the United States left Southeast Asia and South Vietnam surrendered. Porter is also a member of the advisory board of Counter-Spy, the principal outlet for CIA defector Philip Agee's Cuban-supported exposés.

In a bylined article which appeared in the Chicago-Sun Times in April 1975 "as the Provisional Revolutionary Government of the Republic of South Vietnam—the so-called Vietcong—stands on the verge of victory," Porter wrote:

The party leaders have long accepted that the intellectual elite in the south was for the most part anti-Communist.

Thus the party and the PRG must be concerned with how to minimize political opposition to a postwar, Communist-dominated government in the south.

Porter finds no reason to comment adversely on the method of minimizing "political opposition to a postwar, Communist-dominated government in the south" chosen by the North Vietnamese conquerors—namely forced deportations and imprisonment in slave labor work camps and "reeducation camps" of 300,000 Vietnamese.

Although Porter's Washington, D.C., Indochina Resource Center has folded recently, its work continues from the Indochina Resource Center-West, P.O. Box 4000–D, Berkeley, Calif. 94704; and the Friends of Indochina organization are taking up the IRC banner.

On January 30, 1977, an advertisement signed by 19 people was published in the New York Times. After characterizing the Communist victory over South Vietnam after three decades of Soviet-backed subversion, terror and armed aggression as "peace * * * without any bloodshed," the ad called for implementation of a 7-point program similar to that promoted by Friendshipment and the National Council for Universal and Unconditional Amnesty:

1. The President should open direct negotiations between Washington and Hanoi on all outstanding issues;

2. The President should support the admission of Vietnam to the United Nations;

3. The President should lift the embargo on American trade and travel to Vietnam;

4. The President should extend diplomatic recognition to the government of Vietnam and enter into full diplomatic relations at the Ambassadorial level;

5. The Congress can provide substantial economic aid for the reconstruction of Vietnam as promised by agreement and in the spirit of our generous policy after other wars;

6. The Presidential pardon must be extended to military deserters and to recipients of less than honorable discharges during the Vietnam era;

7. The treatment and programs directed at Vietnam era veterans must be reviewed and improved.

The ad then claimed that the Vietnamese Communists' suppression of all freedom was a "pretext" for the United States not to give them massive economic aid needed to consolidate their control. With regard to the 300,000 political prisoners, the ad said, "True, some Saigon collaborationists have been detained in reeducation centers, perhaps 40,000 at present." Then the ad stated that "such a number is surprisingly small considering the several million Vietnamese involved in Saigon's war effort." In other words, the ad's sponsors consider that every Vietnamese who opposed the Communist aggression, who worked in the South Vietnamese civil service or served in the ARVN is liable for imprisonment in the concentration camps as Saigon collaborationists.

The ad then stated that concern for

human rights abuses "is especially approporiate where our Government supports a foreign regime that is engaged in flagrant abuse of its own people * * *. But Vietnam presents a very different case. The present suffering of the Vietnamese people is largely a consequence of the war itself for which the United States bears a continuing responsibility."

In plain words, the ad sponsors feel that the repression and brutality being inflicted upon the South Vietnamese is their just punishment for having resisted the Communist aggression and having asked for U.S. help.

The coordinator of this vicious justification of Marxist-Leninist brutality was listed as self-claimed "humanist" Corliss Lamont, identified as a Communist Party, U.S.A. member by four sworn witnesses—Louis Budenz, Maurice Malkin, John Lautner and Ralph Clontz—and who heads such CPUSA fronts as the National Council of Soviet-American Friendship and the (National) Emergency Civil Liberties Committee—NECLC.

The signers of the ad were:

James Armstrong, Bishop, United Methodist Church.

Richard Barnet, Co-director, Institute for Policy Studies, graduated from Harvard Law School in 1954. In 1960–61 he worked at the Harvard Russian Research Center, and from 1961 until the formation of IPS late in 1963 was Deputy Director of the Office of Political Research of the U.S. Arms Control and Disarmament Agency. In 1967 Barnet was active in the Lawyers Committee on U.S. Policy toward Vietnam, formed by several influential Old Left lawyers in the Emergency Civil Liberties Committee, a Communist Party front. Barnet visited Hanoi in November 1969 and according to a Hanoi Radio broadcast stated that the message he would take back to the U.S. "is the message that the Vietnamese will continue to fight against the aggressors, the same aggressors that we will continue to fight in our own country."

In his 1971 essay in the IPS reader, *Washington Plans an Aggressive War,* Barnet suggested that Americans involved with the Vietnamese War were guilty of war crimes against the "civilized conscience" and that their civil liberties should be revoked so that they could be excluded from holding public office and be forbidden to "preach or advocate" policies of fighting Communist aggression.

Norma Becker, Chairwoman, War Resisters League; formerly co-coordinator of the Fifth Avenue Peace Parade Committee, the New York City branch of the CPUSA-dominated National and New Mobilization Committees.

Atlee Beechy, Menonite Central Committee, which in the hopes of being permitted to return to Vietnam and prosetelyze, has supported U.S. aid and recognition of the Communist regime.

Robert McAfee Brown, Professor, Union Theological Seminary.

Robert S. Browne, Director, Black Economic Research Center.

Eleanor Brussel.

Richard A. Falk, Milbank Professor of Law, Princeton.

Howard Frazier, Promoting Enduring Peace, an organization which arranges tours of the Soviet Union and which has cosponsored anti-intelligence gathering seminars with the National Lawyers Guild and Organizing Committee for a Fifth Estate.

Rev. Stephen H. Fritchman, of Los Angeles, an indefatigable sponsor of Communist Party fronts and causes which include serving as "honorary co-director" of the American Institute for Marxist Studies, on the national council of the National Emergency Civil Liberties Committee (NECLC), and who twice refused under oath to answer questions relating to his CPUSA membership on Fifth Amendment grounds before the House Committee on Un-American Activities.

Don Luce, co-director, Clergy and Laity Concerned; formerly a propagandist for the Vietnamese Communists with the Indochina Resource Center and Indochina Mobile Education Project. In January 1970, Clergy and Laity described its goals as "not simply an end to the war in Vietnam, but a struggle against American imperialism * * *."

John McAuliff, coordinator of the Appeal for Reconciliation, the Indochinese program of the American Friends Service Committee (AFSC) which has consistently justified terrorism and violence by Soviet-backed "nationel liberation movements" on the grounds that the existence of non-Marxist socialists was a greater crime.

Paul F. McCleary, Executive Director of the Church World Service of the National Council of Churches.

Grace Paley, author and self-proclaimed "anarchist."

Dr. Paul Sweezy, co-editor of Monthly Review, a Marxist journal.

George W. Webber, president, New York Theological Seminary.

Cora Weiss, national coordinator, Friendshipment; organizer and motivator of innumerable mass demonstrations against U.S. support for South Vietnam; frequent visitor to Paris and Hanoi to meet with the Vietnamese communists; and bankroller of many pro-Hanoi projects.

In December 1976, Daniel and Philip Berrigan, who removed their names from the human rights petition, along with David Dellinger, Don Luce and Paul Mayer, who had refused to sign, circulated an open letter claiming—that America was the real criminal for not allowing Vietnam into the United Nations and for refusing to begin a decade of aid, rebuilding and reconciliation with the Communist regime.

"First and foremost," they stated, "we are friends of the Vietnamese people." And they characterized Jim Forest and the others who had signed the petition with having "raised charges in an irresponsible manner." The task on which the signers of the open letter are united "both with the Vietnamese people and with one another" is "extinguishing the inferno of American violence in the world."

In February, the misnamed War Resisters League executive committee circulated an official statement attacking those concerned with human rights violations in Vietnam:

1. The Executive Committee of the War Resisters League disassociates the organization from the statement "Appeal To The Government of Vietnam Regarding Human Rights."

2. The Executive Committee of the War Resisters League reaffirms the position of the organization in favor of United Nations membership for the Socialist Republic of Vietnam, in favor of United States recognition of the Socialist Republic of Vietnam and in favor of immediate aid from the United States to the Socialist Republic of Vietnam to repair war damage and heal the wounds of war.

3. The Executive Committee of the War Resisters League is in support of a proposed American Friends Service Committee mission to Vietnam whose purpose will be to investigate allegations of violations of human rights by the government of the Socialist Republic of Vietnam.

On February 9, 1977, Cora Weiss, an honored guest in conquered Vietnam, and Don Luce were among a number of speakers scheduled to promote aid and recognition of the Communist regime in Vietnam at a "legislative briefing" sponsored by the three pro-Vietnamese Communist coalitions, Friendshipment, the Coalition for a New Foreign and Military Policy—CNFMP—and the National Council for Universal and Unconditional Amnesty—NCUUA. It is noted that at the NCUUA International Conference held in Toronto, Canada, January 29–30, 1977, and which was attended by a number of radical U.S. deserters and draft dodgers, the first resolution passed called upon the new administration "to reject the policies of hostility against the governments * * * of Vietnam, Laos, and Kampuchea—Cambodia." The first resolution further stated:

> We call upon the people of the United States to help build peace and friendship with these people and nations, rejecting all campaigns of slander against them.

The American Friends Service Committee, which has repeatedly justified violence by Soviet-backed Marxist terrorist movements on the ground that the existence of non-Marxist societies is a greater crime, has been permitted to send small groups of activists to Vietnam as observers on guided tours.

A six-member delegation from the AFSC toured Vietnam early in February. The AFSC group met with Xuan Thuy, member of the Presidium of the Central Committee of the Vietnam Fatherland Front. According to an English language broadcast by Hanoi VNA Radio, "The American guests assured Xuan Thuy that progressive Americans would continue to struggle for an end to their government's hostile policy towards Vietnam and for the normalization of the relations between the United States and Vietnam."

On their way back to the United States, the AFSC group traveled through Laos to Thailand. The AFSC group was stranded briefly in Laos while heavily armed Laotian Communist troops seized three small islands in the Mekong River which had been used as staging points for refugees fleeing the slaughter of civilians by the Communists.

On March 15, 1977, Carol Bragg, Rhode Island field secretary of the AFSC who was part of the month-long tour group to Vietnam, spoke on Capitol Hill in support of U.S. diplomatic recognition and aid to Vietnam.

While groups claiming "respectability" lobby for U.S. recognition and aid to the Vietnamese Communist regime and defend its suppression of basic human rights, the violence-oriented U.S. street revolutionaries are maintaining a parallel support campaign for the Indochinese Communists.

Friends of Indochina, 135 West 4th Street, New York, N.Y. 10012, has circulated a packet of materials dated February 2, 1977. An open letter signed by Arlene Eisen (Bergman), a leader of the Weatherman faction of SDS and now of the Weather Underground Organization's Prairie Fire Organizing Committee—PFOC—Donna Futterman and Merle Ratner stated in part:

DEAR FRIENDS: We are a group of anti-war activists living in New York City, committed to facilitating a country-wide campaign to reaffirm our solidarity with Viet Nam at a time when Viet Nam is being attacked in the name of the anti-war movement.

We're addressing this letter to the thousands of people who joined the ranks of the anti-war movement, to Black and other Third World organizations, to women's organizations, workers organizations, veterans and community groups—to all who oppose U.S. Imperialism's continuing hostility towards Viet Nam and who support the Vietnamese people's right to self-determination and applaud their successes in building a reunified, socialist Viet Nam.

We're asking you to:

Add your signature to the enclosed affirmation of solidarity with the Socialist Republic of Viet Nam and return the coupon by April 1, 1977.

Publicize it as much as possible in your area, circulate it for signatures from other groups and individuals.

Send a minimum of $10—a token of material solidarity—to aid in reconstructing Viet Nam. (Make checks payable to Indochina Peace Campaign-NYC).

Hold educational and fundraising activities in your area to strengthen solidarity between Vietnamese people and people in the U.S. For example: on International Women's Day we can feature speakers on the accomplishments of Vietnamese Women. These activities may climax in celebrations across the country on April 30th—the second anniversary of the victory of the Vietnamese people.

These activities are especially important because the United States continues its policy of hostility towards Viet Nam. This hostility has taken many forms including: U.S. veto of Viet Nam's admission to the United Nations, an economic blockade of Viet Nam and the continued U.S. refusal to fulfill its pledges in the Paris Peace Agreements to contribute to heal the wounds of war. In this context we must understand the danger and seriousness of Jim Forest's attack on Viet Nam. Even if the Carter Administration normalizes relations with Viet Nam, we must maintain our vigilance and solidarity because without strong political pressure, the United States will never meet all its obligations to Viet Nam.

Circulated with the letter was an "Affirmation of Solidarity with the Socialist Republic of Vietnam" attacking the 105 signers of the December human rights petition as "filled with lies and slanders * * * being used to justify a continued policy of U.S. hostility toward Vietnam." The demands of the "Affirmation of Solidarity with the Socialist Republic of Vietnam" include the standard aid and diplomatic recognition, nonopposition to U.N. admission, and "universal and unconditional amnesty and upgrading of discharges for all U.S. war resistors (sic)."

The "affirmation" is signed by a number of militant and revolutionary groups, mostly active in the Greater New York City area, which were also involved in the July 4 coalition counterdemonstration in Philadelphia:

African Peoples Party.

Attica Now, prison movement group.

Friends of Indochina.

National Committee for the Defense of Political Prisoners, a support group for the terrorist Black Liberation Army.

Lower East Side Mobilization for Peace Action—LEMPA, a militant organization which includes many former and current CPUSA stalwarts.

Nationalist Party of Puerto Rico, which led the 1950 armed revolt in Puerto Rico and whose terrorist cadres attempted to assassinate President Truman in 1950 and Members of the House of Representatives in 1954; now working closely with the Cuban-controlled Puerto Rican Socialist Party, and connected with several terrorist organizations.

Prairie Fire Organizing Committee, the overt arm of the terrorist Weather Underground Organization.

Puerto Rican Socialist Party, a Marxist-Leninist revolutionary organization formed as the Movimiento Pro Independencia in 1959 and long under the control of the Cuban Communists. The Cubans are now training Puerto Rican revolutionaries in conventional and guerrilla warfare, terrorism, and sabotage in Angola and the Peoples Democratic Republic of Yemen.

Union of Activists.

Union of Democratic Filipinos—KDP, a support group for the New Peoples Army guerrillas.

Youth Against War and Fascism—YAWF, the youth arm of the militant Marxist-Leninist Workers World Party—WWP, of Trotskyist origins but which works in close support of the Cuban Communist regime.

Let us be aware of the allegiances and goals of these organizations when they ask us to support diplomatic recognition and vote aid appropriations for the Vietnamese Communist regime and thereby complete the sellout of Southeast Asia to the enemies of all freedom.

CONSUMER ACTIONS UNDER THE FTC ACT

HON. BOB ECKHARDT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. ECKHARDT. Mr. Speaker, the House Consumer Protection and Finance Subcommittee has just completed hearings on H.R. 3816. H.R. 3816 makes a number of changes in the Federal Trade Commission Act to improve its effectiveness. One of its major provisions creates a self-help remedy for consumers who are injured by companies who violate FTC regulations and cease and desist orders. The provision authorizes injured consumers to sue on behalf of themselves and other similarly injured consumers to obtain payment of damages or other appropriate relief.

Congressman KOCH has indicated to me his strong support for this provision, and to demonstrate that support, he and I have introduced today a bill which incorporates the consumer action provisions in H.R. 3816. The Subcommittee on Consumer Protection and Finance will begin markup on H.R. 3816 on March 29. I appreciate Congressman KOCH's indication of particular support for the consumer action provision of the bill.

AMBIGUITIES IN THE 25TH AMENDMENT

HON. PAUL S. TRIBLE, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. TRIBLE. Mr. Speaker, I received the following letter from Gilbert S. Bahn of Newport News, Va., and I would like to share his comments with you. Mr. Bahn is very concerned with the ability of this Nation to deal with a Vice-Presidential vacancy or a Presidential disability as presently delineated by the 25th amendment to the Constitution. I believe his concern is justified and have referred this letter to M. CALDWELL BUTLER of Virginia's Sixth District, a member of the Judiciary Committee, for consideration. The letter follows:

NEWPORT NEWS, VA.,
February 13, 1977.

Hon. PAUL S. TRIBLE, Jr.,
First Congressional District of Virginia, House Office Building, Washington, D.C.

DEAR MR. TRIBLE: The time to deal with emergencies is when they are not upon us. The 25th Amendment to the Constitution was supposed to deal adequately with the problem of a vacancy in the vice presidency or with disability of the President. However, before its passage the situation was fairly straightforward under the 20th Amendment and the law passed during the Truman administration concerning succession to the presidency in the absence of a Vice President (an amended version of a much earlier law which followed Lincoln's assassination.) The 25th Amendment presents problems of ambiguity and inconsistency, some of which were discussed after Kennedy's assassination or during the movement to impeach Nixon, and some of which were not.

Maintaining separation of powers, in the absence of a Vice President, how can a Member of Congress act as President without giving up his seat in Congress? Congress should pass a law now (when we have young and healthy President and Vice President) defining the personal status, salary, etc. of a Speaker or a Senate president pro tempore serving as Acting President when the President is incapacitated and there is no Vice President. Would this Acting President be on leave of absence from Congress; could his seat be filled by someone else? Decisions should be made now in the abstract, not in a crisis in particular.

If the vice presidency is vacant, and the president has nominated a vice president, but the latter has not yet been confirmed, what is the status of the nomination if the president then dies? Suppose the nominee has been confirmed by the House, but not yet by the Senate. Can the Speaker assume the presidency, or only become Acting President? Can the Senate then finish confirming the vice presidential nominee as vice president? If so, can the new vice president invoke the 20th Amendment, saying he is now duly qualified, and oust the Speaker from the presidency? Can the Speaker attempt to honor the vice presidential nomination after the president dies, and state that he will serve as Acting President only until the nomination is confirmed, and then be challenged by the president pro tempore of the Senate? When the Speaker attempts to hand over the presidency to the newly confirmed vice president, can the president pro tem say to the Speaker, "well, if you aren't going to grab for the job, I am," and snarl the intended transition?

What happens when there is no vice president and Article 4 of the 25th Amendment needs to be applied? Does present law actually state that the provision specifying the vice president shall then apply to the next in line of succession? What happens when the Acting President himself, either the Speaker or the president pro tempore of the Senate (if, for example, the Speaker were a naturalized citizen), falls under the conditions of Article 4 of the 25th Amendment? Does the next in line to him make the challenge which a vice president might have made, as to competence? Can the Acting President, absurdly, refuse to receive the transmission of the challenge, now claiming his Congressional role as specifically defined in that article?

I believe that there is a can of worms here. It would be better to sterilize it now in serenity, than to have it opened alive during a crisis.

Sincerely yours,

GILBERT S. BAHN.

CONTINUING THE ASSASSINATION INQUIRIES—THE PEOPLE MAKE THEIR CASE

HON. FLOYD J. FITHIAN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. FITHIAN. Mr. Speaker, I am inserting for the information of my colleagues an article which I consider to be critically important to the coming debate on renewing the life of the Select Committee on Assassinations.

Public concern over the many unanswered questions surrounding the deaths of President Kennedy and Dr. King has, from the start, been a powerful argument in favor of a thorough, independent reexamination of the two assassinations. The February Gallup Opinion Index, reprinted below, demonstrates conclusively that these public concerns which led to the creation of a Select Committee on Assassinations, are more important today than ever before.

It may be that we will never resolve all of the question surrounding the deaths of President Kennedy and Dr. King, but the figures cited in the Gallup opinion index indicate to me that it is incumbent upon us to at least continue to try. To do less would be to confirm a far deeper and more sinister suspicion held by a growing portion of the public—that our Government is callously cynical toward their concerns and their unanswered questions.

The article follows:

WERE KENNEDY, KING CONSPIRACY VICTIMS?

The belief that Lee Harvey Oswald acted alone in the assassinations of President John F. Kennedy is now almost totally without adherents.

As the House Select Committee on Assassinations opened its investigations, only 11 percent of the public told Gallup Poll interviewers they think Oswald acted alone in Dallas on November 22, 1963. The overwhelming majority, 81 percent, are convinced some other person or group of persons conspired with Oswald, and eight percent are unsure.

The same survey also reveals that most Americans think there was a conspiracy in the assassination of civil rights leader Dr. Martin Luther King. Approximately seven persons in 10, 69 percent, say James Earl Ray participated in a plot to kill King while only 18 percent think he planned and perpetrated the act alone. The remaining 13 percent are unsure.

Clearly, Americans have become increasingly skeptical of official explanations of the Kennedy assassination. Even from the beginning, though, they were of the opinion Oswald did not act alone.

One week after Kennedy was shot, 52 percent of the public said they thought more than one man was responsible for the President's death. And three years later, in January, 1967, doubts had not been dispelled. The 1967 survey did show though, that support for the one man theory had grown somewhat.

Opinion on the subject of these two events has, perhaps, been affected by surrounding events. For example, Oswald maintained from the time he was arrested that he did not shoot Kennedy, and even before official findings were presented, critics had begun to attack the one man theory. And Ray, although he pleaded guilty to King's murder, has subsequently changed his story and has tried to obtain a new trial to tell another story.

Now six Americans in 10, 61 percent, think conspiracies were at work in both shootings. Only five percent accept the official versions of both stories—that Oswald and Ray both acted alone.

Interestingly, there is little consistency between the single gun proponents. For example, among the people who think Ray acted alone, the overwhelming majority think Oswald had help in killing Kennedy. But, among those who think Oswald was alone, feeling about the King shooting is about evenly split.

FEELING WIDESPREAD

Opinion in the case of the Kennedy assassination is basically the same up and down the socio-economic scale, with not more than one person in seven in any one demographic group holding to the belief Oswald acted alone. Most skeptical are those under 30 years old, among whom nine in 10, 88 percent, feel Oswald was but one element in a plot to murder the President.

Disbelief in the King case is similarly widespread, although not as one-sided as in the case of President Kennedy. Particularly skeptical in the King puzzle are non-whites, among whom 84 percent are convinced Ray had help in his act.

WHO INVOLVED?

When it comes to point the finger of blame in the Kennedy assassination, Americans mention a wide variety of possible coconspirators.

Most often mentioned are Cuban elements. Led by the college-educated Republicans, professional and business people, and those in the highest-income bracket, 15-percent of Americans, nationwide, say they think a group of Cubans and/or Cuban Premier Fidel Castro helped orchestrate Kennedy's death. Aside from Cubans, groups prominently mentioned include: other American politicians, Communists, and the CIA. While a number of groups and individuals are connected by the public to Oswald, 24 percent are unable to single out a specific person or persons.

DO U.S. BANKS MAKE OUR FOREIGN POLICY?

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1977

Mr. FINDLEY. Mr. Speaker, I was startled last week upon being informed by the Congressional Research Service that U.S. bank loans to nonoil less developed countries totaled $45 billion as of yearend 1976. I was no less disturbed when the Sunday Washington Post arrived, carrying a front page article entitled "Banks, Not U.S., Now Give Brazil Its Foreign Aid." The Washington Post article describes how the Brazilians "thumbed their noses" and canceled a 25-year military agreement with the United States last week in response to a State Department report which described human rights violations in that country. According to the article, Brazil now has $27 billion in foreign loans, including $10 billion from U.S. banks and their foreign branches. In contrast, Brazil was getting about $300 million a year in U.S. grants and loans at the height of our foreign aid program in the mid-sixties. The evidence suggests that other countries, too, increasingly are turning to U.S. banks as a major source of "no strings" financial support.

I long have supported the free enterprise system at home and abroad. But I fear that our private lending institutions are being used by some countries to circumvent international commitments of critical importance to world peace and stability. I am also concerned that U.S. banks, as a result of lending practices overseas, may someday find themselves in the position of speaking primarily to the American people on behalf of foreign interests rather than speaking primarily to foreign countries on behalf of the United States. Finally, if foreign countries now find it easy to "thumb their noses" at the U.S. Government, what remedy will U.S. banks have if the "international thumb" gets pointed at them, and foreign countries begin to default on their loans?

Mr. Speaker, I urge my colleagues to read the Washington Post article, which follows, with this perspective in mind: Do U.S. banks make our foreign policy?:

BANKS, NOT UNITED STATES, NOW GIVE BRAZIL ITS FOREIGN AID

(By Don Oberdorfer)

When a State Department report on human rights violations was released last month with criticism of Brazil, the Brazilians thumbed their noses and last week canceled a 25-year military assistance agreement with the United States.

It was a painless act because the Brazilians are no longer dependent on foreign aid handouts. The international banking community has become the underwriter of Brazil's economic and military development.

The Brazilians now have $27 billion in foreign loans outstanding, including $10 billion from U.S. banks and their foreign branches. New York's Citibank alone holds more than $2 billion in Brazilian loans.

These sums dwarf the amount of U.S. assistance to Brazil at the height of the foreign aid program in the mid-1960s. At that time, Brazil was getting about $300 million a year in grants and loans.

In other Latin American countries, too, international banking institutions are supplanting U.S. foreign aid as a primary source of financial support. Argentina, El Salvador, Guatemala and Uruguay, like Brazil, responded to U.S. human rights criticisms by rejecting further U.S. aid.

This new sense of independence from U.S. government policies is reflected in the new military situation in Latin America.

In the 1960s, the United States provided 35 to 40 per cent of all the armaments sold in America and financed many of the purchases with dollar grants. Today, studies indicate that the U.S. provides only 14 per cent of Latin American arms purchases that are now running at an annual rate of 2 billion.

The shift from U.S. bilateral aid to bank lending as a source of funds has sharply reduced Washington's leverage. When Secretary of State Cyrus R. Vance displayed open concern over Brazil's nuclear deal with West Germany a few weeks ago, for example, Rio's prestigious Journal do Brazil assured its readers that there was nothing to fear. Quoting unnamed official sources the paper reported that "the capacity of the U.S. government to apply pressure on Brazil is miniscule or nil, because the main economic transactions with the U.S. are handled through private bank loans rather than governmental aid."

What the paper called "a qualified source" was quoted as saying, "We are an important customer and it would hurt them (the banks) to lose this client." The same source added facetiously" that "the main U.S. bankers are Republicans."

The senior vice president of a New York bank which has large loans in Brazil said U.S. government officials have made no effort to apply pressure through the banks on Brazilian policy toward nuclear development, human rights or other issues. He said U.S. official concerns could not be transmitted through the banks.

"Our people feel quite strongly that we run the banks, that it's our credit risk," he said. Officials of two other New York financial institutions echoed his attitude.

A State Department official with Latin responsibilities said that "Brazil sees in us the prime source of investments, markets, science and technology, but these are hard levers to use." Another State Department official said, "I don't think we have very much leverage. Trade is the big thing but this involves U.S. interests. You can't say to Brazil that we'll take all your shoes if you do this or that, because the U.S. shoe industry wouldn't stand for it."

Brazil has a financial stake in President Carter's decision expected early next month, whether to accept sharply increased tariffs on shoe imports recommended by the U.S. International Trade Commission. However, Italy, Spain, Taiwan and South Korea have larger U.S. imports than Brazil and thus are likely to figure more importantly in Carter's decision.

A giant of a country which is by far the largest in Latin America in population as well as areas, Brazil and its policies are of major importance in many fields. In its present form the nuclear deal with West Germany, for example, includes a fuel "reprocessing" plant capable of manufacturing atomic bomb material and thus eventually bringing atomic weapon capabilities to the back door of the United States. The human rights attitudes and policies of this big, important country—to take another example—are watched keenly by its neighbors.

Brazil is only one of many countries where directly applied U.S. government power has declined as foreign aid has given way to trade and bank loans, and as U.S. military assistance, military presence and the possibility of paramilitary "covert operations" have diminished.

President Carter's open, emphatic and unilateral policies on nuclear proliferation and human rights—in the face of declining U.S. power—touched special sensitivities in Brazil. This is particularly so because only 13 months ago Secretary of State Henry A. Kissinger signed a formal agreement pledging to consult Brazil on matters of world as well as bilateral importance.

Brazil's cancellation of the 1952 military assistance agreement with the United States was intended to dramatize its independence.

According to Morgan Guaranty Trust's "World Financial Markets," Brazil borrowed at least $740 million in publicized loans from foreign bank branches in 1973; $1.6 billion in 1974; $2.1 billion in 1975; and $3.1 billion in 1976. Last year's borrowing by Brazil was more than 10 per cent of the worldwide total of $28 billion borrowed by all nations in 1976 in the foreign "Euromoney" markets.

A New York financial source who has followed Brazil closely said the actual total for last year might be close to $4 billion, including unpublicized transactions. The source said Brazil is "a preferred borrower" because it has always met its debt payments, and because it is a big country with large U.S. trade.

A banking magazine recently reported that the "alarming increase" in Brazil's overseas debts had made it more difficult to arrange loans for that country. However, fast-climbing coffee prices have doubled and redoubled Brazil's foreign revenues in the past few months, improving the country's financial standing.

A Citibank briefing for New York financial analysts recently estimated that Brazil's coffee earnings will sharply diminish its trade deficit and could even produce a trade surplus in 1977 if prices stay high and Brazil exercises reasonable control over imports.

Armed with this good fortune, Brazil's international borrowing boom may continue. There is no indication that the disputes with the United States over nuclear policy and human rights will have nearly as much effect on Brazil as the price of coffee.

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977 calls for establishment of a system for and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

As an interim procedure until the computerization of this information becomes operational, the office of the Senate Daily Digest will prepare such information daily for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Wednesday, March 23, may be found in the Daily Digest section of today's RECORD.

The schedule follows:

MEETINGS SCHEDULED

MARCH 24

9:30 a.m.
Human Resources
Alcoholism and Narcotics Subcommittee
To hold oversight hearings on existing alcohol and drug abuse education programs, and proposed legislation to extend such programs.
Until: 12:30 p.m. 4232 Dirksen Building
Appropriations
Interior Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1976 for the Smithsonian Institution.
1114 Dirksen Building
Commerce, Science, and Transportation
Subcommittee on Aviation
To hold hearings on bills proposing regulatory reform in the air transportation industry, including S. 292 and S. 689.
Select Nutrition and Human Needs
To resume hearings to examine the relationship between diet and health, to receive testimony on beef consumption.
457 Russell Building

10:00 a.m.
Banking, Housing, and Urban Affairs
To hold hearings on S. 406, the proposed Community Reinvestment Act.
5302 Dirksen Building
Commerce, Science, and Transportation
Surface Transportation Subcommittee
To hold hearings on S. 922 authorizing funds for fiscal year 1978 for the U.S. Railway Association, and on funds for the Office of Rail Public Counsel within the Interstate Commerce Commission.
235 Russell Building
Energy and Natural Resources
To hold oversight hearings on proposal for an international petroleum transshipment port and storage center to be located on the Palau District, Western Caroline Islands, Trust Territory of the Pacific Islands.
3110 Dirksen Building
Energy and Natural Resources
Subcommittee on Energy Research and Development
To hold hearings on proposed authorization for fiscal year 1978 for the Energy Research and Development Administration.
4200 Dirksen Building
Governmental Affairs
To continue hearings on S. 591 and 826 to establish a Department of Energy in the Federal Government to direct a coordinated national energy policy.
3302 Dirksen Building
Governmental Affairs
Subcommittee on Intergovernmental Relations
To hold hearings on S. 2, to require reauthorization of Government programs at least every five years (proposed Sunset Act).
6226 Dirksen Building
Human Resources
Health and Scientific Research Subcommittee
To meet with officials of the Office of Technology Assessment to discuss proposed evaluation by OTA of the Food and Drug Administration ban on Saccharin.
Until: 12 noon 4232 Dirksen Building

10:30 a.m.
Appropriations
To consider H.R. 4877, making supplemental appropriations for fiscal year 1977.
S-128, Capitol

11:00 a.m.
Foreign Relations
Foreign Assistance Subcommittee
To hold hearings on proposed legislation to authorize funds for bilateral development assistance.
4221 Dirksen Building

2:00 p.m.
Appropriations
Foreign Operation Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for foreign aid programs, to hear officials of AID.
1318 Dirksen Building
Appropriations
Labor-HEW Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for higher education, welfare programs, and for library resources.
S-128, Capitol

3:30 p.m.
Banking, Housing, and Urban Affairs
To resume consideration of S. 69 and 92, to amend and extend the Export Administration Act.
5302 Dirksen Building

MARCH 25

9:00 a.m.
Agriculture, Nutrition, and Forestry
Subcommittee on Nutrition
To hold oversight hearings on the food stamp program.
322 Russell Building
Foreign Relations
Foreign Assistance Subcommittee
To hold hearings on proposed legislation to authorize funds for bilateral development assistance.
4221 Dirksen Building

9:30 a.m.
Commerce, Science, and Transportation
Subcommittee on Aviation
To hold hearings on bills proposing regulatory reform in the air transportation industry, including S. 292 and S. 689.
5110 Dirksen Building
Human Resources
Alcoholism and Narcotics Subcommittee
To continue oversight hearings on existing alcohol and drug abuse education programs, and proposed legislation to extend such programs.
Until 12:30 p.m. 1224 Dirksen Building

10:00 a.m.
Appropriations
Defense Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for the Defense Establishment, to hear congressional witnesses.
1223 Dirksen Building
Appropriations
Labor-HEW Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for programs for education of the handicapped, and for occupational, vocational, and adult education programs.
S-128, Capitol
Banking, Housing, and Urban Affairs
To hold hearings on S. 406, the proposed Community Reinvestment Act.
5302 Dirksen Building
Commerce, Science, and Transportation
Merchant Marine and Tourism Subcommittees
To hold oversight hearings on ocean shipping practices.
235 Russell Building
Energy and Natural Resources
Subcommittee on Energy Research and Development
To continue hearings on proposed authorizations for fiscal year 1978 for Energy Research and Development Administration.
3110 Dirksen Building
Government Affairs
To continue hearings on S. 591 and 826, to establish a Department of Energy in the Federal Government to direct a coordinated national energy policy.
3302 Dirksen Building
Human Resources
To hold hearings on the nominations of Mary Berry of Colorado, to be Assistant Secretary of HEW for Education, and Ernest L. Boyer, of New York, to be Commissioner of Education.
Until 12 noon 4232 Dirksen Building

11:00 a.m.
Veterans' Affairs
To hold hearings on the nominations of recommendations for 1977 from officials of Amvets.
Until Noon. 1202 Dirksen Building

MARCH 28

9:00 a.m.
Appropriations
Agriculture Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1978 for the Department of Agriculture, to hear public witnesses.
6202 Dirksen Building

9:30 a.m.
Commerce, Science, and Transportation
Subcommittee on Aviation
To hold hearings on bills proposing regulatory reform in the air transportation industry, including S. 292 and S. 689.
5110 Dirksen Building

10:00 a.m.
Appropriation
HUD-Independent Agencies Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1978 for the Department of Housing and Urban Development.
1318 Dirksen Building
Appropriations
Public Works Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for public works projects, to hear Members of Congress and public witnesses.
Room to be announced
Appropriations
Transportation Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for the Federal Aviation Administration.
1224 Dirksen Building

Commerce, Science, and Transportation
Communications Subcommittee
To resume hearings to inquire into domestic communications common carrier policies (i.e., telephone, computer, etc.).
1202 Dirksen Building

Energy and Natural Resources
Subcommittee on Energy Research and Development
To continue hearings on proposed authorizations for fiscal year 1978 for Energy Research and Development Administration's nuclear budget.
3110 Dirksen Building

Governmental Affairs
Energy Subcommittee
To hold hearings on S. 897, to strengthen U.S. policies on nuclear nonproliferation, and to reorganize certain nuclear export functions.
3302 Dirksen Building

Governmental Affairs
Subcommittee on Intergovernmental Relations
To resume hearings on S. 2, to require reauthorization of Government programs at least every 5 years (proposed Sunset Act).
6226 Dirksen Building

1:30 p.m.
Appropriations
Agriculture Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for the Department of Agriculture, to hear public witnesses.
6202 Dirksen Building

2:00 p.m.
Appropriations
Public Works Subcommittee
To continue hearing on proposed budget estimates for fiscal year 1978 for public works projects, to hear Members of Congress and public witnesses.
Room to be announced

MARCH 29

9:00 a.m.
Appropriations
Agriculture Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1978 for the Department of Agriculture, to hear public witnesses.
6202 Dirksen Building

9:30 a.m.
Agriculture, Nutrition, and Forestry
Subcommittee on Rural Development
To hold hearings on medicare reimbursements for rural health care clinics.
322 Russell Building

Commerce, Science, and Transportation
Subcommittee on Aviation
To continue hearings on bills proposing regulatory reform in the air transportation industry, including S. 292 and S. 689.
5110 Dirksen Building

10:00 a.m.
Appropriations
Defense Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1978 for the Defense Establishment, to hear congressional witnesses.
1223 Dirksen Building

Appropriations
HUD-Independent Agencies Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1978 for the Department of Housing and Urban Development.
1318 Dirksen Building

Appropriations
Labor-HEW Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1978 for the Office of Human Development.
S-128, Capitol

Appropriations
Public Works Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for public works projects, to hear Members of Congress and public witnesses.
Room to be announced

Energy and Natural Resources
*Energy Production and Supply Subcommittee
To continue hearings on S. 977, to conserve gas and oil by fostering increased utilization of coal in electric generating facilities and in major industrial installations.
3110 Dirksen Building

Governmental Affairs
To continue hearings on S. 591 and S. 826, to establish a Department of Energy in the Federal Government to direct a coordinated national energy policy.
3302 Dirksen Building

Governmental Affairs
Subcommittee on Intergovernmental Relations
To continue hearings on S. 2, to require authorization of Government programs at least every 5 years (proposed Sunset Act).
6226 Dirksen Building

Select Intelligence
Subcommittee on Budget Authorization
To resume closed hearings on proposed fiscal year 1978 authorizations for Government intelligence activities.
S-407, Capitol

1:30 p.m.
Appropriations
Agriculture Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1978 for the Department of Agriculture, to hear public witnesses.
6202 Dirksen Building

2:00 p.m.
Appropriations
Labor-HEW Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for the National Technical Institute for the Deaf; the American Printing House for the Blind; Gallaudet College, and Howard University.
S-128, Capitol

Appropriations
Public Works Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for public works projects, to hear Members of Congress and public witnesses.
Room to be announced

*Commerce, Science, and Transportation
To hold hearings on the nomination of Joan Buckler Claybrook, of Maryland, to be Administrator of the National Highway Traffic Safety Administration.
5110 Dirksen Building

MARCH 30

9:00 a.m.
Appropriations
Agriculture Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for the Department of Agriculture, to hear Secretary Bergland.
1224 Dirksen Building

9:30 a.m.
Appropriations
Interior Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1978 for the National Park Service.
1114 Dirksen Building

Commerce, Science, and Transportation
Subcommittee on Aviation
To continue hearings on bills proposing regulatory reform in the air transportation industry, including S. 292 and S. 689.
235 Russell Building

10:00 a.m.
Agriculture, Nutrition, and Forestry
Subcommittee on Agricultural Production, Marketing and Stabilization of Prices
To hold oversight hearings on problems of flue-cured tobacco farmers.
322 Russell Building

Appropriations
Defense Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for the Defense Establishment, to hear congressional witnesses.

CANCELLATION
MARCH 29

10:00 a.m.
Commerce, Science, and Transportation
To hold hearings on the nominations of Charles Linn Haslam, of North Carolina, to be general counsel, Department of Commerce; Elsa Allgood Porter, of Virginia, and Frank Alan Weil, of New York, each to be an Assistant Secretary of Commerce.

HOUSE OF REPRESENTATIVES—*Wednesday, March 23, 1977*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

This is the day which the Lord hath made; we will rejoice and be glad in it.—Psalms 118: 24.

Eternal Father, whose laws rule the universe, whose glory fills the skies, and whose love endures forever, we thank Thee for this new day fresh from Your hands, for life and liberty in this challenging age, for work to do, and for strength to do it.

Amid the experiences and the events of these hours help us to keep our record true—

By thinking without confusion clearly;
By loving our fellow men sincerely;
By acting from honest motives purely;
By trusting in Thee and heaven securely.

Because we serve our country well this day may we at eventide be at peace with ourselves, with our fellow creatures, and with Thee. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Chirdon, one of his secretaries, who also informed the House that on March 21, 1977, the President approved and signed a joint resolution of the House of the following title:

H.J. Res. 269. Joint resolution making an urgent supplemental appropriation for the fiscal year ending September 30, 1977, for disaster relief.

WHAT'S FOR LUNCH TODAY, MR. SECRETARY CALIFANO?

(Mr. KOSTMAYER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KOSTMAYER. Mr. Speaker, it is not unusual for a newsstory about something happening in the huge and complex Department of Health, Education, and Welfare to trigger questions in the Halls of Congress.

The story in today's Washington Post that HEW Secretary Joseph A. Califano, Jr., has hired his own chef though poses a different sort of question for the head of this multibillion-dollar superagency?

That question, Mr. Speaker, is: What's for lunch today, Mr. Secretary?

I am very disappointed to learn while HEW still has not been able to figure out a way to guarantee a nutritious, hot lunch every day for schoolchildren in our country, Secretary Califano, nevertheless, in a classic example of bureaucratic maneuvering and attempted coverup, has figured out a way to get his own personal chef on the Government payroll as well as provide the chef with a Government car, an assistant, and a $12,763 a year salary.

Secretary Califano should try dining out at lunch the way President Carter did last week when he visited West Virginia. At that time the most powerful leader of the free world and Gov. Jay Rockefeller of that State sat down in the cafeteria of the State capital to a lunch of cheeseburgers and french fries.

What is good enough for Jimmy and Jay should also be good enough for Joe. He should realize what they already know—"There ain't no free lunch."

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 3965, AUTHORIZING RESEARCH, DEVELOPMENT, AND DEMONSTRATION PROJECTS FOR AVIATION

Mr. LONG of Louisiana, from the Committee on Rules, submitted a privileged report (Rept. No. 95–107) on the resolution (H. Res. 430), providing for consideration of H.R. 3965, to authorize research, development, and demonstration projects relating to aviation, and for other purposes, which was referred to the House Calendar and ordered to be printed.

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 4991, AUTHORIZING APPROPRIATIONS FOR NATIONAL SCIENCE FOUNDATION

Mr. LONG of Louisiana, from the Committee on Rules, submitted a privileged report (Rept. No. 95–108) on the resolution (H. Res. 431) providing for consideration of H.R. 4991, to authorize appropriations for activities of the National Science Foundation, and for other purposes, which was referred to the House Calendar and ordered to be printed.

PERMISSION FOR COMMITTEE ON RULES TO FILE CERTAIN PRIVILEGED REPORTS

Mr. LONG of Louisiana. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file certain privileged reports.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

Mr. BAUMAN. Mr. Speaker, reserving the right to object, will the gentleman tell us what the reports are?

Mr. LONG of Louisiana. If the gentleman will yield, the Committee on Rules yesterday heard House Resolution 420, establishing a Select Committee on Congressional Operations, and in lieu of the commission that had originally been recommended to the Committee on Rules, we marked up the bill yesterday. We are in the process now of finishing the final report on it, and we hope to have it ready sometime this afternoon for filing with the House.

Mr. BAUMAN. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

LOUISIANA YAMS

(Mr. LONG of Louisiana asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. LONG of Louisiana. Mr. Speaker, today, in cooperation with the Louisiana Sweet Potato Commission, I am inviting my colleagues to stop by the House restaurant to try a baked Louisiana yam with lunch.

There is no better time to try this unique Louisiana product than now, when Washington, and indeed the whole Nation, is becoming increasingly better acquainted with the good things the South has to offer. Yams, whether baked, boiled, or candied, have been familiar items on southern menus for generations. In fact, whole families in the South survived the hard years after the Civil War on a diet consisting of little more than sweet potatoes.

The yams which are being served today, however, are a much improved version of what we have been enjoying all these years. It was through research carried out by Dr. Julian Miller and his research team at Louisiana State University that has given us the superb Centennial yam of present days. It is the product of many years of genetic crossbreeding and refinement that is grown and processed today in Louisiana and shipped all over the Nation.

Sweet potatoes are more than just a tasty southern favorite: They are one of the foods highest in carotene—a substance which the body converts to vitamin A, which is essential for good night vision, as well as healthy bones, skin, and teeth. Yams contain almost twice the minimum daily requirement of vitamin A, as well as a substantial amount of vitamin C and other required nutrients.

Many of the most famous yam recipes are synonymous with the finest traditions in southern—and particularly Louisiana—cooking. I hope you will join me in enjoying these tasty nutritious yams in our House restaurant today.

HOUSE CONCURRENT RESOLUTION 171 RELATING TO CURRENT CRISIS CONFRONTING GOVERNMENT OF ZAIRE

(Mr. DERWINSKI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DERWINSKI. Mr. Speaker, I want to call to the attention of the Members a resolution which I introduced yesterday. House Concurrent Resolution 171 addresses itself to the current crisis confronting the Government of Zaire. President Carter deserves congressional commendation rather than congressional criticism for extending aid to Zaire, which is under attack by an invading force from Angola. I also think the United Nations and its Security Council should make an immediate investigation into the blatant violation of Zaire's sovereignty with the objective of finding a speedy and peaceful solution.

In any realistic assessment of developments in Zaire today, the finger of blame must be pointed at the 94th Congress. It was that Congress which prohibited President Ford from aiding elements in Angola which were resisting a Soviet-Cuban-backed minority. It was that action by Congress which contributed to the ascendancy of a Marxist regime that now is apparently abetting and arming a rebel force, possibly trained by Cubans or Soviets or both, which is presently invading Zaire from a staging area in Angola.

The invasion of Zaire represents a serious threat to world peace and to Zaire's critically important copper industry in Shaba Province. The loss of Shaba Province probably would topple the Zaire Government and in the process, jeopardize the security of neighboring Zambia.

The demise of the Government of Zaire, one of the few allies the United States has in black Africa, would most assuredly lead to the installation of another Marxist-oriented regime in Africa

and a concomitant increase in Soviet influence in an area laden with strategically important reserves.

Instead of turning our back on the President, we should stand up and support him in responding positively to what has become a genuine threat to world peace.

CALL OF THE HOUSE

Mr. WRIGHT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The call was taken by electronic device, and the following Members failed to respond:

[Roll No. 91]

Andrews, N.C.	Drinan	Russo
Andrews, N. Dak.	Eilberg	Sarasin
	Foley	Scheuer
Archer	Harsha	Shuster
Bonior	Heckler	Sisk
Bonker	Holland	Solarz
Brodhead	Johnson, Colo.	Staggers
Burton, John	Lederer	Steed
Cederberg	McKay	Teague
Chisholm	Milford	Udall
Conyers	Montgomery	Wiggins
Davis	Murphy, N.Y.	Wilson, C. H.
Derrick	Myers, Gary	Young, Alaska
Diggs	Patterson	Young, Tex.
Dodd	Rose	

The SPEAKER pro tempore (Mr. NATCHER). On this rollcall 389 Members have recorded their presence by electronic devise, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

THE WESTERN AND PLAINS STATES DROUGHT—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 95–109)

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, without objection, referred to the Committee of the Whole House on the State of the Union and ordered to be printed:

To the Congress of the United States:

Over the past two years, many of the Western and Plains states of our nation have been victims of a prolonged, severe drought. The effects of the drought have built up over many months, and they will take a long time to correct. Even long periods of rain would not wholly relieve the problem now.

The human and economic costs of the drought have been high. It has jeopardized municipal water supplies, damaged crops and pastureland and depleted livestock numbers. The drought has inflicted financial hardship on countless farmers, ranchers, businessmen and others, and it continues to pose a serious threat to their livelihood.

The Federal government has already made available almost a billion dollars in drought assistance through loans and cost-sharing programs. Although we do not have enough money to meet every requirement or indemnify every loss, we can provide additional help in certain areas. I am recommending a variety of assistance programs which will be applied in each area depending on how severely the drought has affected the people of that region.

In addition, we can encourage water conservation through several existing government programs. In many cases, water conservation is our only hope for immediate relief. As a nation, we *must* begin to conserve our water supplies, and government—at all levels—must lead the way.

The measures I propose will allocate benefits fairly, will mitigate some of the worst effects of the drought, and will support individuals and communities in their efforts to conserve water. Some of these proposals will require modification of existing programs or additional funding. Others will require totally new legislation. All of these will be temporary authorities; they are designed to cope with short-term problems, and they will expire on September 30, 1977.

Specifically, I propose the following legislative actions:

—New temporary authority to allow the Economic Development Administration and the Farmers Home Administration to provide $150 million in grants and $300 million in low-interest (5%) loans to communities for emergency water system improvements which can be completed quickly and which are essential to protect public health and safety.

—Establishment of a new Small Business Administration drought assistance loan program to provide $50 million in low-interest (5%) loans to small businesses in major drought designated areas.

—Establishment of a new Farmers Home Administration drought assistance loan program in which prospective losses can be included. This program will provide $100 million in 5 percent loans to farmers and ranchers in major drought designated areas.

—New legislation to authorize the Secretary of the Interior to provide $100 million in low-interest (5%) loans to purchasers of water. (Endorsement of the water bank objectives of S–925).

—Supplemental funds totaling $14 million for the Southwestern Power Administration to ensure adequate energy supplies.

—Supplemental funds in the amount of $30 million to the Bureau of Reclamation to provide assistance to irrigations on Federal Reclamation projects.

—Transfer to the Department of Agriculture from the Federal Disaster Assistance Administration authority to administer and fund the Emergency Livestock Feed Program.

—Supplemental funds to the Agricultural Stabilization and Conservation Service in the amount of $100 million to provide for cost-sharing of emergency soil conservation practices.

In addition, I have directed the following administrative measures:

—The Secretaries of Agriculture and Interior will make available additional Federal lands for grazing and issue emergency permits as appropriate.

—The Secretary of Agriculture will take administrative steps to ensure that trained firefighters and essential equipment are available to meet the increased danger of forest and wildfires.

When added to the supplemental appropriation of $200 million for disaster assistance, these new legislative proposals will provide almost $1 billion in additional drought assistance and bring to almost $2 billion the assistance provided by the Federal Government.

I believe the legislative proposals and administrative actions outlined above offer the best possibility of providing immediate assistance to meet the needs of some of our fellow Americans in this period of crisis. I urge immediate consideration of the legislative proposals and their timely adoption. If we are to be of real help to the people afflicted, time is of the essence.

JIMMY CARTER.

THE WHITE HOUSE, *March 23, 1977.*

PROVIDING FOR CONSIDERATION OF H.R. 4250, EQUAL TREATMENT OF CRAFT AND INDUSTRIAL WORKERS

Mr. MEEDS. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 423 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 423

Resolved, That upon the adoption of this resolution it shall be in order to move, section 402(a) of the Congressional Budget Act of 1974 (Public Law 93–344) to the contrary notwithstanding, that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4250) to protect the economic rights of labor in the building and construction industry by providing for equal treatment of craft and industrial workers and to establish collective-bargaining procedures in the construction industry. After general debate, which shall be confined to the bill and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Education and Labor, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider the amendment in the nature of a substitute recommended by the Committee on Education and Labor now printed in the bill as an original bill for the purpose of amendment under the five-minute rule, and said substitute shall be read for amendment by titles instead of by sections. At the conclusion of such consideration, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or to the committee amendment in the nature of a substitute. The previous question shall be considered as ordered on

the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions.

The SPEAKER pro tempore. The gentleman from Washington (Mr. MEEDS) is recognized for 1 hour.

Mr. MEEDS. Mr. Speaker, I yield 30 minutes to the gentleman from California (Mr. DEL CLAWSON), pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 423 provides for consideration of the bill (H.R. 4250) to protect the economic rates of labor in the building and construction industry by providing for equal treatment of craft and industrial workers and to establish collective bargaining procedures in the construction industry.

Mr. Speaker, this is an open rule providing 2 hours of debate, making the committee substitute in order as an original bill for the purpose of amendment, and providing for one motion to recommit with or without instructions.

This rule also waives points of order against the consideration of the bill for failure to comply with section 402(a) of the Congressional Budget Act of 1974. The gentleman from New Jersey (Mr. THOMPSON), the chairman of the subcommittee reporting this legislation, will offer an amendment to correct this violation by striking section 212 of the bill. In hearing before the Rules Committee the gentleman from New Jersey (Mr. THOMPSON) explained that in drafting in the committee it escaped the notice of everyone that title II of H.R. 4250 authorized the appropriation of funds under that title.

H.R. 4250 comprises common situs picketing legislation as well as legislation to establish a national framework for collective bargaining in the construction industry. According to the House Committee on Education and Labor, this bill before us today is the same in all major aspects to the conference version of H.R. 5900 of the 94th Congress, which was vetoed by President Ford on January 2, 1976. I would hope that my colleague from New Jersey (Mr. THOMPSON) would discuss in his statement any minor variations, which I understand exist between this bill and the conference version vetoed by the President.

In 1947, the Taft-Hartley amendments to the National Labor Relations Act outlawed secondary boycotts—activity on the part of unions which negatively affects third party neutrals. Title I of H.R. 4250 amends the National Labor Relations Act to provide for equal treatment of building and construction trade unions during strikes which take place at construction job sites. It is designed to overturn a 1951 Supreme Court interpretation of section 8(b)(4)(B) of the National Labor Relations Act in *NLRB* v. *Denver Building Trades*, 341 U.S. 675. In the Denver case, the Supreme Court held that because the general contractor and the subcontractor on a building site were separate business entities they were to be treated as neutrals with respect to each other's labor disputes. Accordingly, a union having a controversy with one contractor could not picket the other contrators and subcontractors at the jobsite without engaging in a secondary boycott.

Employees on an industrial or manufacturing site are not faced with the same problem. In its decision in the General Electric case, the Supreme Court in 1961 refused to apply the principles of the Denver decision to an industrial site. Instead it adopted a "work relatedness" test: All employers engaged in work at the common situs may be picketed, except those not engaged in work related to the normal operations of the primary employer.

According to the committee report, title I is designed to recapture the original intent of the provisions of section 8(b)(4)(B) by redefining what constitutes primary activity and secondary activity in the construction industry. The bill applies the primary-secondary dichotomy to the construction industry by providing that all those engaged in a single construction project are a single person for the purpose of the secondary boycott provisions. H.R. 4250 thus reverses the reasoning and result of the Denver case and embodies the connected work test in the General Electric case to the construction industry.

The committee, as my colleague will portray, has taken steps to limit title I of this bill to common situs picketing in the building trades and to provide safeguards so that this amendment does not proliferate to other construction work problems and to other aspects of labor relations prohibited or authorized by the National Labor Relations Act, as amended.

Title II of H.R. 4250 creates the Construction Industry Collective Bargaining Committee—CICBC—the purpose of which is to bring about greater labor relations stability by establishing a new national collective bargaining framework for settlement of labor disputes in the construction industry.

Title II of the bill would continue and expand upon the approach under Executive orders in 1969, 1971, and 1975 which established the Construction Industry Collective Bargaining Commission, the Construction Industry Stabilization Committee, and the Collective Bargaining Committee in Construction. It is designed to create a labor relations structure in the construction industry which can reflect and effectively promote the national interest in diminishing inflationary wage settlements, unproductive manpower utilization, and prolonged work stoppages.

The title's principal focus is the establishment of a tripartite national Construction Industry Collective Bargaining Committee—CICBC—to oversee bargaining in the industry. The committee, appointed by the President, will be composed of 10 members representing the viewpoint of employers, 10 members representing the viewpoint of national labor organizations, and up to three public members representing the public. By creating this committee, the bill establishes a forum for the expression of these national labor organizations and national contractor organizations in local and regional collective bargaining.

The CICBC will be responsible for identifying key construction industry collective bargaining situations for their possible pattern-setting impact on bargaining in the industry. Parties to a collective bargaining agreement would be required to give the committee 60 days notice of proposed termination. If the committee decides to take jurisdiction, it would have up to 90 days—including the 60-day notice period—to help resolve any dispute by meeting with interested parties or by referring them to voluntary national craft or branch boards.

This title also provides responsibilities and standards for committee action and requires the committee to make annual reports to the President and Congress. The committee's authority would expire on December 31, 1980.

Mr. Speaker, I urge adoption of the rule and passage of H.R. 4250.

Mr. DEL CLAWSON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, House Resolution 423 provides an open rule with 2 hours of general debate for the consideration of H.R. 4250—the equal treatment of craft and industrial workers' bill, otherwise known as common situs picketing. The rule provides that the committee substitute shall be in order as an original bill for the purpose of amendment; that the substitute be read for amendment by titles rather than by sections; and that there may be one motion to recommit with or without instructions. The rule also waives section 402(a) of the Budget Act of 1974, since section 212 of the bill grants funding authority for fiscal year 1977 and the bill was not reported in time to meet the May 15 reporting deadline.

The purpose of H.R. 4250 is to exempt the building and construction trade unions from the secondary boycott provisions of the National Labor Relations Act. The bill would legalize secondary boycotts in the construction industry, a practice made illegal by the passage of the Taft-Hartley Act in 1947 and the Landrum-Griffin Act of 1959.

Mr. Speaker, the passage of this legislation could result in a union being able to close down an entire construction project because of a dispute with one subcontractor even though the other subcontractors are not involved in the dispute. I believe this violates the principle and congressional intent of the National Labor Relations Act. I would like to quote from an editorial which appeared in the New York Times on March 12, 1977, since it seems to put this bill into perspective.

If all the building workers on a site were members of the same local, its leaders would surely hesitate before throwing up a picket line that would inconvenience all of its members for the benefit of a few. In any event, the building trades unions have had the same opportunity as other workers to coalesce into a single union. Since they have chosen to continue their separateness, why

bless them legally with the benefits of the togetherness which they have rejected?

Mr. Speaker, the issue of common situs picketing in the construction industry has been debated in the courts and in the Congress for over a quarter of a century. Through big union pressure, a bill such as H.R. 4250 has been considered in each Congress since 1949 and the prohibition against common situs picketing has stood the test of time.

The trade unions would like you to believe that this legislation is necessary for the protection of the laborers in the construction industry. However, anyone knowledgeable about the wage scale for the building trades would know that they are the highest wage scales in any organized labor segment in the country. The problem with the construction industry is not unjust wage scales but rather unemployment. In 1976 the construction industry had an unemployment rate of 15.6 percent as compared with a national unemployment rate—which includes construction—of 7.7 percent. There has been double-digit unemployment in construction in every year since 1970 except 1973. This piece of legislation can do nothing but increase these astounding unemployment figures.

Mr. Speaker, taking these facts into consideration, I must urge my colleagues to defeat this ill-advised bill here and now by defeating the rule.

Mr. MEEDS. Mr. Speaker, I yield 5 minutes to the gentleman from New Jersey (Mr. THOMPSON).

Mr. THOMPSON. Mr. Speaker, I rise in support of H.R. 4250.

Among the many absolutely false issues raised by opponents of H.R. 4250 is the claim that the bill is being railroaded through this House, one journalistic critic went so far as to accuse the chairman of pushing this through in a "tearing rush." This assertion is nothing short of ludicrous in the light of some 25 years of consideration of similar measures here and in the other body. The record is extensive and well established.

Efforts to overrule the Denver Building Trades Council case—have persisted since the NLRB handed down its decision in 1949. President Truman initiated the efforts when, in his state of the Union message, he requested a number of reforms in the National Labor Relations Act, including the reversal of Denver. Such a bill was introduced by Mr. Lesinski and approved by the Education and Labor Committee. When the bill reached the floor, there was opposition to other provisions in the omnibus bill, and the bill was recommitted to the committee without a vote on the Denver provisions.

President Eisenhower was the second President to attempt to have Denver overruled. In a 1954 message to Congress the President made the following recommendation:

> I recommend that the act be clarified by making it explicit that concerted action against an employer on a construction project who, together with other employers, is engaged in work on the site of the project, will not be treated as a secondary boycott.

(President's labor-management relations message, H. Doc. No. 291, Jan. 11, 1954.)

Thereafter, Republican Senator Alexander Smith of New Jersey introduced legislation which was favorably reported by the Senate Labor and Public Welfare Committee after extensive hearings. When the bill reached the floor, a number of antiunion amendments were adopted. Upon a motion of Senator Hill the bill was recommitted because, as the Democratic opponents alleged, with the antiunion amendments the bill was "packed with confusion and subterfuges."

President Eisenhower repeated his efforts to overrule Denver in 1956 and again in 1959.

It just suddenly occurs to me that some of the opponents of this bill since it has been around so long—are too young to remember the days of the Eisenhower administration.

And so in a sense I suppose this is a lesson in history.

At this time in 1959 the proposal was made a part of the Landrum-Griffin reform amendments. The conference committee recommended that the Denver bill be made law but was then informed by the House Parliamentarian that such a provision would not be germane. It was agreed that the bill would be brought up again in the following Congress, and thus in 1960 further hearings were held, with no action being taken.

In 1961 a bill was introduced, and hearings were held. At these hearings Secretary of Labor Goldberg testified on behalf of the Kennedy administration in favor of the legislation, and no action was taken.

During the Johnson administration in 1965 Secretary of Labor Willard Wirtz urged the enaction of legislation to overrule Denver. The bill proceeded to the floor but was withdrawn. In 1967 similar legislation was introduced, and hearings were held. Again, action on the bill was deferred pending Senate approval.

The SPEAKER pro tempore (Mr. DANIELSON). The time of the gentleman from New Jersey (Mr. THOMPSON) has expired.

Mr. MEEDS. Mr. Speaker, I yield 5 additional minutes to the gentleman from New Jersey (Mr. THOMPSON).

Mr. THOMPSON. Mr. Speaker, during the 91st Congress legislation was again introduced, and at that time Secretary of Labor Shultz, testifying on behalf of the Nixon administration, spoke in favor of the legislation. The bill died in committee.

As many of the Members will recall, the 94th Congress sent to President Ford a conference report containing an amendment which the President himself had requested as a condition of signing the legislation. For reasons best known to him, President Ford withdrew his permission and vetoed the legislation, which is why it is before us again.

This year 5 days of hearings were held on H.R. 4250. A wide array of witnesses appeared to testify. Witnesses from organizations such as National Right To Work Committee were invited to testify but declined. I received a letter from that organization this morning saying that they really had not declined, because they wanted to testify against only title I and had no interest in title II. My staff called them and stated that the emphasis following Secretary Marshall's testimony was in favor of the legislation, and that the statements expressing President Carter's support of the legislation were to be confined principally to title II, but that the National Right To Work Committee is invited to testify not only on title II, it is admitted, but also is informed that expressions by their witnesses with respect to title I would be welcome. They declined, and I regret any misunderstanding.

I do not regret my objections to what I consider to be extremely unfair and distorted—not to mention terribly expensive—newspaper ads involving the expenditure of literally millions of dollars throughout the United States in opposition to the bill.

Mr. Speaker, the 26-year history that I have just recounted represents thousands of pages of testimony presented in over 70 days of hearings by witnesses both pro and con, plus virtually innumerable communications which are in the process of being printed as part of the permanent RECORD at this point.

After such comprehensive deliberation and study, I hardly think that our consideration of this bill can be characterized as a "tearing rush." If this bill is being railroaded through this Congress, we have been riding a train that has been traveling at a snail's pace and it is about time we left the station.

Therefore, Mr. Speaker, I urge the adoption of the rule.

Mr. Speaker, I would like to state that there are differences, which I shall make part of the record, in the comparison of H.R. 4250 and the bill vetoed by President Ford.

It is my intention, following the adoption of the rule and the general debate, to make every possible effort to compromise so that the Members will have an opportunity to vote on a final product which, in my judgment, will end up as being essentially, almost word for word, the legislation on which we voted in the last Congress and which was passed and sent to President Ford.

Mr. Speaker, there are some substantive differences which I have with such distinguished friends as the gentleman from Ohio (Mr. ASHBROOK).

Mr. ASHBROOK. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON. I yield to the gentleman from Ohio.

Mr. ASHBROOK. Mr. Speaker, I am perfectly glad to agree, for the record, with what the gentleman from New Jersey (Mr. THOMPSON) has said.

I would say that in the 16 years that I have known my friend, the gentleman from New Jersey (Mr. THOMPSON), the situs picketing bill and the Kennedy Center have been the two things that he has loved most.

Mr. THOMPSON. The gentleman from Ohio (Mr. ASHBROOK) has them in the reverse order.

The SPEAKER pro tempore (Mr. DANIELSON). The time of the gentleman from New Jersey (Mr. THOMPSON) has expired.

Mr. MEEDS. Mr. Speaker I yield 3 additional minutes to the gentleman from New Jersey (Mr. THOMPSON).

Mr. THOMPSON. Mr. Speaker, to continue what I was saying, I would like the gentleman from Ohio (Mr. ASHBROOK) to know that the Kennedy Center is my first love, notwithstanding the fact that he will not let me or us repair the roof of the Center.

My second interest has been common situs picketing.

Mr. Speaker, I have enjoyed my innumerable debates throughout the country with the gentleman from Ohio (Mr. ASHBROOK), where we have put on very well known horse and pony shows.

Mr. ASHBROOK. Mr. Speaker, will the gentleman yield further?

Mr. THOMPSON. I am glad to yield to the gentleman from Ohio (Mr. ASHBROOK).

Mr. ASHBROOK. Mr. Speaker, it is my understanding that both are leaking, the Kennedy Center roof and this bill.

Mr. THOMPSON. Mr. Speaker, I am absolutely certain about the Kennedy Center, but I am in doubt about the other. Like a baby, one has to check it out on occasion; and I know that the gentleman has done that many times.

Mr. Speaker, the gentleman from Ohio (Mr. ASHBROOK) has an amendment which would limit the right of construction unions to induce support of those who were employees of employers "primarily engaged in the construction industry at the site." I still strongly oppose that. I do not know whether the gentleman will prevail or not.

Mr. Speaker, a number of other amendments which were sent to President Ford in the form of the conference report have been eliminated in the bill H.R. 4250, but I would venture to predict that, in the final analysis, the legislation which we shall pass, I hope, today and send to President Carter—and I am certain that he will sign it; I have been so assured—will be so remarkably the same as that which was passed last year that we will have approximately the same majority for it.

Mr. Speaker, I thank the gentleman from Washintgon (Mr. MEEDS) for his assistance and for yielding me this time.

Mr. MEEDS. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the resolution.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. EDWARDS of Oklahoma. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 297, nays 112, not voting 23, as follows:

NOT VOTING—23

Andrews, N. Dak.	Jones, Okla.	Seiberling
Applegate	McKay	Sisk
Bonker	Milford	Staggers
Brodhead	Murphy, N.Y.	Teague
Davis	Myers, Gary	Van Deerlin
Frenzel	Rose	Vento
Holland	Russo	Young, Alaska
	Scheuer	Young, Tex.

The Clerk announced the following pairs:

Mr. Staggers with Mr. Teague.
Mr. Vento with Mr. Young of Texas.
Mr. Davis with Mr. Milford.
Mr. Murphy of New York with Mr. Russo.
Mr. Fish with Mr. McKay.
Mr. Seiberling with Mr. Jones of Oklahoma.
Mr. Bonker with Mr. Frenzel.
Mr. Van Deerlin with Mr. Holland.
Mr. Applegate with Mr. Andrews of North Dakota.
Mr. Brodhead with Mr. Scheuer.
Mr. Rose with Mr. Young of Alaska.

So the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

PERMISSION FOR COMMITTEE ON RULES TO HAVE UNTIL MIDNIGHT TOMORROW, THURSDAY, MARCH 24, 1977, TO FILE CERTAIN REPORTS

Mr. MEEDS. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tomorrow to file certain privileged reports; and I will inform the House, Mr. Speaker, that this is the report on H.R. 5045.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Washington?

Mr. BAUMAN. Mr. Speaker, reserving the right to object, may I ask the gentleman what the nature of that bill is.

Mr. MEEDS. Mr. Speaker, if the gentleman will yield, H.R. 5045 is the Government Reorganization Act, on which our committee will hold hearings.

Mr. BAUMAN. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Washington?

There was no objection.

EQUAL TREATMENT OF CRAFT AND INDUSTRIAL WORKERS

Mr. THOMPSON. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4250) to protect the economic rights of labor in the building and construction industry by providing for equal treatment of craft and industrial workers and to establish collective-bargaining procedures in the construction industry.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New Jersey (Mr. THOMPSON).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 4250, with Mr. NATCHER in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from New Jersey (Mr. THOMPSON) will be recognized for 1 hour, and the gentleman from Ohio (Mr. ASHBROOK) will be recognized for 1 hour.

The Chair now recognizes the gentleman from New Jersey (Mr. THOMPSON).

Mr. THOMPSON. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, it is with a bit of nostalgia that I rise to speak in support of the bill to provide equal treatment for craft and industrial workers. All but our newest colleagues should be quite familiar by now with the problem addressed by this bill. In 1975, we passed almost identical legislation under the number of H.R. 5900 only to have then President Ford veto it after having agreed to sign it.

Indeed, you will recall that Mr. Ford's Secretary of Labor, Mr. Dunlop, resigned in protest of the Ford veto. Secretary Dunlop had been instrumental in helping to shape that bill in the 94th Congress, and felt he had had no alternative but to resign when the President repudiated his commitment to sign it.

But even back in 1975, this matter was old hat. For almost a quarter of a century, there have been serious efforts in both this House and the other body to enact similar legislation. It has at one time or another been endorsed by every President, Democratic and Republican alike, since Eisenhower. It was my very first year in this body that a Republican Senator from my home State, H. Alexander Smith, introduced such a bill in the Senate.

There have been many attempts to enact such legislation since, but each one failed for one reason or another, most recently because of President Ford's last-minute change of heart. Since this year I am absolutely confident that the occupant of the White House will be loyal to his commitment to sign this bill when it reaches his desk, I do sincerely believe that after this year, we will be—to paraphrase the remarks of one great American—free at last of this matter.

I suppose the fact that we are still at work on such legislation a quarter century after Senator Smith introduced his bill is a great tribute to the political clout of the building contractors, as well as the fertile imagination of their public relations consultants. There is no doubt that the construction industry representatives have been quite effective in convincing many people that there is something terrible about the concept of allowing a union to picket an entire construction site when it has a dispute with one of the contractors on the job.

The honest truth is there is nothing very unique or strange about the idea at all. It is only those busy typewriters of the construction industry's PR firms that has made this such a highly volatile issue.

The idea of situs picketing is no more strange or radical than the idea of collective bargaining itself: And this country decided 42 years ago that collective bargaining between workers and employers was a very wholesome thing.

While there is a great deal of public misunderstanding about the nature of this proposed legislation, what we should understand is that all that the bill really does is provide for union workers in the construction industry the same rights which have long been accorded to industrial unions and their members. That is why the bill is entitled "equal treatment of craft and industrial workers."

The essence of the bill is that it would permit workers who have a dispute with their own employer to picket their employer's economic allies at a common construction site. This is already the law at industrial job sites, where a union may direct its picketing not only at the primary employer involved in a labor dispute, but at all other employers who are engaged in "related work."

The right of working people to appeal by picketing for the economic support of their fellow workers has been protected by our national law since 1935.

Prior to the New Deal, the organization of workers into unions for their common protection was often considered an illegal conspiracy; and workers were not protected when they combined to bargain collectively with their employers and attempted to strike and picket to back up their economic demands.

The result was not only the oppression of working people, but industrial strife and economic ruin for a large part of the population.

The National Labor Relations Act changed all that. It declared it to be "the policy of the United States to eliminate the causes of certain substantial obstructions to the free flow of commerce by encouraging the practice and procedure of collective bargaining and by protecting the exercise by workers of full freedom of association, self-organization, and designation of representatives of their own choosing, for the purpose of negotiating the terms and conditions of employment or other mutual aid or protection."

The act guaranteed workers the right to strike and the right to picket in order to eliminate the "inequality of bargaining power between employees who do not possess full freedom of association or actual liberty of contract and employers who are organized in the corporate or other forms of ownership association."

It is precisely this right of workers to appeal to their peers through picketing which is the essence of Federal labor law.

This bill merely provides for construction tradesmen the same right of appeal for solidarity that has been the right of industrial workers since 1935. It was a right that likewise belonged to construction workers prior to an ill-considered Supreme Court decision in 1951 which ignored the realities of the construction industry and held that various contractors joined in a single construction project were completely independent and separate business entities.

Despite all the crocodile tears shed by the opposition, that is all this bill is about. It has nothing to do with freedom of choice or democratic rights—not to mention motherhood or apple pie. What this bill is about is the right of workers to organize and bargain collectively with some modicum of economic power.

The opponents are people who want to be able to prevent their workers from joining unions and obtaining union conditions. They call themselves "open shop," or, more elegantly, "merit shop" employers. What "open shop" means is that it is only open to nonunion workers. And what the "merit" of such an operation is, I cannot imagine.

Interestingly, these opponents never mention that they are afraid that passage of this bill might result in higher wages or improved working conditions or more expensive safety standards for their workers. Again this year as in the past they tell us their opposition is motivated by much more altruistic instincts: That the bill might deny jobs to members of minority groups; that it will deny "freedom of choice" to their workers; that it will raise the cost of residential housing. They worry about everything but their pocketbooks.

Well, we heard all of this back in the 94th Congress as well, and, as I explained at that time, I checked out the opponents of this legislation. And I discovered that these opponents were not with us when we tried to end racial and sex discrimination in employment; they were not with us when we tried to assure job opportunities for all; they were not with us when we tried to assure meaningful housing legislation. They have never been with us when we have tried to legislate to protect the needs of the common working men and women of America.

So you will just have to forgive me if

I take with a large grain of salt the protestations of these opponents that their opposition is motivated by their concern for the good of the country. They may well believe that what is good for their profit margins is always good for the country, but I confess that I remain a bit skeptical that such is always the case.

My primary concern remains the good and welfare of the working men and women of our country, and I am convinced that end is best served by passage of this bill.

Mr. Chairman, let me speak now as to the essence of the bill. Lots of really terrible charges have been leveled against the bill just as they were leveled against its predecessors, other bills that have been considered over the years. This bill has been accused of almost everything, from promoting racial discrimination to threatening to raise the cost of building a private home beyond the reach of the ordinary worker. None of these things which have been said is true.

Our committee heard most of these allegations made over and over again and found them to be without substance, although in two instances it was found that amendments were in order to satisfy critics, in one instance, in order to clarify the actual intent of the bill, and in the other instance, to offer special protections to one specific section of the construction industry, the small-home builders.

The major criticism which opponents of the bill keep asserting is that it would legalize something called a secondary boycott, and this, like other criticisms, is simply not true. The so-called secondary boycott provisions of the Taft-Hartley amendments to the National Labor Relations Act were designed, in the words of the late Senator Taft—and let me quote him—

> To protect a third person who is wholly unconcerned in a disagreement between an employer and his employees.

President Eisenhower elaborated on this theme when he wrote Congress saying that the secondary boycott prohibitions—and I shall quote him—

> Are designed to protect innocent third parties from being injured in labor disputes which are not their concern.

The bill has no quarrel with the secondary boycott provisions of Taft-Hartley insofar as they are required to protect the innocent neutral from embroilment in a labor dispute in which he is wholly unconcerned. Indeed the bill reaffirms the secondary boycott dichotomy, which is primarily the heart of sections 8(b)(4) and 8(e) of the act, and inflicts the economic realities in the building and construction industry in situations where the contractor and all the subcontractors are engaged in a common venture and each is performing tasks closely related to the normal operations of all the others. None are innocent, none are unconcerned in the labor dispute involving any other at the building site. The construction of a building is a single, coordinated, integrated, economic enterprise.

The contractor can perform the total job or subcontract part or various parts of it. If he decides to subcontract, he chooses the subcontractors with care and exercises overall supervision. If he chooses to subcontract to a nonunion subcontractor who pays less than the prevailing union wages and wins the bid for that reason, the contractor cannot claim neutrality when the unions protest by picketing the jobsite.

This view of nonneutrality underlines the purpose and is the essence of this bill. No one who has ever been involved in a construction project can truly believe that every contractor operates independently from the others. The construction of a building or other structure is clearly a team effort. Someone chooses the players with care and then calls the plays. This quarterback is not hesitant in sending in substitutes if the original player for some reason becomes unsatisfactory. The construction of a building is an integrated enterprise in which the participants are interrelated allies rather than independent neutrals.

It should be noted that the bill only applies when employees in a construction industry project are in fact jointly engaged as joint venturers and have the relationships of contractors and subcontractors in the construction project at a particular job site. If for some reason the employers are not so jointly engaged, then the bill has no applicability.

The CHAIRMAN. The time of the gentleman from New Jersey (Mr. THOMPSON) has expired.

Mr. THOMPSON. Mr. Chairman, I yield myself 3 additional minutes.

Mr. Chairman, the bill is thus not intended to and cannot apply when separate employers are in fact innocent neutrals or otherwise wholly unconcerned in the labor disputes that go on around them.

Thus, Mr. Chairman, it in no way authorizes a true secondary boycott. It merely redefines a secondary boycott as it applies to the economic realities of the construction industry.

The point was well stated by Secretary Marshall when he appeared before the subcommittee which I have the honor to chair.

Mr. Chairman, he said as follows:

> Opponents of this legislation argue that it is unfair to treat the general and subcontractors at a construction site as a single entity for the purpose of secondary boycott provisions. They assert that each contractor is an independent business operation with little control over the labor policies of the other. I do not agree with this reasoning.

Mr. Chairman, the Secretary goes on to say as follows:

> The various contractors and subcontractors on the construction project are ordinarily engaged in a closely integrated business relationship. The employees of one contractor work side by side with the employees of another, and the various operations are all integral parts of a single construction project. In my judgment, these various contractors and subcontractors should not be regarded as innocent bystanders which the secondary boycott provisions are intended to protect. Indeed, common situs bills have been drafted to apply only when defined legal relationships exist among the employers at the site. In my view, the present application of the law results in discriminatory treatment of construction workers simply because the construction industry, unlike private industry sectors, operates typically through separate specialized subcontractors.

Mr. Chairman, I expect, as I said in the debate on the rule, that there will be offered either a substitute or a series of amendments which will bring the legislation before us today into almost exact word-for-word compliance with the legislation which was passed by both bodies last year, including the conference report. I would expect that we will see before the end of the afternoon and following the amendments a piece of legislation which is almost precisely word for word that which was adopted as a conference report in the last Congress.

Mr. ASHBROOK. Mr Chairman, I yield myself 10 minutes.

Mr. Chairman, for years, proponents of legislation in some ways similar to H.R. 4250 have chosen to endorse "common situs picketing" legislation, the legislation they are now referring to as "equal treatment for craft and industrial workers." This legislation we are considering is the formerly entitled "common situs picketing" legislation, no matter what it is entitled. The legislation we are considering has nothing to do with the presumably politically acceptable goals of equal treatment. I have opposed common situs picketing legislation since first coming to Congress. Such legislation as H.R. 4250 does more than grant equal rights to craft and industrial workers. H.R. 4250 grants to construction craft unions far greater rights than rights granted to any other unions. As a matter of fact, H.R. 4250 grants rights far greater than any other common situs picketing legislation ever to be presented to this Congress.

Not only do I strongly oppose common situs picketing, I oppose even more vehemently the legislation we are considering today. This legislation should be exposed for what it really is. When that is done I believe that most would agree with me that this legislation should never be considered by those of us who desire to see a balanced approach in the administration of our national labor relations policy.

This legislation is technical, but catch phrases and inadequate explanations do not diminish its extent. Most of the rhetoric has centered on the economic consequences of the bill. Much more attention has centered on the emotionalism involving common situs picketing than on the technical details of the bill.

Perhaps the sponsors of the legislation fail to see the eventual consequences. Perhaps the sponsors of the bill truly believe that the legislative history, or their statements of limitations of the legislation will overcome the ambiguities of the bill itself. But, what the sponsors do not seem to understand is—that where there are no ambiguities, neither the legislative history nor the sponsors' statements mean anything.

Besides the issue of "pure" common

situs picketing itself, I am worried about the ambiguous extent of this bill. I believe the technicalities need to be examined, and thoroughly examined, before this House rushes to pass this unduly broad legislation. I believe if the real extent of H.R. 4250 is understood by the members of this House, they will see fit to reject it.

For instance, the sponsors say this bill amends section 8(b)(4) of the NLRA. That is true. It does amend 8(b)(4). But, in amending 8(b)(4), it also repeals 8(b) as to construction site picketing. Take a look at the bill, page 20, line 25. In amending 8(b)(4), the bill says that "nothing contained in subsection (b)" shall prohibit strikes and picketing by craft unions at construction sites.

It should be made clear that "subsection (b)" contains almost all the unfair labor practices by unions. The other unfair labor practices are contained in 8(e)—the "hot cargo" section, and 8(g)—the 10-day notice requirement in picketing a "health care institution." That language—that "nothing contained in this subsection (b)"—means that construction unions can picket for almost all the reasons now found and legislated to be unfair labor practices. H.R. 4250 contains no ambiguities in this regard. There is no reason for the NLRB or the courts to look at the stated "intent" of the sponsors. This language clearly spells out that construction unions can now picket and strike for reasons and objectives that are unlawful to other unions.

Is this "equal treatment"? Or is this "special treatment"? Anyone who can read obviously can discern that this is "special treatment."

To emphasize the scope of this intended result, I would remind this Congress that all previous legislation before it regarding either "common situs picketing" or "equal treatment of craft and industrial workers" only amended 8(b)(4) by providing that "nothing contained in clause (B) of this paragraph (4)" would prohibit situs picketing. That language—8(b)(4)(B)—limited the effects of the legislation to the intent of the sponsors. It allowed a craft union to picket an entire construction site. It provided that such picketing was not a "secondary boycott," the same as the proviso to 8(b)(4)(B) protects primary picketing.

Let me explain to you why the proponents change the language from 8(b)(4)(B) to 8(b) this year. For years, craft unions have been clamoring for the right to picket an entire construction site—to bring pressure on all the employers at the site. That is what legislation allowed in the past. However, the legislation in the past only allowed the picketing—it did not make lawful the objective of the picketing. This bill, H.R. 4250, also makes lawful what was heretofore an unlawful objective—to "cause one person to cease doing business with another person," as well as many other unlawful objectives now prohibited by subsection (b), including 8(b)(4)(A) which involved the Connell case.

The objective of causing one employer to cease doing business with another is unlawful under 8(b)(4). So is construction picketing for reasons not allowed by 8(e) and 8(b)(4)(A). When 8(b) is repealed as to construction site picketing, those objectives as well as the place of the picketing, becomes lawful. Therefore, the reasons that all of 8(b) must be repealed, is to make lawful the one unlawful objective in the Denver case and to overrule the Connell case—the latter reason unexplained by the sponsors.

The reason for this bill is, obviously, not only to enlarge the place or area of picketing, but also to enlarge the former prohibited objectives of picketing.

Let me state, that no industrial union can picket to cause its employer to cease doing business with another person. When Secretary of Labor Marshall stated that an industrial union could do so, I questioned him about it. The Solicitor of Labor informed me that picketing with such objective could take place in an industrial setting. That is not true.

To set the record straight, in an industrial setting, where the union is allowed to picket to protect subcontracting involves cases where the employer has refused to bargain over subcontracting arrangements. Where an employer refuses to bargain in good faith regarding conditions of employment of the employees in the unit represented by a labor organization is an unfair labor practice. Those employees, then, can strike and picket because of that unfair labor practice. If the Board or Court could find that picketing was for an objective of causing their employer to cease doing business with a subcontractor, without finding the unfair labor practice of refusal to bargain, that picketing would violate 8(b)(4)(B).

Now, why should construction unions be allowed to strike or picket for unlawful objectives when other unions are prohibited from doing so? This bill allows just this situation to occur, and that is the reason for the sudden change in this legislation, after a quarter of a century, in the language of the bill from 8(b)(4)(B) to 8(b). But, the change in the language only created new problems, because it not only allowed the unlawful objective—now prohibited in 8(b)(4)—but it also allows picketing for many unlawful reasons.

With only limited exception, H.R. 4250 would exempt building trades unions from the purview of the NLRA prohibitions on unfair labor practices committed through strikes, picketing, or inducements, or threats, at common construction sites. For instance, by stating that nothing contained in this "subsection (b)" shall apply to common site picketing, the bill would allow picketing for reasons prohibited by: 8(b)(1)(A), restraining and coercing employers by mass picketing, violence, et cetera, unregulated by the NLRA; or 8(b)(1)(B) restraining or coercing employers in their selection of representatives for bargaining or to select or fire supervisory personnel. A construction union may now picket over an illegal subject of bargaining, proscribed by 8(b)(3) as well as for purposes of extracting excessive fees, now prohibited by 8(b)(5). Worse even is the fact that the construction trades will not be prohibited from picketing for "featherbedding" purposes—that is, to require an employer to pay for work not done.

Is this really what the sponsors of this bill want? If that is not what they want, it is, nevertheless, what the rest of the Nation gets with this legislation.

This bill, H.R. 4250, is incredibly bad. This bill, H.R. 4250, is a ridiculous fabrication of the craft union attorneys who either failed to think or thought too broadly. This bill, H.R. 4250, is an insult to those who believe in the equal application of the law. It should be rejected for this reason alone.

But—you have our report in front of you. There are other reasons this bill should be rejected as it goes beyond the well-intentioned, stated reasons of its sponsor. In reading that report, with its failure to mention that picketing "otherwise unlawful" is not permitted, and particularly the minority views, which point out many additional problems, this House would do the labor law in this Nation a great service by denying this bill's passage until it conforms with the stated intention of its sponsors. Either that, or this House should ask those sponsors to explain the intentions of the proponents so that the Members will understand the bill's extent.

As we have pointed out in our minority views, the alleged limitations or safeguards offered in the bill are largely illusionary. For instance, at full committee, an amendment was sponsored by Mr. THOMPSON, called the "U.S. Steel" amendment—at page 21, lines 11 to 16 of the bill—which allegedly protected "industrial facilities."

Not only are there questionable protections for "industrial facilities," but a new unequal treatment has come about by this amendment. There are no equal "protections" to nonindustrial facilities. The list of persons not protected by the industrial facilities amendment includes hospitals, hotels, small business, utility contractors and suppliers, mines, railroads, office buildings, shopping centers, and so forth.

However, this list of endless persons not protected by the industrial facilities amendment need not fear they are missing much. Upon close examination, the protections in the "industrial facilities" amendment offers relatively nothing. Although the assurances of the sponsor of the amendment indicated that industrial facilities could have a reserved gate, the amendment does not make it clear that that reserved gate cannot be picketed.

All the amendment does is allow a facility to set up a gate for its industrial employees, and a construction union could not then direct its strike at that separate gate. However, the amendment does not say that the union could not picket in front of that gate, direct its picket at construction employers, and thereby induce the employees not to cross

the picket line, as well to induce deliverymen—represented by Teamsters, usually—not to cross that line.

The amendment is clearly awkward and confusing, and, at best, the amendment may be read to allow common situs picketing by construction workers at an industrial site as long as such picketing is not directed toward a separate gate reserved for the exclusive use of the manufacturer's employees and for persons making deliveries to or taking shipments from the industrial facility. This would appear to preserve one of the doctrines of the General Electric case, 366 U.S. 667, that a union commits an unfair labor practice where it pickets a gate at the primary employer's premises reserved for neutral employees doing work unrelated to normal plant operations. Under General Electric, a nonconstruction industry employer, such as a manufacturer can insulate his manufacturing employees from construction industry labor disputes by setting up separate entrance gates for the exclusive use of the construction industry employees. If the manufacturer sets up such gates, it is illegal for a union involved in a construction industry labor dispute to picket the gate used exclusively by the manufacturer's employees. A corollary to the GE case is that the employees of these independent nonconstruction industry employers might, at times, become the subject of legal picketing by GE's own employees having a dispute with GE.

Unfortunately, because of the rather twisted manner in which the principal operative proviso of title I is now worded, it provides only minimal guidance to the courts to indicate that the sponsor's stated intentions have been embodied in the language of the bill. Besides the general difficulty of sorting out the numerous modifying clauses now strung together in the first proviso of the bill and identifying their antecedents, specific problems of interpretation may arise under the language added in committee. Obviously, the word "directed" is ambiguous and may be interpreted not to bar all common situs picketing activity affecting a reserved gate.

For example, construction workers might be allowed to physically picket at or near an entrance reserved for the exclusive use of industrial employees as long as their picket signs made no direct reference to the industrial workers. This, therefore, expands the GE doctrine for construction unions and gives construction unions special privileges.

During markup of H.R. 4250 in the House Committee on Education and Labor, I offered an amendment, which was not approved, that would have eliminated the ambiguity over whether nonconstruction industry employers would be insulated from construction industry labor disputes. Under the bill as presently drafted, common situs picketing may be directed at any "person" whatsoever except in certain limited situations. The amendment would have substituted the words "employer primarily engaged in the construction industry" in place of "person." The purpose of the change was to make certain that the employees of manufacturers would not be asked to participate in labor disputes involving the employees of construction contractors doing work at the manufacturer's worksite. The amendment would have accomplished this end in two ways. First, construction industry employees with labor disputes would not have been permitted to picket to induce a strike by the manufacturer's employees, but rather could only have induced the employees of those "employer(s) engaged primarily in the construction industry." Second, the amendment would have permitted the manufacturer, or other employers not engaged primarily in the construction industry, to set up a separate gate for the use of his own employees and employees of businesses whose work is related to the manufacturer's normal operations. Construction industry unions would have been permitted to picket only those gates set aside for the use of construction industry employees.

Hopefully, the objective of my amendment would have been implemented by the Thompson amendment, permitting an employer who is not involved in the construction industry to remain protected from involvement in construction industry labor relations problems, but that does not appear to be the case because of the language which prohibits such picketing only when it is not directed at that separate entrance.

Mr. Chairman, I am afraid of the implications of this legislation. I am concerned that its real intentions are being deliberately concealed by profusion of words. I wish to emphasize to the Members of this House that this is not the common situs legislation of previous years.

In previous years, my opposition to common situs picketing has been well known. I have felt, and continue to feel, that common situs legislation legalizes secondary boycotts in the construction industry. It is the type of legislation that will not add "one whit" to the labor peace in this country and is liable to generate a wave of picket lines—an admission made in consideration of H.R. 5900 in the last Congress.

That type of legislation should be rejected.

Mr. THOMPSON. Mr. Chairman, will the gentleman yield?

Mr. ASHBROOK. I will be glad to yield to the gentleman from New Jersey.

Mr. THOMPSON. Mr. Chairman, I wonder what the attitude of the gentleman from Ohio would be if his viewpoint with respect to this section 8(b)(4)(B) that he has been talking about now were modified? I think it is clear, I think it is very clear, and I have an enormous amount of respect for my friend the gentleman from Ohio (Mr. ASHBROOK) but in this instance my differences are differences of a legal interpretation as distinguished from any other kind.

Mr. ASHBROOK. Mr. Speaker, I would say to my friend and colleague, the gentleman from New Jersey (Mr. THOMPSON) that in last year's bill we indeed did do what the gentleman says was the purpose of the bill and that was to make legal the secondary boycott, or at least the interpretation of secondary boycott that had been applied historically to trade unions. That was accomplished by amending section 8(b)(4)(B).

My point is why do we want to knock out 8(b) when the stated purpose is merely to change the existing law as it relates to section 8(b)(4)(B)?

If that is really what my friend wants to do then legislation this year should have been introduced to duplicate what we did in the last session. Would that not be a fairly accurate appraisal? If there were any doubts, we would be safer to go with the language of last year's bill, H.R. 5900.

Mr. THOMPSON. Will the gentleman yield on that point?

Mr. ASHBROOK. Surely.

Mr. THOMPSON. This is a very fine legal nuance and is one that has given rise to the differences which the gentleman from Ohio and I have over the language in the bill H.R. 4250.

Mr. ASHBROOK. That is right.

Mr. THOMPSON. I am perfectly willing to, and indeed am considering seriously, agreeing to an amendment to take us back to the language to which the gentleman from Ohio refers in last year's legislation. Although I doubt, were I to do that, or were several other things done that the gentleman from Ohio wants done, that, in the final analysis, we could see him voting for it.

However, I do realize that the gentleman from Ohio is conscientious. I admire his statement of principle, even though I do not agree with him. I know he is perfectly honest, and we will work on it.

Mr. ASHBROOK. I will certainly be glad to accept the chairman's support of that amendment, not with the idea of changing my vote on final passage of H.R. 4250, but with the idea of making the language say precisely what the gentleman says it says.

Mr. THOMPSON. If the gentleman would yield further, the gentleman and I have been colleagues for 16 years and we have had many disagreements, but not in one instance has either of us said one thing to the other and then done something else. I make no promise except to consider it. I want to be as helpful to my friend as I can.

Mr. ASHBROOK. That I consider progress, and I thank my friend, the gentleman from New Jersey.

I happen to think the amendment offered gives no protection whatsoever in the so-called industrial reserved gate. If the question can be answered to my satisfaction that under this bill no construction union employee can strike or picket—and there is a difference—at a reserved gate, I will relent in my opposition to the so-called industrial gate charade. But it is my opinion that the language gives absolutely nothing in the way of assurance that we will not see a broadening of labor strikes from the construction industry to involve the entire industrial community where, after all, most construction will be done.

Mr. RHODES. Mr. Chairman, will the gentleman yield?

Mr. ASHBROOK. I yield to the distinguished minority leader.

Mr. RHODES. I thank the gentleman from Ohio for yielding.

I want to ask this question. As the gentleman knows I was formerly a member of the Education and Labor Committee and I value the 6 years I spent there where I made many good friends.

I am somewhat disturbed when a bill comes from that committee and almost immediatley, when it hits the floor, there is talk of amendments. It seems to me that this has happened too often. In other words this committee now seems to have a penchant for writing very important legislation on the floor of the House.

I just ask my friend if this is not a perfectly good reason for recommitting this bill because if the bill is in such a condition that even before a bill comes up for reading, that amendments are accepted, is this not a perfectly good reason for recommitment?

Mr. ASHBROOK. I would say to my good friend, the minority leader, that he is correct on both points. We again see the same old condition with this bill. Historically, bills out of Education and Labor have been rewritten on this floor. As Members will remember, in 1964, when we had the civil rights bill, there were more amendments offered and accepted to the title that the Committee on Education and Labor had jurisdiction over than were offered to the rest of the bill. I could go on and on. The poverty program, the manpower bill, minimum wage, and to education—all of these bills have been rewritten on the floor.

The minority has been able to basically alter many of the bills that have come out of our committee. When we consider all of the revisions that are to be made, and I understand some amendments will be so complicated we will have a hard time reading them before they will be accepted, I say why not recommit the bill back for a little more thoughtful consideration.

I think the gentleman is right on both points.

Mr. RHODES. Then apparently, if those amendments are accepted, it would be very difficult for an average Member, and I do consider myself an average Member, to know what is in the bill, so it would be very difficult to vote on it.

Mr. ASHBROOK. I consider myself to be an average Member of the subcommittee which reported this bill and I may also find it difficult to understand what is in the bill.

Mr. THOMPSON. Mr. Chairman, will the gentleman yield?

Mr. ASHBROOK. I yield to the chairman of the subcommittee.

Mr. THOMPSON. Will the gentleman yield to an average Member?

Mr. ASHBROOK. I yield to my average chairman.

Mr. THOMPSON. I hasten to concede that the distinguished minority leader, with whom I served on the Education and Labor Committee for 6 years, and the gentleman from Ohio with whom I have served for 16 years, are average Members. However, in order to clear up the misunderstanding that the average minority leader might have, I might say I am certain by the end of the debates and the conference reports of 2 years ago that even all three of us understood it, and that is the point at which we are going to end up today.

Mr. ASHBROOK. I would stipulate that is probably correct if we really end up at that point.

Mr. THOMPSON. Mr. Chairman, I yield such time as he may consume to the gentleman from Michigan (Mr. KILDEE).

Mr. KILDEE. Mr. Chairman, opponents of this legislation have claimed that its passage would have a substantial inflationary impact in the country by sharply increasing the costs of construction. I believe these claims are false.

Recent evaluations by qualified researchers have apparently begun to call into question the belief that productivity growth in construction has lagged well behind productivity growth for the economy as a whole. In an address to a conference on September 14, 1972, sponsored by the National Commission on Productivity and the Construction Industry Collective Bargaining Commission, Prof. Albert Rees, who subsequently served as Chairman of the Council on Wage and Price Stability, noted that—

> The best research in the area suggests that the difference between construction and other industries is not nearly as large as is generally believed.

If such views regarding construction industry productivity are valid, then the basis for the continuing verbal assault on work rules as a general drag on productivity is questionable. There is no doubt that the work rules in the construction industry are outgrowths of the problems and structure of the industry. Those work rules have their analogs in other industries where, because the problems and structures may be different, the work rules take on a different form, with no less impact on productivity.

Prof. Daniel Quinlan Mills, one of the Nation's outstanding scholars in the field of construction industry labor relations, notes that most attempts to study work rules in the construction industry "have been hardly more than a list of alleged practices or rules with which the surveyed employers expressed unhappiness." His observations are contained in the book "Industrial Relations and Manpower in Construction" published in 1972. In his view, the most interesting serious study of work rules and their impact on costs, was conducted by Prof. Allan B. Mandelstamm of Michigan State University.

Professor Mandelstamm's study in the July 1965 edition of Industrial and Labor Relations Review involved a comparison of residential construction operations in two cities in Michigan, one highly unionized and the other nonunion. Professor Mandelstamm concluded that, contrary to the popular misconception, unions did not oppose new techniques, and he also discovered that new techniques were more widely used in the highly unionized city. In addition, professor Mandelstamm found that, despite the higher wage scales received by the union workers—

> Total labor costs in the two cities were virtually the same for the construction of comparable houses in the two cities.

In short, because of greater productivity, the union workers required fewer hours in which to complete their tasks.

In line with Professor Mandelstamm's conclusions, two other researchers, Howard G. Foster and George Strauss, reported in 1973 that the studies they had reviewed concerning work rules in the construction industry "tend to agree that the extent of restrictive practices had been exaggerated."

This body of evidence on work rules is supported by another study—perhaps the only one of its kind—that measured productivity growth in residential construction in Alameda County, Calif., between 1930 and 1965. In this study, entitled "Productivity Change for Carpenters and Other Occupations in the Building of Single-Family Dwellings and Related Policy Issues," Prof. Sara Behman found that productivity grew at a rate of 3.2 percent per year. Over the same period of time, productivity for the Nation's total private economy increased by 2.9 percent per year, which reflects rather favorably on the performance of the construction industry in Alameda County.

One other point about this study should be noted. In 1930, according to Professor Behman, residential construction in that county was nonunion, but in 1965 it was entirely unionized. This means, of course, that the productivity growth experienced in Alameda County in housing construction was accompanied by the spread of unionization, and would tend to refute the criticisms so often heard about the adverse effect of construction unions on productivity.

In view of this evidence, there is no basis upon which to expect that title I of this bill will have any inflationary impact.

Title II of the bill is designed to bring some much-needed stability into the collective bargaining relationships in the construction industry. In so doing, it will inevitably help to curtail the growing propensity for strikes in construction and, in addition, exert a moderating influence on the collective bargaining settlements. It will, therefore, serve as an anti-inflationary measure.

The need to try to bring about improvements in the collective bargaining process in construction is readily evident from the data on time lost due to strikes. With rare exception, during the last 25 years the number of workdays lost annually because of strikes in construction, taken as a percent of available worktime, has been well in excess of the corresponding ratios for all manufacturing industries in the Nation and for all industries combined. Moreover, the gap has apparently been growing over the last 20 years.

To the extent that this legislation can help to develop approaches that will improve the industrial relations climate in construction, it will help to reduce the high level of strike activity. In so doing, it will ease the inflationary pressures generated by strikes. Work stoppages contribute to price pressures because they comprise periods during which there is

no output, although the employer continues to incur basic overhead costs.

Mr. ASHBROOK. Mr. Chairman, I yield 7 minutes to the gentleman from Minnesota (Mr. QUIE), the ranking minority member of the committee.

Mr. QUIE. Mr. Chairman, over the years I have supported the situs picketing legislation. I supported it because I felt that the several employers engaged in a single construction project in a contractor/subcontractor relationship are not really neutral with respect to each other.

The real purpose of the secondary boycott provisions of the Taft-Hartley Act is to protect the innocent and neutral employers and their employees. The late Senator Taft stated that these secondary boycott prohibitions were to protect the third person "who is wholly unconcerned" in a disagreement between an employer and his employees. I accept that concept that third persons wholly unconcerned should be protected, but I believe that the several contractors and general contractor, working together in a coordinated building effort, are not wholly unconcerned. The general contractor usually knows the subcontractor's labor relations policy when he subcontracts to him, and the opposite also is true. The subcontractor knows with whom he is dealing and what the consequences may be.

Unions outside the construction industry can picket the whole site of an industrial manufacturing plant even though different trades or crafts may be working in the plant. Thus, to prohibit building trade unions from picketing a worksite where their prospective employers are not wholly unconcerned deprives them of a right which other unions have.

However, I do not believe that all employers engaged in construction are necessarily interrelated. Where a prime contractor has contracted with his subcontractors, there seems to be a relationship. But, often, to prime contractors have no relationship with each other or with each other's subcontractors. As I explained in my supplemental views attached to the committee report, there is just such lack of any interrelationship in the "fast track" method of construction. As explained by certain industrial employer witnesses, they consider themselves as only users of construction, or buyers of construction services. This is an assertion most of us should understand. As industrial employers who are only buyers of construction services, they engage in what they call the "fast track" methods of expansion or construction.

That method involves the design and planning in stages, allowing construction during one phase while another phase is being planned. Consequently, the contractors of one phase could not be considered interrelated or contractors or subcontractors with those engaged in a different phase. Nor would general contractors working on different projects within the buyer's facilities be considered one for the purpose of common site picketing.

It was for that reason that I introduced H.R. 4963, and the reason that I offered it as a substitute to title I of H.R. 4250 in the full committee, the bill which is before us.

My substitute, which was rejected, would have retained essentially the conference report of the last Congress, which was adopted by the 94th Congress by a vote of 229 to 189 here in the House and, additionally, included the limitations in situs picketing in conformity with the fast-tracking methods of construction which, incidentally, are followed in about 50 percent of industrial construction today. Also, I included a definition of a "site" and prohibit using situs picketing against a nonunion employer because of wages if the employer was paying prevailing rates.

In studying the legislative history of section 8(b)(4)(B), formerly 8(b)(4)(A), I came to the conclusion that contractors and subcontractors on a construction site may be separate legal entities, but that they are interrelated for purposes of achieving a common objective and necessarily have to work in close correlation and cooperation to reach their goal. Therefore, it appears that in most situations the several employers engaged in a single construction project are not wholly unconcerned and are not really neutral with respect to one another. Where it can be shown, as in the fast-tracking method, that they are separate, then the realities of the situation should allow those who are separate to escape the common situs picketing.

The intent of common situs picketing legislation has been to give equal treatment to craft and industrial workers. My substitute addressed this goal of the legislation by allowing the building trades to picket where their employer's work is related to the work of like employers who are not wholly unconcerned with the labor dispute of their employer.

Since my substitute was rejected, I intend to offer amendments to H.R. 4250 to protect the industrial employer and construction employer who utilize methods of construction similar to fast-tracking that demonstrates they are separate.

Mr. Chairman, I am additionally concerned about the broad wording of H.R. 4250. I do not think we raise a red herring, but the gentleman from Ohio and the gentleman from New Jersey have talked about that now, going back to 8(b)(4)(B) instead of all of 8(b), and I assume that this will be done. To the extent that this legislation tried to reach other Supreme Court decisions, that ought to be considered in separate legislation or addressed specifically in this legislation. I do not think it is fair in this House or in this Congress or to the National Labor Relations Board or to the courts or to the American public to legislate in a manner that most of us may not intend. We must know what we are about to do.

In the substitute that I offered in committee is a definition of "site," and from my conversation with those who are proponents of this legislation I do not believe they can find anything objectionable to that. But until the language of the bill is in line with the stated intent, I do not intend to support it. Until the bill conforms to equal treatment only, I will withhold my endorsement of it.

As we moved with the legislation in the last Congress, I was not fully aware of the necessity of the language of the definition of the site or the fast-tracking amendment until after it had gone through the House. That prevented me from offering an amendment, such as I am offering this time, to the legislation. I could not do it in conference. But I have concluded that this we must do in order that it does not go beyond that which the sponsors say that it will do. I will explain these more when the amendment stage has arrived.

Mr. THOMPSON. Mr. Chairman, I yield 5 minutes to the gentleman from Missouri (Mr. CLAY).

Mr. CLAY. Mr. Chairman, I rise to support this bill because I believe it will aid working people in general and, as a result, black and other minority group workers who make up such a large part of our labor force.

I find it absolutely amazing that the contractor groups opposing this bill claim to do so, in part, because it will allegedly harm the rights of minority group tradesmen. Frankly, I have never before been aware that most of these contractor associations cared one whit for the rights or the interests of blacks and other racial minorities. They certainly have never demonstrated such concern.

I certainly would not deny—and could not—the sorry history of racial discrimination in the building trades unions. Just like most all other major institutions in our society—including the churches, the schools, the political parties—these unions were, for many years, hostile to the assertion of the rights of racial minorities.

But we must deal with the present, not with the past.

The building trades department, along with the rest of the AFL–CIO, has come a long way in recent years. They have helped pass major civil rights bills in Congress, and they have often been with us in our marches and demonstrations. Every national union has called for a halt to discriminatory practices within their ranks; and more often than not the local unions have responded. There are still problems with some local unions in the building trades, but those problem areas are becoming fewer and fewer.

I am sorry to say that the contractor associations cannot match the progress of the labor organizations in this regard.

I understand that the latest figures of the Department of Labor—which are about 2 years old—place the minority membership on the building trades unions at 16.2 percent. And while there is still underrepresentation of minorities in the highly skilled trades, the more significant figures are that about one out of every five apprentices enrolled in a union-sponsored apprenticeship program is now from a minority group. This is more than double the rate for registered nonunion apprenticeship programs in the construction industry. According to unpublished data compiled by the Employment and Training Administration at the Depart-

ment of Labor, the union minority rate is 19.3 percent, while the minority rate in registered nonunion apprentice programs is only 9.2 percent.

Equally interesting are the absolute numbers of minority apprentices being trained in each sector—union and nonunion. The data show that for every 1 minority apprentice enrolled in programs in the nonunion sector in 1975, approximately 14 were enrolled in union programs.

The significance of these figures is to be found in the value of training through formalized apprenticeship programs. History demonstrates that those craftsmen who are trained in the formal apprenticeship programs have a considerable advantage over those trained by informal means. It is these graduate apprentices who will become the backbone of the construction trades.

While there is a provision which excludes picketing to remove workers because of race, I wish to emphasize that this is not a race bill. It is a labor bill. Black and other minority workers will benefit from it not because of their race, but because they are workers. This bill will not particularly advance the struggle for racial equality. But it will help black workers, just as it will help all workers in the construction industry, to protect their labor standards and working conditions.

The great civil rights leader Clarence Mitchell said in testifying in favor of this bill before the subcommittee the following:

> Those who have experienced conditions in our country that encouraged rivalry between the organized and unorganized workers know that wages, working conditions, fringe benefits and dignity on the job improve when well run labor unions give leadership and proper representation to all within their jurisdictions.

When local unions fail to give that kind of leadership and proper representation, we have other laws to control them—and if we need additional legislation, I will be the first to offer it. But I reject and resent efforts by those who have never been friendly to minority rights in the first place to pit unions and minority groups against each other. The issue today is not whether or not we are going to eliminate discrimination, the issue here is whether or not there will be job security, and the ability of workers to get decent wages and working conditions, and that I am for 100 percent.

Mr. ASHBROOK. Mr. Chairman, I yield such time as he may consume to the gentleman from Maryland (Mr. BAUMAN).

Mr. BAUMAN. Mr. Chairman, I rise in opposition to H.R. 4250. Most reasonable people are able to see through this bill. They know that unions and management by law and custom can and should work out any contract differences in a free and balanced atmosphere. They know that legalizing the secondary boycott as this bill does only tips the scale in favor of the larger unions, creating an imbalance unfavorable to both construction management and all other union members and nonunion workers.

Virtually everybody except for the palace guard at national AFL–CIO headquarters and their special interest allies are opposed to this bill. More than 90 percent of the voters living in my district of Maryland opposed it in my latest poll taken in January. And, according to a respected opinion research corporation, a majority, 63 percent, of all union families nationwide opposed it. They oppose it, because for them unemployment is not just a bad word but too often has been a living reality which they have experienced too many times. The jobs which will inevitably be lost if this bill becomes law and the production loss in the construction trade which will adversely affect the economics of every citizen are considered too high a price to pay simply to give the bigger trade union bosses an ultimate weapon to use in their labor negotiating.

These big labor czars have been trying unsuccessfully for over 20 years to pressure Congress into passing a common situs bill. During each of these years, each side of the dispute has had the opportunity to have their voices heard in committee or on the floor, and each time until last year the matter was voted down.

This time, however, we are presented with a situation where the liberal leadership of this Congress is determined to silence such debate and cut off nonpartisan deliberation on the matter. The chairman of the House Labor Subcommittee claims that there was not sufficient time to allow the National Right to Work Committee to be heard in opposition to the bill. The witness list of those who actually did testify, however, looks like a "Who's Who" in big labor. And certainly the fact that subcommittee members received over $125,000 in campaign contributions from labor bosses during last fall's elections has no bearing on this matter whatsoever.

The passage of this legislation would not bear witness to one of this Chamber's finest hours. Passing common situs picketing legislation gives a green light to construction industry labor czars who could then declare an open season on workers who prefer not to join a union, and it would necessarily victimize the employers who chose to hire them. By assisting in the forced unionization of every working man and woman in America, it will serve to disrupt and jeopardize needed production in one of our most important industries. It will give bad unions which are unable to attract worker support a weapon which they do not deserve to have, and it will present good unions which already command the respect and support of construction workers a weapon they have not asked for and do not need to have.

Not presuming to speak for my colleagues from other States, I can say that in Maryland we enjoy a generally good relationship between construction workers and employers. We do not need nor do we ask for Federal interference in the form of the legislation before us which would upset this balance and place too much power in the wrong hands. I do not believe that such power should be concentrated in the hands of any one group whether in labor or in management or in the hands of Government.

Every individual ought to have the right to decide for himself or herself whether or not to join a union, and to decide which union they wish to join. Employers ought to have the rights which they have always had to be protected from strikes against them during labor disputes in which they are not involved. The common situs bill would do much to destroy both of these rights, and I only hope that this House will consider these facts and vote against this unfortunate bill.

Mr. ASHBROOK. Mr. Speaker, I yield 10 minutes to the gentleman from Illinois (Mr. ERLENBORN), a member of the subcommittee.

Mr. ERLENBORN. Mr. Chairman, the title of the bill before us incorporates the language "equal treatment of craft and industrial workers." If, in fact, this is what H.R. 4250 accomplished and nothing more, I would be here in the well to support the bill.

I must confess that when the issue first arose in the last Congress, my inclination before reading the bill and understanding its implications was to try to find reasons to support it. However, after examining the bill and understanding it and its implications, I was forced to oppose the bill.

Mr. Chairman, put in the simplest terms, if we enact this legislation, we are not going to provide equal treatment for construction and industrial workers, but we are going to allow construction workers to engage in the practice of secondary boycott, which has been traditionally prohibited under the National Labor Relations Act.

This legislation will have very important implications, not only in labor-management relations in the construction industry, but also in the economy of our country. It will, without question, cause construction sites to tend to be all union or all nonunion.

At the present time, Mr. Chairman, it is not uncommon to find some subcontractors or some workers at the construction site represented by unions and others not represented by unions; but the passage of this act will polarize that situation, and the work site will tend to be all union or all nonunion.

Mr. Chairman, most everyone, union witnesses, the Secretary of Labor, and representatives of the construction industry, has agreed on this one result of the bill. There seems to be disagreement as to the ultimate effect, whether we will have more union or nonunion construction sites; but I think the very fact that this will tend to and will cause polarization at the work site, with the attendant conflict that will intervene between the passage of this bill and the final polarization, is almost sufficient reason in itself to vote against this bill.

Mr. Chairman, we have heard from the manager of the bill, the principal sponsor, the chairman of our subcommittee, the gentleman from New Jersey (Mr. THOMPSON), that by the time we are through today, we will have a bill that will be almost word for word the bill that came out of the conference committee in

the last Congress. I have noticed that he does have some reservations. He is not saying that it will be an identical bill.

Mr. Chairman, a very interesting point to bear in mind is that we do not know what bill it is which he intends to have us vote on later today. That bill is not before us.

Mr. Chairman, this has been the history of this legislation in this Congress. First, H.R. 3500 was introduced, which was only title I of the legislation that is before us. Apparently some weakness in the position of the opponents of the legislation was perceived; and thereafter the current bill, H.R. 4250, which is before us, was introduced incorporating title II.

Title II is the reformation, if we want to call it that, of construction industry collective bargaining, giving national unions more strength in the local bargaining situation. This was the so-called compromise that was engineered by former Secretary of Labor John Dunlop, who informed President Ford that it would lead to agreement between organized labor and the construction industry. That proved to be an absolutely false assumption on the part of the Secretary.

Now, however, title II is incorporated in the legislation before us; but that, apparently, is not the legislation we are finally going to be asked to vote on later this afternoon. Now the chairman tells us that yet today, as we are debating the bill here on the floor, something else is being drafted that will be offered to us either through a series of amendments or through the offering of a total substitute bill.

Mr. Chairman, this has to be extremely bad procedure with respect to legislation. We ought to be made aware, through the hearing process, through the debate in committee, made well aware long before we are called on to vote on the legislation on the floor of the House as to what we are going to be asked to vote for.

I would hope that in this process the sponsor of the bill intends to go back to the basic language of the bill that was before the House in the last Congress that exempted only the activities now prohibited under section 8(b)(4)(B). The bill that we are now considering, reported by the committee, exempts all activities under section 8(b). Some may ask, what is the difference? Well, section 8(b) includes almost all of the unfair labor practice proscriptions in the act. If we are going to exempt from situs picketing activities all of the unfair labor practices in the act, then that is much more than the sponsors have ever described the bill as being intended to do. If we do not change that language in that section of the act, under the preemption decisions of the courts that activity which is either protected or prohibited by the National Labor Relations Act cannot be controlled by the States through State legislation. If the language as it is before us now in H.R. 4250 remains, there will be whole areas that will be neither protected nor proscribed by the National Labor Relations Act and it is altogether likely that the States then may move in with their own legislation into those areas and a whole new era of litigation relative to the power of States to legislate in the field of labor-management relations will be opened.

Lastly, Mr. Chairman, let me call the attention of the Members to the effect that this bill will have on the cost of residential construction and what its impact will be on all construction.

It will tend to cause more work stoppages. It will have an effect on the entire economy. But I think the most important effect that this legislation will have will be that of causing work stoppages and thus possibly a higher cost of labor and will, in many ways, tend to drive up the cost of residential construction.

At the present time we know that the medium-income family is hard pressed to be able to afford single family housing. They are being forced to be renters rather than homeowners. It has been a long-cherished goal of Americans. It has been part of the philosophy of our tax laws to encourage individual homeownership. That goal of individual homeownership will be much more difficult to attain if this legislation is passed.

In the committee I offered an amendment that would exempt residential housing from the allowable secondary boycott activities that this bill would provide. At the request of the administration, the bill was amended to provide that secondary boycotts may not be utilized if the builder built 20 homes or less in the course of 12 months and was working on no more than 5 homes at any one time.

I think it is very obvious what that provision does: it gives protection to the custom-home builder and to the person who buys custom-built homes. We are talking about custom-built homes; we are talking about custom-built homes costing $190,000, $150,000, or $200,000. I am sure that those who are able to afford such custom-built homes will appreciate this exemption from the additionally higher costs that the bill will cause for other housing. But the ones who really need protection are the people who are able to buy not the custom-built home but the subdivision home, the tract home, the medium- and the lower-income people.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ASHBROOK. I yield 2 additional minutes to the gentleman from Illinois.

Mr. ERLENBORN. Mr. Chairman, I thank the gentleman from Ohio for yielding me the additional time.

Mr. Chairman, those who are middle and lower income families, who share that hope of being able to be the owners of their own homes, are the ones that really need the protection.

I think it would be a travesty if we would leave the bill in its present form and give protection only to the high-income, custom-built-home purchaser.

So, Mr. Chairman, I am going to offer an amendment that will exempt residential construction. So that this does not include residential construction represented by the large buildings, the high-rises in Manhattan, but we still limit this exemption to buildings that are composed of three stories or less.

The question has been raised as to whether those stories would include the basement. It is not my intention to include the basement, so I drafted the amendment to say three stories or less, not including the basement. In this way I think that the subdivision purchaser, the purchaser of tract-built homes, the lower and middle income purchaser, will be protected against the inevitable consequences of higher construction costs that will be the result of the passage of this bill.

Mr. FORD of Michigan. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I yield to the gentleman from Michigan.

Mr. FORD of Michigan. I thank the gentleman for yielding.

I am interested in the gentleman's desires to broaden the exemption of the housing industry which presumably would exempt virtually all of the housing industry unless they change the styles drastically from what we now have. Would the gentleman be interested in joining with me and going the whole way and exempting the housing industry in toto on all of the provisions of this bill?

Mr. ERLENBORN. In response to my colleague, I am not certain what it is he is driving at. Does he mean exempting from title II?

Mr. FORD of Michigan. No, if we are exempting the housing industry from part of the bill, if that is good, why would it not be better to exempt it from the entire bill?

Mr. ERLENBORN. I ask the gentleman again does he have reference to title II?

Mr. FORD of Michigan. The entire bill, yes.

Mr. ERLENBORN. As far as title II is concerned, I will say to the gentleman it may be his purpose to trap me into an admission that may be used against me, but my whole feeling on title II is reflected by a comment made by Mr. Robert A. Georgine, head of the building and constructive trades department of the AFL–CIO which was published that title II does not mean anything; whether it works or does not work depends on whether they want to make it work. If that is his attitude, title II is meaningless. If we want to exempt from title II, fine. I do not think it makes any difference one way or the other.

The CHAIRMAN. The time of the gentleman has expired.

Mr. THOMPSON. Mr. Chairman, I yield 5 minutes to the gentleman from Michigan (Mr. FORD).

Mr. ZEFERETTI. Mr. Chairman, will the gentleman yield?

Mr. FORD of Michigan. I yield to the gentleman from New York.

Mr. ZEFERETTI. I thank the gentleman for yielding.

Mr. Chairman, today the House of Representatives is considering H.R. 4250, and industrial workers bill. I feel that the passage of this legislation, generally known as the common situs picketing bill, is long overdue and I respectfully urge my colleagues to join in supporting this measure.

This piece of legislation, introduced by our esteemed colleague, FRANK THOMP-

SON, Jr., of New Jersey, will right an inequity that has existed for years by restoring to the Nation's 4.1 million workers in the building and construction trade the same rights enjoyed by workers in all other industries. It grants these workers the right to peacefully picket a working place at which a single job is being performed, in order that they may publicize their position in a labor dispute at that construction site.

Over the last 25 years, six Presidents of the United States of both political parties have endorsed legislation to correct this inequity. Similar legislation passed both the House and the Senate by a substantial margin during the 94th Congress, but former President Ford reneged on his commitment in support of the legislation by vetoing the bill.

The equal treatment for craft and industrial workers bill would overrule a 1951 Supreme Court decision which treated the various contractors engaged in a single construction project as separate economic entities. The construction of a building is a single, coordinated and integrated economic enterprise. This bill recognizes the general contractor and his subcontractors as a single person, which is an approach that reflects the economic realities in the construction industry where the contractor and the subcontractors are engaged in a common venture performing closely related tasks. It will not extend beyond the project site, and will not have any effect outside the construction industry.

This is already the law at industrial job sites, where a union may direct its picketing not only at the primary employer involved in a labor dispute, but at all other employers who are engaged in related work. All this legislation permits is the legal right for construction workers to advertise a legitimate grievance at a construction site with his employer, and nothing more. It is a right that every other organized worker in America has, and it is precisely this right of workers to appeal to their peers through picketing which is the essence of Federal labor law.

Enactment of this legislation would also be beneficial in decreasing construction costs by eliminating the expensive effects of work slowdowns and illegal strikes which stem from the construction workers' lack of legal alternatives.

Safeguards are built into the bill, including the prevention of strikes for racial discrimination, and it recognizes the requirements of national security. It would also require a 10-day notice to all concerned parties prior to the start of picketing and the written approval by the parent union.

In addition, I feel that the amendment calling for the creation of a Construction Industry Collective Bargaining Committee will provide for a more rational means of resolving labor disputes and will contribute to more stabilized labor-management relations in this critical industry.

This bill will clarify a technicality in the law and correct an unfair restriction placed on unions in the building and construction industry. The fact that this right has been and is being denied to these trade union members is outright discrimination.

Surely the time has finally come to end this inequity, therefore I am honored to join in cosponsoring equal treatment for craft and industrial workers legislation, and I am confident that my colleagues will join in supporting this vital legislation.

Mr. FORD of Michigan. Mr. Chairman, I am, to say the least, distressed after serving for many years with my colleague, the gentleman from Illinois, to hear him take the well and express his concern as he did for the fact that everybody who is paying attention on this floor knows that right now it is very probable that the majority and the minority will put the finishing touches on a very hard-fought and hard-negotiated compromise, thereby permitting the minority to put its imprint on this legislation.

I would not like to believe that the gentleman was suggesting that the position of being in total opposition to the initiatives of the majority side was so strongly imbedded in his psyche that he became disturbed when we agreed to let them play in the game with us and gave them a chance at bat.

I am one of the members of the majority that is not very happy with the compromise for different reasons. I do not really have an unhappiness that arises out of the fact that the bill is basically being written by the Republicans now as much as out of what is in the bill. I felt that this legislation was considerably watered down from the original intent of the legislation that I cosponsored at the beginning of this Congress, which had as its single purpose something that seems almost impossible to explain to people who do not understand, as I do not understand sometimes, the mysteries of how the Government of the United States works and that a court rendered a decision back in 1951 that was universally—universally—recognized by everybody in the field to be totally out of whack with the intent of the Congress in passing the Taft-Hartley Act and the secondary boycott provisions of the Taft-Hartley Act.

And Senator Taft himself, if he were here today, would be wondering I suppose why it has taken the members of his party and my party this many years to believe that he was sincere when he said that:

> The Court was wrong. That is not what we meant.

How could it be that every President and every Secretary of Labor serving under those Presidents starting with President Truman, has advocated or supported in some way the reversal of that Court decision and the reinstatement of what, as I say, most labor lawyers, regardless of their philosophy, agree should be the proper interpretation of the Taft-Hartley provisions of the National Labor Relations Act? How could it be after all these years with Democratic Presidents and Republican Presidents and Democratic majorities and a Republican majority for one Congress during that period of time in the Congress, that we are still talking about this in March of 1977?

The main reason is that this is an issue that generates an awful lot more smoke than the fire that burns at its base should justify. Our friends in the National Right to Work Committee on the other side of the river, by using their usual strained appeal to the emotions rather than intelligence, have used this issue to raise an extraordinarily large amount of money, and I suppose that it would be a great deal of disappointment to them if we were able to compromise this issue and get it behind us.

Mr. THOMPSON. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from New Jersey.

Mr. THOMPSON. Mr. Chairman, in speaking of the residential construction the gentleman from Illinois expresses a very deep concern for persons who want to buy homes. In the committee the gentleman from Illinois referred to such persons as Joe Six-Packers. I have a lot of very good friends who occasionally carry a pack and want a home and they are very wonderful, fine people.

Does not the gentleman from Michigan agree with me that if we were to agree to an exemption of, oh, $9 million or more per year for construction and exempt them, that a fantastic number of homes for working people could be constructed for $9.5 million even in today's market?

Mr. FORD. Yes. I think the exemption that is in the substitute that seems about to be agreed upon virtually takes the housing industry out of title I of the bill and virtually makes it impossible to project any change in the status quo.

The CHAIRMAN. The time of the gentleman from Michigan (Mr. FORD) has again expired.

Mr. THOMPSON. Mr. Chairman, I yield 2 additional minutes to the gentleman from Michigan.

Mr. FORD. Now, in the exchange that took place in the committee that the chairman is talking about, we got to "Joe Six-pack," as I recall, because the gentleman from Illinois was reluctant to have himself identified as an advocate of consumer protection, which apparently is not a popular position for the gentleman to be identified with, but that is really what the gentleman is saying. The gentleman was concerned about consumer housing and I am concerned about it, too. All one need do is, as I and my family have done, is examine the difference in the quality of housing that we found available to us around Washington, where it is customary to build without the advantage of the skilled building trades, but with so-called merit contractors, or nonunion contractors, and contrast that with what happens in my home area in Detroit, Mich., where the standard of production is established by the craftsmen in the trades and one can learn very quickly that the consumer is being much better served in my area than here.

Also, we learn very quickly that we can buy that first-quality construction work in my area much cheaper than we can buy nonunion scab production structures here in Washington.

Mr. ERLENBORN. Mr. Chairman, will the gentleman yield?

Mr. FORD of Michigan. I yield to the gentleman from Illinois.

Mr. ERLENBORN. Mr. Chairman, I thank the gentleman for yielding.

In the area I represent, almost all construction, residential, commercial, and

industrial, is built by skilled tradesmen who belong to organized labor. I think the additional cost of construction occasioned by this bill will not be a result of whether it is going to be open-shop or union-shop construction. The cost factor rather will be the work stoppages that will be caused when one trade goes out on strike and causes the whole job to go down.

Mr. ASHBROOK. Mr. Chairman, I yield such time as she may consume to the gentlewoman from California (Mrs. PETTIS).

Mrs. PETTIS. Mr. Chairman, as I have indicated in the minority views on this legislation—H.R. 4250, equal treatment of craft and industrial workers—I am in strong opposition to the passage of such a measure which unnecessarily grants extensive rights to construction unions by allowing a contractor on the same site to be unjustifiably affected by a dispute that does not involve him. In other words, Mr. Chairman, nonunion companies with no labor dispute could be forced to behave as though unionized—without free choice by employees.

I believe that passage of this bill violates the very principle and congressional intent of the National Labor Relations Act and subsequent laws to protect the freedom of choice of individual employees to select, or not select, by majority rule the union or bargaining agent of their choice.

Prohibiting the secondary boycott was intended to protect all neutral parties, whether employees or employers, who are not primarily involved in the labor dispute. In such labor conflicts it was and is the intent of Congress to confine the dispute to the employers, employees, and the area in which the conflict actually existed.

I believe passage of H.R. 4250 would have many undesirable consequences and would open a Pandora's box of new problems.

For a moment, Mr. Chairman, let us not consider what I as a Representative feel; let us take into consideration how a contractor—the very person proponents are claiming this bill will aid—feels about the matter.

If I may, I would like to enclose one sample of the mail I received from contractors:

DEAR MRS. PETTIS: As a Southern Californian I am writing to urge you to oppose enactment of any Situs Picketing legislation in the Congress of the United States.

Enactment of the legislation proposed by H.R. 3500 will cause havoc in the entire Southern California construction industry. As a builder and general contractor I can assure you that it is extremely difficult to accomplish any construction project with all the regulating agencies that are involved in projects today without the constant threat that labor unions could, and would, be empowered to shut down a construction project and to picket employers with whom they have no dispute as proposed under the Common Situs Picketing bill. The results would ignite a new round of national inflation. Delays to projects cost money and are directly passed on to the consumer in terms of project price, i. e. a school, or in terms of rent, i. e. offices, commercial store space, and in housing.

The arguments used by the proponents of the legislation, that construction unions and industrial unions should be given equal strike powers, is invalid and fuzzy thinking. The proponents just don't understand that the composition of employees at a construction project site are entirely different from those at a manufacturing plant site. Employees at a manufacturing plant are employees of *one* employer no matter which union they belong to, while employees at a construction project site are employees of up to 30 to 40 different employers at that same site. Any union which has a dispute with its employer at a construction site is allowed, under current law, to strike and picket that employer only, but the union is not allowed to picket the other project site employers with whom they have no dispute.

Situs Picketing would grant union members the power to close down an entire construction site even though their dispute is with only one subcontractor or employer at the site. Thus, a dispute with a subcontractor employing the fewest individuals at a construction site would result in every employee, whether union or non-union, being denied access to his or her job! For example, a construction project subcontractor with a $500.00 contract and with only two employees could, by reason of a labor dispute with his employees, shut down a multi-million dollar vitally needed school, water, sewer, or housing project and immediately deny work to hundreds of other project employees. The economic repercussions could become astronomical.

Passage of any Situs Picketing legislation could only increase unemployment, increase housing and construction costs of private and public works projects and result in lengthy and costly construction relays.

I strongly urge you to oppose enactment of H.R. 3500, or any subsequent similar Common Situs Picketing legislation.

Very truly yours,

R. C. CHENOWETH.

And finally, Mr. Chairman, I would like to insert for the RECORD, a recent editorial which I feel aptly summarizes the case against this bill:

[From the New York Times, Mar. 12, 1977]

AN UNCOMMONLY BAD BILL

The "common situs" picketing bill is back again in Congress, not as an Administration bill this year but with strong support from the A.F.L–C.I.O. leadership and, not surprisingly, for legislators with ties to organized labor. Though altered in committee to provide certain moderating exemptions, the present bill, like the one President Ford vetoed in 1976, would permit the employees of one contractor on a building project to set up picket lines to keep members of other unions from working anywhere on the site.

The bill would accomplish this objective by making secondary labor boycotts legal in the construction industry. In 1976, then Secretary of Labor John Dunlop strongly supported the measure because it was coupled with a bill that advanced labor stabilization in the industry. Mr. Dunlop, in fact, resigned to protest the Presidential veto. The present bill lacks even the attraction it had for Mr. Dunlop and we hope will not pass. A common situs law would make construction labor even more volatile than in the past, and increase building costs.

Proponents of the bill argue that if the building trades constituted a single union, a picket line would inevitably keep all its members off a struck site. Thus, they say, the common situs bill merely gives these workers the protection they would have if they chose to organize on an industry-wide basis.

This point is not persuasive. If all the building workers on a site were members of the same local, its leaders would surely hesitate before throwing up a picket line that would inconvenience all of its members for the benefit of a few. In any event, the building trades unions have had the same opportunity as other workers to coalesce into a single union. Since they have chosen to continue their separateness, why bless them legally with the benefits of the togetherness which they have rejected?

Shrinkage in the share of construction work now done by union labor has stimulated the demand for common situs picketing. The reason for the shrinkage, however, arises not from the lack of such a bill, but rather from the great differential between the cost of union and nonunion construction labor. By threatening to raise the cost of union labor still higher, the common situs bill would only invite builders to use more nonunion workers. The Congress and the President will, in this case, be helping labor best by ignoring the counsels of its leadership.

Mr. ASHBROOK. Mr. Chairman, I yield 10 minutes to the gentleman from Oklahoma (Mr. EDWARDS).

Mr. EDWARDS of Oklahoma. Mr. Chairman, first, let me make it clear in response to the statement we just heard that the minority is not writing this bill, nor is the minority accepting the bill. One Member's action is not an action by the minority.

Now, common situs picketing is obviously not a new idea. We have heard a great deal about the fact that *x* number of Preidents and *x* number of Secretaries of Labor have supported common situs legislation. We are told that common situs is an idea whose time has finally come. Well, the truth is common situs picketing is an idea whose time has never come. It is an idea that has been rejected by the courts. It is an idea that has been rejected by the committees in this House over and over again, and, when it made it through the House, rejected by the American people in one of the greatest outpourings of mail ever generated by a single issue in the entire history of this country.

Now, the bill's advocates refer to the previous President's mysterious veto—mysterious—as mysterious as one of us voting against a bill after receiving 10,000 letters from our constituents. Mysterious? That veto is mysterious only to those who believe the people are to be talked to and not listened to.

It is supposed to be a bill to provide equal treatment.

Well, that is a wonderful goal, but that is not what this bill is about. That is like calling a pork chop salami to try to sell it in a delicatessen—the same kind of political doubletalk that says if you call a secondary boycott something else, it will not be a secondary boycott.

So, what is this bill about? All this bill is about is letting a union picket an employer who has no problem with any of his employees, who has no union problems, who does a good job, but letting a union shut him down in order to put pressure on somebody else to unionize. It is about putting innocent people, hard-working electricians, carpenters, bricklayers and plumbers, out of work so that some other guy's union can organize some other employer.

Well, I do not believe that a union should have the right to harm an innocent third party's business, put his workers out of work, drive up construction costs to the consumer, harm innocent

people, in order to squeeze a single small employer.

That, alone, is reason enough to vote against this bill. That, alone, certainly is enough today, the anniversary of Patrick Henry's famous speech in defense of one of the greatest of values—not union power, but liberty.

Let me tell the Members, whatever their political philosophy is, this bill is bad because it is flawed; because it is incomplete; because it does more than we have been told it does; because the heart of it, title II, is openly, blatantly, a product of hypocrisy—a bad joke put in the bill to try to make it easier to swallow.

Look at this bill—really look at it. One part of this bill makes legal things that have, until today, been unfair labor practices—coercion, mass picketing, harassment, union violence—things that nobody in this House would sanction—but they are made legal by this bill.

The sponsors tell us that this is a matter of interpretation. Well, do not take my word for it; read the bill. Before voting for the bill, read it. Read the part that wipes out unfair labor practices, and Members will see for themselves if it is ambiguous.

Even if it were, that alone would be enough to justify voting against the bill, because who can vote for a bill that is ambiguous and subject to interpretation on such an important, awesome, awful point? But, it is not unclear. It is not rhetoric. It is not a technicality. It is a sanction by this Congress of unfair labor practices in the construction industry.

What else about this bill? What is it? It is a common situs bill. So, what is the single most important part of the bill? The definition of a common site.

But, there is no definition of a common site. Can the Members believe it? What a joke; what a farce. How do we explain that to our folks back home—a bill that does not even address the single most important element in it?

Even the Secretary of Labor, in his testimony, said that he did not know what a common site was, and he has to enforce the thing. He said he did not know, he could not guess, and he figured that was somebody else's job.

Are we reday to pass a bill when nobody knows what it means? There are probably 433 definitions of the common site in this House today, and not one definition where it matters the most—in this flawed, incomplete, unclear, ambiguous, bill.

How in the world can the leadership ask Members to vote for this kind of a bill, and then send them back home to face their voters? Do not take my word for it. Read it. It will blow your minds when you see what you are being asked to vote for.

There must, obviously, be a tremendous wave of public support behind this bill for such a flawed bill to move so rapidly through the process, bypassing markup in the subcommittee, not even hearing substantial testimony on the definition of a site, or eliminating the prohibition against unfair labor practices; hardly mentioning title II—there must be a tremendous wave of support.

The last time this bill came up, Opinion Research Corp., one of the most respected nonpartisan poll takers in the country, found more than 70 percent of the people against this bill. This time the Roper poll found the same thing. The Roper poll found 73 percent of blue collar workers were against common situs; 64 percent of union members were against it; 73 percent of Democrats were against it; 79 percent of Independents were against it; 76 percent of liberals were against it; 78 percent of moderates were against it—in every part of the country. These are our constituents. We are going to have to go back and face them.

We are going to be told that this is a slanted poll. Members should get the poll themselves. We have it. Members should read the question. It is not a slanted poll. Members cannot take somebody else's word for it, because they have got too much, politically, riding on their votes today on this bill.

The union took a poll, too. The Members might like to know that. They commissioned a poll. Wow, did they slant the question! Do the Members know what their question was? "Do you favor equal treatment?"

Who is not for equal treatment?

They found, with that slanted question, that 51 percent of the people were in favor of the bill.

That is the great public support that you are being asked to risk our political futures for. Let there be no mistake about it, you are being asked to risk your political futures. Why do the Members think we are voting on this bill today? Why now? Why an incomplete bill, with inadequate testimony, no definitions? What is the rush? The Members know what the rush is: So they can pass this bill before they go home for Easter and find out how the voters feel.

We have to be home for Easter anyway, so what is it going to be like finding out how the voters feel when it is too late?

That is not one of labor's top priorities. Labor wants it, sure, and they are holding some IOU's. I know that. I understand it. But this is not their top priority, and if the Members think they are going to be paid off with this one and then be let off the hook later on when the big ones come along, the ones which affect all the unions, not just crafts unions, they are wrong, and they know they are wrong, because the real squeeze comes later.

So why go up against 77 percent of the people back home, who are going to be furious over this bill, to give something to one small part of labor, something which will not even begin to pay whatever debt the Members owe.

What about the President? They can tell you all day that the President is for the bill. But is he?

Mr. THOMPSON. Mr. Chairman, will the gentleman yield?

Mr. EDWARDS of Oklahoma. Not at this time.

Is there anybody in this chamber who does not have some doubt about what the President really thinks about common situs?

Secretary Marshall told us in committee that he could not say that the President advocates this bill, only that the President will sign it if it passes and if it passes with title II in it.

It is no secret. Everybody in the United States knows that the President is lukewarm about this bill. So why walk the plank on something which our President—a President of your party—does not really care about? Heaven knows, you are going to walk the plank for him sometime—we all walk the plank when we have a President of the same party—so why walk it this time just for practice?

Seventy-seven percent of the people are against this bill. It does not even define a site. The President does not care. It is a small part of labor's package. It is not worth it. Do not go down the drain over this bill.

Mr. THOMPSON. Mr. Chairman, before yielding to the gentleman from New York (Mr. WEISS), I yield myself such time as I may consume.

Mr. Chairman, I was both amused and interested by the speech just given by our colleague from Oklahoma. I noted with some interest that he was really preaching from the wrong pulpit. But, of course, it is on the right; so I suppose that is why he chose it.

Apparently this decision is to be made, if I am to follow his logic, by putting one's mail on scales and seeing how much it weighs. The postal service needs business. Certainly the contractors' associations and the National Right-To-Work Committee, and so on, have caused to be printed and stamps to be put on literally thousands of pieces of identical mail.

So we do appreciate the efforts of the Postal Service, although we understand the difficulty it is in. That was done, but that does not necessarily reflect the situation by any means.

Mr. Chairman, I asked the gentleman from Oklahoma (Mr. EDWARDS) to yield at the point where he asked the question: "Is there anyone in this room who can say that the President is for this bill?" I wanted the gentleman to yield so that I could say, "yes," because I have had it restated to me only this morning that the President is for this bill.

Mr. Chairman, I yield 8 minutes to the distinguished gentleman from New York (Mr. WEISS).

Mr. WEISS. Mr. Chairman, title I of the bill has already been discussed at great length. I would like to address myself to title II, the construction industry collective bargaining provisions.

It may be helpful to put this title in its historical perspective. The genesis of title II was the testimony of Secretary of Labor Dunlop before the Labor-Management Subcommittee in 1975. Testifying on what was then H.R. 5900, Dr. Dunlop urged the creation of a construction industry committee to facilitate stabilization of labor relations in the industry. Subsequently, Dr. Dunlop's proposed bill was introduced as H.R. 9500. After some modification and revision, the provisions of the Dunlop bill were added to the Senate version of H.R. 5900 and came back to the House from conference as one bill. The House accepted the conference report. Title II of H.R. 4250 which we are considering

today is identical in every respect to title II of the conference report in the 94th Congress.

The purpose of title II is to reform the framework of collective bargaining in the construction industry. It is designed to create a labor relations structure which can reflect and effectively promote the national interest in diminishing inflationary wage settlements, unproductive manpower utilization, and prolonged work stoppages. By creating a new tripartite committee composed of labor, management, and public representatives, the bill establishes a forum for the expression of these national interests and provides for the direct participation of national labor organizations and national contractor organizations in local and regional collective bargaining. At the same time, it preserves the flexibility to consider the variations that necessarily exist among localities, crafts and branches of the industry.

The Construction Industry Collective Bargaining Committee—CICBC—will be responsible for identifying key construction industry collective bargaining situations for their possible pattern-setting impact on bargaining in the industry. Where appropriate, it will intercede before potentially disruptive new settlements are reached by the parties which are likely to lead to widespread wage distortions and costly work stoppages. It will also promote agreements covering more appropriate geographic areas, encourage voluntary procedures for dispute settlement, and take other steps to remedy the underlying labor relations defects in the construction industry.

The legislation is intended to reform the structure of bargaining and improve the dispute settlement process with a minimum of governmental interference in the collective bargaining process. It is experimental in nature, and by its terms will expire in 3 years. It is, however, an experiment based on the instructive and successful experience of the past several years when representatives of labor and management in the construction industry met with public members to discuss, analyze and resolve their problems. This experience includes the operation of the Construction Industry Collective Bargaining Commission, established by Executive order in 1969, and the subsequent Construction Industry Stabilization Committee, established in 1971 under the Economic Stabilization Act of 1970. The bill applies solely to national construction industry labor organizations and their affiliates, and to contractors and their associations engaged in collective bargaining with them in this industry. It does not apply to bargaining between contractors or contractor associations and independent unions, or to the nonunion sector of the industry.

Section 203 establishes the Construction Industry Collective Bargaining Committee—CICBC—consisting of 10 members representing the viewpoint of employers, 10 members representing the viewpoint of national labor organizations, and up to 3 public members representing the public. The Secretary of Labor and the Director of the Federal Mediation and Conciliation Service are nonvoting members ex officio. This section provides that all action of the committee shall be taken by the Chairman or the executive director on behalf of the committee.

Section 204 requires that with respect to termination or modification of any collective bargaining agreement covering employees in the construction industry, unions affiliated with any standard national construction labor organization, and any employer or employer association dealing with them, must give notice to their respective national organizations 60 days prior to the expiration date or proposed modification of the agreement. The national organizations are required to transmit promptly the notices they receive to the CICBC. During this 60-day period, which is comparable to the provisions of section 8(d) of the National Labor Relations Act, the parties to the agreement may not change the terms and condition of the existing agreement or engage in any strike or lockout.

Section 205 authorizes the committee to assume jurisdiction of the dispute for a period not to exceed 90 days either on its own initiative or at the request of an interested party. The parties may not engage in a strike or lockout during this 90-day period. During this period the committee may participate directly in the negotiations; it may refer the matter to an appropriate national craft or branch board; or it may direct the parent labor organization to participate in the negotiations. In the last event, no contract is of any force or effect unless approved by the parent organization, unless the committee waives this requirement. The parent organization is not exposed to any criminal or civil liability arising out of a request by the committee for its participation in collective bargaining.

Section 206 sets forth the standards for the assumption of committee jurisdiction; that is, to facilitate collective bargaining; to improve the structure of bargaining; to promote practices consistent with appropriate apprenticeship, training and skill level differentials among the various crafts; to promote voluntary procedures for dispute settlement.

Section 207 invests the committee with additional functions: to promote and assist in the formation of voluntary national craft or branch boards; to make recommendations as deemed appropriate to facilitate area bargaining structures to improve productivity; to promote stability of employment; to improve dispute settlement procedures, and to provide for the equitable determination of wages and benefits.

Section 208 provides for remedial action in the form of a civil action brought by the committee in a district court of the United States to enforce any provisions of the act. But no court shall issue any order prohibiting a strike or lockout for any period beyond the 90-day period specified in section 205(a). The findings, decisions and actions of the committee may be set aside only where they are found to be arbitrary or capricious, in excess of its delegated power or contrary to specific requirements of the act.

Section 209 authorizes other agencies and departments of the Government to provide information deemed necessary by the committee, and directs the committee and the Federal Mediation and Conciliation Services to consult and coordinate their activities.

Because of the experimental nature of this committee, section 213 provides that title II shall expire on December 31, 1980, thus requiring careful congressional review of its accomplishments at that time. The CICBC is required to provide both the Congress and the President with an annual report of its activities. No later than June 30, 1980, it must submit a full report on the operation of this title together with recommendation as to whether it should be extended beyond the expiration date, and recommendations for other appropriate legislation.

Mr. Chairman, at this time I would like to express my appreciation to our distinguished colleague, the chairman of the Subcommittee, FRANK THOMPSON, for the work which he has done in bringing this legislation before us today. As every Member of the House is aware, this legislation has seen its share of controversy; more organized mail has been generated concerning this piece of legislation than any other bill which we have considered in the 95th Congress.

As a member of the Subcommittee on Labor-Management Relations I have heard from people throughout the country who are convinced that passage of H.R. 4250 will result in a multitude of specified horrors: Some have written that passage will result in the end of the industry; others have stated that passage will "demobilize the country"; still others have suggested that passage will mean that "the freedom of the working man to choose his employment will be eliminated." For the "good of America" I have been told, vote against common situs.

Mr. Chairman, I have heard every argument, and read every piece of mail in opposition, and have come to the conclusion that rather than presenting us with a series of potential horrors, this legislation is necessary because it does exactly what it purports to:

It equalizes the position of construction trade and craft workers with industrial and office union members.

For all practical purposes, a general contractor is in control of work performed at his construction site: He can either do the work himself or he can employ a subcontractor. If a contractor selects a nonunion subcontractor who does not pay the prevailing wage, there is no recourse for the union members as there would be if a similar circumstance occurred in an industrial—rather than construction—labor dispute. I think that this is unfair and that H.R. 4250 corrects this essential inequity.

This legislation, as all of us know, has had a long and somewhat inglorious history. The Secretaries of Labor of the last six Presidents have indicated their support of the concept of comon situs picketing. Dr. Dunlop, the inspiration behind

title II of H.R. 4250, resigned in protest after Mr. Ford reneged on his promise to sign the common situs picketing bill.

The time has arrived, Mr. Chairman, for the enactment of this legislation. I do not believe that the horrors which opponents of this legislation are predicting will in fact occur.

I suspect that we will look back upon this debate sometime in the foreseeable future after the common situs picketing bill has been in effect for a while, and we will wonder what all the commotion was about. What we will probably find is that as a result of H.R. 4250, the construction trade and craft unions and the contractors and subcontractors for whom they are working will have a more harmonious business relationship than they presently have.

Thank you, Mr. Chairman.

Mr. PHILLIP BURTON. Mr. Chairman, will the gentleman yield?

Mr. WEISS. I yield to the gentleman from California.

Mr. PHILLIP BURTON. Mr. Chairman, I would like to commend our distinguished colleague, the gentleman from New York (Mr. WEISS), for his enormous contribution since his arrival and his becoming a member of the Committee on Education and Labor.

Mr. Chairman, it is rare for a new Member to be able to so quickly and effectively demonstrate a grasp of the many problems that come before that committee; and I particularly commend the gentleman for his efforts in this particular regard.

Mr. WEISS. Mr. Chairman, I thank the gentleman.

Mr. ASHBROOK. Mr. Chairman, I yield such time as he may consume to the gentleman from Illinois (Mr. MICHEL), our distinguished minority whip.

Mr. MICHEL. Mr. Chairman, I rarely find myself in agreement with the editorial opinions of the New York Times; but today I am. Their editorial of March 12, entitled "An Uncommonly Bad Bill," referring to the common situs bill, is right on target when it suggests that:

> The Congress and the President will, in this case, be helping labor best by ignoring the counsels of its leadership.

I could not have put it more succinctly myself. As the Times states:

> A common situs picketing law would make construction labor even more volatile than in the past, and increase building costs.

What we are asked to do here today, therefore, is to enact into law a proposal that will do precisely those things that we must not do: Destroy any possibility of commonsense in bargaining in the construction trades and hurt the consumer.

Let us get one fact straight in this debate. This is not an issue in which the ideals and principles and desires of the vast majority of American working men and women are at stake. Not even the majority of union men and women feel deeply about this. This is, pure and simple, a payoff. This one is for the big boys in the plush union executive offices in Washington and around the country, the ones whose excesses have so disgusted the public that a recent poll showed "labor unions" at the rock-bottom of 16 American institutions in which the American people have confidence. The rank and file union members have not brought unions to this low estate. It is the big boys, the ones with clout who want this one. They want it for one reason: it will increase their power.

Many years ago a bloated plutocrat named Jay Gould said: "The public be damned." Today you can find the same type in some of the union executive suites around the country. The public gets it in the neck either way.

We want to get this country building again. And there is nothing in this bill—absolutely nothing—that will get us more of what we all want at any more reasonable price. On the contrary its passage will have just the opposite effect. Let us not deceive ourselves: this bill is an open invitation for the kind of general shutdowns of large construction sites the big boys want. The public will be damned—and good—if this one gets through.

In my own views it is a pity that these arguments have to be put in a way that makes it appear that "unions" are on one side of this issue and "business" is on the other. The fact of the matter is that there is somebody else involved: the average American who is in a majority in this country. Nobody thinks of him or her. In this case the bill before us will economically hurt the average American who is neither part of a union or part of business management. Who speaks for this person? Well, today, in this bill, we speak for this person if we vote against common situs picketing. Our job here is to keep an eye on unions and business and education and Government and every other major institution to make certain that excesses of power are stopped in their tracks. That is why I am voting against this bill.

Mr. ASHBROOK. Mr. Chairman, I yield such time as he may consume to the gentleman from Tennessee (Mr. DUNCAN).

Mr. DUNCAN of Tennessee. Mr. Chairman, we have before us today H.R. 4250, legislation which if enacted into law would exempt the building and construction trade unions from the secondary boycott provisions of the National Labor Relations Act. In my opinion, H.R. 4250 violates the express intent of the Congress as manifested in the Taft-Hartley Act of 1947 and the Landrum-Griffin Act of 1959, and, more importantly, represents one more giant step toward abolishing freedom of choice for employees to select, or not select, by majority rule, the union or bargaining agent of their choice.

The prospects for H.R. 4250 as the law of the land are frightening. The changes it would bring would permit a single union to close down an entire construction project because of a dispute with one subcontractor, even if other subcontractors were not involved in the dispute. Conceivably, one construction union could close an entire industrial plant by enlisting a sympathy strike from a plant's union employees. The effects on industry and nonunion employees would be disasterous.

I was opposed to efforts in the 94th Congress to enact legislation to permit common situs picketing, and I am most certainly opposed to those efforts today. I will continue to oppose this or any other legislative effort by representatives of the people to deny the majority of our citizens their basic right to freedom of choice in their employment. To legislate for the minority is to deny everything we say this Nation represents, and I, for one, will not do it.

I have heard from a great number of union workers in my congressional district. Many of them are members of a craft union, an overwhelming majority are opposed to this legislation. Some say that they want good contracts, but they do not want another union depriving them of their right to work once they are on the job.

I would like to include as a part of my remarks an editorial from three prominent newspapers on this subject:

[From the Detroit News, Feb. 6, 1977]

COMMON-SITUS PICKETING REVISED

Some issues never die; they just wait to be revived under a new administration.

Now that Jimmy Carter has taken up residence in the White House, the country's building trade unions feel they have a good chance of getting the ancient and controversial common-situs picketing bill, signed into law.

Of course, they felt that same way when former Labor Secretary John T. Dunlop championed their cause in the Ford administration. In the end, fortunately, President Ford changed his mind, rejected Dunlop's advice and vetoed the bill. Perhaps President Carter can be persuaded to see the light, too.

The picketing proposal would allow construction and building trades unions to picket an entire construction site during a dispute with but a single contractor. Thus, one small and irresponsible union could close down an entire construction project, throwing thousands of men and women out of work. The proposal also would restrict competition in the job market by virtually forcing contractors to hire union members.

These consequences are no fairer, no more desirable today than they were in 1951 when the U.S. Supreme Court rejected the common-situs picketing concept, holding that such a practice would constitute an illegal secondary boycott.

During the recent presidential campaign, Mr. Carter indicated he would sign a common-situs bill if it came to his desk. However, this is one of those issues on which his remarks were somewhat ambiguous. In one interview he stated that he didn't know enough about the issue, that he probably would support a common-situs bill, that everything depended on the wording of the bill.

The President seems to have left himself ample room for squirming out of supporting common-situs picketing. And when he considers fully not only the injustices but also the potential economic evils of major construction-site shutdowns, he may well want to squirm out of that thoughtless commitment.

[From the Wall Street Journal, Mar. 17, 1977]

COMMON SITUS AND IOU'S

Last year President Ford vetoed the "common situs" picketing bill, but it is back again and President Carter said he will sign it if it is passed by Congress. The likelihood of that is generally considered excellent because a good many Congressmen feel dependent on organized labor for their election victories.

Common situs is only one of the AFL–CIO's IOU's. Among the other items on the list are

repeal of section 14-b of Taft-Hartley, which allows states to enact right-to-work laws prohibiting compulsory union membership as a condition of employment; raising the minimum wage from $2.30 an hour to $3, and revising the Hatch Act, which prohibits federal workers from partisan politics.

Most of the changes would enhance organized labor's existing privileged position within the U.S. economy, and common situs is a case in point. What the bill would do is legalize secondary boycotts in the construction industry, something that has been illegal since 1951 when the Supreme Court ruled that "unoffending secondary employers should be shielded from pressures and controversies not their own."

Advocates claim that the bill would merely put construction workers on a par with all other unionists, who can shut down projects during strikes. In fact, however, the construction industry is unique in that upwards of 20 different unions often work on the same projects, each having a contract with a different employer. If one union walks out in a dispute now, others continue working. But with the common situs bill, those "unoffending" innocent third parties would be drawn into the line of fire for no purpose other than to strengthen the construction unions.

The net effect of this bill, of course, will be to hike the already high cost of construction union labor, which will be passed on in increased building price tags. A Congress that professes to be concerned about the skyrocketing costs of home construction might consider what this would do to raise them even higher. It might also consider what the growing trend toward nonunion construction labor, which would be accelerated by this bill, would do to minority unionists who are generally low in seniority.

It would seem that construction unions are intent on slitting their own throats in pressing for passage of this bill. Such suicidal impulses are not entirely unknown—recall how New York newspaper unions forced through unreasonable work rules and mammoth pay hikes even as one newspaper after another folded beneath them. But the unions no doubt feel they can avoid this fate if they can also win repeal of right-to-work from Congress. That is, they hope to dispose of the problem of nonunion labor by forcing all workers into unions.

None of this is likely to help minority workers or middle class families struggling not to be priced out of the housing market. But it does show how easy it is for legislators beholden to organized labor to define the public interest in terms of the interests of their benefactors.

[From the New York Times, Mar. 12, 1977]

AN UNCOMMONLY BAD BILL

The "common situs" picketing bill is back again in Congress, not as an Administration bill this year but with strong support from the A.F.L.-C.I.O. leadership and, not surprisingly, from legislators with ties to organized labor. Though altered in committee to provide certain moderating exemptions, the present bill, like the one President Ford vetoed in 1976, would permit the employees of one contractor on a building project to set up picket lines to keep members of other unions from working anywhere on the site.

The bill would accomplish this objective by making secondary labor boycotts legal in the construction industry. In 1976, then Secretary of Labor John Dunlop strongly supported the measure because it was coupled with a bill that advanced labor stabilization in the industry. Mr. Dunlop, in fact, resigned to protest the Presidential veto. The present bill lacks even the attraction it had for Mr. Dunlop and we hope it will not pass. A common situs law would make construction labor even more volatile than in the past; and increase building costs.

Proponents of the bill argue that if the building trades constituted a single union, a picket line would inevitably keep all its members off a struck site. Thus, they say, the common situs bill merely gives these workers the protection they would have if they chose to organize on an industry-wide basis.

This point is not persuasive. If all the building workers on a site were members of the same local, its leaders would surely hesitate before throwing up a picket line that would inconvenience all of its members for the benefit of a few. In any event, the building trades unions have had the same opportunity as other workers to coalesce into a single union. Since they have chosen to continue their separateness, why bless them legally with the benefits of the togetherness which they have rejected?

Shrinkage in the share of construction work now done by union labor has stimulated the demand for common situs picketing. The reason for the shrinkage, however, arises not from the lack of such a bill, but rather from the great differential between the cost of union and nonunion construction labor. By threatening to raise the cost of union labor still higher, the common situs bill would only invite builders to use more nonunion workers. The Congress and the President will, in this case, be helping labor best by ignoring the counsels of its leadership.

Mr. ASHBROOK. Mr. Chairman, I yield 5 minutes to the gentleman from Alabama (Mr. BUCHANAN), our distinguished colleague on the committee.

Mr. BUCHANAN. Mr. Chairman, I rise to join in expressing concern over the effects of this legislation should this body in its wisdom, or lack of it as the case may be, pass H.R. 4250, the common situs picketing legislation.

Members of the Associated Industries of Alabama were in Washington this week and, as could be expected, were strongly opposed to this legislation.

Among the points raised by AIA were the fact that there often is no single employer with control over or responsibility for the labor policies of others. Rather than working as a single unit, in fact, contractors and subcontractors are often competitors. Yet this legislation would permit unions with a grievance against one subcontractor or contractor to close down an entire construction site.

A second point raised by the Alabama businessmen is that this legislation could compromise the principle of free choice in joining or declining to join a union because of the coercion which unions could exert by closing down entire construction sites because of the presence of nonunion employees.

Other AIA concerns include: increased work stoppages; reduced use of nonunion contractors and subcontractors; the forcing out of business of those small construction firms which do not have adequate capital to withstand numerous and lengthy picketing activities resulting from this legislation; the forced unionization of nonunion employees; and adverse effects on the rights of minorities who have traditionally been excluded from membership in the building trades unions.

The Wall Street Journal also opposes this legislation, but such a position by the Journal is also not unexpected.

In its March 17 editorial, the Journal raised some of the same points enumerated by the AIA and added a few of its own.

The Journal countered arguments that this bill will merely put construction workers on a par with other unions by pointing out that—

The construction industry is unique in that upwards of 20 different unions often work on the same projects, each having a contract with a different employer. If one union walks out in a dispute now, others continue working. But with the common situs bill, those "unoffending" innocent third parties would be drawn into the line of fire for no purpose other than to strengthen the construction unions.

Like AIA, the Journal expressed the fear that this legislation will raise costs to the average American home buyer and would be detrimental to minority workers.

Perhaps these responses were to be expected from the entities like AIA and the Wall Street Journal.

But another voice has been heard in opposition to this legislation, a voice which has often sided with labor in the past and that is the voice of the New York Times.

In its editorial entitled "An Uncommonly Bad Bill," the Times expressed its concern that this bill "would make construction labor even more violative than in the past and increase building costs."

Further, as the Times noted:

If all the building workers on a site were members of the same local, its leaders would surely hesitate before throwing up a picket line that would inconvenience all of its members for the benefit of a few. In any event, the building trades unions have had the same opportunity as other workers to coalesce into a single union. Since they have chosen to continue their separateness, why bless them legally with the benefits of the togetherness which they have rejected?

I cannot look upon this as true prolabor legislation because it would result in the regular and sometimes massive loss of work and pay to union members at a construction site not themselves involved directly in a dispute. In many cases the overwhelming majority will be inconvenienced and their livelihood adversely affected because of an unrelated dispute between one small subcontractor and the handful of persons who may have a grievance against him.

This, therefore, may be more of an antilabor bill than a prolabor one from the point of view of the rank and file workers in the construction industry and out of it.

It is certainly an anticonsumer bill. Most Americans are neither contractors nor construction workers, yet all of us are already confronted with high and rising costs in this industry. There is virtually no such thing as low-cost housing in our country today. It seems plain that all low- and middle-income Americans may be adversely affected by this bill except a limited group which works in the construction industry.

Finally, because of past and in some instances continuing patterns of discrimination in the building trades, this could even be considered anti-civil-rights legislation. Because of past patterns of discrimination by unions, many black construction workers are nonunion. Black Americans are underrepresented in the

building trades unions particularly at the level of skilled labor. Passage of this bill, therefore, would almost certainly stand as a continuing handicap or barrier to the increased entry of black Americans into areas of employment, particularly at the higher levels of income.

Mr. Chairman, I have received a few wires and letters from labor union leaders expressing their support for this legislation. I have received almost no mail from the rank and file building trades workers in my district, which indicates to me that this legislation does not have strong support among the rank and file workers.

On the other hand, I have received hundreds of communications from constituents who are strongly opposed to this bill. Some are in the construction industry; many are not.

Mr. Chairman, I join the Associated Industries of Alabama, the Wall Street Journal, the New York Times, and many hundreds of my constituents in urging the defeat of H.R. 4250, the common situs picketing legislation.

Mr. THOMPSON. Mr. Chairman, I yield 3 minutes to the gentleman from Texas (Mr. WHITE).

Mr. WHITE. Mr. Chairman, in looking over this bill I have come to several conclusions, one of which is that this bill may be ill conceived. Looking at it first from a union man's standpoint, I cannot see that this is going to benefit him that much, because I think this bill is going to lead to a higher unemployment rate at the very time when this Congress has gone further in passing jobs bills in an effort to reduce our unemployment rate. Certainly it is going to force the contractor to go out and try to have an all-nonunion job so that he will not have the strike that will occur on the happenstance of having one of his subcontractors have an altercation with some union. But more than that I am concerned about the homeowner himself.

I can see a couple of our constituents, say, the Jacksons who desire to have a house built. They have been looking forward to having this house built. They look for a good contractor, one who has shown himself over the years to be fine and, therefore, he is probably very much in demand. They then contract to sell their own house. They guarantee that they will move out of their house at a certain time.

Then in the midst of construction of the new house, suddenly there is a strike, a union conflict, and the entire job is closed down. They have got to move out of their old house, and they cannot get into their new house for a long period of time while the union strike goes on.

Let us take another situation of a nonhomeowner who desires to buy a home, who has been negotiating for the construction of a home. Today he may have a house of a certain value, say, $20,000. By the time he is able to contract and actually enter into an agreement with a contractor, this bill will have been passed. Suddenly the cost of that house escalates, because certainly this particular bill is going to drive up the cost of housing. There will be many built-in requirements that a contractor is going to have to hedge against the occasion of a strike, and I think we can expect this to be.

I think this bill is going to lead to union and management strife and will lead to unrest and work stoppage at a time when we really want to go forward and build up America and not stall it.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ASHBROOK. Mr. Chairman, I yield 5 minutes to the gentleman from Utah (Mr. MARRIOTT).

Mr. MARRIOTT. Mr. Chairman, today I rise to defend and protect the concepts of free enterprise, the right to work, and the small businessman. I speak knowing that the American people are keenly aware and vitally concerned with the labor legislation being deliberated by this distinguished body.

We are considering the passage of H.R. 4250, which would amend the National Labor Relations Act and legalize presently prohibited secondary boycotts in America's construction industry. Passage of this legislation would have a marked impact on this country and a detrimental effect on the majority of her people.

Twenty-six years ago, the Supreme Court in the Denver Building Trades decision ruled that secondary boycotting was illegal. This prohibited union employees who had labor disputes with a general contractor from extending their picketing and impeding the operations of subcontractors. The equity and fairness of that decision is obvious. Secondary boycotts penalize innocent employers and employees who have no control over the dispute about which the picketing is taking place.

Since the Denver Building Trades' decision, however, organized labor has attempted in one form or another to push for the legalization of boycotting. The unions have attempted to promote this secondary boycotting for a myriad of reasons ranging from economics to wages. Upon close inspection, however, I find that their arguments can be categorized in two main concepts:

First, they claim that passage of secondary boycott legislation would give them picketing rights equal to America's industry.

Second, they contend that unions have a right to picket all the contractor-employers on a construction site because they are joint ventures.

I can find no validity or justification for either argument.

For example, when we look at industry, we find all plant employees having a common employer, regardless of the union to which they belong. That single employer negotiates with the unions so that they all work under common labor policy.

The joint venture argument is equally fallacious and holds little legal weight. Contractors and subcontractors are separate legal entities under common and statutory law. They have no control over each other's disputes and do not share in profits and losses.

If these critical arguments are found wanting in substantive logic and fact, then I believe our trade unions have little definitive base for the proposition that common situs picketing be legalized. If we strip off the facade and rationalization purported by the unions and examine common situs for what it really is, it becomes apparent to me that if H.R. 2450 were passed, Congress would be creating a closed union shop for America's construction industry.

Why is this so?

If we legalize this form of secondary boycotting, we are really issuing a mandate to nonunion workers in the construction industry. We are saying: "They will either have to join a union, or stay away from every job the building trades want for themselves."

This strikes a real blow to those of us who believe in free enterprise and the right to work. Congress has the obligation to zealously guard free enterprise and to protect America's small business subcontractors who also work in the construction industry.

I believe that freedom of choice is paramount in the common situs issue and that our role as lawmakers is to uphold and protect that freedom. If Congress will allow employees and employers on construction such freedom, then we will see an equitable and fair situation as described by Justice Brandeis when he wrote:

> The ideal condition for a union is to be strong and stable and yet to have in the trade outside its own ranks, an appreciable number of men who are non-unionists. . . . Such a nucleus of unorganized labor will check oppression by the union as the unions check oppression by the employer.

Research Corporation Survey Co., of Princeton, N.J.—1976 opinion poll indicated that 72 percent of the general public and 54 percent of union members are opposed to common situs and in the State of Utah a clear majority are opposed to common situs. If you polled your district, the results would be the same.

I urge my colleagues to vote against H.R. 4250 and to support the majority of Americans who would like common situs picketing put aside once and for all!

Mr. THOMPSON. Mr. Chairman, I yield such time as he may consume to the gentleman from Pennsylvania (Mr. MICHAEL O. MYERS), a member of the subcommittee.

Mr. MICHAEL O. MYERS. Mr. Chairman, I rise today in support of H.R. 4250, the Equal Treatment for Craft and Industrial Workers Act. I would like to first commend subcommittee chairman FRANK THOMPSON, for his excellent handling of this legislation in the Labor-Management Relations Subcommittee. As a member of this subcommittee and a cosponsor of H.R. 4250, I was extremely impressed by Chairman THOMPSON's fair and judicious treatment of this vital legislation. Throughout the hearings on this bill, he insured that all testimony was given thorough and careful review and that both sides of the issue were completely considered prior to any action being taken by the subcommittee. The completed bill that the House is considering today is the result of long and diligent effort on the part of the chairman and the subcommittee members to present a long overdue solution to the prob-

lem of inequitable treatment that has plagued the construction trades unions for almost 30 years.

In essence, since 1949, the building and construction trades have had to work under a disadvantage not placed upon other unions. Due to a Supreme Court ruling against the Denver Building Trades Council, it was decided that striking a subcontractor on a construction site would constitute a secondary boycott against a neutral third party, which is prohibited under the Taft-Hartley amendments to the National Labor Relations Act. The problem with this ruling was in defining a subcontractor on a construction site as a neutral third party. When a subcontractor contributes to a single and coordinated construction project by supplying a needed product or service, he automatically must become an involved and concerned party in the completion of that project. In support of this contention, the Supreme Court in the 1961 GE Reserved Gate case reversed their earlier decision as far as the apparel and clothing industry was concerned. This ban, however, has never been lifted from the construction industry unions. H.R. 4250 will finally rectify this inequity by putting the crafts unions on equal footing with other unions.

Title II of this legislation establishing the Construction Industry Collective Bargaining Committee—CICBC—is also of vital importance to the construction industry. The industry's collective bargaining framework has been in need of revision for some time. The establishment of the CICBC will promote a greater degree of cooperation between the contractors and the unions and minimize the instability and conflict that have been present in the past. By drawing equally from both labor and management and by also presenting the public interest viewpoint, the CICBC will assure that the needs and concerns of each group are dealt with in a fair and equitable manner. In addition, the creation of this committee will develop and enhance a constructive approach to the problems of the collective-bargaining process that are experienced by both the contractors and the unions involved.

In summary, I feel that the legislation before the House today constitutes a full and comprehensive package that will greatly enhance and strengthen the entire construction industry. This legislation has been long debated and considered. It has become the consensus of a growing number of members from both sides of the aisle that the time has come to revise and improve legislation governing the construction industry. I feel very strongly that H.R. 4250 represents the best and most appealing vehicle for bringing about this needed improvement and I ask my colleagues to give it their support today.

Mr. THOMPSON. Mr. Chairman, I yield such time as he may consume to the gentleman from Montana (Mr. BAUCUS).

Mr. BAUCUS. Mr. Chairman, I have given careful consideration to H.R. 4250 and sincerely believe that common situs picketing rights can be extended to construction workers without hurting either the workers or the building trade. However, in addition, I support the addition of a "sunset" provision in the bill which would require congressional review of these provisions after a reasonable period of time before these provisions could be extended for a longer period. In spite of all the publicity and heated debate that has surrounded this issue, we will not be certain of the actual effects until we have had a few years in which to see it in operation. After that time, Congress should be responsible for reviewing the effects that the extension of these rights to construction workers has had. Furthermore, I urge my colleague from New Jersey, FRANK THOMPSON, the sponsor of this bill, that his committee review the actual effects of this bill

Working men and women have wanted these extended rights for many years now, and I feel that they should be granted common situs picketing rights, but only as long as I am certain of a congressional evaluation of their effects—be they harmful or positive. There has been great misunderstanding as to exactly what the provisions of this bill will or will not permit. Let me explain that the bill places many restrictions on common situs picketing. Among these, it restricts such activity to construction sites only; it prohibits picketing to exclude anyone from the site, because of their race, sex, creed, or national origin; it requires a 10-day prior notice of a planned strike to all interested parties; finally, it prohibits strikes against small residential builders' projects.

The bill also provides for the establishment of the Construction Industry Collective Bargaining Committee to improve the collective bargaining process in the construction industry. This provision should assist in making the need for labor strikes in the construction industry less frequent.

For the past 26 years our country's construction workers have been discriminated against. Unlike their industrial counterparts, construction workers have been denied the right to picket their entire work sites. H.R. 4250 will help rectify this situation.

There have been many attempts during that time to have Congress enact this type of legislation. Every President from Eisenhower to Nixon, and also President Carter, has supported the extension of common situs picketing rights, and I feel that the time has come for us to enact this legislation and to assess the effects that it will have on our economy and workers.

I know that there are many who disagree with the provisions of this bill, and who fear the effects that they feel it will have on our national economy. On balance, I think our economy and workers will not be adversely affected by the enactment of common situs picketing legislation. However, I firmly believe that Congress should monitor the effects of it and to insure that it truly serves the public interest.

Mr. McKAY. Mr. Chairman, the "equal treatment of craft and industrial workers" bill—H.R. 4250—now being considered by the Congress is not a measure which I can, in good conscience, support. The proposed legislation, on the surface, is not necessarily bad. It permits common situs picketing in the construction trades while allowing nonsympathetic unions to cross the picket lines if the affected local believes the strike to be spurious. Sufficient notice to contractors and other unions is required before a picket line can be established and written permission must be obtained from the national or international parent organization.

However, it is important to look at the deeper implications of the bill. Utah has adopted a right-to-work law which I support. Opening construction sites to common picketing would weaken that concept.

Another element of the bill which causes me serious concern is the provision which envelops a construction site in a total picket situation because of the grievance, real or imagined, of a single trade union. Of course I concede the point that unsympathetic unions can, after a vote of the local membership, opt to exclude themselves from participation in the picket and cross the picket lines. In my view, however, this places the burden on the wrong shoulders. It seems appropriate to permit a sympathetic union to vote to join in the picket, if the local membership so desires. But that is quite a different story, in actual practice, from requiring a trade union to take the incentive to, in effect, vote against their fellow workers. We all know that very few unions would dare to challenge the legitimacy of another trade union grievance by voting to ignore it. By doing so they would subject themselves to interunion harassment and be branded as a renegade union. While many union officials may not dare admit that fact, yet it is nonetheless so.

Title I of the common situs picketing bill is designed to overturn a 1951 Supreme Court interpretation of Section 8 (b) (4) (B) of the National Labor Relations Act in the case of *NLRB* v. *Denver Building Trades* (341 U.S. 675). The bill, in effect, would require the view that all contractors, however disparate their skills or functions, were equal participants in a common economic enterprise. I cannot wholeheartedly accept that thesis.

With that view in mind I register my disapprobation for the common situs picketing bill and recommend to my colleagues a similar position.

Mr. THONE. Mr. Chairman, ever wonder what it would feel like to be a hostage? Thousands of union workers in the building trades might soon get that experience if a bill currently pending before Congress is passed.

Those words about union members being shut out of work even though their unions have no quarrels with their employees are not mine. They were sent to me by Daniel R. Remigio, manager of the Goodyear Tire and Rubber Co. plant in Lincoln, Nebr. The words are from a front page editorial in the Goodyear newspaper for employees.

The editorial illustrates that H.R. 4250 is not just a bill affecting the construction trades. Any manufacturer, wholesaler, retailer, transportation or service company, nonprofit organization or governmental agency that builds a new building, expands one, remodels, repaints or repairs will suffer from this bill

should it become law. The editorial continues,

> There is a real threat, also, to companies such as Goodyear. In these days of tight profit margins and the squeeze on capital money with which to expand plants and machinery, it will be tougher to grow and modernize. That is a personal threat to all of us.

If H.R. 4250 is a threat to any expansion of a giant corporation such as Goodyear, just think how it will terrorize and immobilize the family-owned retail store that wants to modernize and expand, or the small machine shop that would like to build an addition in order to hire a few more workers.

In many of the small towns I represent, the local farm cooperative is the largest activity. Even these local elevators and stores are threatened by common situs. Many of the local co-ops are affiliated with Farmland Industries, Inc., whose president, Ernest T. Lindsey, wrote me emphasizing,

> This organization is opposed to the involvement of innocent parties in disagreements in which they have no interest. This legislation would provide for such involvement of innocent people and would multiply immeasurably the likelihood of large significant work stoppages in the construction industry.

Mr. Chairman, we must bring this issue down to basic terms. All those in the House of Representatives who want to slow down the American economy should vote for H.R. 4250. All those in the House who want to fuel the fires of inflation should vote for H.R. 4250. All those who want to take away some freedom and individual rights should vote for H.R. 4250. And, all those who want to take away local control over local disputes and give it to national management and labor czars should vote for H.R. 4250.

Mr. Chairman, I am aware that some management groups as well as some labor union groups are in favor of the Construction Industry Collective Bargaining Committee concept contained in title II of this bill. No matter. It is still a bad idea. Local disputes should be settled locally. Either a national contractor association dictating to a local contractor or a national labor union dictating to a union local are equally repugnant to me.

Mr. Chairman, the housing industry has not shared fully in the recovery from the recession. In the past, a hearty housing industry and a healthy economy have always gone hand in hand. We cannot be certain of the total effect of passage of H.R. 4250 on the housing industry. All we can be sure of is that this legislation would slow down housing considerably and significantly increase the cost of every new home.

New homes sold in the United States in February 1977 had an average price of $51,800, according to the Federal Home Loan Bank Board. With such an average, many families who would like to buy have already been priced out of even the lowest cost new home available.

Without any other inflation, the same homes built in February would immediately have an average cost of about $60,000 if H.R. 4250 were passed and the result were the building of all housing with union labor.

There are differences of opinion as to what the effect of the bill will be. Some labor union leaders think that the proposed legislation will enable their organizations to expand their memberships and power tremendously. Andrew J. Biemiller, working for this legislation on behalf of the AFL–CIO, has said that it will "assist labor organizations in organizing . . . to see every job in America a union job."

A New York Times editorial, however, suggests that the legislation may have the opposite effect of that desired by the AFL–CIO. The editorial notes that:

> Shrinkage in the share of construction work now done by union labor has stimulated the demand for common situs picketing. The reason for the shrinkage, however, arises not from the lack of such a bill, but rather from the great differential between the cost of union and non-union construction labor. By threatening to raise the cost of union labor still higher, the common situs bill would only invite builders to use more non-union workers. The Congress and the President will, in this case, be helping labor best by ignoring the counsels of its leadership.

One way that a common situs law is certain to drive up costs is through the shutdown of more and more work.

The latest version of H.R. 4250 has an exemption for those builders who construct five or fewer housing units on a site. This will provide an exemption for less than 8 percent of the housing being built in America. In other words, 92 percent of the housing will have the added costs of secondary boycotts tacked on to their price tags. And what is the 8 percent that would be exempted? Mostly custom home building—the construction of houses costing $80,000, $100,000, or $200,000.

Mr. Chairman, I ask support for the amendment that will be offered to exempt from this bill all residential housing that is no more than three stories high.

Nebraska, the State I represent, is one of the 20 States in the Union that has a right-to-work law. The overwhelming majority of Nebraskans support this law. Even more importantly, they believe that Nebraska citizens should be allowed to decide whether or not they want such a law. H.R. 4250 will negate right-to-work laws as far as construction unions are concerned.

If H.R. 4250 becomes law, it will deliver a serious block to the pocketbook of every prospective homeowner. The legislation would cause some increases in all consumer and taxpayer costs.

Even worse, however, than the economic effects are the bill's attacks on our private enterprise system. It just does not make any sense—it just is not fair—for workers who have no grievance with their employers to be thrown out of work by a secondary boycott. Nor can the small businessman—the subcontractor and the small contractor—survive the economic losses of secondary boycotts.

America is being weakened by big forces at work—big government, big business, and big labor. This proposal would tend to concentrate all construction under big labor and big business. That will be bad for all Americans.

Construction unions have earned a reputation as being very discriminatory against minorities. It is much easier for a qualified black to become a physician than for a qualified black to become a journeyman in most construction craft unions. In 1975, I supported an amendment to the common situs bill that would have exempted minority contractors from the proposal. The majority rode roughshod over civil rights concerns and defeated that amendment. I ask that the House this time give fair consideration to protecting the rights of employees of minority contractors.

Mr. Chairman, I ask for defeat of H.R. 4250. I often disagree with the liberal editorial positions of the New York Times. I think that paper hit the nail right on the head, however, with its March 12, 1977, editorial on common situs, headlined, "An Uncommonly Bad Bill."

Mr. DRINAN. Mr. Chairman, the so-called common situs bill has generated a tremendous amount of comment from concerned constituents. Some opponents of the legislation have written that it will cause another economic recession. Others claim it will force their companies into bankruptcy. Still others assert that the bill gives construction workers excessive power and unfair advantages which will fuel further inflation.

I have investigated these and other serious charges made against this bill in a comprehensive manner. If factual evidence showed any of those charges to be true, I could not give H.R. 4250 my support. An analysis of the facts, however, demonstrates that the enactment of this bill will not have the dire consequences which its most impassioned foes fear.

First, it must be made clear that there are two separate sections of this bill. Title I, entitled "Equal Treatment of Craft and Industrial Workers", authorizes striking construction workers to picket an entire construction site if they have a grievance against one or more subcontractors at that site. The justification for that provision, as explained by Labor Secretary Ray Marshall in his testimony before the Labor-Management Relations Subcommittee, is that "the various contractors and subcontractors on a construction project are ordinarily engaged in a closely integrated business relationship." Just as striking janitors are authorized to picket the entire factory where they work, striking electrical workers should be permitted to picket the entire construction site where they are employed.

That is all that title I of this legislation does. Let me now review what it does not do:

The bill does not legalize secondary boycotts;

The bill does not legalize unfair labor practices;

The bill does not legalize picketing in breach of contract;

The bill does not legalize picketing at nonconstruction sites.

The bill does not legalize picketing at a construction site over a dispute at another site.

Moreover, the committee added an amendment which exempts small home contractors from the provisions of title

I altogether. An estimated 70 percent of all residential builders will be protected against situs picketing under that exemption.

Title II of H.R. 4250, "Construction Industry Collective Bargaining," has received little attention, but will probably prove to be the most important part of this bill. This section establishes an orderly mechanism for resolving the numerous labor-management disputes which have plagued the construction industry in recent years. Title II establishes a Construction Industry Collective Bargaining Commission to oversee bargaining between the parties to a contract and defer a strike for up to 30 days after an existing contract expires. This is a plan designed to restore order to an industry currently beset by chaos.

Mr. Chairman, it is unfortunate that the common situs issue has been so greatly exaggerated by both the proponents and opponents of H.R. 4250. As Secretary Marshall observed, "common situs appears to have taken on a symbolic significance which far exceeds the actual impact which it is likely to have on the construction industry." The Boston Sunday Globe, in, endorsing H.R. 4250 on March 20, 1977, provided the following excellent synopsis:

> It will neither destroy the construction industry nor make the building trade unions omnipotent. It does, however, offer the opportunity to bring a degree of order to labor-management relations in a highly fragmented industry.

It is imperative that we resolve this 25-year-old conflict once and for all and get on with the job of restoring good health to the ailing construction industry. Secretary Marshall observed:

> The continued existence of the common situs issue as a source of controversy on the labor relations scene makes it considerably more difficult to address the unique problems which beset the construction industry.

Let us enact this balanced bill today as the first step in the revitalization of our domestic construction industry and the realization of full economic recovery.

Mr. LE FANTE. Mr. Chairman, I rise in support of H.R. 4250, a bill to provide equal treatment for craft and industrial workers, and urge my colleagues to approve the measure as reported by the Education and Labor Committee.

I want to take note of the outstanding work done by my friend and colleague from New Jersey, Mr. THOMPSON, and to commend him and the members of the Subcommittee on Labor-Management Relations for bringing this important piece of legislation to the floor for our consideration.

Labor-management relations require that a delicate baalnce be maintained between the two sides so that control of the collective bargaining mechanism is not thrown out of wack. H.R. 4250 seeks to restore the imbalance caused by the court's decision in Labor Board against Denver Building Trades Council. It does not make sense to deny to our craft unions the rights and privileges enjoyed by organized industrial unions.

Almost hidden by all the talk about what this measure will do for big labor or to big business is the section of the bill which creates the Construction Industry Collective Bargaining Committee which will help standardize bargaining in the industry.

Contracts settlements in the construction industry have been so disparate as to contribute significantly to our problems with inflation. I expect that the committee which is charged with promoting stability of employment and economic growth in the industry will bring a semblance of order to this situation. The employers and the employees have a mutual interest in seeing that the chaos of the past is ended.

The promotion of voluntary dispute settlement procedures is another serious responsibility of the committee. Too often in the past precipitous actions by employers and employees have caused work stoppages which have increased the cost of projects or killed them entirely. Such stoppages will be severely curtailed by this proposal.

Without passage of this bill craft unions will be forced to continue to operate without many of the economic weapons which are available to industrial unions. Their members will be denied the full strength which they expected to have when they joined the union.

For these reasons, Mr. Chairman, I have cosponsored this measure and strongly urge the House to approve it.

Mr. PHILLIP BURTON. Mr. Chairman, in a nation which thrives on the premise that there is to be equal treatment for all under the laws of the land, it is ironic that there is no such equity between the various trade and craft unions.

This bill, H.R. 4250, would overrule the so-called Labor Board vs. Denver Building Trades Council case of 1951 and enable craft unions to participate in a picketing of an entire construction site even though their dispute is with only one subcontractor doing work on a particular project.

There could be countless statements of great eloquence offered on the floor of the House today, but none can touch the hearts and the minds of each Member here more than the meaning of one simple word: Equality.

That is all the craft unions are asking, and this particular bill will provide for their right to engage in common situs picketing—the picketing of an entire construction site—in a fashion which will place their union organized objectives and operations on par with other union activity.

The Denver case involved a general contractor on a construction project subcontracting certain electrical work to a nonunion subcontractor who paid his workers 42 cents per hour less than the union scale. When the nonunion electrical workers reported to the job site, the Denver Building Trades Council picketed the entire job site, and the union workers on the site honored the picket line by refusing to enter the project.

The simple object of this picket line was to force the nonunion subcontractor off the job, and this was accomplished as the general contractor did terminate the contractor.

But the Labor Board held that the Denver Building Trades Council was in violation of the law and the case eventually went to the Supreme Court.

In an opinion on the case, Supreme Court Justice William O. Douglas said:

> The picketing would undoubtedly have been legal if there had been no subcontractor involved—if the general contractor had put non-union men on the job. The presence of a subcontractor does not alter one whit the realities of the situation; the protest of the union is precisely the same. In each the union was trying to protect the job on which union men were employed. If that is forbidden, the Taft-Hartley Act makes the right to strike, guaranteed by Section 13, dependent on fortuitous business arrangements that have no significance so far as the evils of the secondary boycott are concerned. I would give scope to both Section 8(b)(4) and Section 13 by reading the restrictions of Section 8(b)(4) to reach the case where industrial dispute spreads from the job to another front.

Thus, H.R. 4250, is designed to conform the law "to the realities of the situation" as explained by Justice Douglas.

Mr. ABDNOR. Mr. Chairman, today the House is considering H.R. 4250, the Common Situs Picketing bill, which would legalize secondary boycotts in the construction industry. I am totally opposed to this type of legislation, and I urge my colleagues in the House to join with me in voting against H.R. 4250.

As we all know, the bill would enable a union striking or picketing against one subcontractor to close down an entire construction site. Even those contractors and subcontractors who are not parties to the dispute would nevertheless be forced to stop work.

Although many of my colleagues are unwilling to admit it, the enactment of H.R. 4250 would give powerful unions the ability to force nonunion workers to either join the union or stop construction work. In order to avoid labor problems caused by such a law, contractors would be forced to employ only union workers. As the ultimate goal of this type of legislation, I see the labor interests working to repeal section 14–B of the Taft-Hartley Act, thereby depriving all Americans one of our most basic freedoms—the freedom to work without having to join a union.

To label H.R. 4250 the "Equal Treatment of Craft and Industrial Workers" is a misnomer of the highest order. Secondary boycotting is outlawed for all other unions, as it ought to be, and allowing such a privilege for the construction unions is certainly not giving it "equal treatment." The construction unions have not suffered from any inequities in the past, and H.R. 4250 would only serve to give them excessive power over both union and nonunion workers.

I understand that a reputable polling firm has found that well over 70 percent of the public are opposed to common situs picketing, including a majority of the union members in this country. While I will certainly admit that polls of any kind are subject to question, at the same time I feel that it is foolhardy at best to try to dismiss such glaring statistics. I can certainly attest to the fact that the people of South Dakota are overwhlemingly opposed to common situs picketing in any form. I have received literally thousands of letters from individuals in South Dakota

stating strong opposition to common situs picketing and the repeal of section 14–B.

At a time when construction costs are already too high and when unemployment rates in the construction industry are over 20 percent, it would be a drastic mistake to pass this legisation. Secondary boycotts in the construction industry can only serve to increase these high costs and put more people out of work.

We all know that H.R. 4250 is a much stronger bill than the one Congress passed a year ago. I urge my colleagues to take this into account before voting on this bill today. Mr. Chairman, it is hard to believe that H.R. 4250 is not just another attempt to remove all nonunion employees from all construction sites. Please allow us to preserve our freedom to work by defeating H.R. 4250.

Mr. COCHRAN of Mississippi. Mr. Chairman, I intend to vote against this so-called common situs picketing bill which has been reported from the House Committee on Labor and Public Welfare by a vote of 22 to 11. The vote in committee was strictly along party lines with all Democrats for the bill, and all the Republicans on the committee voting against it.

The issue involved in this legislation has been before Congress every few years since 1949, and it is still not resolved. The question is whether the Taft-Hartley Act, also know as the National Labor Relations Act, should be amended to permit strikes and picketing to force one employer to cease doing business with another.

Such activity has been described as secondary picketing, or secondary boycotting. When Congress adopted the Taft-Hartley Act, a prohibition against this activity was included to protect neutral contractors from being drawn into a labor dispute.

Those in favor of changing the law to permit secondary boycotts argue that only by this means can the equal treatment of craft and industrial workers be assured so as to protect the economic rights of labor in the building industry.

The practical effect of the legislation, however, will result in either a completely unionized or completely nonunionized construction site. It will no longer be possible, if this bill is enacted, for union employees and nonunion employees to work side by side.

Another practical result of this change would be the vesting in one labor union of the power to close down an entire construction project because of a dispute it may have with only one subcontractor, even though the other subcontractors are not involved in the dispute.

It may even permit a construction union to close an industrial plant by enlisting a sympathy strike from a plant's unionized employees.

Without question the passage of this bill would mark a significant departture from the congressional intent manifested in the National Labor Relations Act. And it would abrogate judicial decisions that permit individual employees to select by majority vote the union or bargaining representatives of their choice.

Stated another way, some employers would be subjected to organizational picketing, and consequently unionization, without free choice by their employees.

The importance of the construction industry to our Nation's economy cannot be overemphasized. It is the largest single industry in the United States today, accounting for 11 percent of the gross national product.

Disruptive changes in the law governing collective bargaining in this industry and the singling out of it for an exception under the law could have an adverse impact on construction starts and consumer costs.

I am opposed to this effort to change the long established principles of this law because it would upset a delicate balance of power and harm the mutual interests of workers and contractors in protecting: First, the rights of unions to strike for organizational and bargaining purposes; second, the rights of neutral, innocent employers and employees to be shielded from disputes in which they are not involved; and third, the rights of workers to choose their own bargaining agents.

Mr. CRANE. Mr. Chairman, I rise in opposition to the bill. Rather than review the whole litany of problems associated with this legislation, I would like to focus on just two—freedom of association and restraint of trade.

The first amendment to the Constitution grants to all Americans the right to associate with any organization they wish without penalty. Implicit in this constitutional guarantee is the right of all Americans not to join any organization with which they disagree or in which they have no interest, again without penalty. Commitment to this ideal had a great deal to do with the abolition of the draft a few years back, yet today we are contemplating a bill that would, for all practical purposes, force people to join an organization, in this case a building trades union, in order to get or keep a job. Just because workers in 30 States are subjected to such a constitutionally questionable practice does not mean we should extend it to employees whose firms are presently not unionized or to the 20 States which have passed laws guaranteeing their citizens the right to work regardless of union affiliation. If anything, we should be looking in precisely the opposite direction.

Legalizing the secondary boycott for construction unions, as common situs would do, may appear to some to be equitable. However, its purpose is anything but. As George Meany, president of the AFL–CIO pointed out several years ago in testimony on common situs legislation, the objective of the unions is to make "every job a union job." The extent to which this legislation would succeed in doing that, at the cost of freedom of association, was underscored several weeks ago when Secretary Marshall testified before the House Subcommittee on Labor-Management Relations. Said Secretary Marshall, at the time, common situs would "probably create totally union or totally nonunion construction sites."

Realistically speaking, what the outcome is likely to be is all union construction sites in the Northeast and Midwest and all nonunion sites in the South and Southwest. But, still, that is of little consolation to the nonunion construction worker in the unionized areas or the union construction worker in the nonunion areas. They will have to compromise either their principles or their livelihood or perhaps both.

Also to be considered is the status of minority groups—employers and employees alike. It is no accident that most subcontracting firms owned and operated by minority group members are nonunion. First of all, they, like many other small business enterprises, frequently find that they cannot be union and be competitive at one and the same time. And second, by going union, minority subcontractors would find themselves in the position of having to lay off longtime employees who, by virtue of age or inability to meet apprenticeship requirements, would have difficulty fulfilling the requirement of union membership. Which leads to a final point—is this difficulty in getting into labor unions simply an individual matter or does it represent an historical pattern of discrimination?

The May 1976 report of the U.S. Commission on Civil Rights sheds considerable light on this point. According to the report, construction and trucking unions continue to discriminate against minorities and women through the use of apparently neutral but still discriminatory practices. As Secretary of Labor Marshall noted back in 1974, craft unions—prevalent in the construction industry—have considerable control of the supply of labor through control of: First, job training; second, entrance into the union; and third, job referrals. And, as Marshall admitted, "black workers have difficulty getting into the local craft unions."

Statistics comparing black union members in the building trades to the number of wage and salary workers in other industries bear out the Secretary's point. Whereas 12.4 percent of all wage and salary workers were black union members in 1970, only 8.7 percent of wage and salary workers in the construction industry were black union members. The significance of this differential is underscored by the fact that in 1970, 10.2 percent of all construction workers on wages or salaries were black.

Before leaving this issue of an individual's right-to-work and the discrimination that can occur if it is not respected, one other point needs to be made. If this bill is passed, members of independent unions will be discriminated against as well as nonunion members.

Increasing the power of a relative handful of privileged unions over employers, other unions, and nonunion members raises the other key point upon which I would like to focus—restraint of trade. Not only is the secondary boycott, which we would legalize in one instance with this legislation, prohibited under labor law, but it is inconsistent with the purposes of antitrust law. Just as the Justice Department would come down hard on a businessman who told custom-

ers they could not buy from him if they also bought goods produced by a competitor, so too should Congress look askance at sanctioning any attempt by the building trade unions to prevent other employers from doing business with an employer with whom they have a grievance. Either practice constitutes a conspiracy to restrain trade; and legitimizing the latter, even for one industry, would go contrary to recent Supreme Court decisions—particularly Connell Construction Co. against Plumbers Local 100 and NLRB against Enterprise Association of Steam Pipefitters—which have held unions subject to the antitrust laws if the restraining activity engaged in was unrelated to wages, hours, or working conditions. Logic suggests that if we are not to make a mockery of the antitrust laws we should be seeking to eliminate even that exception rather than creating yet another one. There is no good reason why construction unions, or any union for that matter, should be treated any differently than management when it comes to the antitrust laws—unless, of course, we are going to pass special interest legislation, and particularly since construction workers are at the top of the ladder when it comes to pay scales.

As presently drafted, H.R. 4250 is, without a doubt, one of the most obvious pieces of special interest legislation to appear in a long time. Amending this bill will not help all that much; it is the basic principles H.R. 4250 incorporates that are the problem. Equal treatment is not the issue here, unless Congress is willing to discuss equal application of the antitrust laws to unions. The basic issue here, along with the antitrust consideration, is the right of all Americans to work without being forced to join an organization that, to their way of thinking, may not represent their best interests. Until these issues are positively resolved, all Americans will suffer the effects of a basic imbalance in our system of individual liberty and free enterprise.

Mr. LEGGETT. Mr. Chairman, this afternoon the House considers H.R. 4250, equal treatment of craft and industrial workers, generally known as the common situs picketing bill. This legislation merits favorable action by the Congress.

The common situs bill will extend to craft workers rights enjoyed by industrial workers since 1935, by overruling the 1951 Denver Building Trades Supreme Court decision. This ill-considered decision ignored the realities of the construction industry when it applied the Taft-Hartley prohibition against secondary boycotts to this particular multiple-union activity. The effect of the 1951 decision has been to deprive construction workers of the right to appeal to the public and their fellow workers in a labor dispute—a right recognized for other workers in our Nation for more than 40 years.

Both the Congress and the executive branch have long recognized this inequity. Efforts to overturn the Denver Building Trades decision have been supported by Presidents Truman, Eisenhower, Kennedy, Johnson, Nixon, and Ford. During the 94th Congress, a common situs bill passed the Congress, only to be vetoed by President Ford when he failed to honor his commitment to sign such legislation in his attempt to gain the Republican Presidential nomination.

I have received a large volume of mail on this legislation, as have other Members of Congress. It is important that both contractors and the tradesmen understand that the bill contains numerous limitations on common situs picketing, including: First, restricting such activity to construction sites only; second, prohibiting picketing to exclude anyone from the site because of their race, sex, creed, or national origin; third, requiring 10-day prior notice of a planned strike of all interested parties—the reporting requirements are more extensive when the construction site is at a defense installation; and fourth, prohibiting strikes against small residential builders' projects. These provisions will protect the public interest and prevent the adverse effects many of the opponents fear. Additionally, the bill establishes the Construction Industry Collective Bargaining Committee to develop a "more viable and practical structure for collective bargaining in the construction industry." It is my belief that this body will substantially promote labor-management peace on our Nation's construction sites.

I believe it is fundamentally unfair to single out one group of workers and prohibit them from engaging in such concerted action while allowing industrial workers this prerogative. I think we must recognize that picketing is a form of speech and we must be very careful when we attempt to limit such free speech activities. In the absence of a clear and present danger, and I see none here, we must not prohibit such picketing.

In the interest of fairness and consistency in our law, this measure deserves the support of the House, and it will have my vote.

Mr. HAGEDORN. Mr. Chairman, I have to admit that the employment policies of the current administration are somewhat confusing to me. On the one hand, it proposes $19 billion in new deficit spending, largely to be used for public service jobs and public works programs. On the other hand, it seeks to economize by reevaluating and terminating water resource projects which accomplish the same purpose.

Now the push for common situs picketing, the legalization of which is certain to create higher levels of unemployment in an industry already beset by unemployment levels twice that of other industry. In 1976, unemployment figures in construction exceeded 15.5 percent, while the national unemployment rate excluding construction was less than 7.5 percent. Those, however, who managed to retain their employment did very well, with the average hourly earnings in the construction industry nearly 50 percent higher than that in other industries. Wage rates have risen steadily and spectacularly, during good times and bad. Not coincidentally, unemployment rates have risen in a similar pattern.

The effect of common situs picketing will be the same as has been the effect as a result of increases in the minimum wage and extension of Davis-Bacon. Lower paid workers, especially nonunion and minority workers, will be thrown out of work in order that the wage levels of higher paid, union laborers can be subsidized. The effect of each of these laws is to reduce wage competition in industry, and to artificially promote the unionization of employees who would not otherwise join.

It is inconceivable to me that we can approve a measure so certain to result in escalated labor costs in an industry that has been so slow to fully recover from the recession of 1974–75. In the past 2 years alone, construction costs have risen more than 22 percent. Since the construction industry is clearly one of our most labor intensive industries, it is clear that soaring labor costs are a major factor for this continued sluggishness.

How much longer can Congress continue to subsidize an extremely well paid group of workers at the expense of lesser paid workers, at the expense of lower- and middle-class couples seeking to purchase modest housing, and at the expense of the taxpayer who is being forced to shell out billions of dollars annually for public works projects designed to cure persistently high unemployment levels in construction?

Rather than being treated in a discriminatory fashion as the equal treatment title of this bill would suggest, unions in the construction industry have been the recipients of numerous legislative privileges, some perhaps justified by the transitory nature of construction work, others not. The provisions of the Davis-Bacon Act which set prevailing wages—usually defined to be union wages—in the construction industry as the minimum wage for purposes of Federal construction is a notable example. Under section 8(e) of the Taft-Hartley Act, construction unions alone are permitted to enter into so-called hot cargo agreements with their employers and specify individual firms with which the employer is forbidden to do business. Under section 8(f), they can enforce union security clauses after 7 days, rather than the usual 30-day period; they can utilize hiring halls—which have become the equivalent of outlawed closed shops in many regions—for employment referrals; and they can enter into prehire agreements whereby contracts can be negotiated even prior to final determination of the union's majority status.

Mr. Chairman, this is special interest legislation at its worst. It is a positively harmful piece of legislation to all but a small, favored group of laborers who themselves are going to learn that they cannot continue to individually prosper as their industry languishes. No one should be deluded into believing that considerations of equity and fairness demand the passage of H.R. 4250. In fact, they require just the opposite.

Mr. McCLORY. Mr. Chairman, in expressing strong opposition to the passage of the common situs picketing bill, H.R. 4250, I have in mind the interests of all those who are involved in construction projects which this legislation would affect.

In the application of the existing labor relations laws, the Supreme Court wisely held in the Denver Building Trades case

that it was an unfair labor practice for a union to strike and picket employees and owners who are not involved in a labor dispute in which an individual subcontractor and his employees may be separately involved.

Mr. Chairman, the Congress did not intend to condone secondary boycotts which the Supreme Court held would be involved if strikes involving individual subcontractors could close down an entire building construction job.

Mr. Chairman, the existing law and the Supreme Court decision are in the best interest of our national economy and beneficial to the interests and welfare of the general contractor and his employees as well as other subcontractors who are not directly involved in any labor dispute.

Contrary to the belief of proponents of this legislation, a construction project is not a joint venture. Subcontractors do not share in profits and losses and do not have common labor policies. It would be unethical, therefore, that one single building trade union be allowed to picket and shut down an entire construction site.

Delays in building due to such secondary boycotts would undoubtedly lead to an increase in construction costs. And, as construction costs rise, employment goes down. Workers know this and will not readily accept it. I fear that if this bill is passed we may see violence and property damage on construction sites resulting from frustrations, and as one union forces other union workers to strike.

Mr. Chairman, my concern is not only with the owners of the property that may be involved, but also with the contractors and subcontractors and their employees who stand to lose substantial benefits from wages and earnings as a result of a labor dispute in which they are in no way directly involved. If the grievances are not theirs, they should not be forced to suffer the economic pressures resulting from them.

Mr. Chairman, those affected the most by increases in construction costs would be the middle-income families, who would have adequate housing pushed further and further out of their reach. We cannot let this happen.

Mr. Chairman, I urge my colleagues to join me in opposing passage of this measure and keeping the reasonable balance of interests in the construction industry to help preserve our Nation's economy.

Mr. SYMMS. Mr. Chairman, I rise in strong opposition to H.R. 4250, the common situs picketing bill. This bill is a threat to the small entrepreneur in the construction industry. Further it will work against the economic interest of the minority groups and hold back their economic integration in to the construction industry. The increase in unemployment caused by this bill is sure to be substantial. The construction industry already has the highest unemployment rate—averaging 15 percent—of any field.

The overall delays and work stoppages caused by this legislation will result in higher consumer prices for everyone.

Also, consider for a moment the effects of this bill on the small independent contractor. In 1972, there were about 438,000 firms engaged in contract construction; the number of firms with nine or less employees was about 352,000. These small firms represented about 80 percent of all the firms engaged in contract construction. It is these firms, mostly nonunion, that this bill is designed to destroy. It seems that the AFL–CIO and other proponents of this bill want to eliminate all nonunion contractors and subcontractors.

In addition, if this bill is enacted into law, it will sanction illegal labor practices, including coercion, threats, mass picketing, and in all likelihood violence at construction sites. Furthermore, this bill, as reported by the Committee, does not clearly define a common site; it could mean anything from a single house to a large building complex.

In conclusion, it is my understanding that the White House commissioned a study of the pros and cons of this bill by Rinfret Associates in New York. I would like to read the conclusion of the Rinfret study:

> Taking all these factors into account, it would appear that common situs legislation to date [1977] would work against minority groups and small business. It would tend to increase unemployment and/or decrease employment opportunities and tend to increase the inflationary bias of the American economy.

Consequently, I cannot understand why the President is supporting this legislation, or why anyone, for that matter, would support this bill. I urge my colleagues in Congress to reject this legislation.

Mr. EVANS of Delaware. Mr. Chairman, I rise to voice my strong opposition to Common Situs Picketing, and urge my colleagues to defeat this economically disastrous legislation.

This bill will, if passed by the Congress, legalize secondary boycotts in the construction industry, thus permitting a union to close down an entire construction project because of a dispute with one subcontractor even though the other subcontractors are not involved in the dispute. Quite simply, this bill could force the closure of an entire industrial plant, placing thousands of people out of work, just because of a single dispute between one union and one subcontractor. Innocent neutral parties will be caught up in labor disputes not of their making, and a basic principle of worker protection will be seriously violated.

In passing the National Labor Relations Act and subsequent laws, the intent of Congress has been clearly to allow freedom of choice by industrial employees to select, or not to select, by majority rule the union or bargaining agent of their choice. The common situs bill before us today, however, would virtually require total unionization by subjecting all contractors and subcontractors to secondary picketing. Coercion of nonunion contractors to use only union labor, and of men and women to only work for employers having contracts with labor organizations will be the rule of the day.

This legislation will cause conflict throughout the construction industry, and lead to repeated disruptions in this critical sector of our economy. The inevitable effect of these disruptions will be greater unemployment for construction workers, and higher costs to the consumer, who ultimately must pay the costs of these delays.

Mr. Chairman, organized labor, which has placed this bill on the top of their wish list in Congress, has said that the measure will assist in insuring that every job in America is a union job.

I cannot support a bill that would take away the rights of all American workers to freely choose whether or not to join a union.

I cannot support a bill that would remove the right of neutral and innocent employees to be protected from disputes they are not involved in.

And I cannot support a bill which will radically shift the balance of economic power in this country to big labor.

Therefore, I urge the House to defeat the common situs picketing bill.

Mr. BADILLO. Mr. Chairman. I rise in full support of this legislation, H.R. 4250. Old fears, like old soldiers never seem to die—or even to fade away, and it is for this reason that we are once again debating our national commitment to the encouragement of collective bargaining in every sector of our labor force.

Forty years ago, with the passage of the Wagner Act, we brought into law the public "policy of the United States" to encourage "the practice and procedure of collective bargaining" and thereby to encourage "the friendly adjustment of industrial disputes arising out of differences as to wages, hours, or other working conditions by "restoring equality of bargaining powers between employers and employees."

Forty years ago there were many people who sincerely believed that the Wagner Act would destroy our economic system by granting employees the right to collective bargaining. History has shown that they were wrong and that the right to form unions and to participate in collective bargaining has enriched our economic system by helping to create a new and more secure middle class comprised of families whose wage earners belong to the labor movement. But the old fears persist, and we are faced with counteracting more baseless arguments about how the passage of the common situs bill will destroy the construction industry.

There are those who declare that the severe economic problems assailing the construction industry would only be aggravated by the passage of the bill, and that wages and construction costs would go up even further. We should recognize that is not the unions that are responsible for creating or resolving the economic crisis in the construction industry. It is we, the Members of Congress who must bear the responsibility for that.

Throughout the country today, it is impossible to build housing for anyone except upper income people without adequate subsidies. We have been unwilling to provide those subsidies in adequate amounts over the years and many of you

who are now expressing your concern about the depressed condition of the industry are those who have failed to support amendments that would have stimulated additional construction in the cities, the suburbs, and in the rural areas of this country. In this session, the Committee on Banking, Finance and Urban Affairs, of which I am a member, will propose legislation designed to provide additional aid to the housing and construction industry. If we all join in supporting new legislation, we will discover that new housing will be built, additional jobs will be created and there will be greater profits—not hardships—for contractors, subcontractors and bankers.

We have had decades of experience with common situs picketing, or its equivalent, in the apparel industry, in manufacturing, in the production of automobiles—in fact, in every other industry but the construction industry. There is no justification for this exception to continue, no valid argument to counterbalance the need to end this inequity.

With total equity in our labor laws, and legislation that will provide an adequate number of available construction jobs, the irrational fears of what situs picketing is supposed to be will disappear in a new era of prosperity.

Mr. BURKE of Florida. Mr. Chairman, H.R. 4250, is a bill which has been introduced over the years, under various names and will authorize secondary boycotts. If enacted, this bill—while helpful to some in the labor unions—would be harmful to others, not only to the construction worker but also to the American consumer in general. By allowing a single subcontractor to close down an entire construction site, the result would be even greater unemployment in an industry which already suffers high unemployment. In addition construction costs—already too high—would be forced up with every secondary boycott thereby putting a noose around the necks of the consumers who must ultimately pay the bill for higher construction costs.

Mr. Chairman, the prohibition against secondary boycotts is one of the key provisions—section 8(b)4(B)—of the National Labor Relations Act. Having been included in lieu of an earlier proposal to extend antitrust laws to unions, this section outlaws secondary boycotts by all labor organizations. Secondary boycotts occur when a labor organization having a dispute with one employer—the primary employer—extends that dispute to a neutral third party—the secondary employer. The objective of a secondary boycott is to compel the neutral employer to cease doing business with the primary employer, thereby applying pressure designed to force the primary employer to give in to the union's demands.

H.R. 4250 would have the net effect of legalizing secondary boycotts by construction unions at construction sites. This is of particular significance because the construction industry is particularly vulnerable to the pressures of a secondary boycott insofar as the efforts of a large number of independent employers are required to contribute to a finished product. Furthermore, since all of the employers and all employees are involved in a given construction project at one place at one time, it follows that secondary pressure can be exerted by a union easily, effectively, and quite inexpensively.

A simple illustration will show the potential impact this bill can have. Suppose that on a large construction project where thousands of workers employed by a substantial number of subcontractors are busy, a group of 50 sheetmetal workers get into a dispute with their employer who has contracted for all the sheetmetal work. Under H.R. 4250 these 50 sheetmetal workers would not only be permitted to picket their employer, but they would be allowed to picket the entire construction site. A chain reaction of work stoppages by the thousands of other employers on the project would be likely, and eventually, all work on the project would be brought to a standstill. If the primary sheetmetal contractor refused to give in to the union's demand, the general contractor would be forced to replace him with a subcontractor having no dispute with the union to get the job moving again. In a situation such as this, not only would a great many innocent persons be hurt and a great deal of money lost by the purchasers of construction, but also the entire construction industry would become less stable and subject to unreasonable wage demands.

Mr. Chairman, H.R. 4250 rests on a very simple premise. It tends to smooth over the distinction between primary and secondary parties and affirms that the general contractor and all his subcontractors are to be treated as a single person for the purposes of the secondary boycott provisions of the Taft-Hartley amendments of the National Labor Relations Act. It is the view of the proponents of this bill that in the construction industry, there are no innocent or unconcerned parties in a labor dispute involving any other. The construction of a building is a single, coordinated and integrated economic enterprise.

This argument was used by the building trades union in the *Denver Building Trades Council* case, 341 U.S. 675. The Supreme Court rejected the union's argument that all employers working on a construction site should be treated as a single employer and held instead that the employers were separate and thus entitled to the protection of the secondary boycott provisions of the National Labor Relations Act.

Mr. Chairman, the Supreme Court in the Denver Building Trades case has already ruled against the basic rationale of H.R. 4250. It has recognized the fact—as early as 1951—that the situation on a construction site bears no similarity to that of a single manufacturer who employs workers from different trades. Whereas the manufacturer controls the wages and working conditions of all his employees, contractors and subcontractors on a construction site have nothing to do with the terms of employment of the other employees. The only way they can affect each other's terms of employment is by ceasing to do business on the same site as the struck employer thereby forcing the struck employer to either immediately capitulate to union demands or be replaced by another contractor.

It is here that we begin to see the awesome power for which the unions are lobbying. What they in effect are asking is that they be given the right to remove from a construction site any employer offensive to the union.

Mr. Chairman, the very fact that the unions are asking for the right to remove from a construction site any employer offensive to them is certain proof against the claims offered by the unions that there are no innocent contractors and subcontractors on such a site. Time after time, the unions have picketed the open shop employer to advise the public that this employer does not comply with area standards without ever attempting to organize the employees of the subcontractor. The obvious objective is to have that employer removed from the jobsite and replaced with an employer who is a party to the local union agreement and who employs persons who are already members of the union. This common event completely contradicts the fiction urged in support of H.R. 4250 that all employers on the common situs are joint venturers.

The unions and their supporters argue in favor of H.R. 4250 on the basis that the building trades unions do not now enjoy the same rights as other unions with respect to the right to strike. We all know that this is not true. Unions in the construction industry have not been denied the right to engage in primary picketing in labor disputes. Construction unions have always had the same rights to engage in primary strike activity as other unions. As a matter of record, section 8(b)4(B) specifically states that "nothing contained in this clause (b) shall be construed to make unlawful where not otherwise unlawful any primary strike or primary picketing." So instead of asking for equality with manufacturing unions, the construction unions are asking for more power than other unions now possess.

Mr. Chairman, we should not act to restrict competition in the business market. Competition is the most dynamic force working toward the solution of problems in the free enterprise system and the construction industry in particular. And yet, that is precisely what would result if H.R. 4250 were to become enacted into law. For by granting immunity to the building trades unions from 8(b)4(B) and thereby permitting a single building trades union to dictate to general contractors as to the labor relations policies of subcontractors, a union would be in the position to control which subcontractor could enter a given market by simply making or refraining from making labor agreements with them. This would force many subcontractors not operating with labor agreements out of the construction market even though they may, in fact, be paying as much or more than the union negotiated or prevailing wage rates and working conditions in the area. This kind of practice may well be in violation of the Federal antitrust laws under the Connell case and would most certainly stifle competition.

Mr. Chairman, it is also true that this

legislation would tend to encourage more picketing and striking and would continue to expand the economic power of the building trades unions in general. The building trades unions would be free to picket entire construction projects in any dispute and would be in a position to force as many of the members of other unions to walk out as possible. Imagine what this would mean to such a vast project as the Alaska pipeline project. In spite of the no-strike agreement, this bill could enable the building trades union to picket and cause a total site work stoppage from Valdez to Prudhoe Bay because of a dispute between one of the many unions with one of the many hundreds of employers on that project. It should not be forgotten that union locals have not demonstrated adequate responsibility in the exercise of power which they presently have. With the passage of H.R. 4250 it can be anticipated that entire factories, mines, shale operations, energy installations and clean water operations would be shut down totally by reason of a local construction union's exercise of the secondary boycott powers in each isolated dispute. And the corollary of this is more unemployment, higher costs, less efficiency, and a thwarting of the hope that the construction industry can reverse the current economic slump.

Mr. Chairman, the impact which this bill could possible have on technological advance in the construction industry is another factor worthy of consideration. The trade unions already have the power to boycott the use of prefabricated products whenever their use deprives the union members of work traditionally performed by them. The U.S. Supreme Court gave them that power in *National Woodwork Manufacturers Association* v. *N.L.R.B.*, 386 U.S. 612 (1967). Thus, in Cleveland, the building trades union struck builders for an agreement not to use prefabricated roof trusses, cabinets, and similar prefabricated materials. The San Diego Building Trades Council opposed the use of concrete forms which were prefabricated off the jobsite. In Houston, the local Heat and Frost Insulators and Asbestos Workers Union declined to install precut insulation and struck in protest. The passage of the proposed secondary boycott legislation would further hamper the technological future of the industry. It would in effect give the building trades union literal control over the technological future of the construction industry.

Mr. Chairman, Professor Archibald Cox laid bare the central arguments against this legislation in a 1947 edition of the Harvard Law Review. He said that—

> Banning the use of secondary strikes and boycotts as weapons of organization is primarily a prohibition against economic pressures; the interference with freedom of persuasion is relatively slight since all avenues of communication except the picket line are left open. Furthermore, the measure is necessary to localize industrial disputes, thus minimizing the resulting loss to the community, and forms an important part of any labor policy based on collective bargaining between employers and representatives chosen by their employees. Discontent, unrest, and ultimately strikes, result from outside unions forcing representation upon other groups of employees—in much the same manner as when industrial democracy is denied employers.

In other words, to put pressure on a neutral third party so as to force them to intervene on the union's behalf in the real dispute is unfair and wrong. It can lead only to counterproductive results.

Mr. Chairman, I am amazed that at a time when the unions are calling for more jobs and demanding legislation for more housing they would truthfully push this legislation. It is my opinion that should this common situs bill pass, the consumer, the construction industry, and the job market will all be adversely affected. But most of all, the passage of this legislation would unconscionably increase the cost of housing that is so vitally needed by the young people of our Nation. In the final analysis, this is not a good bill for the working Americans and this is why I am strongly opposed to the passage of this bill.

Mr. MANN. Mr. Chairman, I am unalterably opposed to H.R. 4250 and its common situs picketing provision, as I was in the last Congress.

I frankly do not understand the arguments being advanced in support of this bill. Advocates claim the legislation would merely provide for equal treatment of construction workers. The distinguished chairman of the subcommittee, the gentleman from New Jersey, says a bit more bluntly that it will make "the picketing rights of construction workers comparable to those enjoyed by workers in all other industries."

But, Mr. Chairman, the construction industry is unique. Twenty or more different unions with different employers and different contracts and different needs often work on the same project. Hence the very reasonable Supreme Court ruling—which has held for 26 years—that "unoffending secondary employers should be shielded from pressures and controversies not their own."

Frankly, it seems to me, Mr. Chairman, that the construction unions have done pretty well in their collective bargaining efforts without common situs—at least if average wages are any indication. In July of 1976, the average union construction wage was $10.47 per hour, compared to the average manufacturers wage of $5.25.

So I do not see that this House needs to help the building trades unions become more equal than they already are.

Another basic argument is that contractors on a jobsite are actually joint venturers. But they do not share their profits and losses, Mr. Chairman; each contractor does his own job and makes or loses money independently. Contractors have no control over each other's labor policies. In fact, I submit that contractors and subcontractors are separate legal entities under common and statutory law.

Now I do not really want to get into the other items on labor's rather extensive shopping list, and I do not want to get into the actual power that organized labor wields—or thinks it wields—or that the public thinks it wields—in this House. But it offends me to read day after day that our votes on this common situs bill may be affected by the fact that "a good many Congressmen feel dependent on organized labor for their election victories," as a Wall Street Journal editorial implied last week. It offends me that many people apparently believe our action today on common situs is a test vote on what this House will do on a host of other labor-backed proposals, like repeal of 14(b).

I really want to stick to the issue at hand today and the question is, Mr. Chairman, why should we give one union the power to shut down an entire construction site where 20 or more unions may be working. Are we unconcerned about the loss of jobs that would cause? I have heard a lot of talk in this Chamber about our concern about unemployment.

Are we unconcerned about the slowdown in construction activity that would result? We have talked a lot, too, about the need to encourage building starts.

Are we unconcerned about the likely inflationary impact of this proposition on an already anemic economy? Certainly, we spend more time discussing ways to revive the economy than on any other single issue.

Mr. Chairman, I submit that the common situs provision of H.R. 4250 in fact has no purpose other than to strengthen the already very healthy building trades unions. This bill should be soundly defeated.

Mr. BEDELL. Mr. Chairman, I have found that I must again vote against the common situs picketing bill, as I did last year. There are some good parts of this bill but there are also some bad ones which outweigh the benefits.

I think that establishing a Construction Industry Bargaining Committee to develop a "more viable and practical structure for collective bargaining in the construction industry" makes a great deal of sense. Certainly this is a welcome first step in trying to diminish labor strife. I also feel that the 60-day cooling off period set forth in the bill is good.

However, I am concerned by the provision in title I of the bill which prohibits picketing institutions where a State has let separate prime contracts. I feel this is discriminatory: You could have one site where a State has let a construction contract for, say, a hospital and picketing there would be illegal. But right across the street, if someone were building a church, they would be vulnerable to picketing and I feel this is unfair.

Lastly, Mr. Chairman, I think one result of this bill could easily work against the very unions it was designed to help. It seems to me that the effect of this bill will be to make construction projects in one area either all union or all nonunion. Where the union movement is strong it would probably make it difficult for the nonunion contractor to operate. Where the union movement is weak, this will probably shut them out altogether.

For these reasons, I feel compelled to vote against H.R. 4250.

Mr. GRASSLEY. Mr. Chairman, there is one aspect; namely, the price tag of common situs picketing, which has not received a great deal of attention and is more than a little troublesome to me. To

be sure, title I of H.R. 4250 provides for no new Federal budget authority while title II authorizes such sums of money as are necessary for a construction industry collective bargaining committee.

My concern is with the indirect cost of permitting secondary boycotts at construction sites. I can foresee an increase in the number of strikes within the construction industry. This would doubtless result in an increase in the number of workers out on strike and these persons could well receive various forms of financial assistance including, but not limited to, food stamps.

There have been predictions that the implementations of common situs picketing will cause more persons to be unemployed. These individuals will be eligible for unemployment compensation payments which would be a drain upon Federal and State treasuries. Enacting H.R. 4250 would cause construction costs to rise, which increases will eventually be passed on to the already hard-pressed consumers of our Nation. No one, with the possible exception of Members of Congress who are still entitled to annual cost-of-living increases in salary, is insulated from the ravages of inflation.

My point is that this legislation, specifically title I, entails numerous, and potentially huge, hidden costs in spite of the fact that it will not authorize direct Federal spending. It is unfortunate that there have been no thorough and in-depth studies of this matter. Even a simple inflationary impact statement from the Congressional Budget Office would be helpful. Yet, this whole subject has been lost in the sound and fury surrounding common situs picketing. The proponents of this bill have the burden of proof on this aspect and it is apparent that they have not carried it.

Mr. CLEVELAND. Mr. Chairman, I take this opportunity to briefly explain why I intend to once again cast my vote in opposition to the legislation before us today, which would permit common situs picketing in the construction industry.

The ban on common situs picketing on construction sites is designed to prevent neutral and innocent third parties from becoming enmeshed in a labor dispute not of their own making or directly pertaining to them. I think this protection afforded to neutral employees and neutral contractors and subcontractors is reasonable and in most cases desirable. What purpose is served by involving in labor disputes of others employees or employers who are content with their own employee/employer relations? I submit that common situs picketing might very well undermine the stability of labor-management relations in this country.

Provisions in the bill before us today require an affiliated national or international union authorize a local union's proposed strike on a construction site. This aspect of the bill concerns me, as it appears to lessen the autonomy of union locals in the construction industry.

I believe that this bill raises more important considerations outside the normal sphere of labor-management relations. These considerations include the impact of this bill on the continuation of our economic recovery, on the depressed condition of the construction industry, on the use and development of new energy-saving technologies in construction, and on the affordability of housing to the average American family. The unanswered questions raised by these considerations trouble me greatly. These issues deserve to be addressed, and quite frankly, I do not feel they have been addressed in any significant fashion by the House Committee on Education and Labor. Until such time as evidence indicates that this bill before us today is not severely inflationary, and will not adversely affect the construction industry we are all so dependent upon, I cannot support it and will thus vote against it.

In the CONGRESSIONAL RECORD for Friday, July 25, 1975, I discussed at greater length this issue. My reservations then are still much the same. This legislation is not good legislation—or as the New York Times said on March 12, 1977, it is "An Uncommonly Bad Bill."

Mr. KOCH. Mr. Chairman, I have grappled with the question of how to vote on the "Equal Treatment of Craft and Industrial Workers" legislation for several months now. I have received hundreds of letters and notes from constituents on both sides of the issue and I have weighed their arguments very carefully.

I was not a cosponsor of H.R. 3500 which was the initial "situs picketing" legislation in the 95th Congress. I did not favor that legislation, because it did not include many of what I considered to be the important features of the "Equal Treatment of Craft and Industrial Workers" legislation which I voted for in the last Congress.

The bill before us today, H.R. 4250, is a much improved piece of legislation and because of that I will vote for it. At the request of the Carter administration, the Committee on Education and Labor voted to exempt small homebuilders—20 units a year or less.

Furthermore, the bill now includes a second title which includes provisions known as the "Dunlop amendments," strongly endorsed by former Secretary of Labor John T. Dunlop. Basically, this title would estabilsh a 25-member Construction Industry Collective Bargaining Committee appointed by the President.

Locals could not receive picketing permission until they have given 10 days notice to all unions and persons at the construction site, to the national or international labor organization and to the Construction Industry Collective Bargaining Committee. In addition, parties to a collective bargaining agreement would be required to give the committee 60 days' notice of proposed termination. If the committee decides to take jurisdiction, it would have up to 90 days to help resolve the dispute.

Additionally, the committee could make recommendations to assist in the negotiation of collective-bargaining agreements in the construction industry to facilitate area bargaining structures; to improve productivity and training; to promote stability of employment and appropriate differentials among branches of the industry; to improve dispute settlement procedures and to provide for the equitable determination of wages and benefits.

I believe the collective bargaining committee is an important part of this legislation and I hope that it will lead to more conciliation in the construction industry.

Finally, to those who believe that this bill would be destructive and too one-sided, let me say that some of these beliefs are based on a misunderstanding of the applicability of this legislation. The bill specifically provides that it shall not be construed as authorizing: first, violation of an existing collective bargaining contract; second, furtherance of a labor dispute at another construction site; third, action directed at a person—including manufacturer—not engaged primarily in construction who, through unionized workers regularly employed by that person, is installing or servicing products by that person or is doing construction work at a facility owned by that person; fourth, performance of an unfair labor practice; fifth, picketing aimed at removing from the site any employee for reason of sex, race, creed, color, or national origin; or sixth, causing or attempting to cause a person to discriminate against any employee on the foregoing grounds; seventh, furthering jurisdictional or recognitional disputes; or eighth, furthering any unlawful product boycott.

Mr. HANLEY. Mr. Chairman, I rise in support of H.R. 4250, a bill to provide for the equal treatment of craft and industrial workers; or as it is more commonly known, the common situs picketing bill. I support this legislation, because it is my firm belief that it will prove to be the most effective means of bringing stability to the construction industry at this critical point in our economic recovery. After careful study, I have found no justification for the contention that this legislation will make construction labor more volatile than in the past, and increase labor costs.

Those connected with the construction industry have realized for some time that increased stability must be achieved. We have seen everything but stability in recent years, and we in the Congress can no longer fail to act. The construction industry today is highly fragmented, and this fact accounts for the fragmented nature of collective bargaining in the industry. As a result of this, and the very nature of construction work in general, bargaining is rarely coordinated among trades, local unions of a single trade, or employer associations. National unions and their national officers are generally involved to a very limited extent. As a result labor relations in the construction industry are characterized by numerous work stoppages and rapidly escalating wage rates.

To resolve this situation, the legislation under consideration takes two necessary steps. First, the bill removes the barriers in existing law which deny construction workers the picketing rights that have traditionally been available to workers in the industrial sector. Second, it establishes procedures to provide for the creation of a labor relations struc-

ture which can reflect and effectively promote the national interest in reducing inflationary wage settlements, unproductive manpower utilization, and prolonged work stoppages. As a needed precaution, the bill contains numerous restrictions on the use of situs picketing. Most importantly, however, the bill brings the national labor organization into the picture by requiring its approval of any picketing activity.

Despite charges to the contrary, the bill does not legalize secondary boycotts. I am totally opposed to secondary boycotts, and would never support legislation designed to make them legal. What the legislation does do, however, is to clarify the intent of the Taft-Hartley Act with respect to labor relations at the construction site. In 1950, the Supreme Court ruled that the picketing of an entire construction site as a result of a disagreement with a single subcontractor, was a secondary activity. I am convinced that this was not the intent of Congress in seeking to protect neutral employers in a labor dispute. It is my view that the economic realities of the construction industry clearly make the construction of a building a single, coordinated, and integrated economic enterprise. Therefore, the presence of a subcontractor does not alter the realities of a dispute on a construction project. It is the responsibility of the Congress to clarify the intent of the secondary boycott provisions of the National Labor Relations Act.

In conclusion, I would simply say that if we are to provide stability in the construction industry, we must work toward a common labor policy on construction projects. Both sides in the construction industry have long held that this should be our ultimate goal, regardless of how many contracts are involved. This bill takes the necessary steps toward that goal, and will reduce rather than increase construction strife.

Mr. HANSEN. Mr. Chairman, I am shocked that the arguments in favor of the common situs picketing legislation have so easily skirted the real issue, which is the matter of continued national economic recovery.

The proposed legislation could not have come at a worse time. Just when this country needs immediate, massive, new construction to boost the economy, H.R. 4250, if enacted, would have the effect of spawning costly and lengthy labor disputes never before seen in the construction and building industry.

According to the proponents of the bill, H.R. 4250 is designed to insure equal treatment of the building trades and craft unions working at a common construction site. As a practical matter the bill would insure unequal treatment. Individuals who have chosen union representation, and the employer who was awarded work from competitive bidding, would be denied all human rights of choice. Those unions as well as nonunion members who are presently not affiliated with the AFL–CIO could immediately be forced out of all construction jobs where they are now protected. Naturally, the minority laborers would suffer the most, since the construction and building industry is among the largest employers of minority labor in this country. Minority unemployment has long passed the crisis point. H.R. 4250 would simply skyrocket this crisis out of reach. If this were the case then I could again envision the resurrection of the massive civil disorders which engulfed this country in the late sixties.

It has also been suggested that equal treatment should be accorded to the construction and building unions as exists for industrial unions. Construction and building unions already enjoy privileges which are not accorded to industrial unions and vice versa. However, circumstances just are not the same.

For example, there may be more than one union in an industrial plant, not necessarily affiliated, but only one employer dealing with all the unions.

On a construction site, there may be many employers and any one of these employers, by disrupting with his employees, could cause a shutdown of the entire project, leaving no recourse to the other employers or their employees who were in no way concerned with the original dispute.

The U.S. Congress during the last two decades has repeatedly struck down attempts by organized labor to implement common situs legislation. Congress, in its deliberations on the thrust of U.S. labor policy, determined secondary boycotts to be an unfair labor practice. The Supreme Court upheld the National Labor Relations Board in clarifying the definition of secondary boycotts as they relate to the construction industry in the Denver building trades case. The court held that is was an unfair labor practice for a union to strike and picket secondary employers, and thereby shut down an entire job site, because of a dispute over a primary employer's labor policies. It further held that unoffending—secondary—employers should be shielded "from pressures and controversies not their own." In the Moore drydock ruling, the National Labor Relations Board further clarified picketing rights for disputes arising on a construction job site. This is the basis for the rule that in picketing the primary employers, picket lines may be established only at a separate gate set up for the exclusive use of employees and suppliers of the primary employer. Ingress or egress from other gateways may not be halted.

Despite the judicial rulings, membership in the building trades unions has grown steadily. According to the U.S. Bureau of Labor Statistics, membership in two of the larger craft unions, carpenters and laborers, has increased by 19.1 percent from 1964 to 1972. Individual wage rates and fringe benefits have also increased. Why, then, is organized labor making such an issue of legalizing the secondary boycott?

Legalization of the secondary boycott would artfully fashion the construction industry for the purpose of fostering unionization in the industry. There is a reason for the objective. Most construction jobs and most construction workers are nonunion. The unions, therefore, seek a change in law so that the industry can be unionized in a more extensive manner. Indeed, despite the economic harms which legalizing the secondary boycott would cause, its primary value to the unions, and its primary harm to the industry would be its impact on union organization attempts.

The central purpose of the legislation thus becomes crystal clear. The unions want to be able to keep nonunion workers off the job sites and, hopefully, reverse the trend toward open shop and merit shop contractors. I cah find nothing wrong with these systems particularly the right of free choice which this legislation seeks to systematically eliminate. I firmly believe in the right of the worker to organize, I also feel strongly about his right not to do so. There are obviously a great number of skilled and unskilled individuals who, for various reasons, choose not to belong to a union, and I am not ready to tell them that they cannot have a job. I think by enacting H.R. 3500 you would in a great many areas of this country, be telling these nonunion people exactly that.

Robert Georgine, in testimony delivered before the Subcommittee on Labor-Management Relations on March 1, 1977, stated that subcontractors on a construction jobsite could not be a neutral employer because:

These circumstances create a close relationship between contractors.

Then, just two pages later in his testimony, Mr. Georgine states that secondary boycotts are open to criticism because they involve a neutral employer in a labor dispute that is not of his making and is beyond his power to remedy. Certainly, if a large highway project is shut down because one of the unions working for one of the subcontractors goes out on strike, the other subcontractors on that job will find themselves in a labor dispute not of their making and beyond their power to remedy. Yet their economic loss during the time the project is closed will be just as severe as the parties directly involved in the dispute. This, in my mind, is one of the inherent injustices of H.R. 4250 and common situs legislation in general.

Economics, however, must be our first and final consideration. Construction projects, such as highways, are very expensive and take years of planning and building. In many areas of the country, they are constructed on a seasonal basis. If we are to allow every dispute between a union and one of the many contractors or subcontractors to close down one of these major projects, the economic costs could be severe. These losses, more often than not, are not borne entirely by the builder, but are passed on to the consumer and taxpayer. Theoretically, society would be willing to absorb these increased costs if the result of their sacrifice was justified. However, that is not the case with H.R.4250. It is asking society, in general, to pay what could be a very high price so that the construction labor unions can acquire more power—power, which as I stated earlier—they simply do not need. I doubt seriously that if an economic impact statement on H.R. 4250 was realistically prepared

and distributed to the general public, you would find much support for the passage of common situs legislation.

Additionally, I would like to point out the recent findings of a Roper organization poll. Overall, the study showed that 77 percent of the public feels that a construction union "should only be allowed to picket the work of the contractor with whom it has a dispute and not the whole building site." This opinion was expressed by 73 percent of the blue collar workers, 64 percent of the union members, 73 percent of the Democrats, 79 percent of the Independents, 84 percent of the Republicans, 80 percent of the people who describe themselves as being conservative, 76 percent of the people who call themselves liberal, and 78 percent of the self-identified moderates.

In closing, I do not view H.R. 4250 as an equal rights bill. Construction unions already have rights that the other unions do not, such as the hot cargo exemption of the Taft-Hartley Labor Relations Act which allows product boycotts; the 8-hours wage law applicable to Federal construction, and section 8(f) of the National Labor Relations Act which provides for a 7-day compulsory union shop and the union hiring hall. All these are formidable weapons for the unions' bargaining arsenal. They do not need H.R. 4250, too. Common situs is uncommonly bad for America.

Mr. STUMP. Mr. Chairman, I am unalterably opposed to H.R. 4250, common-situs picketing, for the following reasons.

The U.S. Supreme Court ruling 26 years ago in the Denver building trades decision was in accord with protections against secondary boycotts which are extended to employers in all other businesses.

H.R. 4250 would end free competition for construction jobs. Additionally, it would perpetuate unrealistic wage demands and restrictive work practices which have plagued the construction industry for years and led contractors to seek nonunion labor. This legislation would lead to high construction costs during a period when the Nation's economy needs a boost from the multibillion dollar construction industry.

Construction unions already have the right to picket primary employers on a construction site, even thought there are other employers present. Today unions are prohibited from picketing employers with whom they have no employment relationship.

This measure would provide special privileges by removing millions of employees of one of America's great industries from reasonable restrictions on picketing secondary boycotts.

This bill would further lead to union action against small builders, many of them from minorities and small businesses, which would cripple those contractors who do not have the vast resources of the major builders. The exemption for small builders in this legislation is not comprehensive enough to cover many of the minority enterprises and small businesses just now beginning to compete with the larger construction companies.

It is just plain unfair for unions to have the power to keep hundreds and maybe thousands of hard-working people from their jobs just because they have an alleged grievance with one of the employers. We are all very aware that the one grievance which stands out among all the rest is the fact that some employers refuse to force their employees into unions. It becomes apparent, then, that what the unions really want is the power to keep nonunion workmen from their jobs, and the power to turn the construction industry into a nationwide closed shop.

Mr. MOORE. Mr. Speaker, thorough analysis must be given to H.R. 4250 to determine if it will actually work for or against the interest of the individual union construction worker. Earlier this month, Congressman FRANK THOMPSON, who authored the bill and guided it through the Labor Subcommittee he chairs, delivered a speech in San Francisco. I quote from the text of his March 8 remarks, as delivered:

> I do not think that a sophisticated prime contractor even in today's circumstances, where there are any number of illegal strikes under existing law, would even try to mix union and non-union subcontractors. I think it would be all union or all open shop. I rather think—I rather agree with Senator Laxalt that the union membership in all unions throughout the United States has been dropping. I think it will continue to do so. I think there will be more open shop work in all candor.

If the author of this common situs picketing bill admits the bill will increase the number of nonunion jobs when compared to those for union employees, I see little comfort in this bill for the individual union member in Louisiana.

This viewpoint is also expressed by a vast majority of union members, according to a Roper poll released March 17. This highly respected research organization found that 64 percent of all union members feel building trade union pickets should be limited to the contractor with whom a dispute exists and not an entire building site. The same view was held by 77 percent of the public at large, and 73 percent of all blue collar workers. The results are almost identical to those found last year by the Opinion Research Corp. Its poll found 73 percent of the public said construction unions should only be allowed to picket the contractor with whom they have a dispute.

These figures dispute statements by organized labor leaders in support of common situs picketing. The results also indicate to me that by and large the individual worker has been satisfied with his employment and his pay without this bill.

Proponents of H.R. 4250 also admit that the bill is not really designed to improve labor negotiations over economic grievances, but state it will serve as a vehicle to increase a union's organizational abilities. I do not believe at this point in time when economic recovery is underway in the construction industry, that increasing a union's organizational abilities is in the best interest of the individual union member or the Nation.

It is my belief that the Federal Government should help create new jobs through stimulating the economy by significant tax cuts. I have supported and introduced legislation to that end in the past. Construction workers recall all too easily the dormant 1973 and 1974 construction seasons. I want no part of any legislative action that would encourage a return to that bleak period of little new construction and few jobs.

Present evidence clearly indicates we have not solved the problem of inflation. It is with us now and with the current prospects of record levels in deficit spending, no relief is in sight. Common situs picketing is inflationary through its delays in construction timetables, reduction in the flow of investment capital at a construction project, and increase in the frequency and duration of strikes. It proposes to allow picketing of construction and other multiple employer sites to force third parties, such as subcontractors not connected with the dispute, into the settlement process. It could easily cause a skyrocketing increase in the number of job sites shut down for long periods of time, disrupt employment schedules, and cause forfeiture of contracts; thereby increasing construction costs and inflation. In short, it could reduce the number of jobs available in the construction marketplace at the very point in time Congress is asked to create more jobs. It would plague this Nation's economy through the vehicle of the secondary boycott.

Mr. THOMPSON. Mr. Chairman, I yield back the balance of my time.

Mr. ASHBROOK. Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. Pursuant to the rule, the Clerk will read the committee amendment in the nature of a substitute recommended by the Committee on Education and Labor now printed in the bill as an original bill for the purpose of amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I—EQUAL TREATMENT OF CRAFT AND INDUSTRIAL WORKERS

AMENDMENTS TO NATIONAL LABOR RELATIONS ACT

SEC. 101. (a) Section 8(b)(4) of the National Labor Relations Act, as amended, is amended by inserting before the semicolon at the end thereof ": *Provided further*, That nothing contained in this subsection (b) shall be construed to prohibit any strike or refusal to perform services or any inducement of any individual employed by any person to strike or refuse to perform services or threats thereof, at the site of the construction, alteration, painting, or repair of a building, structure, or other work which may be directed at a single person in the construction industry at such site and which is directed at any of several persons who are in the construction industry and are jointly engaged as joint venturers or in the relationship of contractors and subcontractors in such construction, alteration, painting, or repair at such site and, where the construction site is adjacent to or part of an industrial facility and a separate entrance is reserved for the individuals regularly employed at that facility or for individuals employed by persons making deliveries to or taking shipments from that facility, which is not directed at that separate entrance: *Provided further*, That nothing in the above proviso shall be construed to authorize a strike or refusal to perform services or any inducement of any individual employed by any person to strike or refuse to perform services, or threats thereof, (1) in violation of an existing collective bargaining contract; (2) in furtherance of a labor dis-

pute where the issues in dispute concern only the wages, hours, or other working conditions of individuals employed at any other common construction site; or (3) directed at a person who is not engaged primarily in the construction industry who, through individuals regularly employed by that person and represented by a labor organization, is installing or servicing products produced by that person, or is doing construction work at a facility owned by that person: *Provided further,* That except as provided in the above provisos nothing herein shall be construed to authorize any act or conduct which was or may have been an unfair labor practice under this subsection, or to prohibit any act or conduct which was not an unfair labor practice under this subsection, prior to the enactment of such provisos: *Provided further,* That nothing in the above provisos shall be construed to authorize picketing, threatening picket, or causing to be picketed, any person (1) to remove or exclude from a common construction site any individual employed by that person on the ground of sex, race, creed, color, or national origin; (2) to cause or attempt to cause a person to discriminate against any individual employed by that person in a manner prohibited by paragraph 2 of this subsection (b); or (3) under circumstances prohibited by paragraph (4)(D), or (7) of this subsection (b): *Provided further,* That nothing in the above provisos shall be considered to authorize any picketing of a common construction site by a labor organization to force, require, or persuade any person to cease or refrain from using, selling, purchasing, handling, transporting, specifying, installing, or otherwise dealing in the products or systems of any other producer, processor, or manufacturer: *Provided further,* That nothing in the above provisos shall apply at the site of the construction, alteration, painting or repair of a building, structure or other work involving not more than five family dwelling units in structures of three residential levels or less devoted solely to residential use constructed by a person who has not in his own capacity or with or through any other person during the twelve calendar months prior to the start of that construction, engaged in the construction of more than twenty family dwelling units if that person within ten days of being served with the notice required by subsection 8(g)(2) of this title truthfully advises each labor organization which served that notice in a notarized affidavit that he satisfies the requirements stated in this subsection: *Provided further,* That in determining whether several persons who are in the construction industry are jointly engaged as joint venturers or in the relationship of contractors and subcontractors at any site, (1) ownership or control of such site by a single person shall not be controlling; (2) where a State law requires separate bids and direct awards to persons for construction, the various persons awarded contracts in accordance with such applicable State law shall not be considered joint venturers or in the relationship of contractors and subcontractors with each other or with the State or local authority awarding such contracts at the common construction site.".

(b) Section 8(g) of such Act is amended by redesignating the present section 8(g) as section 8(g)(1), and adding at the end thereof the following:

"(2)(A) A labor organization before engaging in activity permitted by the third proviso at the end of paragraph (4) of subsection (b) of this section shall provide prior written notice of intent to strike or to refuse to perform services, or to induce any person to strike or refuse to perform services, of not less than ten days to all unions and the persons at the common construction site, to any national or international labor organization of which the labor organization involved is an affiliate, and to the Construction Industry Collective Bargaining Committee: *Provided,* That at any time after the expiration of ten days from such notice, the labor organization may engage in activities permitted by the third proviso at the end of paragraph (4) of subsection (b) of this section if the national or international labor organization of which the labor organization involved is an affiliate gives notice in writing authorizing such action: *Provided further,* That authorization of such activities by the national or international labor organization shall not render it subject to criminal or civil liability arising from activities, notice of which was given pursuant to this subparagraph, unless such authorization is given with actual knowledge that such activities are to be willfully used to achieve an unlawful purpose.

"(B) In the case of any such site which is located at any military facility or installation of the Army, Navy, or Air Force, or which is located at the facility or installation of any other department or agency of the Government if a major purpose of such facility or installation is or will be the development, production, testing, firing or launching of munitions, weapons, missiles, or space vehicles, prior written notice of intent to strike or to refuse to perform services, or to induce any person to strike or refuse to perform services, of not less than ten days shall be given by the labor organization involved to the Federal Mediation and Conciliation Service, to any State or territorial agency established to mediate and conciliate disputes within the State or territory where such site is located, to the several persons who are jointly engaged at such site, to the Army, Navy, or Air Force or other department or agency of the Government concerned with the particular facility or installation, and to any national or international labor organization of which the labor organization involved is an affiliate.

"(C) The notice requirements of subparagraphs (A) and (B) above are in addition to, and not in lieu of, the notice requirements prescribed by section 8(d) of the Act.".

EFFECTIVE DATE

SEC. 102. The amendments made by this title shall take effect ninety days after the date of enactment.

Mr. THOMPSON (during the reading). Mr. Chairman, I ask unanimous consent that title I be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

AMENDMENT IN THE NATURE OF A SUBSTITUTE OFFERED BY MR. QUIE

Mr. QUIE. Mr. Chairman, I offer an amendment in the nature of a substitute.

The Clerk read as follows:

Amendment in the nature of a substitute offered by Mr. QUIE: strike out all after the enacting clause and insert the following:

(a) Section 8(b)(4) of the National Labor Relations Act, as amended, is amended by inserting before the semicolon at the end thereof ": *Provided further,* That nothing contained in clause (B) of this paragraph (4) shall be construed to prohibit any strike or refusal to perform services or any inducement of any individual employed by any employer primarily engaged in the construction industry on the site to strike or refuse to perform services at the site of the construction, alteration, painting, or repair of a building, structure, or other work other than residential structures of three stories or less and directed at any several employers who are primarily engaged in the construction industry on the job site with whom the individual's employer has a direct contractual relationship either as contractor or subcontractor or with whom the individual's employer has a common contractor primarily engaged in the construction industry in such construction, alteration, painting or repair at such site: *Provided further,* That nothing in the above proviso shall be construed to permit a strike or refusal to perform services or any inducement of any individual employed by any person to strike or refuse to perform services in furtherance of a labor dispute, unlawful under this Act or in violation of an existing collective bargaining contract, relating to the wages, hours, or other working conditions of employees employed at such site by any of such employers, or the issues in dispute involve the employees of an employer at the site who is not engaged primarily in the construction industry: *Provided further,* Except as provided in the above provisos nothing herein shall be construed to permit any act or conduct which was or may have been an unfair labor practice under this subsection: *Provided further,* That nothing in the above provisos shall be construed to prohibit any act which was not an unfair labor practice under the provisions of this subsection existing prior to the date of enactment of such provisos: *Provided further,* That nothing in the above provisos shall be construed to authorize, any strike, picketing, threatening to picket, or causing to be picketed, any employer where an object thereof is (1) the removal or exclusion from the site of any employee on the ground of sex, race, creed, color, or national origin or because of the membership or nonmembership of any employee in any labor organization; (2) to cause or attempt to cause an employer to discriminate against any employee, or to discriminate against an employee with respect to whom membership in a labor organization has been denied or terminated on some ground other than his failure to tender the periodic dues and the initiation fees uniformly required as a condition of acquiring or retaining membership, or to exclude any labor organization on the ground that such labor organization is not affiliated with a national or international labor organization which represents employees of an employer at the common site; or (3) any attempt by a labor organization to require an employer to recognize or bargain with any labor organization presently prohibited by paragraph (7) of subsection (b): *Provided further,* That if a labor organization engages in picketing a construction site for an object described in paragraph (7) of subsection (b), there must be filed a petition under subsection (c) of section 9 within five days after commencement of such picketing, or if a charge is filed under subsection (b) of Section 10, the Board shall conduct an election and certify the results thereof within fourteen calendar days from the filing of either the petition or the charge: *Provided further,* That nothing in the above provisos shall be construed to authorize any strike, picketing, threatening to picket, or causing to be picketed any person, other than the employer of the employees involved in the dispute, where an object thereof is to require that person to pay wage rates exceeding the prevailing wage rate for work of a similar nature in the locality, as determined by the Secretary of Labor: *Provided further,* That nothing in the above provisos shall be construed to permit any picketing of a common situs by a labor organization to force, require, or persuade any person to cease or refrain from using, selling, purchasing, handling, transporting, specifying, installing or otherwise dealing the products or systems of any other producer, processor, or manufacturer. In determining whether any of several employers are primarily engaged in the construction, industry, ownership or control of the construction site shall not be a factor to be considered, and, for the purposes of the preceding provisos, the term

site means one physically contiguous location at which the employers involved are engaged in interrelated construction, alteration, painting, or repair towards a common objective and in physical proximity to each other."

(b) Section 8 of such Act is amended by adding at the end thereof the following new subsection:

"(h) Notwithstanding the provisions of this or any other Act, where a Federal or State law requires separate bids and direct awards to employers for construction, the various contractors awarded contracts in accordances with such applicable Federal or State laws shall not for the purposes of the third proviso at the end of paragraph (4) of subsection (b) of this section, be considered in the relationship of contractors and subcontractors with each other or with the Federal, State or local authority awarding such contracts at the common site of the construction."

(c) Section 8(g) of such Act is amended by redesignating the present section 8(g) as section 8(g)(1), and adding at the end thereof the following:

"(2)(A) A labor organization before engaging in activity permitted by the third proviso at the end of paragraph (4) of subsection (b) of this section shall provide prior written notice of intent to strike or to refuse to perform services of not less than ten days to all unions and the employers and the general contractor at the site and to any national or international labor organization of which the labor organization involved is an affiliate: *Provided*, That at any time after the expiration of ten days from transmittal of such notice, the labor organization may engage in activities permitted by the third proviso at the end of paragraph (4) of subsetcion (b) of this section if the national or international labor organization of which the labor organization involved in an affiliate gives notice in writing authorizing such action: *Provided further*, That authorization of such action by the national or international labor organization shall not render it subject to criminal or civil liability arising from activities, notice of which was given pursuant to this subparagraph, unless such authorization is given with knowledge that the picketing is to be willfully used to achieve an unlawful purpose.

"(B) In the case of any such site which is located at any military facility or installation of the Army, Navy, or Air Force, or which is located at a facility or installation of any other department or agency of the Government if a major purpose of such facility or installation is or will be the development, production, testing, firing or launching of munitions, weapons, missiles, or space vehicles, prior written notice of intent to strike or to refuse to perform services, of not less than ten days shall be given by the labor organization involved to the Federal Mediation and Conciliation Service, to any State or territorial agency established to mediate and conciliate disputes within the State or territory where such site is located, to the several employers who are jointly engaged at such site, to the Army, Navy, or Air Force or other department or agency of the Government concerned with the particular facility or installation, and to any national or international labor organization of which the labor organization involved is an affiliate.

"(C) The notice requirements of subparagraphs (A) and (B) above are in addition to, and not in lieu of the notice requirements prescribed by section 8(d) of this Act,".

SEC. 2. The amendments made by this Act shall take effect 90 days after the date of enactment of this Act, except that with respect to construction work which was contracted for or on which work had actually started prior to the date of enactment, the amendments made by this Act shall take effect two years after such effective date.

Mr. QUIE (during the reading). Mr. Chairman, I ask unanimous consent that the amendment in the nature of a substitute be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Minnesota?

Mr. ROUSSELOT. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

The Clerk will read.

(The Clerk continued to read.)

Mr. THOMPSON (during the reading). Mr. Chairman, I ask unanimous consent that the amendment in the nature of a substitute be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from New Jersey?

Mr. ROUSSELOT. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

The Clerk will read.

(The Clerk continued to read.)

Mr. THOMPSON (during the reading). Mr. Chairman, I ask unanimous consent that the amendment in the nature of a substitute be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

The CHAIRMAN. The gentleman from Minnesota (Mr. QUIE) is recognized for 5 minutes in support of his amendment.

Mr. QUIE. Mr. Chairman, when we came to the floor this afternoon, it was my impression that we would move ahead with the bill with the amendments that have been printed in the RECORD. Upon arriving, I find that there is a whole new game plan; that the gentleman from Connecticut (Mr. SARASIN) was going to have a substitute which would include portions of the conference report of the last Congress. And the proponents no longer support the committee bill.

In the Committee on Education and Labor I offered a substitute which included the conference report of last year, with some changes. I would say that the changes go in an opposite direction from the changes that the gentleman from Connecticut (Mr. SARASIN) proposes to go. In my bill, it would include the provisions of the Hathaway amendment, which has been spoken of earlier. It would include the Ashbrook amendment, which would make clear that it would not affect the nonconstruction employees.

In addition, it provided language wherein the industries that are involved in fast-track in their construction, where they issue a contract for one prime contractor while they are planning another part of the construction, would limit the common situs to each phase of the construction.

It would also provide a definition of site.

From the very beginning of the last Congress, I have been concerned about what actually is site. What do we really mean by the "site?" That can have very extensive implications.

It also provides that, just as presently one cannot picket against an employer who is paying prevailing wages for the purpose of increasing the wage, and we cannot use situs picketing to picket, again in this case, a nonunion employer who is paying the prevailing rate. However, if they have any other objection against him that is a legal reason to picket, they can go ahead and picket. For instance, if the working conditions are deplorable, they can still go ahead and picket.

To give the Members an example of refinements in the conference bill: For the residential property, my substitute is not limited to the contractors who do $9,500,000 worth of business or less, as the conference report did last year. My substitute exempts all residential housing as long as the buildings are three stories or less.

In the enactment provision last year, the Meeds law would not go into effect for 1 year for those who did $5 million worth of business or less, and not for 2 years for those who did more than $5 million worth of business.

It did not seem to me that that was equitable. Rather, those who have entered into a contract under the present law should not be subjected to situs picketing until their contract has been completed. However, I put in an enactment date of 2 years for existing contracts. If it is a long-term contract that goes beyond 2 years, then it would go into effect at the end of 2 years.

That is primarily what this substitute does. I urge the Members to support this substitute over and against the substitute that is to be proposed by the gentleman from Connecticut (Mr. SARASIN) and over and against the bill that came from the Committee on Education and Labor which leaves so much undefined that I do not believe that the NLRB could actually get a handle on how they are to interpret the law in many cases, because witnesses would not specify what it meant, and even the Secretary of Labor was not willing to specify what it meant.

To give the Members an example, before our committee I tried to use an example to help members understand the fast-tracking. I indicated that if there was one general contractor for the three buildings being built on an industrial facility it should be one common site. I used the example of a warehouse, a research building and the extension to an office building.

The CHAIRMAN. The time of the gentleman from Minnesota (Mr. QUIE) has expired.

(By unanimous consent, Mr. QUIE was allowed to proceed for 1 additional minute.)

Mr. QUIE. In the case of those three buildings on the industrial facility, if there is one general contractor, I can understand that would be one site. In the case that they have three separate general contractors one for each of the three separate buildings, it seems to me

then it ought to be understood that they ought to be treated as three different sites. The attorney for the AFL–CIO, Larry Gol, indicated that in his estimation it would be one site. That indicates to the Members, in the case of industrial construction, how difficult it would be if this bill goes to that extent. I could not even get into the description of fast-tracking then, if we understand this legislation to mean that even in the situation, where there are three separate general contractors on three separate buildings on an industrial facility, that that could be one site.

For that reason, Mr. Chairman, amongst all the others, I urge my colleagues to accept my amendment in the nature of a substitute which would not define a site and not include those in a common site who were in no way interrelated or working side by side.

The CHAIRMAN. The time of the gentleman from Minnesota (Mr. QUIE) has expired.

(On request of Mr. DON H. CLAUSEN and by unanimous consent, Mr. QUIE was allowed to proceed for 1 additional minute.)

Mr. DON H. CLAUSEN. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from California.

Mr. DON H. CLAUSEN. Mr. Chairman, having referred to the letter signed by Mr. Thompson, dated December 9, 1975, I think it would be appropriate to read the full content of the letter into the record so that all Members will be acquainted with what Mr. QUIE and I are referring to in this dialog. It reads as follows:

HOUSE OF REPRESENTATIVES,
Washington, D.C., December 9, 1975.

DEAR COLLEAGUE: I have received many inquiries concerning the Conference Committee action on H.R. 5900, the Common Situs Picketing Bill. This letter presents the significant highlights. As indicated below, the Bill came out of Conference much more favorable to employers, far less favorable to organized labor.

1. *Residential Construction.* The House defeated an Amendment offered by John Anderson which would have exempted residential construction of three stories or less without an elevator. The Senate accepted a comparable amendment when offered by Senator Beall. The Conferees agreed to exempt construction consisting of three *residential levels* or less with or without an elevator.

The only limitation on this exemption is that the employers doing the residential construction must be "small businessmen", i.e. an annual gross volume of construction business of up to $9,500,000.

2. *Grandfather Clause.* The House Bill as passed had no "grandfather clause". The Senate Bill as passed exempted all construction on which work had commenced on November 15, 1975. The Conference agreed to a grandfather clause of one year for all existing construction valued at less than $5,000,000; a grandfather clause of two years for all existing construction of more than $5,000,000.

3. *Injunctive Relief.* The House Bill as passed had no provision for injunctive relief against picketing in breach of strikes or picketing in breach of contract. The Senate Bill has such a provision in an amendment offered by Senator Taft. The Conference agreed to the Taft amendment for injunctive relief.

4. *Employers Primarily Engaged in Construction.* The House Bill under the *Ashbrook Amendment* permitted unions to picket or otherwise induce employees to strike only if they are employed "by an employer primarily engaged in the construction industry". The Senate Bill permitted unions to picket or otherwise induce employees to strike if they were employed "by any person". The Conference agreed to the more restrictive House Bill if the employer is primarily engaged in construction "on the site" of the construction. If the employer is primarily engaged in manufacturing, merchandising, etc. "on the site" of the construction, "common situs picketing" is not permitted.

Both the House and Senate Bills (and the Conference Bill) contain the House amendment offered by Mr. Esch during the debate which prohibit common situs picketing; (2) when state laws require separate bids, (b) when the object is a *product boycott*, and (c) when the object is to remove an employee because of membership or non-membership in a union (the Esch amendment).

Finally, the House, Senate, and Conference Bills all contain some amendments accepted by the House Committee prior to floor debate: (a) the ten-day *notice requirements* suggested by Secretary of Labor John Dunlop, (b) the prohibition against common situs picketing when the object is the removal of any employee from the site because of *sex, race, creed,* color or national origin, and (c) the prohibition against common situs picketing because an *independent union* not affiliated with the AFL–CIO is on the job.

In my presence, President Ford promised to sign H.R. 5900 if it were accompanied by H.R. 9500. As outlined above, we have made a number of concessions that should make the Bill more attractive. Anyone who voted for H.R. 5900 should certainly vote for this Conference Report.

Cordially,

FRANK THOMPSON, Jr.

I would like to ask the author of the amendment one question. I have in my hand a lettter dated December 9, 1975, that was signed by our distinguished subcommittee chairman, the gentleman from New Jersey, Mr. FRANK THOMPSON, wherein he spelled out the provisions of the conference report that was agreed to during the last Congress. In more precise terms, the one point I wanted to ask about is in the area of residential construction.

The letter states in part:

The conferees agreed to exempt construction consisting of three residential levels or less with or without an elevator.

The only limitation on this exemption is that the employers doing the residential construction must be "small businessmen," i.e. an annual gross volume of construction business of up to $9,500,000.

Mr. Chairman, I think the gentleman is entirely familiar with the letter that was circulated around among the Members asking us to support the legislation.

What I would like to ask the gentleman is this: Is this provision contained in the legislation, or is it contained in the gentleman's amendment?

The CHAIRMAN. The time of the gentleman from Minnesota (Mr. QUIE) has again expired.

(By unanimous consent, Mr. QUIE was allowed to proceed for 1 additional minute.)

Mr. QUIE. Mr. Chairman, I would say to the gentleman that the provision is in the legislation. However, the $9½ million limitation is no longer in my substitute. In the bill before us, but not in my substitute only residential housing of three stories or less where the contractor did 20 houses or less the previous year is exempted.

As to the grandfather clause, which is the second point the gentleman speaks of, I exempt any present contracts unless they run beyond 2 years. The conference bill grandfathers construction under $5 million for 1 year and over $5 million for 2 years. The remainder of the provisions is in my substitute.

Mr. DON H. CLAUSEN. Mr. Chairman, my concern is for the protection of some of the small businessmen who have been writing to me about this matter, and I wanted to know if they will be protected.

Mr. QUIE. They will be protected under the substitute that I have offered.

Mr. DON H. CLAUSEN. I thank the gentleman.

AMENDMENT OFFERED BY MR. SARASIN AS A SUBSTITUTE FOR THE AMENDMENT IN THE NATURE OF A SUBSTITUTE OFFERED BY MR. QUIE

Mr. SARASIN. Mr. Chairman, I offer an amendment as a substitute for the amendment in the nature of a substitute.

The Clerk read as follows:

Amendment offered by Mr. SARASIN as a substitute for the amendment in the nature of a substitute offered by Mr. QUIE:

Strike out all language which follows the enacting clause and substitute therefor the following language:

TITLE I—PROTECTION OF ECONOMIC RIGHTS OF LABOR IN THE CONSTRUCTION INDUSTRY

SEC. 101. (a) Section 8(b)(4) of the National Labor Relations Act, as amended, is amended by inserting before the semicolon at the end thereof ": *Provided further,* That nothing contained in clause (B) of this paragraph (4) shall be construed to prohibit any strike or refusal to perform services or any inducement of any individual employed by any person to strike or refuse to perform services at the site of the construction, alteration, painting, or repair of a building, structure, or other work and directed at any of several employers who are in the construction industry and are jointly engaged as joint venturers or in the relationship of contractors and subcontractors in such construction, alteration, painting, or repair at such site: *Provided further,* That nothing in the above proviso shall be construed to permit a strike or refusal to perform services or any inducement of any individual employed by any person to strike or refuse to perform services in furtherance of a labor dispute, unlawful under this Act or in violation of an existing collective bargaining contract, relating to the wages, hours, or other working conditions of employees employed at such site by any of such employers, and the issues in dispute involve a labor organization which is representing the employees of an employer at the site who is not engaged primarily in the construction industry: *Provided further,* Except as provided in the above provisos nothing herein shall be construed to permit any act or conduct which was or may have been an unfair labor practice under this subsection: *Provided further,* That nothing in the above provisos, shall be construed to prohibit any act which was not an unfair labor practice under the provisions of this subsection existing prior to the enactment of such provisos: *Provided further,* That nothing in the above provisos shall be construed to authorize picketing, threatening to picket, or causing to be picketed, any em-

ployer where an object thereof is the removal or exclusion from the site of any employee on the ground of sex, race, creed, color, or national origin or because of the membership or nonmembership of any employee in any labor organization, or to cause or attempt to cause an employer to discriminate against any employee, or to discriminate against an employee with respect to whom membership in a labor organization has been denied or terminated on some ground other than his failure to tender the periodic dues and the initiation fees uniformly required as a condition of acquiring or retaining membership: *Provided further*, That nothing in the above provisos shall be construed to permit any attempt by a labor organization to require an employer to recognize or bargain with any labor organization presently prohibited by paragraph (7) of subsection (b): *Provided further*, That nothing in the above provisos shall be construed to permit any picketing of a common situs by a labor organization to force, require, or persuade any person to cease or refrain from using, selling, purchasing, handling, transporting, specifying, installing, or otherwise dealing in the products or systems of any other producer, processor, or manufacturer. In determining whether several employers who are in the construction industry are jointly engaged as joint venturers at any site, ownership or control of such site by a single person shall not be controlling".

(b) Section 8 of such Act is amended by adding at the end thereof the following new subsections:

"(h) Notwithstanding the provisions of this or any other Act, where a State law requires separate bids and direct awards to employers for construction, the various contractors awarded contracts in accordance with such applicable State law shall not for the purposes of the third proviso at the end of paragraph (4) of subsection (b) of this section, be considered joint venturers or in the relationship of contractors and subcontractors with each other or with the State or local authority awarding such contracts at the common site of the construction.

"(i) Notwithstanding the provisions of this or any other Act, any employer at a common construction site may bring an action for injunctive relief under section 301 of the Labor Management Relations Act (29 U.S.C. 141) to enjoin any strike or picketing at a common situs in breach of a no-strike clause of a collective-bargaining agreement relating to an issue which is subject to final and binding arbitration or other method of final settlement of disputes as provided in the agreement.

"(j) The provisions of the third proviso at the end of paragraph (4) of subsection (b) of this section shall not apply at the site of the construction, alteration, painting, or repair of a building, structure, or other work involving residential structures of three residential levels or less constructed by an employer who in the last taxable year immediately preceding the year in which the determination under this subsection is made had, in his own capacity or with or through any other person, a gross volume of construction business of $9,500,000 or less, adjusted annually as determined by the Secretary of Labor, based upon the revisions of the Price Index for New One Family Houses prepared by the Bureau of the Census, if the employer within 10 days of being served with the notice required by subsection (g)(2)(A) of this section notifies each labor organization which served that notice in an affidavit that he satisfies the requirements set forth in this subsection.".

(c) Section 8(g) of such Act is amended by redesignating the present section 8(g) as section 8(g)(1), and adding at the end thereof the following:

"(2)(A) A labor organization before engaging in activity permitted by the third proviso at the end of paragraph (4) of subsection (b) of this section shall provide prior written notice of intent to strike or to refuse to perform services of not less than ten days to all unions and the employers and the general contractor at the site and to any national or international labor organization of which the labor organization involved is an affiliate and to the Construction Industry Collective Bargaining Committee: *Provided*, That at any time after the expiration of ten days from transmittal of such notice, the labor organization may engage in activities permitted by the third proviso at the end of paragraph (4) of subsection (b) of this section if the national or international labor organization of which the labor organization involved is an affiliate gives notice in writing authorizing such action: *Provided further*, That authorization of such action by the national or international labor organization shall not render it subject to criminal or civil liability arising from activities, notice of which was given pursuant to this subparagraph, unless such authorization is given with actual knowledge that the picketing is to be willfully used to achieve an unlawful purpose.

"(B) In the case of any such site which is located at any military facility or installation of the Army, Navy, or Air Force, or which is located at a facility or installation of any other department or agency of the Government if a major purpose of such facility or installation is or will be the development, production, testing, firing or launching of munitions, weapons, missiles, or space vehicles, prior written notice of intent to strike or to refuse to perform services, of not less than ten days shall be given by the labor organization involved to the Federal Mediation and Conciliation Service, to any State or territorial agency established to mediate and conciliate disputes within the State or territory where such site is located, to the several employers who are jointly engaged at such site, to the Army, Navy, or Air Force or other department or agency of the Government concerned with the particular facility or installation, and to any national or international labor organization of which the labor organization involved is an affiliate.

"(C) The notice requirements of subparagraphs (A) and (B) above are in addition to, and not in lieu of the notice requirements prescribed by section 8(d) of the Act.".

SEC. 102. The amendments made by this title shall take effect 90 days after the date of enactment of this title except (1) with respect to all construction work having a gross value of $5,000,000 or less which was contracted for and on which work had actually started on date of enactment, the amendments made by this title shall take effect one year after such effective date, and (2) with respect to all construction work having a gross value of more than $5,000,000 which was contracted for and on which work had actually started on date of enactment, the amendments made by this title shall take effect two years after such effective date.

TITLE II—CONSTRUCTION INDUSTRY COLLECTIVE BARGAINING

SHORT TITLE

SEC. 201. This title may be cited as the "Construction Industry Collective Bargaining Act of 1977".

FINDINGS AND PURPOSES

SEC. 202. (a) The Congress finds and declares that the legal framework for collective bargaining in the construction industry is in need of revision; and that an enhanced role for national labor organizations and national contractor associations working as a group is needed to minimize instability, conflict, and distortions, to assure that problems of collective-bargaining structure, productivity and manpower development are constructively approached by contractors and unions themselves, and at the same time to permit the flexibility and variations that appropriately exist among localities, crafts, and branches of the industry.

(b) It is therefore the purpose of this title to establish a more viable and practical structure for collective bargaining in the construction industry by establishing procedures for negotiations with a minimum of governmental interference in the free collective-bargaining process.

CONSTRUCTION INDUSTRY COLLECTIVE BARGAINING COMMITTEE

SEC. 203. (a) There is hereby established in the Department of Labor a Construction Industry Collective Bargaining Committee. The Committee members shall be appointed as follows:

(1) Ten members shall be appointed by the President from among individuals qualified by experience and affiliation to represent the viewpoint of employers engaged in collective bargaining in the construction industry.

(2) Ten members shall be appointed by the President from among individuals qualified by experience and affiliation to represent the viewpoint of the standard national labor organizations in the construction industry.

(3) Up to theree members shall be appointed by the President from among individuals qualified by training and experience to represent the public interest, one of whom shall be designated by him to serve as Chairman.

(4) The Secretary of Labor, ex officio.

(5) The Director of the Federal Mediation and Conciliation Service, ex officio.

The employer, labor, and public members shall be appointed by the President after consultation with representative labor and management organizations in the industry whose members are engaged in collective bargaining. Any alternate members who may be appointed shall be appointed in the same manner as regular members. An organizational meeting of the Committee shall be held at the call of the Chairman at which there shall be in attendance at least five members qualified to represent the viewpoint of employers, five members qualified to represent the viewpoint of labor organizations, and one member qualified to represent the public interest. All actions of the Committee shall be taken by the Chairman or the Executive Director on behalf of the Committee.

(b) The Secretary of Labor may appoint such staff as is appropriate to carry out the Committee's functions under this title and with the approval of the Committee, may appoint an Executive Director.

(c) The Committee may, without regard to the provisions of section 553 of title 5, United States Code, promulgate such rules and regulations as may be necessary or appropriate to carry out the purposes of this title including the designation of "standard national construction labor organizations" and "national construction contractor associations" qualified to participate in the procedures set forth in this title.

NOTICE REQUIREMENTS

SEC. 204. (a) In addition to the requirements of any other law, including section 8(d) of the National Labor Relations Act, as amended, where there is in effect a collective bargaining agreement covering employees in the construction industry between a local construction labor organization or other subordinate body affiliated with a standard national construction labor organization or between a standard national construction labor organization directly, and an employer or association of employers in the construction industry, neither party shall terminate or

modify such agreement or the terms or conditions thereof without serving a written notice of the proposed termination or modification in the form and manner prescribed by the Committee effective sixty days prior to the expiration date thereof, or in the event such collective bargaining agreement contains no expiration date, sixty days prior to the time it is proposed to make such termination or modification. The notice required by this subsection shall be served as follows:

(1) A local construction labor organization or other subordinate body affiliated with a standard national construction labor organization shall serve such notice upon such national organization.

(2) An employer or local association of employers shall serve such notice upon all national construction contractor associations with which the employer or association is affiliated. An employer or local association of employers, which is not affiliated with any national construction contractor association shall serve such notice upon the Committee.

(3) Standard national construction labor organizations and national construction contractor associations shall serve such notice upon the Committee with respect to termination or modification of agreements to which they are directly parties.

The parties shall continue in full force and effect, without resorting to strike or lockout, all the terms and conditions of the existing collective bargaining agreement for a period of sixty days after the notice required by this subsection is given or until the expiration of such collective bargaining agreement, whichever occurs later.

(b) Standard national construction labor organizations and national construction contractor associations shall furnish forthwith to the Committee copies of all notices served upon them as provided by subsection (a) of this section.

(c) The Committee may prescribe the form and manner and other requirements relating to the submission of the notices required by this section.

ROLE OF THE COMMITTEE AND NATIONAL LABOR AND EMPLOYER ORGANIZATIONS IN COLLECTIVE BARGAINING

SEC. 205. (a) Whenever the committee has received notice pursuant to section 204 it may take jurisdiction of the matter, with or without the suggestion of any interested party, by transmitting written notice to the signatory labor organization or organizations and the association or associations of employers directly party to the collective bargaining agreement, during the ninety-day period which includes and immediately precedes the later of: (1) the ninetieth day following the giving of notice under section 204 (a); or (2) whichever is applicable, (A) the thirtieth day following the expiration of the collective bargaining agreement, or (B) the thirtieth day following the date proposed for termination or modification of such agreement.

(b) The Committee shall decide whether to take such jurisdiction in accordance with the standards set forth in section 206. When the Committee has taken jurisdiction under this section, it may in order to facilitate a peaceful voluntary resolution of the matter and the avoidance of future disputes: (1) refer such matter to voluntary national craft or branch boards or other appropriate organizations established in accordance with section 227; (2) meet with interested parties and take other appropriate action to assist the parties; or (3) take the action provided for in both preceding clauses (1) and (2) of this subsection. At any time after the taking of jurisdiction, the Committee may continue to meet with interested parties as provided herein.

(c) When the Committee has taken jurisdiction within the ninety-day period specified in this section over a matter relating to the negotiation of the terms or conditions of any collective bargaining agreement involving construction work between: (1) any standard national construction labor organization, or any local construction labor organization or other subordinate body affiliated with any standard national construction labor organization, and (2) any employer or association of employers, notwithstanding any other law, no such party may, at any time prior to the expiration of the ninety-day period specified in this subsection, engage in any strike or lockout, or the continuing thereof, unless the Committee sooner releases its jurisdiction.

(d) When the Committee receives any notice required by section 204 it is authorized to request in writing at any time during the ninety-day period specified in subsection (a) of this section participation in the negotiations by the standard national construction labor organizations with which the local construction labor organizations or other subordinate bodies are affiliated and the national construction contractor associations with which the employers or local employer associations are affiliated.

(e) In any matters as to which the Committee takes jurisdiction under subsection (a) of this section and makes a referral authorized by subsection (d) of this section, no new collective bargaining agreement or revision of any existing collective bargaining agreement between a local construction labor organization or other subordinate body affiliated with the standard national construction labor organization, and an employer or employer association shall be of any force or effect unless such new agreement or revision is approved in writing by the standard national construction labor organization with which the local labor organization or other subordinate body is affiliated. Prior to such approval the parties shall make no change in the terms or conditions of employment. The Committee may at any time suspend or terminate the operation of this subsection as to any matter previously referred pursuant to subsection (d) of this section.

(f) No standard national construction labor organization or national construction contractor association shall incur any criminal or civil liability, directly or indirectly, for actions or omissions pursuant to a request by the Committee for its participation to approve a collective bargaining agreement under this title: *Provided*, That this immunity shall not insulate from civil or criminal liability a standard national construction labor organization or national construction contractor association when it performs an act under this statute to willfully achieve a purpose which it knows to be unlawful: *Provided further*, That a standard labor organization shall not by virtue of the performance of its duties under this Act be deemed the representative of any affected employees within the meaning of section 9(a) of the National Labor Relations Act or become a party to or bear any liability under any agreement it approves pursuant to its responsibilities under this Act.

(g) Nothing in this title shall be deemed to authorize the Committee to modify any existing or proposed collective bargaining agreement.

STANDARDS FOR COMMITTEE ACTION

SEC. 206. The Committee shall take action under section 205 only if it determines that such action will—

(1) facilitate collective bargaining in the construction industry, improvements in the structure of such bargaining, agreements covering more appropriate geographical areas, or agreements more accurately reflecting the condition of various branches of the industry;

(2) promote stability of employment and economic growth in the construction industry;

(3) encourage collective-bargaining agreements embodying appropriate expiration dates;

(4) promote practices consistent with appropriate apprenticeship training and skill level differentials among the various crafts or branches;

(5) promote voluntary procedures for dispute settlement; or

(6) otherwise be consistent with the purposes of this title.

OTHER FUNCTIONS OF THE COMMITTEE

SEC. 207. (a) The Committee may promote and assist in the formation of voluntary national craft or branch boards or other appropriate organizations composed of representatives of one or more standard national construction labor organizations and one or more national construction contractor associations for the purpose of attempting to seek resolution of local labor disputes and review collective-bargaining policies and developments in the particular craft or branch of the construction industry involved. Such boards, or other appropriate organizations, may engage in such other activities relating to collective bargaining as their members shall mutually determine to be appropriate.

(b) The Committee may, from time to time, make such recommendations as it deems appropriate, including those intended to assist in the negotiations of collective-bargaining agreements in the construction industry; to facilitate area bargaining structures; to improve productivity, manpower development, and training; to promote stability of employment and appropriate differentials among branches of the industry; to improve dispute settlement procedures; and to provide for the equitable determination of wages and benefits. The Committee may make other suggestions, as it deems appropriate, relating to collective bargaining in the construction industry.

MISCELLANEOUS PROVISIONS

SEC. 208. (a) This title shall apply only to activities affecting commerce as defined in sections 2(6) and 2(7) of the National Labor Relations Act, as amended.

(b) Nothing in this title shall be construed to require an individual employee to render labor or services without the employee's consent, nor shall anything in this title be construed to make the quitting of labor by an individual employee an illegal act; nor shall any court issue any process to compel the performance by an individual employee of such labor or services, without the employee's consent; nor shall the quitting of labor by an employee or employees in good faith because of abnormally dangerous conditions for work at the place of employment of such employee or employees be deemed a strike under this title.

(c) The failure or refusal to fulfill any obligation imposed by this title on any labor organization, employer, or association of employers shall be remediable only by a civil action for equitable relief brought by the Committee in a district court of the United States, according to the procedures set forth in subsection (d) of this section.

(d) The Committee may direct that the appropriate district court of the United States having jurisdiction of the parties be petitioned to enforce any provision of this title. No court shall issue any order under section 205(c) prohibiting any strike, lockout, or the continuing thereof, for any period beyond the ninety-day period specified in section 205(a).

(e) The findings, decisions and actions of the Committee pursuant to this title may be held unlawful and set aside only where they are found to be arbitrary or capricious, in excess of its delegated powers, or contrary to a specific requirement of this title.

(f) Service of members or alternate members of the Committee may be utilized without regard to section 665(b) of title 31, United States Code, Such individuals shall be deemed to be special Government employees on days in which they perform services for the Committee.

(g) In granting appropriate relief under this title the jurisdiction of United States courts sitting in equity shall not be limited by the Act entitled "An Act to amend the Judicial Code and to define and limit the jurisdiction of courts sitting in equity, and for other purposes", approved March 23, 1932 (29 U.S.C. 101).

(h) The Committee may make studies and gather data with respect to matters which may aid in carrying out the provisions of this title.

(i) Notwithstanding anything in subchapter II of chapter 5 of title 5, United States Code, in carrying out any of its functions under this title, the Committee shall not be required to conduct any hearings. Any hearings conducted by the Committee shall be conducted without regard to the provisions of subchapter II of chapter 5 of title 5, United States Code.

(j) Except as provided herein, nothing in this title shall be deemed to supersede or modify any other provision of law.

(k) In all civil actions under this title, attorneys appointed by the Secretary may represent the Committee (except as provided in section 518(a) of title 28, United States Code), but all such litigation shall be subject to the direction and control of the Attorney General.

COORDINATION

SEC. 209. (a) At the request of the Committee, the other agencies and departments of the Government shall provide, to the extent permitted by law, information deemed necessary by the Committee to carry out the purposes of this title.

(b) The Committee and the Federal Mediation and Conciliation Service shall regularly consult and coordinate their activities to promote the purposes of this title.

(c) Other agencies and departments of the Federal Government shall cooperate with the Committee and the Federal Mediation and Conciliation Service in order to promote the purposes of this title.

DEFINITIONS

SEC. 210. (a) The terms "labor dispute", "employer", "employee", labor organization", "person", "construction", "lockout", and "strike" shall have the same meaning as when used in the Labor-Management Relations Act, 1947, as amended.

(b) As used in this title the term "Committee" means the Construction Industry Collective Bargaining Committee established by section 203 of this title.

SEPARABILITY

SEC. 211. If any provision of this title or the application of such provision to any person or circumstance, shall be held invalid, the remainder of this title or the application of such provision to persons or circumstances other than those as to which it is held invalid, shall not be affected thereby.

EXPIRATION DATE AND REPORTS

SEC. 212. (a) this title shall expire on December 31, 1980.

(b) No later than one year following the date of enactment of this title and at one-year intervals thereafter, the Committee shall transmit to the President and to the Congress a full report of its activities under this title during the preceding year.

(c) No later than June 30, 1980, the Committee shall transmit to the President and to the Congress a full report on the operation of this title together with recommendations, including a recommendation as to whether this title should be extended beyond the expiration date specified in subsection (a) of this section, and any other recommendations for legislation as the Committee deems appropriate.

Mr. SARASIN (during the reading). Mr. Chairman, I ask unanimous consent that the amendment offered as a substitute for the amendment in the nature of a substitute be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Connecticut?

Mr. BAUMAN. Mr. Chairman, reserving the right to object, I can appreciate the gentleman's wanting to dispense with the reading of this lengthy surprise amendment. It was printed in the CONGRESSIONAL RECORD last Christmastime and its character does partake of goodies one might find under the Christmas tree; if George Meany is your idea of Santa Claus.

The substitute amendment covers 4 or 5 pages. We have had Members running back and forth across the center aisle all afternoon, and the majority counsel and the distinguished gentleman from New Jersey (Mr. THOMPSON) have been working with scissors and paste and everything else. I would not want the House to be in the dark about this matter. I think we should know what we are voting on.

Earlier today we heard that the committee bill was perfection itself. Suddenly now we have a new bill. New versions come along as quick as the head count changes. We even see amendments fluttering down from the gallery. I think we really ought to have a chance to know what is going on.

Mr. Chairman, let us have a leisurely reading of the amendment.

Mr. THOMPSON. Mr. Chairman, will the gentleman yield?

Mr. BAUMAN. I yield to the distinguished gentleman from New Jersey.

Mr. THOMPSON. Mr. Chairman, the gentleman said there are amendments coming down from the gallery. He is mistaken; it is tinsel. Let us put a light on the Christmas tree. These provisions are all understood, so let us dispense with the reading.

Mr. BAUMAN. The gentleman really hung one on the tree with this amendment.

Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

The Clerk continued to read.

Mr. THOMPSON (during the reading). Mr. Chairman, I rise to renew the unanimous-consent request of the gentleman from Connecticut (Mr. SARASIN) that the amendment offered as a substitute for the amendment in the nature of a substitute be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New Jersey?

Mr. ASHBROOK. Reserving the right to object, Mr. Chairman, I might say to my friend, the gentleman from New Jersey (Mr. THOMPSON), that there is a little concern this is going so fast that we might not be able to get our amendments prepared in time to offer them as amendments to the substitute amendment.

If the chairman can assure us that we will at least have that time, I would not object.

Mr. THOMPSON. If the gentleman will yield, certainly I would not move the previous question until the other side has had a chance to draft another set of amendments.

Mr. ASHBROOK. Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from New Jersey?

Mr. ROUSSELOT. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

The Clerk will read.

The Clerk continued to read.

Mr. SARASIN (during the reading). Mr. Chairman, I would again ask unanimous consent that the amendment offered as a substitute for the amendment in the nature of a substitute be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Connecticut?

Mr. MICHEL. Mr. Chairman, reserving the right to object, and I do so, to inquire of the author of the substitute, whether or not the only three changes to the language in the conference report to accompany the bill, H.R. 5900 of last year, with deleting the phrase:

Employer primarily engaged in the construction industry.

And the phrase:

Provided further, That nothing in the above proviso shall be construed to authorize picketing, threatening to picket, or causing to be pocketed, any employer where an object thereof—

And insert the word:

or—

And then several lines further on down:

or to include any labor organization on the ground that such labor organization is not affiliated with a national or international labor organization which represents employees of an employer at the common site.

And then three lines below that—

Provided further, That if a labor organization engages in picketing for an object described in paragraph (7) of subsection (b) and there has been filed a petition under subsection (c) of section 9, and a charge under subsection (b) of section 10, the Board shall conduct an election and certify the results thereof within 14 calendar days from the filing of the later of the petition and the charge.

If there are no other changes other than those, I would have no objection to having the amendment offered as a substitute for the amendment in the nature of a substitute being considered as read and printed in the RECORD but, Mr. Chairman, I would want the assurances of the gentleman from Connecticut (Mr. SARASIN) that, under the fly-by-night operation under which we are operating that we know what we are talking about.

Mr. SARASIN. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Connecticut.

Mr. SARASIN. Mr. Chairman, I would

agree that the description the gentleman from Illinois has provided the House is absolutely correct. The gentleman has referred to those areas which are stricken in the conference report of last year.

Mr. MICHEL. Then I would withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Connecticut?

Mr. ROUSSELOT. Mr. Chairman, I object until we get this straightened out.

The CHAIRMAN. Objection is heard.

The Clerk continued to read.

Mr. FORD of Michigan (during the reading). Mr. Chairman, I ask unanimous consent that further reading of the amendment be dispensed with and that it be printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

Mr. ROUSSELOT. Mr. Chairman, reserving the right to object, can we have the assurances of the managers of the bill that adequate time will be provided for the amendment process. I understand there are Members on both sides of the aisle who have amendments that they were going to offer either to the substitute of the gentleman from Connecticut or the substitute of the gentleman from Minnesota and/or to the committee bill. The advocates of these amendments need time to tailor their amendments to fit these two substitutes, or both of them. Can we be assured that the committee itself understands the nature of these two substitutes? It is my understanding that the gentleman from Minnesota offered his substitute in committee, so most of the committee members who were present are aware of most of the substance of that substitute.

Mr. THOMPSON. Mr. Chairman, will the gentleman yield?

Mr. ROUSSELOT. I yield to the gentleman from New Jersey.

Mr. THOMPSON. I thank the gentleman for yielding.

The gentleman is quite correct. The gentleman from Minnesota did offer this with one exception, which is not in it now, in the committee and, of course, we understand fully the substitute being offered by the gentleman from Connecticut. To the extent possible we would guarantee that as soon as amendments are produced, we will not try to close off debate on them. As soon as amendments are properly introduced, they can, will, and should be read and debated.

Mr. ROUSSELOT. Further reserving the right to object, Mr. Chairman, the problem that many Members have who had amendments prepared for the committee's bill, is that they now find themselves in the unfortunate position of having to scramble around to find the appropriate place to offer their same amendments, either to the substitute of the gentleman from Minnesota or to the substitute of the gentleman from Connecticut.

Mr. THOMPSON. We are aware of that.

Mr. ROUSSELOT. The problem, and I will restate it, is that my colleague, the gentleman from Connecticut, informs me that even though substantial portions of his substitutes are very similar to the conference report of last year, he has in five or six cases written new concepts into the legislation.

Mr. THOMPSON. Will the gentleman yield further?

Mr. ROUSSELOT. I will be glad to yield to the gentleman from New Jersey.

Mr. THOMPSON. I thank the gentleman for yielding.

It is my understanding that—and I am virtually certain of this—there are three differences between the substitute of the gentleman from Connecticut and the conference report. They relate the Hathaway amendment.

Mr. SARASIN. Mr. Chairman, will the gentleman yield?

Mr. ROUSSELOT. I yield to the gentleman from Connecticut.

Mr. SARASIN. I thank the gentleman for yielding.

I will confirm that there are three essential differences. They were just referred to by the gentleman from Illinois as being deletions. There is nothing added except for a change of dates from the conference report to conform to the date of enactment, and the appropriations section is removed. Essentially that is it.

Mr. ROUSSELOT. I appreciate my colleague's explanation. Can we have assurances from my distinguished chairman, Mr. THOMPSON, that all people who have amendments to either of these two substitutes will have adequate time to present them and that there will not be an attempt to unduly cut off debate?

Mr. THOMPSON. If the gentleman will yield further, excepting, of course, for dilatory tactics, of course not.

Mr. ROUSSELOT. Who would do that?

Mr. THOMPSON. If the gentleman will yield further, the differences which the gentleman from Connecticut has described as susceptible of amendment are already extant.

To the degree that they can be produced and read, they will be debated, and we shall not try to limit debate.

Mr. ROUSSELOT. I appreciate my colleague's suggestion.

Mr. BAUMAN. Mr. Chairman, reserving the right to object, I would like to ask the gentleman from New Jersey one other question. This bill came out of the committee in a form that was assured by the gentleman publicly earlier today and in speeches was absolutely perfect. Is it because they do not have the votes to pass that bill that they have now fallen back on the substitute? Is that the problem?

Mr. THOMPSON. Oh, no. Essentially the bill reported out of the committee unfortunately came out on a party line vote. We wanted the cooperation, which we are getting from the minority now, to make this a bipartisan effort.

Mr. BAUMAN. It almost guarantees my objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. SARASIN. Let me suggest to the House that the reason for offering what is essentially last year's conference report on this bill is because many of us who supported the concept of common situs feel very strongly that the bill as reported from the Committee on Education and Labor, H.R. 4250, did not do what it purported to do and serious objections have been raised to parts of it. There was certaintly a legitimate argument as to the interpretation. I was very much troubled by the fact that the bill as reported appeared to wipe out all fair labor practices from the present law and only reinserts some of them.

I think it was generally agreed that H.R. 4250 is ambiguous and there would be litigation in an effort to resolve those problems. I think there is a better way.

In addition to that there were concerns regarding those people who truly were not engaged in construction or work on a site that would be only incidental to construction who would be affected by this bill in spite of the assurances that H.R. 4250 would not affect them. I still think there is a better way to handle it.

So the debate this year has not been about the merits of H.R. 4250, the bill to reverse the reasoning and result of Labor Board against Denver Building Trades Council, so much as it has been about certain drafting changes from last year's conference bill. There are many of us here who do support the concept of common situs but who were concerned about the structure of H.R. 4250. There is no great argument for those of us who feel that a bill to reverse the reasoning and result of Labor Board against Denver Building Trades Council was in order and something we should adopt.

I have concluded the best way to cut through the confusion stemming from the charges and countercharges that have gone on with this bill is to try to come back to where we were last year. Most of the Members in this House have lived through the common situs picketing bill and most of them who were here understood it very well. At least we can talk about something we have a feeling about and we can deal with a common ground. This bill is essentially the same as the conference report finally adopted by both the House and the Senate last year except for three major changes and a couple of minor ones. Undoubtedly there will be no objections.

The first changes is to delete the Ashbrook amendment, which was accepted last year on the understanding that it did not change the substance of the bill but which in conference was construed to limit the traditional right to appeal to employees making deliveries to a struck construction site. In its place the bill uses the House language of last year. The change in my bill is that no industrial facility, hospital energy supplier, and so forth, could be affected by a common situs strike other than at the gates reserved solely for construction workers. So it could conceivably affect workers at the construction site but not the suppliers for a hospital or industrial facility or energy supplier or whatever entity which was operating in its normal business.

The language I propose permits picketing only if it is directed against the employees doing construction work at a

construction site. If there is a dispute at such a site, construction workers would not be permitted to picket at a gate reserved for industrial workers at a nearby plant or at a plant to which, for example, a new wing is being added.

The second change is to delete the provision protecting what are referred to as independent unions. I believe this provision invites abuse by permitting employers to sign prehire agreements with such unions in an effort to defeat the basic purpose of the bill. The risk is that such unions could be paper creations designed to subvert the process.

Finally, on the ground that it imposes an administrative burden on the Labor Relations Board which cannot be met, I have deleted the Hathaway amendment on expedited elections. It is my understanding the Senator shares my concern in this regard on that. We are left then with the present law which says that the expedited election must take place within 30 days or less, so we have not made a major change.

I wish to make it plain that the substitute amendment refers only to section 8(b)(4)(B) and amends only the secondary boycott provision of the act.

The CHAIRMAN. The time of the gentleman from Connecticut has expired.

(By unanimous consent, Mr. SARASIN was allowed to proceed for an additional 5 minutes.)

Mr. SARASIN. Mr. Chairman, it conforms with the present proviso to section 8(b)(4)(B) that protects primary picketing and strikes. The purpose of the substitute is to overrule the Denver case, thereby to treat all employees on a common construction site as a single person, and to permit the type of picketing involved in Denver.

I believe by going back to where we were 1 year ago, we do provide for much more justice in a much less ambiguous way than had we accepted the bill as reported by the Committee on Education and Labor (H.R. 4250).

Mr. MICHEL. Mr. Chairman, will the gentleman yield?

Mr. SARASIN. I yield to the gentleman from Illinois.

Mr. MICHEL. Mr. Chairman, the gentleman will recall that that conference report had 189 votes, as I recall, against it. The gentleman says that his substitute amendment takes the form of the language of that conference report, except for three major changes and two minor ones. We will discount the minor ones.

I would agree that the first one is a major one, for if we delete that language, "primarily engaged in the construction industry," we are opening up all industrial sites to picketing; is that correct?

Mr. SARASIN. Mr. Chairman, I would respectfully disagree with the gentleman from Illinois. This is a bill dealing with the economic rights of the construction industry. That is the title of the bill. It refers to services and activities at the site of construction involving people who are in the construction industry. I think the language is, in fact, very limited, dealing only with construction and not with an incidental situation.

It certainly is my understanding that a manufacturing facility or any nonconstruction operation which is incidentally having a building built on its site or a wing or reconstruction or painting or whatever utilizing construction workers and there is a dispute with the construction workers, it is my understanding that it in no way affects the normal activities of a shopping center or a hospital or a factory or whatever; the language in the report last year limits it sufficiently to prevent that.

Mr. THOMPSON. Mr. Chairman, will the gentleman yield?

Mr. SARASIN. I yield to the gentleman from New Jersey.

Mr. THOMPSON. Mr. Chairman, to reassure the gentleman from Illinois, there is still unmentioned the General Electric case, which is precisely as described by the gentleman.

The gentleman from Tennessee will have an amendment to further clarify that; but the description of the gentleman from Connecticut is accurate.

Mr. ASHBROOK. Mr. Chairman, will the gentleman yield?

Mr. SARASIN. I yield to the gentleman from Ohio.

Mr. ASHBROOK. Mr. Chairman, I would hasten to say exactly the opposite. What we are talking about is the inducement of any person to strike or refuse to perform services. When we talk about any individual employed by any person, we are talking about much more than the gentleman from Illinois says. We are talking about industrial sites. We are talking about shopping centers, hospitals, every employer, because we are talking about any person employed by any individual.

I think that record ought to be completely clear.

Mr. MICHEL. That is exactly why this language was retained in there, to guard against this kind of conduct going on.

Mr. ASHBROOK. That is why my amendment was accepted in the last Congress. This is one of the few areas where I think I have a little knowledge, because it was my amendment and it was there for that purpose.

Mr. THOMPSON. Mr. Chairman, will the gentleman yield on that?

Mr. SARASIN. I yield.

Mr. THOMPSON. Under the language—and I respectfully disagree with my colleague from Ohio—it says, "employed by any person to strike or refuse to perform services at the site of the construction," and that is all. It goes on to say, "or refuse to perform services at the site of the construction, alteration, painting or repair of a building, structure or other work."

And here is the key: "at any of the several employers who are in the construction industry."

That is precisely what the gentleman from Illinois is worried about.

The CHAIRMAN. The time of the gentleman from Connecticut has again expired.

(By unanimous consent Mr. SARASIN was allowed to proceed for 5 additional minutes.)

Mr. MICHEL. Mr. Chairman, will the gentleman yield further?

Mr. SARASIN. I yield to the gentleman from Illinois.

Mr. MICHEL. The problem here is that on the construction site, immediately, that is the construction site. Where all these other things can be taking place without this prohibition, we just find is stretched beyond all imagination, and we do not have the kind of protection we think we are entitled to if we do not specifically write it into the statute.

Mr. SARASIN. I think the argument, of course, was made last year on this basis, and the Ashbrook amendment was accepted in an effort to tighten up what everyone wanted to do. I think the issue is clear. We are engaged only with construction people on construction sites, and they are the only ones affected by it. The employer under the General Electric case can and will set up separate gates to separate his regular employees from those people who are involved in the construction work at that time. I think that remains, and it is rather clear.

Mr. MICHEL. If the gentleman will be good enough to yield further, let me move on to this other change which would, for all practical purposes, allow the AFL–CIO to require only their members to be employed at a site. Currently, we can have independent unions or the AFL–CIO working, but by deletion of the kind of language such as this section of language, "or to exclude any labor organization on the ground that such labor organization is not affiliated with a national or international labor organization which represents employees of an employer."

When we knock out that language, we have just got a mandatory kind of situation where there can be nothing but AFL–CIO trade union members involved in the worksite.

Mr. SARASIN. The concern is that—and it has happened in the past—that some contractors have formed their own sweetheart unions, or could possibly do that, which would then immunize them from the effects of this act. I do not think that is what the House intended to do.

Mr. FORD of Michigan. Mr. Chairman, will the gentleman yield?

Mr. SARASIN. I yield to the gentleman from Michigan.

Mr. FORD of Michigan. This language has been in all forms of this bill that have been considered for a number of years, and it is a purely politically inspired piece of language that became boilerplate to fight what we came to refer to as the "District 50 phenomena."

A group of people, ostensibly coal miners, were in fact in the construction industry known as the District 50 people. We were trying to avoid politically getting into the middle of that long drawn-out battle. As a matter of fact, the so-called District 50 unions have now merged with the steelworkers. The question is moot. There is not any such situation in existence at the present time, and the need for the proviso as a political consideration to avoid controversy when that competition existed is no longer there. So, the question that this proviso addressed itself to is moot.

Mr. SATTERFIELD. Mr. Chairman, will the gentleman yield?

Mr. SARASIN. I yield to the gentleman from Virginia.

Mr. SATTERFIELD. Mr. Chairman, I would like to reduce this to something more definite. I wonder if the gentleman would respond to this question: The Veterans' Administration is presently in the process of replacing 10 Veterans' Administration hospitals. In many instances, the new construction will be adjacent to their present or existing hospitals being operated now.

Can the gentleman assure me that under the language of the substitute there will be free access to people supplying goods and supplies to these hospitals which will not be subject to a strike or a picket line?

Mr. SARASIN. Yes. That assurance can be given to the gentleman.

I would point out, in addition, that in the discussion of this conference report last year, this very issue had been raised in the Senate, and it was entered in the House, by way of colloquy, which clearly dealt with the Veterans' Administration situation and refers to comments by Senator WILLIAMS and Senator CRANSTON, which were inserted in the RECORD to make very clear that we are talking about construction disputes and construction people only. And in no way is there the ability to interfere with the ongoing operations of the location simply because the construction happens to be taking place at that location.

Mr. SATTERFIELD. Mr. Chairman, will the gentleman yield further?

Mr. SARASIN. I yield to the gentleman from Virginia.

Mr. SATTERFIELD. Is it the intention of the gentleman that his substitute will give that assurance and that guarantee, so far as medical facilities are concerned, to the VA and also to other hospitals?

Mr. SARASIN. Yes.

The CHAIRMAN. The time of the gentleman from Connecticut (Mr. SARASIN) has expired.

(By unanimous consent, Mr. SARASIN was allowed to proceed for 5 additional minutes.)

Mr. FORD of Michigan. Mr. Chairman, will the gentleman yield?

Mr. SARASIN. I yield to the gentleman from Michigan (Mr. FORD).

Mr. FORD of Michigan. Mr. Chairman, in an attempt to provide some assurance to the gentleman who was just asking about the VA hospital, it is my understanding and I believe the gentleman's amendment leaves intact the General Electric case, which establishes the principle that a separate gate can be established for construction workers on the part of the installation that is involved in the construction site, and once that is done, picketing at the general entrance or delivery entrance, or any other entrance of the factory, hotel, or whatever it might be, would not be permitted; is that correct?

Mr. SARASIN. That is correct.

Mr. FORD of Michigan. Not only would hospitals be protected, but any installation would be protected against labor disputes with people primarily involved in the construction industry interfering with deliveries, with the normal flow of customers to and from that installation?

Mr. SARASIN. That is correct.

Mr. ASHBROOK. Mr. Chairman, will the gentleman yield?

Mr. SARASIN. I yield to the gentleman from Ohio (Mr. ASHBROOK).

Mr. ASHBROOK. Mr. Chairman, I thank the gentleman for yielding.

Again I fail to see how the language of the amendment would let the gentleman from Connecticut give that assurance to the gentleman from Virginia.

If the language allows the striking employees to induce the employees of any person—and certainly a hospital would be a person—I just do not see in the language where this assurance is.

Could the gentleman direct me or direct my attention to the language that would protect that situation? I honestly do not think he could give the gentleman from Virginia that assurance.

Mr. SARASIN. I think I can. Again referring to my earlier comments and those of the gentleman from New Jersey, the bill is specifically designed to affect only those persons engaged in the construction industry.

Section 101 does refer to the site of the construction. It refers to the direction at any of several employers who are in the construction industry.

My point is that we are only talking about the individuals, employees or employers in the construction industry.

Mr. ASHBROOK. If the gentleman will yield further, the gentleman is talking about direction. I am talking about inducement. The language allows the striking employees to induce the employees of any person. Again I am looking for language which would dissuade me from my great concern in this area. There is a difference between directing and inducing. A striking union in a construction field cannot direct its picketing at the employer but it can induce the employees, which accomplishes, in essence, the same purpose. That is the thing which bothers me the most. If the gentleman can dissuade me from this contention, I would have to say that I would feel a lot better about this bill.

Mr. SARASIN. Mr. Chairman, I think the question of inducing and directing is still narrowed and qualified by the language referring only to construction, and that individual must be engaged in construction or he is not affected by it.

Mr. FORD of Michigan. Mr. Chairman, will the gentleman yield?

Mr. SARASIN. I yield to the gentleman from Michigan.

Mr. FORD of Michigan. Mr. Chairman, I believe the gentleman from Ohio (Mr. ASHBROOK) will be reassured by this:

First, I would like to see it made clear that if we did nothing here we do have already in place in the law the General Electric case.

Therefore, the law is very clear, and the gentleman in the well has simply said that his amendment does not do anything to change the existing state of the law which seems to satisfy most people.

However, to make sure that no one misunderstands and to make it clear that we do not intend by any kind of omission or by striking this language to change the existing law, the gentleman from Tennessee (Mr. ALLEN) has worked with us over here and has prepared an amendment that spells out in so many words what the gentleman from Ohio (Mr. ASHBROOK) is asking for. I think once the gentleman from Tennessee (Mr. ALLEN) has had the opportunity to offer his amendment, that will clear up this question for the gentleman from Ohio (Mr. ASHBROOK).

Mr. ASHBROOK. Mr. Chairman, will the gentleman yield further?

Mr. SARASIN. I yield to the gentleman from Ohio.

Mr. ASHBROOK. Mr. Chairman, if the gentleman from Michigan (Mr. FORD) will allow me to respond, I would say that my concern is not protected by the General Electric case because the General Electric case came down at a time when the employer of industrial employees clearly had the right to set aside a reserve gate.

What we are doing here is including the whole site as something that is embroiled in a situs picketing controversy. As long as the picketing or the strike is not directed at the other employer, as I read the language, the striking employees can still induce employees of any person on the site. That is the part of this that bothers me the most.

Mr. THOMPSON. Mr. Chairman, will the gentleman yield?

Mr. SARASIN. I yield to the gentleman from New Jersey.

Mr. THOMPSON. Mr. Chairman, the General Electric case, which is still the law and has been left untouched, will be made more expicit by the amendment that will be offered by the gentleman from Tennessee (Mr. ALLEN). The General Electric case arose out of just that situation, so the law is clear.

The CHAIRMAN. The time of the gentleman from Connecticut (Mr. SARASIN) has expired.

(On request of Mr. THOMPSON and by unanimous consent, Mr. SARASIN was allowed to proceed for 5 additional minutes.)

Mr. ALLEN. Mr. Chairman, will the gentleman yield?

Mr. SARASIN. I yield to the gentleman from Tennessee.

Mr. ALLEN. Mr. Chairman, I believe that all the questions on this score will be answered when I offer my amendment to line 13, page 1 of the substitute amendment offered by the gentleman from Connecticut (Mr. SARASIN).

My amendment would say, after the words, "or repair at such site," we would add the following language: "and where the construction site is adjacent to or part of a nonconstruction or industrial facility and a separate entrance is reserved for the individuals regularly employed at that facility or for individuals employed by persons making delivery to or taking shipments from that facility which is not directed to this specific entrance."

This is a definite exemption, and I think it takes care of the question that is bothering the gentleman on the other side.

Mr. ASHBROOK. Mr. Chairman, if the

gentleman from Connecticut will yield further, would this be basically the industrial facilities amendment offered by the gentleman from New Jersey (Mr. THOMPSON) in committee?

Mr. ALLEN. It is pertaining to any nonconstruction facility, industrial or any other such facility.

Mr. ASHBROOK. Mr. Chairman, will the gentleman from Michigan (Mr. FORD) tell me the answer to that question?

Mr. FORD of Michigan. Mr. Chairman, if the gentleman from Connecticut (Mr. SARASIN) will yield, in response to the gentleman from Ohio (Mr. ASHBROOK), this represents a litle bit of lawyering over here. It was recognized that not all construction sites would be on industrial property, and that the word "industrial" obviously did not cover hotels, hospitals, schools, and institutions of that kind.

Mr. ASHBROOK. Yes, I recall making that point.

Mr. FORD of Michigan. Mr. Chairman, the gentleman made the point well, and he has had counsel on this side worried, so they came up with the language, "construction site is adjacent to or part of a nonconstruction or industrial facility." The word "nonconstruction" presumably covers the kind of things we have been talking about that would not nicely fit into the definition of "industrial facility."

Mr. ASHBROOK. Mr. Chairman, it seems to me that the gentleman is still using the language, "directed at." If we use the language, "directed at," we still leave in the club which is intended by the word, "induce," allowing the employees the right to induce the employees of any person. That is the catch phrase that worries this gentleman. It is not "directed at," but I am worried about the right to induce employees of any person even though they are not primarily "directed at." There is a very great distinction there.

Mr. FORD of Michigan. Mr. Chairman, I do not want to answer the gentleman on that point because it would be a form of anticipatory repudiation. We have not reached that point.

Mr. ASHBROOK. I think we will pretty soon.

Mr. FORD of Michigan. When the Ashbrook amendment comes up, the gentleman may be surprised at the reaction.

Mr. EDWARDS of Oklahoma. Mr. Chairman, will the gentleman yield?

Mr. SARASIN. I yield to the gentleman from Oklahoma.

Mr. EDWARDS of Oklahoma. Mr. Chairman, I know that we are all trying to be conciliatory and reach compromise agreements, and I hear the gentleman from Ohio (Mr. ASHBROOK) talking about what is good about the so-called Ashbrook amendment. I heard the gentleman from Michigan (Mr. FORD) talking about the fact that he agrees that it is a good idea, and so they have language to try to accomplish this. The language of the gentleman from Tennessee (Mr. ALLEN) is apparently intended to accomplish the same purpose.

If that is true, why do we not just compromise and put the Ashbrook amendment back in the bill? Is that not the compromise that we want?

Mr. SARASIN. To answer the gentleman from Oklahoma (Mr. EDWARDS), I am sure the gentleman from Ohio (Mr. ASHBROOK) will try to accomplish that result.

Mr. EDWARDS of Oklahoma. Can we accomplish it by putting the same words back in?

Mr. SARASIN. Certainly you will have the opportunity to offer such an amendment.

Mr. EDWARDS of Oklahoma. I ask the gentleman whether he would support that.

Mr. SARASIN. I would not object to a refinement of the language, and I would reserve my judgment on that refinement.

Mr. EDWARDS of Oklahoma. I thank the gentleman.

Mr. BLOUIN. Mr. Chairman, will the gentleman yield?

Mr. SARASIN. I yield to the gentleman from Iowa.

Mr. BLOUIN. Mr. Chairman, the gentleman's amendment on page 2 basically states the language in the conference report, and I quote: *"Provided further,* That nothing in the above proviso shall be construed to authorize picketing" and it goes on to where the word "or" appears.

Mr. SARASIN. Yes.

Mr. BLOUIN. What is the gentleman's intent by that change?

Mr. SARASIN. The intent is to do nothing other than to clean up or clear up the language.

Mr. BLOUIN. To strike it?

Mr. SARASIN. Strike it. It is redundant. With the word "or" it ties the rest of the language into the proviso above it. It does away with additional language, and it does no more than that.

Mr. BLOUIN. Mr. Chairman, I thank the gentleman.

Mr. CHAIRMAN. The time of the gentleman from Connecticut (Mr. SARASIN) has again expired.

(By unanimous consent, Mr. SARASIN was allowed to proceed for an additional 2 minutes.)

Mr. SARASIN. Mr. Chairman, there is an additional area, I think, that has been discussed rather fully here, but I want to be sure that in my own comments I discuss it.

In my own State there is presently underway the construction of a nuclear facility on a site which already contains a nuclear facility.

That particular first facility, which is already operating, uses organized craft workers for its routine maintenance. There was concern expressed that in the event this bill passed and a labor dispute came into existence at the nuclear facility under construction, that somehow this would allow interference with the normal maintenance and interfere with those persons who do belong to the craft trades.

I have been assured by a number of people that that, in fact, is not the case; and certainly under the language we have been discussing here that would not be the case. With respect to that situation, while there may be a dispute over the construction, it would not interfere with the maintenance.

Mr. ERLENBORN. Mr. Chairman, will the gentleman yield?

Mr. SARASIN. I yield to the gentleman from Illinois.

Mr. ERLENBORN. Mr. Chairman, I thank the gentleman for yielding.

As I understand it, in the example the gentleman gave he clearly stated that the maintenance workers employed at the already constructed and operating facility were union employees; is that correct?

Mr. SARASIN. That is correct.

Mr. ERLENBORN. In the event that they happen not to have chosen to join a union, would that existing facility have any protection under the language of the gentleman's amendment?

Mr. SARASIN. Yes, it would because, again, we are not talking about a construction site, so that the issue just would not arise.

The example I tried to pose is one where we happen to have members of the same union who are actually constructing the new facility and, because of security, there is only one gate into or out of such facility. In that case, if there was a dispute over the construction of the new nuclear facility, that would not affect maintenance.

The CHAIRMAN. The time of the gentleman from Connecticut (Mr. SARASIN) has again expired.

(On request of Mr. ERLENBORN and by unanimous consent, Mr. SARASIN was allowed to proceed for 2 additional minutes.)

Mr. ERLENBORN. Mr. Chairman, will the gentleman yield further?

Mr. SARASIN. I yield to the gentleman from Illinois.

Mr. ERLENBORN. If the gentleman from Connecticut (Mr. SARASIN) relies on the fact that it is not a construction site, then why is the language necessary to protect a situation where the maintenance employees are represented by a union?

Mr. SARASIN. I do not think the language is necessary. I just wanted to raise the issue in order to point out that there is nothing in this bill that would interfere with that, and that is all.

Mr. ERLENBORN. Would the gentleman explain this question I have: In order to make certain that there is no confusion, why is not the language drawn so that both union and nonunion maintenance employees and their employer would be protected ?

Mr. SARASIN. I do not see that that is any problem, or, at least, one that is affected by this legislation.

Mr. FORD of Michigan. Mr. Chairman, will the gentleman yield?

Mr. SARASIN. I yield to the gentleman from Michigan.

Mr. FORD of Michigan. Mr. Chairman, the gentleman from Illinois (Mr. ERLENBORN) raised this question on more than one occasion during the consideration of the legislation or of the bill, and he persists in reading this particular language differently from the way anybody else on any side of this issue does who is familiar with what the intent and

purpose of the proviso he addresses himself to is.

The intent and purpose of the proviso is to protect an employer at an industrial site or engaged in some construction activity from being caught in a whipsaw situation between the union, with which he has a contract, representing his employees, in the case of a dispute between that union and a construction trade union over who should be doing plumbing in that factory or who should be putting the electric wiring into an extension.

It simply protects him against being picketed if those two unions are arguing about who ought to be doing the job inside the plant, and thereby interfering with the industrial workers who are, in his view, not primarily engaged in the construction industry, while some trade from the outside might be doing some electrical work.

The CHAIRMAN. The time of the gentleman has again expired.

(By unanimous consent, Mr. SARASIN was allowed to proceed for 3 additional minutes.)

Mr. FORD of Michigan. Mr. Chairman, if the gentleman will yield still further, I might say, finally, that it sort of statutorily consolidated the concept of no-raiding agreements which are intended for the purpose of maintaining some stability, and to prevent, for example, in an automobile industry that is building an addition to its plant, which is entirely new, and which might very well have its millwrights and others installing machinery, and in order to do so they would have to string pipe and electric wires and pour concrete for bases and do a lot of other things. It is intended to keep the building trades from coming in any saying to that employer, "We have a dispute as to whether or not you can do this with your workers, and we want that kind of work," which is basically an argument between two different unions and it would prevent an employer being picketed under those circumstances.

Mr. DON H. CLAUSEN. Mr. Chairman, will the gentleman yield?

Mr. SARASIN. I yield to the gentleman from California.

Mr. DON H. CLAUSEN. Mr. Chairman, I would like to refer to section (j) that I believe was in last year's conference report, and I would like to receive some clarification as to whether or not that is included in the gentleman's amendment. That alludes to the so-called exemption that would apply to a site of construction where an employer has a gross volume in the construction business of $9,500,000 or less.

Is that subsection (j) in the gentleman's amendment?

Mr. SARASIN. The gentleman is correct. Section (j) was reported in the conference and is here in this amendment, intact, as it was approved by the House.

Mr. DON H. CLAUSEN. Mr. Chairman, I thank the gentleman.

AMENDMENT OFFERED BY MR. ASHBROOK TO THE AMENDMENT OFFERED BY MR. SARASIN AS A SUBSTITUTE FOR THE AMENDMENT IN THE NATURE OF A SUBSTITUTE OFFERED BY MR. QUIE

Mr. ASHBROOK. Mr. Chairman, I offer an amendment to the amendment offered as a substitute for the amendment in the nature of a substitute.

The Clerk read as follows:

Amendment offered by Mr. ASHBROOK to the amendment offered by Mr. SARASIN as a substitute for the amendment in the nature of a substitute offered by Mr. QUIE: Section 101(a), as it amends Section 8(b)(4) of the National Labor Relations Act, is amended by striking in the first proviso "any persons" and inserting in lieu thereof "any employer primarily engaged in the construction industry on the site" and is further amended in the same proviso by striking "who are in the construction industry" and inserting in lieu thereof "who are primarily engaged in construction".

Mr. ASHBROOK. Mr. Chairman, I would like to point out to the members of the committee that these 10 words are extremely important words. For those members who were listening to the colloquy in the last hour I think they will recognize that there are many questions that were raised as to who can be involved and how far the embroilment extends when there is a strike at a construction site.

Mr. Chairman, the sponsors of this bill have talked about equal treatment and about the economic rights of labor. What this bill is basically, and let us not forget this, an attempt to say who can be affected by a strike, what employer, what employees, the degree to which we are trying to insulate some and give rights to others that many think have been denied rights for 25 years. This bill is technical, it is complicated, it is ambiguous. When we strip all the verbiage, we are talking about who can be induced not to work on a common job site. That is the heart of this legislation. That is the question that ought to be in everybody's mind: Who can be induced not to work?

Let us consider where we are and where we are going to go with the Sarasin amendment. It is very clear that a striking construction union can request such action—action being an inducement not to work on a job site—of any individual employed by any person. This language would clearly permit a construction union to request all other construction union employees not to work on the common site. I think everybody understands that. That is the heart of common situs picketing, the heart of H.R. 4250.

A plumbing union, for example, could induce a strike by the employees of the carpentry union not to work for the contractor on the site. We understand that. But the point raised by the gentleman from Illinois (Mr. MICHEL), is the point we ought to address ourselves to. How much further than that does this legislation go? There is no requirement, I would point out—no requirement—that the employer of the induced employees be involved in any way in the construction industry. That is the heart of my reservation, of the serious questions I raise. There is nothing in the language of the Sarasin amendment which would prevent a construction union working at a common situs located at a manufacturing plant, a commercial plant, a hospital, a shopping center—anyone can name it—from asking—that is inducing—the manufacturer's, the commercial store's, the hospital's employees not to work on their jobs located on the common situs. That to my way of thinking is the heart of the problem and that is precisely why the 10 words of my amendment were left out of H.R. 4250 and the Sarasin amendment. My amendment would correct that situation.

Let us read the conference report last year. We are talking about inducement of any individual employed by, and here are the words:

By any employer primarily engaged in the construction industry on the site.

Note that—

primarily engaged in the construction industry on the site.

That offers some protection, because if we are talking about General Electric, if we are talking about a shopping center, a railroad, a hospital, it is pretty clear they are not employers primarily engaged in construction.

Proponents of H.R. 4250 have consistently emphasized that this bill is aimed only at employers in the construction industry and has nothing to do with employers and employees in the industrial sector.

However, the language of the Sarasin amendment would indicate that inducements to strike or picket could be directed against employees who are employed by other than construction employers, such as employers of manufacturing plants, State government employees—who are outside the parameters of the NLRA—or employees covered by the Railway Labor Act.

Under existing law a nonconstruction industry employer, such as a manufacturer, who is having construction work done on his manufacturing site, can insulate his manufacturing employees from construction industry labor disputes by setting up separate entrance gates for the exclusive use of the construction industry employees. If the manufacturer or nonconstruction employers sets up such gates, it is illegal for a union involved in a construction industry labor dispute to picket the gate used exclusively by the manufacturer's employees.

Adoption of my amendments will make certain that the employees of manufacturers or nonconstruction employers will not be asked to participate in labor disputes involving the employees of construction contractors who are doing work at the worksite. Construction industry employees with labor disputes will not be permitted to picket to induce a strike by the manufacturer or nonconstruction employees, but rather may only induce the employees of any "employer engaged primarily in the construction industry."

The proposed amendment is consistent with the stated goals of the supporters of H.R. 4250 who argue that the bill is intended to give certain rights to construction industry unions that they are denied, but which are enjoyed by manufacturing industry employees. Thus, they first point to the Supreme Court's

decision in the General Electric case (366 U.S. 667), which held, in essence, that a construction industry union could not picket a gate set aside for both: First, the employees of a manufacturer (General Electric); and second, the employees of other independent employers whose work was related to General Electric's normal operations, such as maintenance and delivery persons. A corollary to the General Electric case is that the employees of these independent nonconstruction industry employers might, at times, become the subject of legal picketing by General Electric's own employees having a dispute with General Electric.

The construction unions then argue that they receive disparate treatment as a result of another Supreme Court case—the Denver Building Trades decision (341 U.S. 675)—which held that construction contractors and subcontractors and hence are legally insulated from each other's labor disputes. Construction unions argue that construction subcontractors perform work related to the general contractor's normal operations, and therefore, each job site contractor's employees should be subject to picketing by the employees of every other job site contractor. In essence, they argue that the General Electric case is applied to construction unions their right to picket should extend only to employees of contractors engaged in related work; that is, construction, not to be the manufacturer whose work is unrelated.

Assuming for purposes of argument that the various construction site contractors are so interrelated that they should become subject to each other's labor disputes, even proponents of situs picketing can agree that there should be no fundamental change in the existing law as it affects the manufacturer and his employees. When proponents argue that the General Electric case should apply to them, they implicitly concede that the holding of that case not be disturbed as it applies to manufacturing industry. Without the above amendment, however, there is no assurance that this disturbance would not occur. H.R. 4250 or the Sarasin amendment too easily can be interpreted to modify the General Electric case and permit unwarranted situs picketing by construction unions directed at manufacturer's or nonconstruction employees.

My amendment permits an employer who is not primarily involved in the construction industry to remain protected from involvement in construction industry labor relations problems.

Mr. SARASIN. Mr. Chairman, will the gentleman yield?

Mr. ASHBROOK. I yield to the gentleman from Connecticut.

Mr. SARASIN. I thank the gentleman for yielding.

I wonder if we might attack this from the reverse. Would it be the gentleman's intention that a supplier of material, assuming—I know the gentleman does not agree with the concept, but assuming he agreed with the concept of common situs, would he agree also that the supplier of material to the construction site, for the construction site, should be allowed to be picketed or induced not to come in?

Mr. ASHBROOK. I will not say that they should be allowed to, but I will say that they are allowed to now under existing law. There is no question that as part of a strike, one can try to shut off the Teamsters from bringing in supplies. That is clear under the law now. So while I do not agree with it, I accept it as part of the law as it now stands.

Mr. SARASIN. If the gentleman will yield further, but apparently after the language the gentleman offered last year was accepted and adopted by the conference, it was being interpreted that the gentleman's language would prevent the striking construction workers from attempting to induce those suppliers of construction materials not to make deliveries. This is the reason why that language was left out of the conference report in the substitute that I filed.

Mr. ASHBROOK. The gentleman does not say who brought this up, who expressed these observations. I did not hear these reservations on the Ashbrook amendment. I do know that union leaders oppose my amendment. We are talking about an employer primarily engaged in construction. Somebody delivering pipe is not an employer primarily engaged in construction. A supplier is not primarily engaged in construction, as I understand the interpretation.

Mr. SARASIN. A supplier to a manufacturer or hotel in the normal course of its operation would not be affected by the language I have inserted in the substitute.

Mr. ASHBROOK. I would agree with that, but what I worry about is that those nonconstruction employers would be involved, those people we talk about—the hospitals, shopping centers, General Electric, and so forth.

I still maintain, I would say to my friend, the gentleman from Connecticut, that what we are talking about in H.R. 4250 and your amendment is a very legalistic differentiation. One section of the bill says you cannot direct picketing or the strike at the employer but in another section, H.R. 4250 permits the striking employees nonetheless to induce the employees of the employer. That is the way we get around it.

Mr. SARASIN. Let us say for a moment I would say that I agree on what should happen, that those people not engaged in construction should not be affected and that those engaged in construction should be affected. We just disagree on the language.

Mr. ASHBROOK. Then I would think the gentleman would agree to the 10 word amendment I have offered.

Mr. SARASIN. I would think we would agree on the intent of this language and mine is essentially the same.

Mr. ASHBROOK. No, we do not agree.

Mr. ERLENBORN. Mr. Chairman, will the gentleman yield?

Mr. ASHBROOK. I yield to the gentleman from Illinois.

Mr. ERLENBORN. Mr. Chairman, I hope the gentleman from Connecticut will remain and listen to the colloquy.

The purpose of this bill is to permit activities that are now not allowed under the law. Nothing in this bill will prohibit activities that are currently lawful. I do not believe that the language of the gentleman from Ohio would have the effect of prohibiting currently lawful activity but would merely limit the kinds of activities that are now being made lawful under this act. Would the gentleman agree?

Mr. ASHBROOK. That would be precisely the response I would give. I thank the gentleman from Illinois.

Mr. ERLENBORN. So that the gentleman from Connecticut in talking about the thrust of his language prohibiting presently lawful conduct is totally misinterpreting what could possibly be the effect of this language in the bill.

Mr. ASHBROOK. In fact I cannot really contemplate that a court or anyone—we know it could get stretched and our laws get stretched, but I cannot contemplate anyone thinking the legislation would make illegal anything now legal under NLRA. The thrust is directly the opposite, to make legal activities which are now illegal because of the Denver case.

Mr. LAGOMARSINO. Mr. Chairman, will the gentleman yield?

Mr. ASHBROOK. I yield to the gentleman from California.

Mr. LAGOMARSINO. Mr. Chairman, it is with some hesitation that I rise today in opposition to H.R. 4250. Any bill which includes a title like "Equal Treatment for Craft and Industrial Workers," would be hard to oppose, both morally and politically. And if in fact the title in this bill reflected its substance, I would not oppose it.

Furthermore, it is increasingly clear that my opposition may be futile. The President has already indicated his support for the bill, and if we are to believe the many lobbyists working in behalf of the bill, the votes for its passage are virtually assured, so that politically "smart" way to go would be with the majority.

But I happen to believe, Mr. Chairman, that we should not decide issues on political expediency but on merit. And on merit, I cannot support this bill. And I believe that if my colleagues would read this bill, they would reach the same conclusion, and therefore I still have hope that opposition is not futile.

This bill is being sold, Mr. Chairman, as a simple change in the law to give craft unions the same rights as industrial unions. Indeed, it was sold that way last year, and I bought it. But this is not the same bill we had before us last year.

If the intent of this bill were simply to assure equal treatment for craft unions, there is a straightforward and clean way of doing that. Namely, by amending clause (B) of section 8(b)(4) of the National Labor Relations Act dealing with secondary boycotts. That is what last year's bill did.

For reasons of their own, however, the drafters of this particular bill before us today, have not chosen that route. Instead, H.R. 4250 exempts craft unions from the entire effect of section 8(b)—

dealing with unfair labor union practices—except for certain practices spelled out in the bill.

In other words, instead of seeking to amend the single clause with which they disagree, the sponsors of this bill have in effect repealed the entire subsection—and its associated body of case law dealing with unfair practices—and then listed those prohibitions which they say they will observe.

It is a little bit like repealing the entire Bill of Rights to modify one part, and then restating the other parts in your own words. What, we might ask, was wrong with the original version, which has withstood the test of time and the courts?

What this bill really does is to throw the field of labor law into confusion, in the hopes that labor will somehow come out ahead in the end. That may or may not be the result; it certainly will give work to a lot of lawyers, but it will also cause uncertainty and chaos in an already weakened and ailing industry.

Nor does the bill really give comfort to craft workers. In California, at least, most contractors are union already, and the system works. But title II of this bill says that local craft unions in California will have to defer to national leaders in Washington on strike issues. Why?

Mr. Chairman, I submit this bill is not what its title would lead you to expect. It uses a shotgun instead of a scalpel to accomplish its avowed ends, and the result is liable to make a bloody corpse of the construction industry, along with a number of innocent bystanders.

Mr. Chairman, in the past few weeks we have heard many concerns expressed on third floor about jobs and the economy—a concern certainly shared by local craft union members, who have an unemployment rate almost twice that of the rest of the country. Let us not spill the entire cart to get at one stick. It is too risky, for both the riders and the horses—to say nothing of the country they are engaged in building.

Read the bill, then decide. This is not the way to go.

Mr. ASHBROOK. One last point, Mr. Chairman, the General Electric case has been repeatedly brought before us. No. 1, there is no definition of a site in the General Electric case or in this legislation or Sarasin amendment.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

(By unanimous consent, Mr. ASHBROOK was allowed to proceed for 1 additional minute.)

Mr. ASHBROOK. Mr. Chairman, we have no definition of a site, so the whole area is muddy. Second, we are muddying the waters even worse by allowing the inducement of striking employees against the employees of any person. That is where the real catch comes in. I think you have a legislative thicket that we in our best judgment should not create today. My amendment will in some small way limit the area of strife the legislation is bound to bring in our economy. The Sarasin amendment, as I understand it, is the position reflected by the union leaders who in truth have drafted it with the support of the majority members of the Labor Subcommittee. I do not view it as improving H.R. 4250 even thought it might bring additional votes to their lagging vote tally.

Mr. THOMPSON. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from Ohio (Mr. ASHBROOK).

Mr. Chairman, this amendment would undermine very seriously the purpose of the bill, to grant craft workers equal treatment with industrial workers. Any employer engaged on a construction site who was not primarily engaged in the construction industry would be exempt from picketing. For example, pickets could not lawfully be directed at persons picking up or making deliveries to the construction site. This amendment would deprive construction workers of a basic right enjoyed by workers in other industry, the right of appeal to employees present at the site in a dispute. It prohibits it and the amendment, I respectfully say, would undermine the purpose of the bill and should be defeated.

Mr. ASHBROOK. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON. I yield to the gentleman from Ohio.

Mr. ASHBROOK. Mr. Chairman, I think first from a historical standpoint, the Denver case did not involve pickup and delivery. It did involve the section 8(b)(4)(B) situation. It is legitimately trying to have or make a situs picket involve an entire construction industry.

Mr. THOMPSON. The gentleman is correct about the genesis of the Denver dispute but what the gentleman would do is go further than the Supreme Court in its 5-to-4 decision.

Mr. ASHBROOK. I respectfully suggest we differ on that because the gentleman agrees with the intention of the sponsor, as often stated by my friend, the gentleman from New Jersey, that he does not want to involve the industrial employers or employees would recognize this amendment is necessary and we did agree to it in the last session although, I might state, under some duress.

Mr. THOMPSON. I do not agree with the gentleman. I think the best way to clarify this is to defeat this amendment and then the law would remain clear and we would not have undermined its fundamental purposes.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. ASHBROOK) to the amendment offered as a substitute by the gentleman from Connecticut (Mr. SARASIN) for the amendment in the nature of a substitute offered by the gentleman from Minnesota (Mr. QUIE).

The question was taken; and the Chairman announced that the noes appeared to have it.

RECORDED VOTE

Mr. ASHBROOK. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and their were—ayes 212, noes 209, not voting 11, as follows:

[Roll No. 93]

NOT VOTING—11

Boggs	Milford	Staggers
Davis	Murphy, N.Y.	Teague
Hansen	Russo	Young, Tex.
McKay	Sisk	

The Clerk announced the following pairs:

On this vote:

Mr. Milford for, with Mr. Murphy of New York against.

Mr. Teague for, with Mr. Russo against.

Mr. McKay for, with Mr. Staggers against.

Mr. Davis for, with Mr. Sisk against.

Mr. SHIPLEY and Mr. WRIGHT changed their vote from "aye" to "no."

Messrs. APPLEGATE, EVANS of Georgia, and DERWINSKI changed their vote from "no" to "aye."

So the amendment to the amendment offered as a substitute for the amendment in the nature of a substitute was agreed to.

The result of the vote was announced as above recorded.

AMENDMENT OFFERED BY MR. QUIE TO THE AMENDMENT OFFERED BY MR. SARASIN AS A SUBSTITUTE FOR THE AMENDMENT IN THE NATURE OF A SUBSTITUTE OFFERED BY MR. QUIE

Mr. QUIE. Mr. Chairman, I offer an amendment to the amendment offered as a substitute for the amendment in the nature of a substitute.

The Clerk read as follows:

Amendment offered by Mr. QUIE to the amendment offered by Mr. SARASIN as a substitute for the amendment in the nature of a substitute offered by Mr. QUIE: Section 101(a), as it amends Section 8(b)(4) of the National Labor Relations Act, is amended by inserting in the first proviso before "in the construction industry" the following: "who are primarily engaged in the construction industry on the job site with whom the individual's employer has a direct contractual relationship either as contractor or subcontractor or with whom the individual's employer has a common contractor primarily engaged in the construction industry".

Mr. QUIE. Mr. Chairman, if I could explain my amendment briefly, an amendment which is printed in the RECORD and which is what I would call a fast-track amendment, I will preface my remarks by saying that after the bill passed the House in the last Congress, I learned that the bill would go to those who are not in the relation of contractor/subcontractor or joint venturors. Industries use a system of construction which they call fast-tracking. About 50 percent of the industrial construction operates in that way.

The intent of common situs picketing has been to give equal treatment to craft and industrial workers. This amendment addresses this goal of the legislation: It allows the building trades to picket where their employer's work is related to the work of like employers who are not wholly unconcerned with the labor dispute of the employer.

The reason for this amendment was explained by witnesses from the 3M Co., at hearings on H.R. 4250. Those witnesses explained that nearly 50 percent of industrial construction is accomplished through the fast-track scheduling system. The method divides a given construction project into phases. Each phase represents a separate construction project from the other phases. Each phase is separately designed and engineered, with the bidding and awarding done separately and usually at different times. This method achieves substantial cost-savings, for it enables the work to begin on one phase, while the subsequent phases are still in the designing and planning stages.

The critical features which set this approach apart from traditional construction techniques are that there is no one general or prime contractor who has overall project authority and responsibility nor is the work of the contractors of one phase of the project really interrelated to that of other phases of the project. These unique features of the fast-track system render the rationale for permitting secondary boycotts inapplicable. That rationale is predicated upon the fact that general contractors and subcontractors share a common, interrelated interest in a project. And, where a labor dispute does arise with a subcontractor, economic pressure in the form of boycotts, picketing, and strikes can be meaningfully and effectively brought to bear upon the general contractor to achieve labor's objective.

In contrast, however, under the fast-track method, the general contractor of one phase has no real economic concern or involvement with the work of the preceding and succeeding phases. Nor is that general contractor, even if he is subjected to secondary pressures by subcontractors of another project, in a position to help the other project subcontractors achieve their demands against their own general contractors.

Further, Mr. Chairman, it should be noted under the fast-track system the owner does not assume the responsibilities of an overall general contractor, responsible for the manner and conditions under which the construction work is done.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. QUIE was allowed to proceed for 2 additional minutes.)

Mr. QUIE. Here, too, then secondary boycotting activities directed at the owner lose their effectiveness as vehicles for enabling labor to achieve a lawful objective. For the owner is not in a meaningful position to become involved with the adjustment of labor disputes between the various general contractors and then the respective subcontractors.

Because concerted secondary activities will yield so little when misdirected at the wrong parties, I offer an amendment that confines situs picketing to the given project in which the labor dispute arises. Unions will not be able to direct their concerted activity to those general contractors and subcontractors of another project. Rather, the union must focus its activity against those employers with whom the employer of union employees has a direct contractual relationship either as contractor-subcontractor or as cosubcontractors of a common contractor.

Mr. Chairman, I believe this amendment will preclude, then, the common situs picketing going on beyond that where there is a relatedness and I believe the bill as it presently stands permits them to go into a situation where there is no relationship between different prime and subcontractors who work for different primes.

Mr. FORD of Michigan. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from Minnesota (Mr. QUIE) to the substitute amendment.

Mr. Chairman, in opposing the gentleman's amendment, I suppose I have to violate one of the traditions of the House not to attack a gentleman who is trying to take care of a constituent. This is called by the gentleman the "fast track amendment." After we heard him describe it, we can tell that, indeed, it is a fast track. If the Members had spent as many years as most of us on the committee trying to understand this legislation and the many nuances of it, they would not be pleased if they found themselves, as we do, somewhat at a loss to understand exactly what the gentleman from Minnesota (Mr. QUIE) expects to happen in the real world if his amendment is adopted.

This has been referred to as the Minnesota mining and manufacturing amendment, because that organization appeared before the committee and described a practice that they engage in in constructing additions to and enlargements of their industrial sites, which in effect has them acting as their own general contractor. Then they come up with this interesting sort of reasoning that by acting as their own general contractor

and dealing directly with the contractors on several different components of a single site, they, the principal, become the insulator against these people who have a common interest. The gentleman from Minnesota (Mr. QUIE) would have us chase our tails far enough around the barn so that we forget that what we started out to do here was to deal with a mistake the court made when it held that two or three contractors working for a single general contractor on a single building site were independent one of the other, instead of people all engaged in the same enterprise.

The gentleman from Minnesota (Mr. QUIE) makes the point that it is conceivable that the company would be building a glass plant on one end of its property and something else on the other end of the property, and one would have a completion date in January and the other would have a completion date in June, and because they were not going to be completed at the same time, one was not dependent upon the other although, as a matter of fact, they were not going to get the operation going until they had both been completed.

In short, I have great difficulty explaining to the Members why they should oppose the Quie amendment because none of us really knows what he is trying to do except to allow one particular company, and perhaps those few others who might see this as a way to do it, to act as a general contractor without any of the responsibilities that we are asking the Members to impose on other general contractors throughout the rest of the United States.

Mr. MILLER of California. Mr. Chairman, will the gentleman yield?

Mr. FORD of Michigan. I yield to the gentleman from California.

Mr. MILLER of California. I thank the gentleman for yielding.

In fact, is not what this amendment does is make major industrial facilities when they go to expand or to improve, hire a Bechtel or a Brown and Root to run that job for them? They would then computerize that job and state when various phases of that job would be started, or would be done, and when people would report to work and leave. In fact, MMM is doing that for themselves, so there is no question, then, that when a major oil company expands, they may build a fast-track facility, a distillation facility. It is all one facility. But this is the ultimate general contractor, if you will. This is the man who will computerize the plant gates we are trying to get rid of in this bill, because we have people on the job not only at separate gates but at different times on and off the job. So it is very clear that they are related through the use of computers to the timing of the job. The sponsors of this legislation got to doing that for themselves where many entities hire a company like Bechtel to run that job. That is what this amendment tries to take care of.

Mr. FORD of Michigan. The gentleman is exactly correct. When we questioned the representatives of MMM about their practice, they indicated to us that in fact their technicians and their experts on the site had the power to direct the activities of everybody involved, whether they were plumbers, electricians, or whatever. In fact, they presented clearly a case of having more control over the individual contractors than many general contractors would have in doing that job if they were engaged.

Mr. THOMPSON. Mr. Chairman, will the gentleman yield?

Mr. FORD of Michigan. I yield to the gentleman from New Jersey.

Mr. THOMPSON. I thank the gentleman for yielding

The explanations of the gentleman from Michigan and the gentleman from California are precisely correct.

This really is a means by which to evade and to say that by the mere fact of constructing one part of a facility at one time and another part of a facility at another time, all to be used in the final analysis for one industrial purpose, you could evade the law and say there is no relationship between the two. I agree that this should be defeated.

Mr. ERLENBORN. Mr. Chairman, I move to strike the last word and I rise in support of the amendment.

I yield to the gentleman from Minnesota (Mr. QUIE).

Mr. QUIE. Mr. Chairman, I rise just to say that in the testimony before our committee the company did not direct each of the employees. They only decided when a phase would start and the order in which they would start. I think we ought to bear in mind that this was not done as a subterfuge because situs picketing did not exist. That is about the way in which half the industrial construction goes on and the way in which they would like to continue. The worst that could happen is we would go back to the Moore Dry Dock case, with separate gates between different prime contractors.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Minnesota (Mr. QUIE) to the amendment offered by the gentleman from Connecticut (Mr. SARASIN) as a substitute for the amendment in the nature of a substitute offered by the gentleman from Minnesota (Mr. QUIE).

The question was taken; and the Chairman announced that the noes appeared to have it.

RECORDED VOTE

Mr. QUIE. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 181, noes 241, not voting 10, as follows:

[Roll No. 94]

NOT VOTING—10

Boggs	Milford	Teague
Davis	Murphy, N.Y.	Young, Tex.
Hansen	Sisk	
McKay	Staggers	

The Clerk announced the following pairs:

On this vote:

Mr. Teague for, with Mr. Murphy of New York against.

Mr. Milford for, with Mr. Staggers against.

Mr. McKay for, with Mr. Sisk against.

Mr. TONRY changed his vote from "no" to "aye."

So the amendment to the amendment offered as a substitute for the amendment in the nature of a substitute was rejected.

The result of the vote was announced as above recorded.

AMENDMENT OFFERED BY MR. QUIE TO THE AMENDMENT OFFERED BY MR. SARASIN AS A SUBSTITUTE FOR THE AMENDMENT IN THE NATURE OF A SUBSTITUTE OFFERED BY MR. QUIE

Mr. QUIE. Mr. Chairman, I offer an amendment to the amendment offered as a substitute for the amendment in the nature of a substitute.

The Clerk read as follows:

Amendment offered by Mr. QUIE to the amendment offered by Mr. SARASIN as a substitute for the amendment in the nature of a substitute offered by Mr. QUIE: Section 101(a) as it amends section 8(b)(4) of the National Labor Relations Act is amended by striking the last sentence and inserting the following: "In determining whether any of several employers are primarily engaged in the construction industry, ownership or control of the construction site shall not be a factor to be considered, and, for the purposes of the preceding provisions, the term 'site' means one physically contiguous location at which the employers involved are engaged in interrelated construction, alteration, painting, or repair toward a common objective and in physical proximity to each other,".

Mr. QUIE. Mr. Chairman, despite the attention given to defining the parameters of permitted secondary boycott activity at a construction site, H.R. 4250 has a serious shortcoming in that it does not define what a "site" is. H.R. 4250 is obviously a complex bill, addressing a complex problem. This is in part due to the fact that secondary boycott activities can be manifested in many ways and utilized to achieve any number of objectives. Some of these ways and objectives do not offend public policy. Others do. H.R. 4250 identifies a number of these acceptable and unacceptable means and objectives, prohibiting those that offend public policy.

However, just as there are many species of secondary boycott activities, so are there many sites at which construction takes place. A graphic example is the Alaska pipeline which extends continuously for hundreds of miles. Another example is the large industrial parks where construction may be proceeding simultaneously on behalf of various tenants. Or, suppose a hospital is adding a wing to its building at the same time it is building an adjacent parking lot accross the street: Can a labor dispute which arises out of the parking lot construction be extended to the hospital building itself?

One can conceive of countless other examples. But the point is that if H.R. 4250 is to be self-limiting, in the sense that it confines the rights granted under it, a definition of site is required.

My amendment provides a definition of site. It means:

One physically contiguous location at which the employers involved are engaged in interrelated construction, alteration, painting, or repair toward a common objective and in physical proximity to each other.

This definition is linked directly to the purpose of the bill—to overrule Denver Building Trades decision so as to permit secondary boycotts under the circumstances of that case, namely, where the work of the various contractors is aimed toward a common objective and the contractors are in physical proximity to each other at a contiguous location.

Without such a definition, we face the possibility that employers will be enmeshed in a labor dispute, of which they have no direct interest, simply because they work in the vicinity of the dispute.

Mr. THOMPSON. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from New Jersey.

Mr. THOMPSON. Mr. Chairman, where the gentleman says that "'site' means one physically contiguous location at which the employers involved are engaged," does that mean even if it is under the same ownership and there may be, for instance, a street separating the contiguous location, they would be considered as two sites?

Mr. QUIE. Yes; if a street is separating them, running between the two of them, they would be separated from each other and they would be two different locations. If there are two separate buildings and they are not connected to each other, then they would be separate locations.

Mr. MILLER of California. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from California.

Mr. MILLER of California. Mr. Chairman, this goes to the discussion we had in the committee. Let us say we had a large construction site and we have construction going on on one end of the site and we have construction going on at the other end of the site and the ownership is the same; let us assume the parcel of land is the same and it is the same project. What happens then?

Mr. QUIE. Mr. Chairman, what I would use as an example is this: Let us say there is a warehouse on one part of an industrial facility, a research facility over in another part of the property, and then we have an extension of an office building somewhere else. Those would be under my definition three different sites. Under the language of the bill I know it is the interpretation of the attorney for the AFL–CIO, Larry Gold, that those three locations would all be one site.

Mr. THOMPSON. Mr. Chairman, will the gentleman yield further?

Mr. QUIE. I yield to the gentleman from New Jersey.

Mr. THOMPSON. Mr. Chairman, let us assume that there is under construction a shopping center, a rather large shopping center, and that there is at one end a gas station under construction and at the other end a store under construction. Is that one site, or are they two sites?

Mr. QUIE. No, they would be two sites under this definition.

Mr. THOMPSON. Even if the same entrepreneur is building the entire site, the shopping center?

Mr. QUIE. If he is doing the entire site and there is also construction between the two locations so that they are contiguous to each other, then that would all be one site. However, if they are separated from each other and are not contiguous, each one would be a separate site.

Mr. THOMPSON. Mr. Chairman, I do not quite understand. The gentleman is saying that they are contiguous if there is something at each end and they are building stores, et cetera, in the middle. However, suppose they are not building stores in the middle at that particular time; would that still be one site?

Mr. QUIE. If they are not contiguous to each other, it would not be one site.

Mr. THOMPSON. They would have to be physically contiguous, then?

Mr. QUIE. Yes, physically contiguous to each other.

Mr. MILLER of California. Mr. Chairman, will the gentleman yield further?

Mr. QUIE. I yield to the gentleman from California.

Mr. MILLER of California. Mr. Chairman, it seems that we keep going by examples, so let us cite another example.

In large residential subdivisions we may have a developer come in and develop property and put in all the streets and roads and dedicate those to the local entity, and then they may come back perhaps later and start construction, stop construction, and then start again, depending on how the home market is. In fact, they may have several hundred pads prepared and being developed way down on one end and others being developed on the other end of the project.

Do I understand that under the gentleman's definition the carpenters could not picket that as one site?

Mr. QUIE. No, unless they had a dispute against people in both locations. They would be two different sites under my amendment.

Mr. Chairman, I will say to my colleagues that this is a serious problem that confronts us in this bill. It occurs where the construction is actually in different sites. We are talking about a location as being one common site where there is a general contractor and where we have subcontractors.

The way it is now, if they have a dispute against one subcontractor, they have to have a separate gate, and we are changing it with this bill so that it would all be one site.

But to carry it further, as I believe this bill does, and using the entire shopping center as an example, there would be construction going on in one area and construction going on in another area of the shopping center and it would be one site. I think those ought to be two different sites.

It should be the same way if there is a building going up and they have a separate contractor who is doing the parking lot. It seems to me that ought to be a different site. If they have a road running between two buildings, those ought to be different sites. If an industrial facility is built in one separate location and we have another location or facility, another separate facility built, those ought to be separate sites.

Mr. THOMPSON. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I recognize the intent of my distinguished friend, the gentleman from Minnesota (Mr. QUIE); but I oppose the amendment because I do not see any reason that the Labor Board, with its expertise in this area, should not be called upon, along with the courts, to create a workable definition of a site.

An attempt to include a definition of site in the bill itself, as in this case, it seems to me, raises more problems than it solves. No definition of site could cover all of the possibilities that might arise.

Mr. Chairman, the limitation of the bill to persons jointly engaged in a construction project is a sufficient limitation, in my judgment.

I think, although I do not always agree with the Board—the gentleman from Minnesota (Mr. QUIE) seems to have more influence with them than I do—that the Board is fully capable of developing a definition of a site in the context of cases brought before them.

In this instance, all there need be is a street or any sort of artificial separation, as I see it. Then we would have not one site, but two sites.

Mr. MILLER of California. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON. I yield to the gentleman from California.

Mr. MILLER of California. Mr. Chairman, I think this is very clear with respect to many construction projects and certainly in the area which I represent. First, we had the previous amendment whereby separate gates could be constructed to protect the workers, which this bill tries to get rid of. Then we had an amendment just a while ago where it could be constructed by computer. Now we can do it simply by constructing clusters if one is on land owned by the same parties, with the same general contractors and the same subcontractors.

However, if one is just skillful in arranging his work orders and schedules, at that point he could have, under this amendment, what are separate project sites. In fact, the economics of it are that they are joint units and that the responsibility runs to the same parties.

Therefore, I think it is very clear that this is another way to circumvent what is the actual intent of this law.

Mr. THOMPSON. Does not the gentleman from California (Mr. MILLER) agree with me that we are trying to get to all of the parties covered here?

Under the hypothetical case which I asked the gentleman from Minnesota (Mr. QUIE) about, one owner of a very large trace could and very likely would under this amendment start at either end and build toward the middle until he had left just one little store to complete. Otherwise, everything else is completed except the one little connecting store; and he might not even put the connecting store in there so that it would not be contiguous, but he might put in a driveway to a parking lot in the rear and thereby evade his responsibility. That is the danger which I see.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON. I yield to the gentleman from Minnesota.

Mr. QUIE. Mr. Chairman, what the gentleman from New Jersey (Mr. THOMPSON) does not mention, however, in the example he gives is that he is using just one general contractor for both of them. However, if the objection to the picketing is against the subcontractor who has employees working on both of those jobs, of course, then he brings down both locations.

This amendment does not in any way prevent common situs picketing where there is a general contractor-subcontractor relationship. However, if there are a separate general contractor and a separate subcontractor working on each site, then they could include them together.

Mr. THOMPSON. Mr. Chairman, I respectfully disagree. If that doubled the number of pickets, that would be inconvenient.

I understand the intent and probably the gentleman from Minnesota (Mr. QUIE) understands it better than I. However, I understand it well enough to say that it really is so indefinite and is so vague that it should not be adopted.

Mr. Chairman, I commend the gentleman from Minnesota, of course, for his innovativeness in his attempt to make contiguous the key word.

Mr. QUIE. If the gentleman will yield further, it is in the spirit of the bill which we have before us, and that suffers from the same description that the gentleman uses as to my amendment.

Mr. THOMPSON. There are some good spirits and some bad spirits, and I do not like these kinds of spirits.

Mr. FORD of Michigan. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON. I yield to the gentleman from Michigan.

Mr. FORD of Michigan. Mr. Chairman, I would like to make it clear that even if we were all in agreement as to the exact language that should be in the amendment of the gentleman from Minnesota (Mr. QUIE), thereby clearing up all of the ambiguities that some Members see, I would still be against including that language in the bill.

The inclusion of a statutory definition that is this finite guarantees that we would have a situs picketing bill on this floor every 6 months. The reason for that is that you cannot sit here and try to visualize that in a large industry such as the construction industry, where conditions and methodologies are changing as rapidly as they are there, that a single definition for a worksite can be used.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. THOMPSON was allowed to proceed for 1 additional minute.)

Mr. FORD of Michigan. Mr. Chairman, if the gentleman will yield further, I repeat that you cannot have a single definition for a work site, or that you can set it in concrete and then expect what looks reasonable to those who have looked on it with their own eyes and have perceived it through their own experience, as a means of determining what is going to be reasonable when it is looked at from the standpoint of somebody who is 2,000 miles from here on the western coast.

I think it would be a terrible mistake to take away from the National Labor Relations Board the right in its ability to adjust to changing circumstances, for determining what is right, and that what is right for the construction industry now is not necessarily going to be right for all time to come, especially when we get into the homebuilding industry where this becomes very complicated. I think we should leave it to the National Labor Relations Board and not adopt any amendment such as this.

Mr. THOMPSON. Mr. Chairman, I agree with the gentleman from Michigan.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Minnesota (Mr. QUIE) to the amendment offered by the gentleman from Connecticut (Mr. SARASIN) as a substitute for the amendment in the nature of a substitute offered by the gentleman from Minnesota (Mr. QUIE).

The question was taken; and on a division (demanded by Mr. QUIE) there were—ayes 47, noes 103.

So the amendment to the amendment offered as a substitute for the amendment in the nature of a substitute was rejected.

AMENDMENT OFFERED BY MR. ERLENBORN TO THE AMENDMENT OFFERED BY MR. SARASIN AS A SUBSTITUTE FOR THE AMENDMENT IN THE NATURE OF A SUBSTITUTE OFFERED BY MR. QUIE

Mr. ERLENBORN. Mr. Chairman, I offer an amendment to the amendment

offered as a substitute for the amendment in the nature of a substitute.

The Clerk read as follows:

Amendment offered by Mr. ERLENBORN to the amendment offered by Mr. SARASIN as a substitute for the amendment in the nature of a substitute offered by Mr. QUIE: Section 101(a), as it amends section 8(b)(4) of the National Labor Relations Act, is amended by inserting in the first proviso after "or other work" the following: "(other than residential buildings or structures of 3 stories or less, not including a basement)".

And, section 101(b), as it amends section 8 of such Act, is amended by striking out new subsection "(j)".

Mr. ERLENBORN. Mr. Chairman, the Sarasin substitute pending before us incorporates the language that was in the conference report on the bill that was reported last year. That conference report addressed itself to the problem of residential construction and the increased costs that would be occasioned by the passage of the situs picketing bill. The way it addressed itself to that question, however, I think was defective in that it prohibited the utilization of situs picketing for the employer engaged in $9½ million of construction work, total cost of construction work, or less in the course of the preceding year. That is very similar to the effect of the language that was in the bill reported by the committee in that it exempts the custom homebuilder, the one who is building the high-priced homes to be purchased by those who have sufficient means to buy custom homes.

The people who really need protection are not the employers at all; they are the users of the construction. It is the home buyer that we ought to be protecting. A very large percentage of single-family homes and garden apartments that are constructed every year—well over 50 percent—would not be protected by the language of the Sarasin substitute. We all know that housing generally has been experiencing more difficulty in the last several years of recession than has the economy generally. It is now about to come back, and we ought not have this situs picketing bill interfere with the resurgence of the homebuilding industry.

It is also very unclear in the language of the Sarasin substitute how one would determine the application of the $9½ million limit. Would the total construction of $9½ million apply to the owner-builder? The general contractor? Would it apply to the total work done by the subcontractor-employer? If one had a contractor or subcontractor engaged in both residential and commercial or industrial construction, which many do, would it apply to all of the construction that he engaged in or only the residential construction that he engaged in? If one had mixed ownership, which is often the case in the construction industry—either multiple corporate entities or partnerships where the same person may have an ownership portion or control over several different companies, all in the construction industry—would we add them all together, or would each one of the entities be separate for the purpose of this computation? All of these are ambiguities not answered in the language of the Sarasin substitute.

I repeat, the basic fallacy is to conceive this as a protection for the employer. That is not whom we should be worried about. We should not be worried about the subcontractor, the contractor, or the subdivision builder. It is the homeowner whom we ought to be protecting. The homeowner will be protected in the language that I have offered, because residential construction, residences or structures that are three stories or less, not counting the basement, will be exempt from the provisions of this act and, therefore, the kind of people that we ought to be worried about—the ones who are now being priced out of the residential market—will be protected against the increased costs that will be occasioned by the strife at the workplace that will be brought about by the passage of this situs picketing bill.

Mr. Chairman, I would hope that the Members would support this amendment.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I yield to the gentleman from Illinois.

Mr. ANDERSON of Illinois. I thank the gentleman for yielding.

I rise in support of Mr. ERLENBORN'S amendment to exempt from the provisions of title I residential structures of three stories or less. While H.R. 4250 provides for an exemption of projects being constructed by small residential builders, this exemption is so narrowly defined as to be practically meaningless. This will provide relief for the preponderance of residential housing construction.

A broader residential exemption is necessary if we are not going to hamstring housing construction. In the last Congress, this body considered an amendment similar to the one proposed today. The country was then suffering from the lowest level of housing construction in many years. While that amendment was rejected by only two votes, it was overwhelmingly approved by the Senate and the conference committee approved a version close to the Senate provision. I believe that the reasons for that action are just as applicable today. Shelter is one of the basic requirements of life and the ability of the American family to afford decent, modest priced housing is threatened by the approval of a situs picketing bill without a realistic, residential exemption.

While the proponents of H.R. 4250 contend that the residential exemption contained in the bill would exempt the majority of new housing construction, the information which I have is that in reality only about 6 percent of all housing units constructed annually would qualify for exemption. They concede the validity of the principle, but the language of the exemption is faulty.

What concerns me, Mr. Chairman, is that the residential exemption contained in H.R. 4250 does not apply to the typical homebuilding firm, which constructs the housing units occupied by the average American family. The residential exemption of H.R. 4250 is so narrowly defined that it only exempts builders who have built no more than 20 residential units in the preceding 12 months. The builders covered by this exemption are mainly the so-called custom homebuilders who primarily market their product to the top range of the housing market and cater to families with unusually high incomes. The residential exemption of H.R. 4250 does nothing for addressing the needs of middle-income buyers, much less for low- and moderate-income families.

A recent report on "The Nation's Housing 1975–85," prepared by the Joint Center for Urban Studies of the Massachusetts Institute of Technology, and Harvard University, shows that housing problems formerly limited to the poor have now spiraled upward to affect the average-income family as well. This study indicates that only 25 percent of all U.S. families could afford to buy a median priced new home in 1975. While the United States has been a nation of homeowners, with two-thirds of all families owning their own homes, the problem of rising housing costs is threatening to undermine the national commitment to homeownership.

Ironically, even more serious cost problems are affecting the production of new rental units today. Multifamily construction activity is less than one-half the level of a few years ago. This is especially harmful for those families and persons in the low, moderate, and lower middle income brackets who depend most heavily on rental housing.

According to the joint center study, we need a much higher level of housing production over the next 10 years—2 million units—than we have had in the last 3 years—average of 1.35 million units—if we are to produce the number of units necessary to meet anticipated household growth and to replace physically obsolete units. If we are lucky, we may produce 1.8 million housing units this year, 200,000 less than the minimum needed. Even this level will depend upon no serious disruptions in production; disruptions that are sure to take place with the expected massive effort to unionize the residential construction industry that will result from the application of situs picketing to light residential construction.

I should like to emphasize that this amendment only exempts light residential construction, buildings and structures of three stories or less. The basement would not be counted in determining the number of stories. It would not exempt construction of high rise apartment complexes. The amendment would, of course, exempt construction of all single-family homes, whether attached or detached, and whether the floor plan was of the ranch type or of the colonial, split level or split foyer. It would also exempt the typical garden apartment complex. The average subdivision in this country contains 50 to 100 homes and the average garden apartment project runs between 100 to 200 units.

This type of housing is typically built by small and moderate size businesses, with frequently great variations from year to year in the number of units produced. These variations result from several factors, such as the need to await the sale or rental of units on which construction has been completed before starting a new development. Another principal factor is the highly cyclical nature of housing construction as it is too often used to speed up or slow down the economy.

This built-in variable nature of the residential construction industry is why it is so important that all light residential construction be exempted from the application of title I of H.R. 4250. Otherwise a builder could have his jobsite subjected to situs picketing one year and exempted the next.

Failure to approve this exemption could effectively put out of business many of these private entrepreneurs who do not have the means to withstand or survive work stoppages at the entire construction site based on disputes to which they are not a party. It could also drive up the cost of housing at the very time when it is so important that these costs be kept down.

I urge the adoption of this extraordinarily important amendment.

Mr. THOMPSON. Mr. Chairman, I rise in opposition to this amendment. I rise in very strong opposition to it.

I am grateful for the statistic which the gentleman from Illinois (Mr. ANDERSON) provided. He was talking about really a tremendous industry such as Litton Industries and the ITT, all in the business of building huge tracts.

In the Sarasin substitute there is a provision which is extremely liberal. We were told in committee by a number of groups, reliable groups, that the exemption of five homes at one time on a site or no more than 20 in a year would exempt 70 to 72 percent of all the homebuilders in the United States, the average homebuilders in the United States.

The gentleman from Illinois (Mr. ANDERSON) points out that only 6 percent of the housing in the United States is built on such an enormous scale.

Let us examine the argument of the gentleman from Illinois (Mr. ERLENBORN) that he is trying to protect the small home purchaser. In the language of the Sarasin amendment as it exists, there is a limitation but it is $9.5 million a year, and a $9.5 million a year threshold that would cover probably 92 to 96 percent of all the homebuilders in the United States, because the average builder does not build over 20 in a year.

That was the objective of the amendment in H.R. 4250. We are willing to say, as we did in conference 2 years ago, that if they do not build more than $9.5 million worth of residential construction in a year they will be exempt. The average home, I am told, being built for families in the United States now costs in the vicinity of $50,000, or average in the high $40,000 up to $50,000. Divide that into $9.5 million and then try to tell me that the small home purchaser is going to be hurt. He is not.

The effect of this is really to exempt all residential buildings or structures of three stories or less not including a basement. That means a proliferation of enormous housing projects such as in northern Virginia—the Parkfairfax and the Fairlington. Only such enormous ones as that would be covered under the existing language in the Sarasin amendment. I therefore feel very strongly that a $9.5 million threshold will protect more than 90 percent of the homebuilders in the United States. They are the small businessmen we are interested in and their workers. They are exempt. I think that is a reasonable enough exemption and I think this should be defeated.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON. I yield to the gentleman from Illinois (Mr. ANDERSON).

Mr. ANDERSON of Illinois. I thank the gentleman for yielding. Of course he makes a correct point when he talks about the percentage of builders that are involved but what we are interested in is not builders but how many housing units are constructed. I have the figures right here that show if we take the builders of under 25 units a year we are talking about only 9 percent of the total housing in this country. So it does not do any good to stand up and talk about the number of builders that are going to be excluded from the provisions of this law. We should be talking about the housing.

Mr. THOMPSON. The gentleman is talking about 9 percent.

Mr. ANDERSON of Illinois. That is right.

Mr. THOMPSON. He is talking about 9 percent of the houses and I am talking about 92 percent of the builders. I do not know where the gentleman got his statistics. I consider that they are inaccurate.

Mr. ANDERSON of Illinois. If the gentleman will yield I will give him the source: They are from the NAHB profile of builder survey, 1969, and BEC survey, 1974, NAHB economics department.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. ERLENBORN) to the amendment offered by the gentleman from Connecticut (Mr. SARASIN) as a substitute for the amendment in the nature of a substitute offered by the gentleman from Minnesota (Mr. QUIE).

The question was taken; and the Chairman announced that the noes appeared to have it.

RECORDED VOTE

Mr. ERLENBORN. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 252, noes 167, not voting 13, as follows:

NOT VOTING—13

Boggs	McKay	Staggers
Davis	Milford	Teague
Dingell	Murphy, N.Y.	Young, Tex.
Harkin	Pattison	
Johnson, Colo.	Sisk	

The Clerk announced the following pairs:

Mr. Teague for, with Mr. Murphy of New York against.

Mr. Milford for, with Mr. Staggers against.

Mr. McKay for, with Mr. Dingell against.

Mr. COTTER changed his vote from "aye" to "no."

So the amendment to the amendment offered as a substitute for the amendment in the nature of a substitute was agreed to.

The result of the vote was announced as above recorded.

Mr. BURGENER. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in opposition to this legislation, which, while advertised as a harmless "equal treatment" bill, hardly amounts to that when one views the impacts secondary boycotts are likely to have on the general public.

It is clear to me, once the emotionalism on both sides of this issue is swept away, that passage of this bill will jeopardize the economic well-being of many in exchange for the addition of another feather in the headdress of labor leadership whose search for bargaining superiority seems never ending.

The principal purpose of the legislation, when one removes the sheep's clothing of harmless descriptions which have been stitched around this bill, is that unions want to be able to keep nonunion workers off job sites and stem the trend toward open and merit-shop contractors.

While I firmly believe in the right of workers to organize, I feel equally strongly about their right not to do so. There are thousands of both skilled and unskilled workers who, for a variety of reasons, choose not to belong to a union, and I am not about to vote to deny them jobs because they have exercised that right. Yet passing this legislation would be tantamount to doing that.

If a large building project is shut down because one union, no matter how small, working for one subcontractor strikes, the other subcontractors on the job are immediately plunged into a labor dispute they did not cause, yet, under this legislation, is beyond their power to remedy. Financial losses to working men and women and their families who had no grievance to begin with should not be tolerated because of the whims of a few.

The overall economic impact of this legislation is even broader. Large construction projects often take years of planning and building. If we permit every dispute between a union and one of the many contractors or subcontractors to shut down entire major projects, we would likely see economic chaos. Major losses and cost increases resulting from such shutdowns would undoubtedly be borne by the consumer or taxpayer, resulting in even heavier economic burdens.

In conclusion, Mr. Chairman, I am not willing to trade the public good for increased power to be enjoyed by a few. It is a power, I might add, which had brought us unnecessary labor strife over the past several years, in part contributing to the 30-percent unemployment rate in the building trades and the congressional obsession with massive public service jobs programs to put these people back to work.

My opposition to common situs picketing continues, and I hope we will vote this legislation down resoundingly.

AMENDMENT OFFERED BY MR. EDWARDS OF OKLAHOMA TO THE AMENDMENT OFFERED BY MR. SARASIN AS A SUBSTITUTE FOR THE AMENDMENT IN THE NATURE OF A SUBSTITUTE OFFERED BY MR. QUIE

Mr. EDWARDS of Oklahoma. Mr. Chairman, I offer an amendment to the amendment offered as a substitute for the amendment in the nature of a substitute.

The Clerk read as follows:

Amendment offered by Mr. EDWARDS of Oklahoma to the amendment offered by Mr. SARASIN as a substitute for the amendment in the nature of a substitute offered by Mr. QUIE: Section 101(c), as it amends Section 8(g) of the National Labor Relations Act, is amended by inserting after the final proviso of new section "(2)(A)" the following new proviso: ": *Provided further*, That once written authorization of such activities by the national or international labor organizations is given, a secret ballot election shall be held by all affected workers, union and non-union, construction and industrial, to approve or disapprove a strike, and only upon the approval of a majority of the ballots cast shall a strike begin."

Mr. EDWARDS of Oklahoma. Mr. Chairman, I will be very brief. I really think we ought to title this the "harmony in labor relations amendment."

We have been very concerned here about the rights of the working men and women who are involved under common situs. One of the things that we recognize about common situs picketing, of course, is that we are extending the boundaries of a picket line and of a strike beyond those union members, who are affected, to other people, including nonunion members—the innocent carpenters, electricians, plumbers, roofers, tilers, and others who may be put out of work by the effects of this legislation.

Therefore, I believe in all fairness—and this is what my amendment would accomplish—that we should provide that after approval has been given by the national or international union for a strike, we would then have a vote both by the union members and the nonunion members.

Every worker who was in danger of being laid off by the picket line and by the strike would have a vote on whether or not the strike would take place.

Mr. FORD of Michigan. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, this would be a complete reversal of the usual procedure set by the collective bargaining agent, to wit, a union's not having any responsibility at all, because it would remove from the responsibility of the leadership and the membership of the union the decision as to whether or not a strike was to take place and replace that with some broader definition that would include not only members of the union but nonmembers of the unions, and not only people who are being asked to participate in the strike, but those who might be, in a secondary way, affected by a walkout.

Moreover, this provision would clearly invite the reverse of what we are talking about in the right-to-work States.

Mr. Chairman, I think we are starting in motion a form of reasoning that could lead us to the conclusion that those of us here from right-to-work States would not like to face in the future.

Mr. ROUSSELOT. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I listened very closely, as I always do, to my colleague, the gentleman from Michigan (Mr. FORD), with respect to his rationale as to why a secret-ballot election would be so damaging to the process. I really do not understand it.

Mr. Chairman, I know that my colleague, the gentleman from Michigan—and we both sat on the same committee—was anxious to make sure that the House did not have a chance to vote on a pay increase. Therefore, I can understand why he does not always like open elections; but for the life of me, I really cannot understand why my colleague would be so fearful of an election by the people who are directly involved in situs picketing.

Mr. FORD of Michigan. Mr. Chairman, will the gentleman yield?

Mr. ROUSSELOT. I yield to the gentleman from Michigan.

Mr. FORD of Michigan. Mr. Chairman, if the gentleman would take a close look at what secret-ballot elections have done to his party, he might change his tune.

Mr. ROUSSELOT. On the basis of that statement, Mr. Chairman, I assume that the gentleman from Michigan (Mr. FORD) will now support this amendment because there is no doubt about the fact that his party has been very effective at the ballot box in the last two elections especially in places like Chicago. Of course we are not always sure of what the real count is.

Mr. FORD of Michigan. Mr. Chairman, if the gentleman had included Michigan in his statement, I would take exception to that.

Mr. ROUSSELOT. Mr. Chairman, I believe that this amendment for secret ballot elections is very much a part of our democratic process. I want to compliment my colleague, the gentleman from Oklahoma (Mr. EDWARDS). I think his proposal is a reasonable and a rational amendment. I am surprised that my colleague, the gentleman from Michigan (Mr. FORD), would be in the position of supporting an antidemocratic idea.

Mr. MILLER of California. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, under this bill, as it is now written, when a union determines that there is a legitimate grievance, they have a right to call a strike and to picket that site.

What this amendment would do would mean that when the painters have a grievance or when the electricians have a grievance then the pipefitters could decide whether or not that grievance was legitimate. And that is not the purpose of this legislation.

The purpose of this legislation is one for which the union movement was constructed and that was for the purpose of protecting those workers in what they consider to be legitimate grievances, and one which allows them to picket an entire site, and so that they do not have to turn that right over to other workers. It is not for the purpose of assisting people who are working in opposition to the union movement for which those people who have joined the union movement are working under today's law, and in which they have the right to determine whether they want to strike or picket. We have gone one step further and have taken some of the power away from the local unions and said that they will have to go to the International in order to receive permission to strike through the determination of whether or not their grievance is a legitimate grievance. But, Mr. Chairman, this amendment would thwart that attempt because then everyone would vote against everybody else as to whether they had a right to strike or not. Such a thing would cause complete turmoil. There has been some turmoil among the unions and that is the purpose of this legislation to reduce that kind of turmoil. So I urge the Members not to vote for this amendment.

Mr. BAUMAN. Mr. Chairman, I move to strike the requisite number of words and I yield to the gentleman from Oklahoma.

Mr. EDWARDS of Oklahoma. Mr. Chairman, I thank the gentleman from Maryland for yielding to me.

Mr. Chairman, I am not sure if I heard correctly, or not, but I thought the gentleman from Michigan (Mr. FORD) referred to people who, he said, would in a very sedentary way be affected by this strike. The people who are going to be laid off are going to be affected. They are going to lose their jobs.

Mr. Chairman, I am delighted by the position I have heard taken from the other side of the aisle. I am very glad to get a vote on this one and maybe that will fill the empty seats on this side.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Oklahoma (Mr. EDWARDS) to the amendment offered by the gentleman from Connecticut (Mr. SARASIN) as a substitute for the amendment in the nature of a substitute offered by the gentleman from Minnesota (Mr. QUIE).

The question was taken and the Chairman announced that the noes appear to have it.

RECORDED VOTE

Mr. EDWARDS of Oklahoma. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 115, noes 304, not voting 13, as follows:

NOT VOTING—13

Boggs	Milford	Teague
Davis	Mitchell, N.Y.	Walsh
Harkin	Murphy, N.Y.	Young, Tex.
Johnson, Colo.	Sisk	
McKay	Staggers	

Messrs. PIKE, McCLORY, WYDLER, MARLENEE, and Mrs. HECKLER of Massachusetts changed their vote from "aye" to "no."

So the amendment to the amendment offered as a substitute for the amendment in the nature of a substitute was rejected.

The result of the vote was announced as above recorded.

AMENDMENT OFFERED BY MR. EDWARDS OF OKLAHOMA TO THE AMENDMENT OFFERED BY MR. SARASIN AS A SUBSTITUTE FOR THE AMENDMENT IN THE NATURE OF A SUBSTITUTE OFFERED BY MR. QUIE

Mr. EDWARDS of Oklahoma. Mr. Chairman, I offer an amendment to the amendment offered as a substitute for the amendment in the nature of a substitute.

The Clerk read as follows:

Amendment offered by Mr. EDWARDS of Oklahoma to the amendment offered by Mr.

SARASIN as a substitute in the amendment in in the nature of a substitute offered by Mr. QUIE: Section 101(c), as it amends Section 8(g) of the National Labor Relations Act, is amended by adding at the end of the new subsection "(C)" the following new subsection:

"(D) Any local union that engages in a common situs picketing action without written national or international approval shall be liable to all contractors, subcontractors, their employees and agents for double direct economic loss caused by their actions."

Mr. EDWARDS of Oklahoma. Mr. Chairman, the bill we have before us provides that a local union, before it engages in a common situs picketing action, must receive written approval from the national or international union. There is nowhere in the bill a provision for a penalty if that provision is not adhered to.

All I am doing in this amendment is trying to insert a penalty into the bill.

Mr. THOMPSON. Mr. Chairman, I would make a point of order against the amendment.

The CHAIRMAN. The Chair would like to advise the gentleman from New Jersey that a point of order is too late.

Mr. THOMPSON. Mr. Chairman, I wish to speak in opposition to the amendment.

Mr. Chairman, members of the committee, I am sorry that I was concentrating on something else at the moment this amendment was offered, or I would have made a point of order against the amendment. The effect of this is really, as I understand it, where any local union that engages in a common situs picketing action—and I am uncertain as to what action means—I would yield to the gentleman if he would explain to me what he means by "common situs picketing action."

Mr. EDWARDS of Oklahoma. I would be glad to tell the Chairman that all we are talking about is, when the union having the dispute goes on strike, and by its strike extends the picket to close down the whole operation at the common situs. I cannot define it beyond that, because I have not been able to find out what a common situs is.

Mr. FORD of Michigan. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON. I yield to the gentleman from Michigan.

Mr. FORD of Michigan. In trying to see what the gentleman is talking about, there is some difficulty. First, I do not know what he means by, "engaging in a common situs picketing action," but there is no reference in this legislation anywhere to obtaining national or international union permission for situs picketing. Permission is required by section 2 of the law for permission to go on strike, but this is far beyond the issue of situs picketing.

The gentleman's amendment does not define what a situs picketing action would be, or how one would go about getting permission, because he provides a penalty for not having something that is, in fact, neither required by his amendment nor by the statute that he is attempting to amend. So, it provides a penalty without an offense to apply the penalty to. I think the amendment should be defeated.

Mr. THOMPSON. Mr. Chairman, in addition to that which the gentleman from Michigan has so ably pointed out, if any such action as the gentleman contemplates were to be undertaken, the employer under existing law, under section 10(1) of the act, could go immediately to court and get an injunction.

Furthermore, under section 303 of the existing act, damages are already provided, not double damages.

What the gentleman would do would be involve the courts in this, and I believe that my point of order would have been sustained, had I been not otherwise concentrating on something else.

So I recognize the gentleman's intent. There is in the Sarasin substitute an absolute requirement of approval by the international union. Albeit, it does not specify that it must be in writing, obviously it is going to be; because the locals are going to say, "Look, I am going to go out unless I have in writing a prohibition from going out."

So I commend the gentleman for his intent, but I think the language is vague. I think it adds a new dimension involving the courts and delays, and it does not take into consideration either section 10 (1) or section 303, which would, in effect, have the same results without the double damages.

I therefore oppose the amendment, Mr. Chairman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Oklahoma (Mr. EDWARDS) to the amendment offered by the gentleman from Connecticut (Mr. SARASIN) as a substitute for the amendment in the nature of a substitute offered by the gentleman from Minnesota (Mr. QUIE).

The amendment to the amendment offered as a substitute for the amendment in the nature of a substitute was rejected.

AMENDMENT OFFERED BY MR. EDWARDS OF OKLAHOMA TO THE AMENDMENT OFFERED BY MR. SARASIN AS A SUBSTITUTE FOR THE AMENDMENT IN THE NATURE OF A SUBSTITUTE OFFERED BY MR. QUIE

Mr. EDWARDS of Oklahoma. Mr. Chairman, I offer an amendment to the amendment offered as a substitute for the amendment in the nature of a substitute.

The Clerk read as follows:

Amendment offered by Mr. EDWARDS of Oklahoma to the amendment offered by Mr. SARASIN as a substitute for the amendment in the nature of a substitute offered by Mr. QUIE: Section 213 is amended by striking subsection (a), redesignating subsection "(b)" as "(a)", and redesignating subsection "(c)" as subsection "(b)".

Section 213(c), as presently designated, is further amended by striking "recommendations, including a recommendation as to whether this title should be extended beyond the expiration date specified in subsection (a) of this section, and any other".

Mr. EDWARDS of Oklahoma. Mr. Chairman, there was one area in our testimony before the subcommittee where there was virtual unanimity. The persons who represented the AFL–CIO very strongly endorsed title II of this bill. They referred constantly, as did the bill's sponsors, to the support of the business community for title II of the bill. What I am asking in this amendment is simply that we delete the expiration date since everybody is in such agreement that it is such a good law is does not seem to make much sense that we have a 1980 cutoff date for it.

Mr. THOMPSON. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, this amendment, really, I think the gentleman from Oklahoma would concede, should be properly called the antisunset amendment. In other words, he wants to make permanent title II, which we admit and have admitted all along it is, by its very nature, an experimental program. If it does not work, we will have to come back here in 2 years. I am not sure the gentleman from Oklahoma will be here in 2 years. I find the gentleman not only bright and charming, but he is on the wrong side of the aisle. I do want to give him the opportunity, if he is here 2 years hence, to have another go around at this.

This is an experimental program, and it must be reviewed. It must terminate. It must have reason to succeed if indeed we think it is as good as I hope. We set a terminal date in order that we may see how it works.

Mr. Chairman, I oppose the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Oklahoma (Mr. EDWARDS) to the amendment offered by the gentleman from Connecticut (Mr. SARASIN) as a substitute for the amendment in the nature of a substitute offered by the gentleman from Minnesota (Mr. QUIE).

The amendment to the amendment offered as a substitute for the amendment in the nature of a substitute was rejected.

AMENDMENT OFFERED BY MR. EDWARDS OF OKLAHOMA TO THE AMENDMENT OFFERED BY MR. SARASIN AS A SUBSTITUTE FOR THE AMENDMENT IN THE NATURE OF A SUBSTITUTE OFFERED BY MR. QUIE

Mr. EDWARDS of Oklahoma. Mr. Chairman, I offer an amendment to the amendment offered as a substitute for the amendment in the nature of a substitute:

The Clerk read as follows:

Amendment offered by Mr. EDWARDS of Oklahoma to the amendment offered by Mr. SARASIN as a substitute for the amendment in the nature of a substitute offered by Mr. QUIE: Section 102 is amended to read as follows:

"The amendments made by this title shall take effect during the period which begins ninety days after the date of the enactment of this Act and ends on December 31, 1980."

Mr. EDWARDS of Oklahoma. Mr. Chairman, I would state to the distinguished gentleman from New Jersey (Mr. THOMPSON), who is the chairman of our subcommittee and who, I believe, made a very good argument against the previous amedment, that he almost persuaded me to vote against it.

I am so convinced by his argument that with new experimental legislation we should have a cutoff date—a sunset law provision, if that is what we want to call it, as the gentleman did—that I think it is only fitting and proper that we be consistent and apply an expiration date also to title I.

Mr. THOMPSON. Mr. Chairman, I rise in opposition to the amendment.

As I said earlier when I spoke in opposition to the other amendment, I admire the brilliance and the dedication

of the gentleman from Oklahoma (Mr. EDWARDS). I think that it would be quite enough for him to fiddle with title II 2 years from now.

The fact is that the Denver building trades decision came down in 1951. There is nothing exprimental about title I. We all know what it is; we all know precisely what it does. It has been amended here successfully by the gentleman from Ohio (Mr. ASHBROOK).

Mr. Chairman, I hope that the committee will defeat this amendment as well.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Oklahoma (Mr. EDWARDS) to the amendment offered by the gentleman from Connecticut (Mr. SARASIN) as a substitute for the amendment in the nature of a substitute offered by the gentleman from Minnesota (Mr. QUIE).

The amendment to the amendment offered as a substitute for the amendment in the nature of a substitute was rejected.

AMENDMENT OFFERED BY MR. GLICKMAN TO THE AMENDMENT OFFERED BY MR. SARASIN AS A SUBSTITUTE FOR THE AMENDMENT IN THE NATURE OF A SUBSTITUTE OFFERED BY MR. QUIE

Mr. GLICKMAN. Mr. Chairman, I offer an amendment to the amendment offered as a substitute for the amendment in the nature of a substitute.

The Clerk read as follows:

Amendment offered by Mr. GLICKMAN to the amendment offered by Mr. SARASIN as a substitute for the amendment in the nature of a substitute offered by Mr. QUIE: Section 102 is hereby amended to read as follows:

"The amendments made by this title shall take effect ninety days after the date of enactment of this title: *Provided,* That the provisions of this Act shall not be applicable as to construction work contracted for and on which work has actually started as of the date of enactment of this title."

Mr. GLICKMAN. Mr. Chairman, first of all I want to thank the chairman of the subcommittee, the gentleman from New Jersey (Mr. THOMPSON), because we did engage in dialogue on this issue, and, therefore, I think we moved forward a little bit. He was very helpful.

Basically, this amendment goes to the grandfather clause. The grandfather clause in the Sarasin amendment provides that projects of $5 million or less will be grandfathered out of the operation of this bill for 1 year and projects of $5 million or more will be grandfathered out of the project for 2 years, but after 2 years then the operations of the bill shall take effect.

My amendment grandfathers all existing projects out. Let me read the language of my amendment again:

The provisions of this Act shall not be applicable as to construction work contracted for and on which work has actually started as of the date of enactment of this title.

Mr. Chairman, let me start by saying that I support the Sarasin amendment and intend to vote for it. However, it appears to me that if we are going to go with situs picketing, we should go with new projects, with new contracts that were not negotiated under the terms of preexisting law. To do otherwise seems patently unfair to me. In addition, it seems, because we want to get the economy moving and we need to stimulate the economy, that we should create a legal climate to provide these jobs under this new provision for new contracts, not for existing contracts and jobs.

We saw recently the effects of the energy crisis, which may have caused some jobs to slow up more than we think they should have. Many of those jobs will not be completed for well over 2 years.

Perhaps the biggest problem concerning this bill is the uncertainty it may cause. I really think much of the uncertainty is unfounded. But let us be honest with ourselves. Let us begin with a clean slate. Let us say that all of those projects that are under construction and all work which has started as of the date of enactment shall go ahead and proceed on the basis of their practice of law prior to the enactment of this bill and that all projects coming into existence after that time shall proceed on the basis of the law which will then be applicable.

Mr. Chairman, it just seems to me that to do otherwise will create some uncertainty on the part of labor unions and will create some uncertainty on the part of members of the construction industry, and for that reason I urge support of this amendment.

Mr. FORD of Michigan. Mr. Chairman, I rise in opposition to the amendment.

(Mr. FORD of Michigan asked and was granted permission to revise and extend his remarks.)

Mr. FORD of Michigan. Mr. Chairman, it comes as a great surprise to me to hear that I do not have the unanimous support of my colleagues on this side of the aisle since I have spent the entire afternoon in trying to defend a Republican substitute to a Democratic bill. I thought I earned something for that effort.

Mr. Chairman, this amendment is just one bite too much. The gentleman from Kansas (Mr. GLICKMAN) has already succeeded in very effectively amending the act to put grandfathering into the bill. What we were willing to accept was some kind of reasonable and rational compromise to total grandfathering which the gentleman proposes now or none at all.

Mr. Chairman, from the position in which the bill now stands, projects up to $5 million would be grandfathered for a year and projects beyond $5 million in size would be grandfathered for 2 years, but not forever.

There has been a little discussion around these Chambers about some water projects. Some of those projects are going to extend over a period of many years and involve hundreds of millions of dollars.

What the gentleman is, in effect, saying is that any of those projects that have already been started or which are started within 90 days after the enactment of this act will forevermore be outside the purview of this act.

Mr. Chairman, it is precisely these kinds of projects that ought to be within the purview of the act. It is a totally unreasonable sort of exemption to say that anybody who gets a shovel into the ground before the expiration of 90 days after the President's signature will forevermore, regardless of the size of the project, be insulated against the normal kind of activity that his competitors in every other industry engage in.

Mr. GLICKMAN. Mr. Chairman, will the gentleman yield?

Mr. FORD of Michigan. I yield to the gentleman from Kansas.

Mr. GLICKMAN. Mr. Chairman, I would like to clarify something that the gentleman said. It is not actually 90 days after the signature. My cutoff date was the date of the enactment, so it was the date of the President's signature. I believe that is the appropriate date.

Mr. FORD of Michigan. Mr. Chairman, I accept that correction, but it does not help. A bad amendment should be defeated.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Kansas (Mr. GLICKMAN) to the amendment offered by the gentleman from Connecticut (Mr. SARASIN) as a substitute for the amendment in the nature of a substitute offered by the gentleman from Minnesota (Mr. QUIE).

The question was taken; and on a division (demanded by Mr. THOMPSON) there were—ayes 132, noes 82.

Mr. ANNUNZIO. Mr. Chairman, I was on my feet when the vote by a division was taken and I am now demanding a recorded vote.

The CHAIRMAN. The Chair will state that the gentleman from Illinois was on his feet and will be recognized for that purpose.

The gentleman from Illinois demands a recorded vote.

A recorded vote was refused.

So the amendment to the amendment offered as a substitute for the amendment in the nature of a substitute was agreed to.

AMENDMENT OFFERED BY MR. ALLEN TO THE AMENDMENT OFFERED BY MR. SARASIN AS A SUBSTITUTE FOR THE AMENDMENT IN THE NATURE OF A SUBSTITUTE OFFERED BY MR. QUIE.

Mr. ALLEN. Mr. Chairman, I offer an amendment to the amendment offered as a substitute for the amendment in the nature of a substitute.

The Clerk read as follows:

Amendment offered by Mr. ALLEN to the amendment offered by Mr. SARASIN as a substitute for the amendment in the nature of a substitute offered by Mr. QUIE: On line 13, of page 1, of the amendment offered by Mr. SARASIN:

After the words, "or repair at such site:", add the following language: "except where the construction site is adjacent to or part of a nonconstruction or industrial facility and a separate entrance is reserved for the individuals regularly employed at that facility or for individuals employed by persons making delivery to or taking shipments from that facility which is not directed at that separate entrance, no picketing shall be permitted at such separate entrances;"

Mr. THOMPSON. Mr. Chairman, will the gentleman yield?

Mr. ALLEN. I yield to the gentleman from New Jersey.

Mr. THOMPSON. Mr. Chairman, the committee will be pleased to accept this national emergency amendment.

Mr. SARASIN. Mr. Chairman, will the gentleman yield?

Mr. ALLEN. I yield to the gentleman from Connecticut.

Mr. SARASIN. Mr. Chairman, I have reviewed the amendment offered by the gentleman from Tennessee (Mr. ALLEN). I think it is a worthwhile addition to my substitute and I certainly would accept it.

Mr. ASHBROOK. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, let me say that this amendment has changed several times since I received the first copy. We have been shooting at a moving target all afternoon and I am not really sure where we stand at this time, however I would like to propound at least two questions to the chairman of the committee, the gentleman from New Jersey (Mr. THOMPSON).

It is the understanding of the gentleman from New Jersey that this amendment would authorize a separate or reserved gate to be set aside or insulated at a nonconstruction or industrial facility?

Mr. THOMPSON. If the gentleman will yield, yes, it is. This is the amendment that was adopted in the committee, which is a clarification and, to an extent, an extension of the General Electric case.

If the gentleman from Ohio will yield still further, let me say that I do not have a copy of the amendment before me.

Mr. ASHBROOK. As my colleague knows, it has been my contention, and I still believe it to be the truth, that his amendment, the so-called industrial facility amendment would not accomplish the purpose that the gentleman intended. That is why I am asking these questions since I have the same doubts on the Allen amendment.

Mr. THOMPSON. And I am trying to respond to them.

Mr. ASHBROOK. The gentleman from New Jersey is certain that this would authorize a separate reserved gate at what we refer to as a nonconstruction or an industrial facility?

Mr. THOMPSON. Yes. If I may answer further, if the gentleman would yield?

Mr. ASHBROOK. I will be glad to yield to the gentleman.

Mr. THOMPSON. In committee we used this as an example, a very real one, where there is a steel plant in operation in production, with a rolling mill and they want to add a coke plant to it. They contracted out for the coke plant. There is a contractor who has a dispute with his construction workers. Under this amendment there would be, limited to the construction workers, the one gate and the industrial workers there, as in the General Electric case, only this is more specific, to go through all the other gates to continue production.

Mr. ASHBROOK. All right. The second question that I wish to propound is even more pertinent because, as the gentleman knows, it has been my contention that the legislation is drafted in such a way that so long as the picketing is not primarily directed at the employees of the industrial union employer, so long as that is met, they still can induce or in other ways attempt to encourage the same employees to go along with their strike. So that is why I am asking this question: Is it the understanding of the chairman that at that separate gate or reserve gate a construction union member may not legally conduct a strike, picket, or endeavor to induce the employees of any nonconstruction or industrial facility employer to strike or in any way join in sympathy with their own strike?

Mr. THOMPSON. If the gentleman will yield, the answer is that under the amendment the aggrieved construction worker cannot picket the other gate. At that point we run into the first amendment problem on free speech. We cannot give that away. They can talk, but they cannot picket.

Mr. ASHBROOK. That is exactly the point I have been making. In other words, the gentleman is saying they could conduct an informational picket at the so-called reserve gate.

Mr. THOMPSON. They could not picket the industrial gate.

Mr. ASHBROOK. Can they induce in any way the employees of the nonconstruction or industrial facility employer, the employees who supposedly we are not going to allow to be embroiled in the strike—can they in any way induce those employees? That is my question. The chairman says they cannot picket, but can they in any way induce other employees in sympathy with their strike not to go to work or to support their strike, even though they are in a separate industrial or commercial setting?

Mr. THOMPSON. If the gentleman will yield, first, they cannot picket. Second, they would have the right, for instance, to purchase a newspaper ad in an effort to induce them, or they could speak verbally. They could telephone, or they could write letters, but they could not picket; otherwise it would be in violation of the first amendment right.

Mr. ASHBROOK. I understand that. What we are talking about is activities that may be legal at that reserve or set-aside gate at the nonconstruction or industrial facility. I am just trying to get this crystal clear.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. ASHBROOK was allowed to proceed for 2 additional minutes.

Mr. ASHBROOK. I would say to the Chairman that I am trying to get it very crystal clear what activity will be proscribed and what activity will be allowed at that reserve gate, because if we are going to have a reserve gate and the gentleman says we cannot have picketing but yet the construction union members can at that gate engage in inducement of the industrial employees not to go in, in effect, then, we have picketing whether or not we call it that.

Mr. THOMPSON. If the gentleman will yield, no, they cannot picket at that gate. They cannot leaflet at that gate. They cannot impede the progress of the other workers entering, except their own.

Mr. ASHBROOK. At that gate. The statement of the gentleman gives me some assurance. I would have to admit that I still have some trepidation. I have a feeling that if we wrote an amendment that says under no circumstances could construction union employees picket, strike, leaflet, or in any way induce any employee of a nonconstruction or industrial facility employer, they still might be able to. But at least the gentleman is on record as answering the question in the way that I had hoped he would. I thank the gentleman.

Mr. SARASIN. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I would like to direct a question to the author of the amendment, the gentleman from Tennessee (Mr. ALLEN). In the amendment that was previously discussed as being possibly offered by the gentleman from Tennessee it appeared that the language would be clarifying. As I see the amendment which was actually filed by the gentleman from Tennessee. I see that one additional sentence has been added and that is the last sentence which says:

No picketing shall be permitted at such separate entrances.

I wonder if the gentleman would explain why it has been clarified to that point?

Mr. ALLEN. Mr. Chairman, if the gentleman will yield, at the place where this falls into the bill it would have no meaning whatever to insert that provision unless we add just what is said here, because previously it said "and" and it did not say what was proscribed and what was prohibited. This definitely says there shall be no picketing. If we look at where it is, it says they shall not picket. The original amendment says "and where" and so on, and I said, "No picketing shall be permitted at such separate entrances." This makes it crystal clear.

Mr. SARASIN. I thank the gentleman for his explanation.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Tennessee (Mr. ALLEN) to the amendment offered by the gentleman from Connecticut (Mr. SARASIN) as a substitute for the amendment in the nature of a substitute offered by the gentleman from Minnesota (Mr. QUIE).

The amendment to the amendment offered as a substitute for the amendment in the nature of a substitute was agreed to.

AMENDMENT OFFERED BY MR. ALLEN TO THE AMENDMENT OFFERED BY MR. SARASIN AS A SUBSTITUTE FOR THE AMENDMENT IN THE NATURE OF A SUBSTITUTE OFFERED BY MR. QUIE

Mr. ALLEN. Mr. Chairman, I offer an amendment to the amendment offered as a substitute for the amendment in the nature of a substitute.

The Clerk read as follows:

Amendment offered by Mr. ALLEN to the amendment offered by Mr. SARASIN as a substitute for the amendment in the nature of a substitute offered by Mr. QUIE: Insert at the end of the 3rd line from the bottom of page 3, immediately following the word "action", the following language: ", provided the Construction Industry Collective Bargaining Committee established under the provisions of Title II hereof, on its own motion, and for reasons of overriding national security or because of substantial potential impact on the economy or on the Federal budget does not

disapprove and notify the labor organization of its disapproval prior to the expiration of said ten days, in which event such strike, picketing or refusal to perform services shall be postponed at least thirty days to give time to the parties involved to reconcile their differences or dispute by collective bargaining, with such assistance as the Federal Mediation and Conciliation Service of the Department of Labor may provide".

The CHAIRMAN. The gentleman from Tennessee (Mr. ALLEN) is recognized in support of his amendment.

Mr. THOMPSON. Mr. Chairman, will the gentleman yield?

Mr. ALLEN. I yield to the gentleman from New Jersey.

Mr. THOMPSON. Mr. Chairman, the gentleman from Tennessee has discussed this amendment at length with the Chair and with the committee. I think it to be a good amendment which we can take.

Essentially, as I understand it, if there exists a national emergency of one or another sort the construction committee set up under title II could delay or cause to be delayed any strike activity for a period of 30 days. Is that correct?

Mr. ALLEN. That is correct, Mr. Chairman, and the committee could do it on its own motion in any case where it felt that the national security was involved or where there was potential impact, substantial impact upon the national economy or upon the Federal budget. They could on their own motion disallow it.

Mr. THOMPSON. Mr. Chairman, I agree with the amendment and I support it.

Mr. ASHBROOK. Mr. Chairman, if the gentleman will yield, we have just received the amendment on this side.

I guess the first question I would ask is if the gentleman in any way feels this would limit or in any way change the powers of the President under the Taft-Hartley on national security?

Mr. ALLEN. No. In answer to the gentleman, it would not in any way do that but we establish under this bill this committee and it is appointed by the President, and the President can act under the Taft-Hartley Act only when a strike occurs. This is to prevent unnecessary strikes from occurring, to provide in certain cases where the Construction Industry Collective Bargaining Committee feels that an impending strike would jeopardize the national security or for other reasons stated they could express their disapproval, in which case there could be no strike or picketing for a period of 30 days in order to allow time for the parties to try to reconcile their differences with the assistance of the Mediation Service of the Department of Labor.

Mr. ASHBROOK. I say to my friend, the author of the amendment, that those of us on this side are not completely sure that that would be the effect of the amendment; but inasmuch as it is in the part of the act that would only last for 2 years, there would be no great damage done.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Tennessee (Mr. ALLEN) to the amendment offered by the gentleman from Connecticut (Mr. SARASIN) as a substitute for the amendment in the nature of a substitute offered by the gentleman from Minnesota (Mr. QUIE).

The amendment to the amendment offered as a substitute for the amendment in the nature of a substitute was rejected.

Mr. MICHEL. Mr. Chairman, I move to strike the last word.

Mr. Chairman, it is quite obvious we are at that juncture now where we are about to vote on the pending substitute amendment offered by the gentleman from Connecticut (Mr. SARASIN).

Let me briefly recap, if I may, that as this day began we were talking about one particular bill (H.R. 4250). As the day began, it was in trouble. Those of us who play the "numbers game" around here know that as of this morning there were 130 sure votes against it on our side of the aisle. There were about 74 or 75 against it on that side of the aisle. There were also about four or five over here that could be had and I suggest there were about 20 over here wavering, wobbling, shaky, undecided, on the Demomratic side. Defeat of this bill was clearly in prospect as we began. The majority side recognized it and decided to go bargaining for votes. Naturally, I regret this foray for votes brought the majority over to our side for sponsorship of the substitute amendment with the hope of wooing just a handful of additional votes and with the ruse that the substitute amendment was simply the same language adopted by the conferees in December 1975. Supposedly now those in support of that language could now vote for this substitute amendment in good conscience.

Wait a minute, wait just one minute. The language is by no means the same, for its author admitted to three major and two minor changes when he made his pitch. Oh, admittedly, we cleaned up one problem area with the adoption of the Ashbrook amendment; but even so, there is no reason for any Member on either side of the aisle to feel locked in to the Sarasin substitute because he or she might have voted for that conference report in December 1975.

Mr. Chairman, we are talking about two different things here, particularly in view of what we have added and subtracted by way of amendment and we now do not know exactly what we have in this substitute amendment.

I do not claim to be a labor lawyer or particularly attuned to this kind of legislation. It is not my area of expertise; but I submit that there are 90 percent of the sharpest labor lawyers in this country who cannot interpret in any way what we have done to this substitute amendment.

I dare the author of the substitute amendment to come down here and explain word for word for us what the effect of his substitute would be right now. He does not know, none of us know what we have in this substitute.

I submit we should go back to the original game plan and meet this issue head-on. There are all the arguments in the world to vote down this substitute and all its amendments that this House does not understand. Those who have supported those amendments have had the opportunity to make their pitch to the homebuilders and all the rest.

Remember just a couple of weeks ago when this body wanted to do something for the ladies, so there was an advisory commission being considered and someone said, "Let's mandate 50 percent women on that commission." So everyone jumped right in. We got the ladies' vote. We met that issue and then turned around and discarded the whole commission whatsoever.

I suggest that you can do the same thing today. You have made your points here and there, but let us not forget the real key issue. This is a bad bill on its face. There is no way to clean it up.

Will its enactment improve labor-management relations? Of course not. Will this bill get any more houses built? Of course not. Will this bill bring down construction costs? Of course not. On the contrary, it will do just the opposite. So, why in heaven's name should we pass it when the latest polls, for example, indicate that the rank and file of labor is opposed to it?

Did the Members of this House ever stop to think how the defeat of this bill could slow down the juggernaut for all those other bad pieces of legislation coming down the pike? What effect will it have over in the other body, if it does pass, when they debate the same issue?

You good, stalwart sons and daughters who love freedom can certainly strike a blow for liberty here. Members laugh, but the folks back home are listening and they are watching, and they have been taking count.

I say again, we have a good chance here to strike a blow for liberty by voting down this substitute; then getting with it, meeting the issues head-on and voting down this bad bill. We can defeat this bill and I ask you to join me and vote "no."

Mr. THOMPSON. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, the gentleman from Illinois was totally honest when he said that this is not an area of his expertise, and I agree with that. I rather thought for a while that he was trying to explain Henry Kissinger's foreign policy. It sounded to me like a speech of over 7 or 8 years ago, and we are going to strike a blow for liberty.

I do not know why the gentleman objects so strenuously to an effort by the majority to work in cooperation with the minority and develop a piece of legislation which, indeed, a great majority of the Members of this House understand. They understood the bill 2 years ago and the conference 2 years ago, even if the gentleman did not. I suspect that he did, however. I think he is being overly modest. I think he is, like the gentleman from Ohio (Mr. ASHBROOK), the gentleman from Arizona (Mr. RHODES), and myself, an average Member.

His performance was a little bit below average, but if one is going to hit

.300 for a season, every once in a while one drops down to .225. So, I thank him for his contribution toward liberty. I think the time has come now for us to vote for the Sarasin substitute, as amended.

Mr. SARASIN. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I would like very much to thank the gentleman from Illinois. I have never been to a revival meeting before. I really enjoyed that, but let me go back again to what I said when this substitute was offered initially. There were many people who supported the common situs picketing bill last year, and I was one of them. I was fully prepared to support the same bill again.

I think it is a compromise. It does not make either side particularly happy. Title I or title II provide more restrictions. I think it is a balanced bill, and it will make some sense. But, I did not like H.R. 4250. I thought it was too ambiguous; I thought it raised too many questions; I think it went too far. It appeared to take out many of the unfair labor practices, but put a few back in. I think, because of the ambiguity, it would have been a bill which would be litigated for a very long time.

So I said, "Let us go back to where we were before, to a bill we all did understand, and one we talked about since the conference report was adopted in 1975. You all have to either defend or object to it, depending on the way you voted at that time."

At least we start from common ground. H.R. 4250 is not like the bill which was adopted before. The approach was completely different. Many aspects were completely different. So we went back to this point. In the conference report I did not kid anyone. We allowed the House the opportunity to work its will, and the House has worked its will. It has put back in the Ashbrook amendment. I would point out the gentleman from Ohio was so persuasive I voted for it, despite the fact that we had taken it out.

I think on balance we have come up with a better bill than we had last year. We have certainly a better bill with this substitute than we had in H.R. 4250 as it was originally voted out of committee.

I would urge the committee to vote for the substitute and let us get on with it.

Mr. WAGGONNER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman and my colleagues of the House, here is the situation that we are in, and this, I think, requires a decision now. Yet, we have a substitute that we are about ready to vote on. But the decision we have to make is this: whether or not this substitute is something that we want signed into law.

As I judge the political situation, the odds are greater that this bill will be passed by the House if the substitute is adopted than is the situation if the original committee bill is voted upon.

I say to you my colleagues that the substitute does do some things which I like. It is an improvement in certain respects over the committee bill. But I say to you my colleagues that you should remember this: The real thing that is wrong with the original bill is still part of this substitute, and this is what is wrong with common situs picketing. It provides—and all of you know it provides—the potential for jeopardy and for injury to innocent third parties. As long as third parties are made to pay the price for the mistakes of others, then it is wrong in principle and it will not serve the best interests of this country.

Mr. Chairman, in my personal opinion, if we vote for the substitute we are enhancing the passage of a common situs bill. If we vote against it, still common situs might pass, the committee bill might pass. But if we reject the substitute under the rules of this House, then the committee bill will be subject to every amendment that has been proposed here today, and we will get another vote. That is what the rules of this House provide for. Do not stampede.

But now the question is simply this: Do we want to enhance the chances of passing legislation which provides for injury to innocent third parties? I think not.

To explain what I am talking about, just suppose that we have young sons in the fifth grade. They catch my young son cheating, but they punish not just my young son but yours, too. That is wrong and you all know it.

That is the thing that is wrong with common situs picketing. I believe from the top of my head to the bottom of my feet that we stand a better chance of defeating common situs, if that is what we want to do, if we vote down the Sarasin substitute. Remember, too, that if we pass a bill it can be completely rewritten in conference.

The CHAIRMAN. The question is on the amendment, as amended, offered by the gentleman from Connecticut (Mr. SARASIN) as a substitute for the amendment in the nature of a substitute offered by the gentleman from Minnesota (Mr. QUIE).

The question was taken; and the Chairman announced that he was in doubt.

RECORDED VOTE

Mr. SARASIN. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 246, noes 177, not voting 9, as follows:

[Roll No. 97]

NOT VOTING—9

Boggs	Milford	Staggers
Davis	Murphy, N.Y.	Teague
Harkin	Sisk	Young, Tex.

The Clerk announced the following pairs:

On this vote:

Mr. Murphy of New York for, with Mr. Teague against.

Mr. Staggers for, with Mr. Milford against.

Messrs. BYRON and FLOWERS changed their vote from "aye" to "no".

So the amendment, as amended, offered as a substitute for the amendment in the nature of a substitute was agreed to.

Mr. ROUSSELOT. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in strong opposition to H.R. 4250, legislation which would legalize the presently unlawful secondary boycotts in the construction industry and permit the picketing of all employers on a construction site even though the union may have a dispute with just one employer on a given job.

Since the enactment of the National Labor Relations Act and related statutes, both the Supreme Court of the United States and the National Labor Relations Board have fashioned a rational and logical body of law governing labor-management relations by means of a case-by-case resolution of extremely complex disputes in this area. While no one party is completely satisfied with the current state of the law, it is well recognized that the courts and the National Labor Relations Board have done an admirable job in interpreting a balance of interests between management and labor as envisioned by the NLRA and related legislation. What H.R. 4250 will accomplish, in no uncertain terms, is a complete destruction of a reasonable balance of interests in the construction industry. Enactment of this legislation will surely have disastrous effects upon this country's construction industry and, consequently, upon the Nation's economy as a whole.

Mr. Chairman, it is hard to believe, but H.R. 4250 goes far beyond the scope of last year's common situs picketing bill. It in effect legalizes secondary boycotts by allowing a contractor on the same site to be unjustifiably affected by a dispute that does not involve him. In addition, by repealing most of section 8(b) of the National Labor Relations Act, H.R. 4250 reinstates provisions allowing unfair labor practices, including picketing for unlawful objectives, mass picketing to coerce employees in selecting bargaining representatives, and generally unrestrained picketing. But most importantly, is the fact that H.R. 4250 would serve to limit competition by making most construction work either all-union for all-nonunion. Most proponents of the bill, including the unions, openly admit that this is what they want—no more construction projects where the union and nonunion worker can work side by side.

This means the general contractor who employs union workers will no longer be able to risk taking any bids from subcontractors using nonunion employees. Similarly, the open shop general contractor will no longer dare to use a unionized subcontractor. The obvious effect is to restrict competition and, thereby, soon drive out of business the contractors who do not fit the dominant pattern in their area. They, and their employees, will be shut out of the marketplace. In addition, the reduced competition will inevitably produce more costly construction and we all know who pays for that—you and I—the American taxpayers and consumers.

Let us examine the economic impact of common situs legislation on these contractors—most of whom are small businessmen. Dr. Pierre Rinfret, the eminent New York economist and president of Rinfret Asssociates, Inc., recently studied the effect of common situs picketing legislation on small business and had these interesting observations to make:

The construction industry appears to be dominated by small businesses.

In 1972, there were about 438,000 firms engaged in contract construction. The number of firms with one to nine employees was about 352,000. These firms, therefore, represented about 80 percent of all the firms engaged in contract construction.

There were only about 4,520 firms with 100 or more employees engaged in contract construction in 1972. These firms represented about one percent of all the firms engaged in contract construction.

The construction industry has a very high rate of business failures. We have consistent statistics for business failures for the past decades. In 1975, construction business failures represented close to 20 percent of all business failures in the U.S. That was the high point. The lowest percentage of failures was registered in 1972, when it was 14.4 percent. For the first ten months of 1976, construction failures represented 18.2 percent of all business failures.

The average liability per failure in the construction industry has tended to increase sharply in the last decade. In 1965 the average liability per failure was about $116,000. It peaked at about $286,000 in 1974 and was about $236,000 for the first ten months of 1976 (not annually rated).

The construction industry has a greater percentage of workers on strike than does the economy as a whole. In 1973, the percentage of workers involved in strikes for "all industries" was 3.0 percent. For manufacturing it was 4.9 percent. For construction it was 10.1 percent. This tendency for a greater percentage of workers in the construction industry to be involved in strikes is longstanding and persistent.

Contract construction stoppages have been declining steadily as a percent of all U.S. stoppages since 1965. In 1965 contract construction stoppages represented about 24 percent of all U.S stoppages but declined to 10.1 percent by 1973. Construction workers represented 3.8 percent of the total employed civilian labor force in 1965 and 3.9 percent in 1975. The percentage of contract construction work stoppages in 1965 and in 1973 exceeded the percentage of contract construction workers in the total civilian labor force.

The construction industry is dominated by very small businesses with a high bankruptcy rate, high liabilities per failure, a high rate of strikes and a high rate of work stoppages.

It would appear that common situs would have a negative impact on small businesses as they now exist in this industry and would work against free entry of small businesses into the construction industry.

I certainly share Dr. Rinfret's conclusion—this common situs picketing bill before us would be disastrous to the small business contractor in the construction industry.

Mr. Chairman, given our current national problems of unemployment and inflation, we simply do not need H.R. 4250 and I urge my colleagues to join me in voting it down.

The CHAIRMAN. The question is on the amendment in the nature of a substitute, as amended, offered by the gentleman from Minnesota, (Mr. QUIE).

The amendment in the nature of a substitute, as amended, was agreed to.

The CHAIRMAN. The question is on the committee amendment in the nature of a substitute, as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. NATCHER, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 4250) to protect the economic rights of labor in the building and construction industry by providing for equal treatment of craft and industrial workers and to establish collective-bargaining procedures in the construction industry, pursuant to House Resolution 423, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment to the committee amendment in the nature of a substitute adopted in the Committee of the Whole? If not, the question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

MOTION TO RECOMMIT OFFERED BY MR. ASHBROOK

Mr. ASHBROOK. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. ASHBROOK. I am, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. ASHBROOK moves to recommit the bill H.R. 4250 to the Committee on Education and Labor.

The SPEAKER. Without objection, the previous question is ordered on the motion to recommit.

There was no objection.

The SPEAKER. The question is on the motion to recommit.

The motion was rejected.

The SPEAKER. The question is on the passage of the bill.

Mr. ASHBROOK. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 205, nays 217, not voting 10, as follows:

[Roll No. 98]

NOT VOTING—10

Boggs	Murphy, N.Y.	Vander Jagt
Davis	Sisk	Young, Tex.
Harkin	Staggers	
Milford	Teague	

The Clerk announced the following pairs:

On this vote:

Mr. Murphy of New York for, with Mr. Teague against.

Mr. Staggers for, with Mr. Milford against.

Until further notice:

Mr. Sisk with Mr. Young of Texas.

Mr. Harkin with Mr. Davis.

Mrs. Boggs with Mr. Vander Jagt.

So the bill was not passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. THOMPSON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks, and to include extraneous matter, on the bill H.R. 4250.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

PERMISSION FOR SUBCOMMITTEE ON IMMIGRATION, CITIZENSHIP, AND INTERNATIONAL LAW OF COMMITTEE ON THE JUDICIARY TO SIT TOMORROW DURING 5-MINUTE RULE

Mr. EILBERG. Mr. Speaker, I ask unanimous consent that the Subcommittee on Immigration, Citizenship, and International Law of the Committee on the Judiciary be permitted to sit tomorrow during the 5-minute rule.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, will the gentleman explain to us why it is necessary to get unanimous consent?

Mr. EILBERG. Mr. Speaker, if the gentleman will yield, we are having a hearing pertaining to foreign medical graduates in the United States.

Mr. ROUSSELOT. Mr. Speaker, further reserving the right to object, will the committee be marking up a bill or merely holding hearings?

Mr. EILBERG. Merely holding hearings.

Mr. ROUSSELOT. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

PROPOSED DEFENSE OFFICER PERSONNEL MANAGEMENT ACT

(Mr. NICHOLS asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. NICHOLS. Mr. Speaker, I am today introducing a bill to amend the laws governing the appointment, promotion, separation, and retirement of officers of the Armed Forces.

The bill is identical to H.R. 13958 of the 94th Congress which was reported by the Committee on Armed Services on June 24, 1976. That bill, with one amendment I will discuss later, was passed by the House on September 13, 1976, by a vote of 343 to 4.

The Senate, due to the pressures of other business during the closing days of the 94th Congress, was unable to devote the necessary time to the consideration of this important matter and, as a result, took no action on the bill.

Mr. Speaker, during the 94th Congress, the Subcommittee on Military Compensation devoted many days and weeks to this very important and complex piece of legislation. This bill will re-

peal the present hodgepodge of separate unrelated laws enacted from time to time over the past 30 years and will replace them with a uniform statute prescribing logical career management programs for military officers.

I intend to schedule expeditious consideration of this legislation in order to report a bill to the floor so that the House can consider the matter at an early date. This will then provide the Senate with ample time to schedule the necessary consideration of this measure and, hopefully, result in enactment of the much needed reforms provided by the bill in this Congress.

Mr. Speaker, I mentioned that there was one provision in the bill as passed by the House which is not included in the bill I am introducing today.

The only difference between the bill I introduce today and the bill as passed by the House is that the House-passed bill included a floor amendment proposed by the gentleman from New Jersey (Mr. HUGHES). That amendment would preclude senior retired officers and former officers of the Armed Forces, for a 3-year period after release from service, from accepting employment with a defense contractor if, before their release they were involved in any way in a contract under which that contractor provides goods or services to the United States.

Mr. Speaker, I appreciate the objective of Mr. HUGHES. I can assure the gentleman from New Jersey that I will urge the chairman of the Committee on Armed Services to arrange for a review of this matter to determine what additional legislative action should be taken.

In this way, the need for legislation in this area can be examined in an orderly manner and, if legislation is required, it can be drafted in such a manner as to insure that it will achieve that objective.

DR. WERNHER VON BRAUN

The SPEAKER. Under a previous order of the House, the gentleman from Florida (Mr. FUQUA) is recognized for 60 minutes.

Mr. FUQUA. Mr. Speaker, over the years it has been my privilege to know many outstanding men who were members of this body: Statesmen, educators, managers, and industrialists. The greatest among them all hold a number of significant attributes in common. The willingness to make personal sacrifices to further a cause larger than themselves is certainly one of these attributes. The ability to inspire others with enthusiasm and purpose is another. Total, unselfish dedication ranks highest among these attributes. Dr. Wernher von Braun has all of these and more.

My association with Dr. von Braun dates back to the days when he struggled to make the people of our great Nation aware of the importance and potential of rocketry. His vision is a great vision—not only great in magnitude of resources employed, but great in terms of the human dimensions of achievement and opportunity.

Few men in their lives are able to conceive an idea of the proportions that guided Dr. von Braun in the grueling years that led to the Apollo lunar landing. Yet, in conceiving and executing superbly the task of building the vehicle to fly men to the Moon, he never lost sight of the even larger dimensions of man's need to quest in space for its secrets and benefits.

Dr. Wernher von Braun is an inspiration to those who seek to achieve great goals, often nearly unattainable at the outset. Certainly, the concept of flying to the Moon is thinking on a grand scale—only one indication of the breadth and depth of von Braun's personality; while thinking on a grand scale he was able to accomplish many of the "little" things is another. His speeches, writings, and his daily management of a vast technical organization all demonstrated his continuing concern for his fellow man. His interest in education, the arts, and humanities not only caused his name to be associated with worthwhile efforts, but also caused him to tap that seemingly inexhaustable supply of personal energy to inspire, aid, encourage and support our national space effort.

To the youth who study the technology and science of space he is a symbol of excellence; a man of unbounded vision and energy; a man whose dreams are fashioned into reality.

Many, after the monumental success of the Apollo lunar landings would have simply accepted the well-deserved accolades of one of the great achievements of modern times. Dr. von Braun chose another path. After years as the Director of the Marshall Space Flight Center, he came to Washington to help enlarge the future planning for NASA. the agency he had so ably served for so many years. Many of the advanced ideas which employ space operations for our day-to-day benefits are an outgrowth of von Braun's vision.

Today, Dr. von Braun continues as a man of accomplishment and vision in the industry he helped to build. His interests and contributions continue to span an ever increasing array of activities. For the benefit of those of my colleagues in the House who do not know Dr. Wernher von Braun, I would like to read an excerpt from Erik Bergaust's book, "Wernher von Braun," which quotes von Braun and shows this man's great insight for our future:

> But most of all, we must remember that our future lies in the success we achieve in the education of our young people. We must not let indifference or unwillingness cause us to fail to see the problem of education in human terms—in terms of boys and girls with abilities and aspirations, children who may either be held down and defeated by poor education or be given new possibilities and new goals by a good one. When we neglect education, we weaken the whole foundation of free society. And when we neglect education in an age of global conflict, we risk the very safety of our nation and the future of freedom in the world. Education is the passport to a better society. Don't forget that the race is to the swift and the battle is to the strong.

Mr. TEAGUE. Mr. Speaker, for those of us who have been supporters of the Nation's space program since its inception, today is a special day. It is Wernher von Braun's 65th birthday and represents another milestone in the remarkable career of the man who is one of the space age's most respected pioneering leaders.

Few have had the opportunity to share the challenging assignment of sending rockets into space; into other worlds. The adventure of exploration has always dictated von Braun's moves. He is an explorer and tackles projects wholeheartedly. Whatever the challenge, his approach is positive, thorough, and organized.

Von Braun has the ability to see the end results and then to set about working toward their completion. Long before man entered the space age, he could foresee the possibility of space travel.

When the Soviet Union successfully launched and put into orbit the world's first artificial satellite, Sputnik I, America's response was swift and widespread. It seemed equally compounded of alarm and chagrin. As a counter to meet this challenge, there followed an intense 2-year period of organization, buildup, fill-in, planning, and general catchup.

NASA was established and long range planning was accelerated. New capabilities were needed to conduct such a program. To that end, the Army Ballistic Missile Agency at Huntsville, Ala., headed by Wernher von Braun, was transferred to NASA along with the big Saturn booster project.

Long before sputnik, von Braun had the basic knowledge and practical experience to develop a rocket of sufficient size to carry a satellite into orbit. He thought in 1953 that within 5 years, assuming an all out effort was made, a small satellite could be launched. And, that within 10 years, he believed a manned station could be built and operated.

The U.S. space endeavors were inaugurated with the placement in orbit of a 30-pound satellite, Explorer I, on January 31, 1958. America had entered the Space Age with this successful orbiting attempt made under the direction of von Braun and his team.

Von Braun was to become the space hero who eventually built the Saturn boosters that lifted off the American astronauts for their successful lunar landings. He will be judged by history as a giant who made one of the largest contributions to America's goal to land a man on the moon and return him safely.

I know von Braun as a man who, while reaching for the stars, moved easily from one accomplishment to the next in his outstanding work in behalf of our Nation's space program. He is an accomplisher; and I am glad for this opportunity not only to extend best wishes on his 65th birthday, but also to extend my personal thanks to him for a job well done.

He deserves the recognition he received and stands as an outstanding example of what one person can accomplish.

Mr. ROUSSELOT. Mr. Speaker, I appreciate my colleague for yielding and for taking the initiative on this occasion to provide many of us the opportunity

to honor the undisputed leader in the field of rocketry and space technology, Dr. Wernher von Braun.

For most of his 65 years, Dr. von Braun has been at the forefront science and rocket technology. A rocket expert since the age of 19 in his native Germany, he is perhaps best known for directing the team that designed and built the Saturn 5 rocket that carried men to the moon during the famous Apollo missions.

The principles of aerodynamics and rocket propulsion which von Braun pioneered have most recently been used in the development of the Space Shuttle which was rolled out in Palmdale, Calif., last September 17. This remarkably versatile and reusable spacecraft will be a "national work horse" for the Space Shuttle program—a program which will greatly advance our explorations in space by enabling less expensive and more frequent Earth-orbital operations.

We are all indebted to the scientific achievements which Dr. von Braun has made and should remember that they go far beyond the development of Saturn 5's and Space Shuttles. The work Dr. von Braun has promoted has also led to significant advances in the area of communications, mapping and charting, education, medicine, meteorology, environmental monitoring and control, and the study of oceans and Earth resources. Numerous benefits from space exploration have also worked their way into our daily lives to a far greater extent than most people realize. To list just a few, we are now able to apply what we have learned in locating oil, natural gas, in detecting food sources, identifying crops, and developing monitoring units and communications devices for medical emergencies; and the list could go on and on. The door to all of these achievements and technological developments was opened by the genius and innovative work of Dr. Wernher von Braun.

As we honor Dr. von Braun this afternoon, he lies ill in an Alexandria, Va., hospital. We wish him well on his birthday, we thank him for his tremendous contributions, not only to science but to mankind, and we pray for his relief from his illness and for his speedy recovery.

Mr. DEL CLAWSON. Mr. Speaker, the occasion of the 65th birthday of Dr. Wernher von Braun gives many of us in the Congress the opportunity to pay tribute to the accomplishments of this exceptional citizen. Paradoxically, the praise which we hesitate to offer in person for fear it may sound fulsome to the recipient is more easily presented publicly in an impersonal setting. How many of us watching the U.S. rockets speeding on their way to outer space have reflected upon the expenditure of time, dedicated effort and thought by men and women associated with the U.S. space effort. The staffs of the House and Senate Committees, the men and women in my home town of Downey, "home of the Space Shuttle," the scientists, research and development people at NASA and in the employ of contractors and subcontractors across the Nation, all can look with pride upon the effort. But vision precedes every giant venture and it is the vision of the Wernher von Brauns of this world that paves the way for achievement of this high level.

The work of Dr. von Braun with his team from the Explorer I satellite, the flights which put our astronauts into space and the work on Skylab has been that of active participant in the technology and scientific planning upon which the U.S. space effort is founded. It is a record of accelerated progress and who could venture to assess just how vastly the contribution of this single genius has abbreviated the preparation time on each of the steady progress of projects which have astounded the world and formed the U.S. primary world role in exploration.

It has been a signal honor to be personally acquainted with this great man and a privilege today to send our warmest best wishes to Dr. von Braun and those near and dear to him on this anniversary of his birth March 23, 1912 in Wirsitz, Germany. His is a career which perfectly illustrates the maxim that the rungs of a ladder are not for resting, but for climbing to greater heights. As the many benefits of the space program continue to multiply his work will continue to grow in depth, breadth and benefits "for all mankind."

Mr. STAGGERS. Mr. Speaker, I am honored and altogether pleased to join my colleagues in paying tribute to Dr. Wernher von Braun, whose efforts in the development of rockets allowed the United States to become the first country to land a man on the Moon and whose name has become synonymous with this country's space program, on the occasion of his 65th birthday today.

Dr. von Braun came to my congressional district at my invitation to speak at the local high school in my home town of Keyser, W. Va., in 1970.

It was a once-in-a-lifetime honor and privilege for me to present this man to that audience. A rapport was instantly and instinctively established with this large group of young people. The lack of any "generation gap" was an unmistakable tribute to authentic greatness which young people always recognize and respect. On that day he gave great inspiration to some 1,500 of our most impressionable youth.

Born in Wirsitz, Germany—now Wyrzysk, Poland—von Braun developed an early fascination with rocketry and geared his education to that interest, culminating in a Ph. D. in physics from the University of Berlin in 1934. Prior to that time he had become known to the German Army as a liquid fuel expert, and in 1932 they employed him at their rocket experiment station in Kummersdorf. When that activity was transferred to Peenemunde in 1937, von Braun was made technical director. His team of rocket experts perfected the V–2 rocket, which was used against Britain at the end of World War II.

In May 1945, with Hitler dead and a realization that Germany would not win the war, von Braun and his team had to choose which country to surrender to; the Russians or one of the allies. Noting that the United States was "known for its progressive attitude toward science," and was a "still growing nation which can afford rocket development on a grand scale," the decision was made to surrender to the Americans. The U.S. Government decided that only 100 of the team's top people could emigrate to America, a number which eventually became 118, including von Braun.

Upon arrival in America, the Germans were assigned to the Army and sent to Fort Bliss, Tex., where von Braun was made project director for research and development. In 1950, the Fort Bliss rocket activities were transferred to Redstone Arsenal near Huntsville, Ala., and the team moved there. In 1955, von Braun became a U.S. citizen, as did many of his colleagues. During this time they worked on developing an upper stage for the V–2, for Earth-orbital launches, and the rocket was named Redstone. Well before the first launch of an Earth satellite by the Russians in 1957, von Braun proclaimed that he could place an object into orbit. President Eisenhower, observing that America was committed to the peaceful exploration of space and Redstone was a military rocket, decided to develop an entirely new civilian launch vehicle, the Vanguard. His decision gave the Soviet Union the time it needed to put Sputnik into orbit first.

Following Sputnik, development of Vanguard was made a very high priority. When its first test launch in December 1957 failed, von Braun was given the go-ahead to try with Redstone. Vowing that he could put a satellite into orbit within 90 days, von Braun accomplished the task on January 31, 1958, with the launch of Explorer 1.

With the United States now firmly entrenched in a space program, a space agency was created to coordinate the civilian space program, the National Aeronautics and Space Administration. In 1960, the Marshall Space Flight Center was established in Huntsville as part of NASA, and von Braun and his team were transferred there with von Braun as Director of the Center. During his tenure at Marshall, he directed development of the Saturn class of launch vehicles, including the Saturn V, which is the most powerful launch vehicle, even to this day. The Saturn V has a 100-percent successful launch record, with a total of 13 launches, 9 of which were manned—Apollo 8, the first circumlunar flight, Apollo 10, Apollo 11, the first manned landing on the Moon, and Apollo 12, 13, 14, 15, 16, and 17.

In 1970, Dr. von Braun became Deputy Associate Administrator of NASA for planning, a position he held for 2 years. On July 1, 1972, he retired from NASA after 27 years of Government service, explaining that he wanted to "devote my time now to help implement some space projects I feel are of particular importance. I think I can do this best in private industry, where the tools of progress are being made."

In July 1972, he accepted the position of vice president for engineering and development for Fairchild Industries in Germantown, Md. He retired from Fairchild on December 31, 1976, and now de-

votes himself to his position as chairman of the board of the National Space Institute, a nonprofit institution created to disseminate information about the space program to the public. His many books, from "The Mars Project," published in 1953, to his latest work, "The Rocket's Red Glare," written with Frederick Ordway III and completed just last year, will delight readers for years to come.

Mr. Speaker, on this, his 65th birthday, I wish to give thanks to Dr. Wernher von Braun for his vital role in this Nation's space program and to wish both him and his family many future years of happiness. He gave us his best and asked little in return.

Mr. WINN. Mr. Speaker, man has always been obsessed with a quest for knowledge and truth in the universe. Many times the scientists and engineers are in the forefront of this quest. Normally, the quest itself provides sufficient personal satisfaction, however, some scientists and engineers are fortunate enough to discover truths that are significant enough to impact the entire society. Galileo and Einstein are examples of men who have achieved this stature.

Dr. Wernher von Braun is another. Dr. von Braun's unselfish and undaunted quest for truth and knowledge and its subsequent application to the space program has resulted in one of the most dramatic changes to this society that have occurred in the existence of man. This dedication resulted in the obvious, successful landing of a U.S. astronaut on the lunar surface. This accomplishment in itself generated a very high degree of national pride. However, more important, are the everyday influences that this program has had on our lives. Today communications with all parts of the world are possible by satellite monitoring systems. Weather predictions and monitoring are made daily with satellite photographs. Manufacturing of medicinal drugs in space may become routine. Crop disease, field description, and pollution detection are routinely conducted using space methods.

It is only fitting that in commemoration of this great man's 65th birthday we as a nation extend our thanks and gratitude for the outstanding contributions he has made. Our thoughts and prayers go with you, Wernher von Braun.

Mr. FREY. Mr. Speaker, I would like to join with my colleagues in honoring one of the greatest space pioneers who ever lived, Dr. Wernher von Braun. I have had the pleasure of knowing Dr. von Braun over the years of my service on the Science and Technology Committee. His advice, his knowledge, his intelligence, and his desire to build a better world have always stood out. Without the many contributions of Dr. von Braun, we would not be where we are today in space. All know of his tremendous contributions to the Apollo program. It is especially fitting that on his 65th birthday the people of this country thank him for his contributions and wish him well. Happy birthday, Wernher, and many happy returns.

Mr. McDONALD. Mr. Speaker, we are a nation of immigrants, and fortunately for the United States, we have acquired some rich talent due to periodic upheavals around the world. At the end of World War II, the U.S.S.R. acquired the rich store of German rockets and materials at Pennemuende, in what is now East Germany, but the United States and the Western nations were able to acquire most of the top German scientists who worked on these rockets. Among these was Dr. Wernher von Braun who came to the United States in 1945 to assist in America's rocket program. He was also instrumental in getting our own satellite program going after the launch of the Soviet Sputnik in 1957 galvanized our own space program into accelerated efforts. Since that time he has made significant and generous contributions to our rocket and space programs.

However, Dr. von Braun although a highly specialized scientist all his life, does not hold a narrow view of life and its problems. In a statement at a space congress held at Huntsville, Ala., on November 15–19, 1971 he said:

> Many of our most urgent problems today are global in nature. If we are to maintain Earth as a livable dwelling place for mankind, we must learn to view it as a whole. We must understand that our existence depends on a delicate balance of nature, and that this balance includes not only all of mankind but of all living things.

Many happy returns to Doctor von Braun.

Mr. McCLORY. Mr. Speaker, we mark here today the 65th birthday of Dr. Wernher von Braun, a man whose name is synonymous with America's space successes and who dreamed realistically of men on the Moon when that was but a science fiction concept to most of us.

We are told that his mother, an outstanding amateur astronomer, was a strong influence on this son who once, in his young days, failed physics and math. But, soon after, an intense absorption in astronomy led Dr. von Braun to a book predicting that someday men would land on the Moon. In a sense, the career of this man who would help open up the solar system to travel by men and their machines, was launched.

The young von Braun, committed now to mastering math and physics, soon began work on rocket engines and the physiological impact of space flight. His experiments convinced him man could bear the thrust and deceleration of such voyages.

Von Braun was the leader in the development of rocketry for Germany and he saw rockets as a step toward space travel. When World War II was almost over, he evacuated 5,000 of his associates and their families from an area soon to be taken by the Russians to a sector where the Americans were advancing.

So, in late 1945, he and some of his top people came to the United States. The U.S. Army gave him the role of developing the Redstone rocket that played such a key role in our infant space efforts. From that, with NASA, followed triumph after triumph in the creation of launch vehicles for space exploration.

Mr. Speaker, the philosophy of a man determines the road he will take and to what purposes his gifts will be put. Let me close this tribute to Dr. von Braun with this quotation from him:

> We should remember that science exists only because there are people, and its concepts exist only in the minds of men. Behind these concepts lies the reality which is being revealed to us, but only by the grace of God.

Mr. Speaker, it was a privilege to meet Wernher von Braun several years ago when I visited the Space Center at Cape Canaveral, and I am pleased to join today in this tribute to him on the occasion of his 65th birthday.

Mr. WYDLER. Mr. Speaker, today is the 65th birthday of Dr. Wernher von Braun, a renowned pioneer of our national space program and father of modern space flight. A little more than 19 years ago on January 31, 1958, an American satellite, the Explorer, was launched into orbit under the leadership of Dr. von Braun and his army research team in Huntsville, Ala.

Dr. von Braun's career has spanned an enormously rapid development of rocketry. He was also one of the initial group of 118 German "Paper Clip" specialists transferred to the United States in 1945–1946. Later Dr. von Braun led the research team at the Army Ballistic Missile Agency which launched America's first successful satellite. Russia's first satellite to orbit the sun was launched on January 2, 1959; von Braun's followed 2 months later on March 3. On March 15, 1960, the Army Ballistic Agency's 4,000-man Development Operations Division, headed by Dr. von Braun, was transferred to NASA and eventually became the George C. Marshall Space Flight Center. Dr. von Braun then led the development of the Saturn launch vehicles which were successful in launching the first men to land on the Moon in 1969.

To his teammates, Dr. von Braun is thought of as the greatest practicing engineer alive. German-born rocketeer Rolf Engel once said:

> Dr. von Braun joins technical ability, passionate optimism, immense experience, and uncanny organizing ability. * * * He is, the greatest human element behind today's rocketing success.

Another von Braun teamster said:

> From Wernher, you get a feeling of the orderliness of things, what it is possible for the human mind to be and do. But this orderliness is not that of a bookkeeper, it is that of a great poet!

Dr. von Braun has received more than 65 awards, honors, and medals. Not only has he been recognized as an outstanding scientist, but he has also been widely recognized for his contributions to his community. His awards have been as diverse as the Langley Medal—one of seven ever presented—by the Smithsonian Institution; the medal presented by the President of the United States to Dr. von Braun and the American astronauts; the Engineer of the Century Award by the Press of the World; the World Citizenship Award by the International Civitan Club; the Citation of Appreciation as Outstanding Citizen and Public Servant by the city of Huntsville, Ala.; and the Daughters of the American Revolution Americanism Medal.

It is indeed an honor to recognize the contributions of this great man on this his birthday, March 23, 1977.

Mr. KETCHUM. Mr. Speaker, today is the 65th birthday of a great man. He is Wernher von Braun, whose contributions to the science of the space age have made a reality of the man on the Moon.

During the more than quarter century that Dr. von Braun has lived in the United States, he has presided over our Nation's entry into the space age. At the end of World War II, he became Project Director of U.S. Army Ordinance Corps, Research and Development Service at Ft. Bliss, Tex. Moving in 1950 to Huntsville, Ale., he served as Technical Director of the Guided Missile Development Group, Redstone Arsenal and later as Chief. He became the Director of the Development Operations Division of the Army's Ballistic Missile Agency in Huntsville in 1956.

In 1957, the Soviet Union stunned the world by the announcement of the orbits of sputnik I and II. Due to Wernher von Braun's tremendous interest in space exploration which led to his own advance preparations for the day when the United States would enter the space age, Explorer I was launched only 84 days after the Redstone facility was given the nod for production of a satellite of our own.

Following the creation of the National Aeronautic and Space Administration in 1960, Dr. von Braun was chosen to serve as Director of the new agency's Marshall Space Flight Center, Huntsville. In this capacity, he supervised the development of the Saturn C–1 rocket, from which evolved the Saturn IB of the Apollo test program and the Saturn V moon rocket. Under von Braun's guidance, the United States embarked upon an unprecedented course of space exploration, culminating in the successful landing of men on the Moon.

Wernher von Braun came to Washington in 1970 as NASA's Deputy Associate Administrator and retired from that position in 1972. He recently retired as vice president of engineering and development of Fairchild Industries of Germantown, Md.

The name of Wernher von Braun has become synonymous with space exploration. Through his vision, his dedication, his genius, yesterday's dreams have become today's reality.

Mr. FLIPPO. Mr. Speaker, it is with a great feeling of pride that I join in the recognition of Dr. Wernher von Braun and his continuing service to the people of the United States.

His contributions to the advancement of our Nation's science, industry, and space activities are so extensive that a detailed itemization would fill a good-size book. For this, the entire country is in his debt.

The people of north Alabama, however, owe Dr. von Braun a particular debt of gratitude for the scientific and management skills he so successfully engaged for more than two decades to make Huntsville, Ala., one of the Nation's leading centers of science and technology.

In 1950 the then small Huntsville community welcomed Dr. von Braun and his associates to develop our Nation's rocket program for the Army at Redstone Arsenal. This brilliant team attracted other scientists and many later transferred to the space effort when the National Aeronautics and Space Administration was established.

In honor of his contributions, a magnificent new auditorium and convention center has been dedicated to Dr. von Braun by the people of Huntsville.

Dr. von Braun is a man of extraordinary scientific abilities which are combined with a genius for management and a remarkable vision of the potentials for scientific endeavor. He has an exceptional capacity for transferring theory to application. From the initial team he assembled at Huntsville to work on rockets, the scientific community has expanded to tackle a wide array of problems relating to energy, environment, transportation, and other pressing concerns. Many of these advances have been developed as a direct result of the research and development in the space program.

The improvement of solar energy technologies and the work on more efficient advanced engines are two areas of particular importance in the Huntsville area at this time.

Although most of the original von Braun team members are now at retirement age, the scientific talents they attracted to the Huntsville area are still in harness and productively increasing our national wealth by advancing technology with imagination.

An account of the recent activities of the von Braun team was recently prepared by Mr. Rudy Abramson of the Los Angeles Times. I am including his article of January 20, 1977, as a part of my remarks at this point:

HUNTSVILLE, ALA.—In 1956, more than a year before the Soviet Union shocked the world with the launch of Sputnik 1, Wernher Von Braun's rocket team sent a U.S. Army missile streaking 600 miles above the earth more than 3,000 miles over the Atlantic, reaching a speed of 16,000 m.p.h.

With no trouble the flight could have orbited a satellite, and significantly changed events of the following decade.

Instead, Russia opened the space age with its Sputnik in October, 1957, and the United States set out in a race to demonstrate supremacy in space technology. The race did not end until Apollo 11 went to the moon nearly 12 years later.

The Von Braun team did not launch the first artificial earth satellite because President Dwight D. Eisenhower ordered the military to stay out of a U.S. project to put one in space as part of the 1958 International Geophysical Year.

Indeed, he had even warned Von Braun and Maj. Gen. John B. Medaris, then head of the Army Ballistic Missile Agency, against orbiting anything "by accident."

But Sputnik—plus the spectacular failure of this country's Vanguard project, its first effort to launch a satellite—caused Eisenhower to change his mind.

And on Jan. 31, 1958—19 years ago this month—the Von Braun Army team put the United States into the space race by launching the Explorer I satellite, fashioned at Pasadena's Jet Propulsion Laboratory.

It discovered the Van Allen radiation belt around the earth, and circled the planet for more than 13 years.

The band of Germans who played leading roles in the historic launch, and later led development of the rockets that carried men to the moon, have slipped back into obscurity as suddenly as they emerged into the world spotlight.

Some have died, some have gone back to their native land and some have made new starts in private industry. Most of the rest have gone quietly, sometimes painfully, into retirement in Alabama.

Ironically, they saw dreams of sending men to the moon come true largely because the United States was embarrassed by Sputnik. Then they saw their own careers end because of their success in developing the Saturn rockets for flights to the moon.

Wernher Von Braun's celebrated German rocket team is no more. It faded with the decline of the space age it helped create.

After developing the V–2 rockets that Hitler fired on London and Antwerp, the German team became one of the most sought-after prizes in the ruins of Germany.

One hundred and eighteen of the hand-picked experts were slipped into the United States at the end of 1945, to remain nearly four years as "prisoners of peace," as they called themselves, before they were taken to Mexico, then walked back across the Rio Grande between Juarez and El Paso to gain official status as immigrants.

They were the men who changed the rocket from a laboratory curiosity to a modern weapon, important actors in the missile race between the United States and the Soviet Union, gifted technicians who helped move space flight from the comic pages to the front pages.

Now, they read, garden and take long walks. They dabble at hobbies, go to part-time jobs and watch their grandchildren grow up.

Ernst Stuhlinger, one of the world's foremost authorities on electrical rocket propulsion, works at the University of Alabama Research Institute. His interests now pertain to electric automobiles as much as to electric rockets.

William Mrazek, long a member of the Von Braun inner circle, runs a restaurant with his wife in the Heart of Huntsville Shopping Center.

Eberhard Rees, Von Braun's righthand man from their days at the German rocket center at Peenemunde until Von Braun left Huntsville for Washington, is a consultant to the European Space Research Organization.

Dieter Huzel, who helped bury tons of V–2 engineering drawings in an abandoned mine as Germany collapsed, now works for Rockwell International Corp. Walter Wiesman, an industrial management expert, works with the Huntsville Industrial Development Assn.

Emil Hellebrand teaches underprivileged children. Werner Keurs retired to Mexico, Arthur Rudolph to California and Kurt Debus, longtime director of the Kennedy Space Center, to Florida.

Only months after the first U.S. landing on the moon, Von Braun himself left Huntsville, giving up the directorship of Marshall Space Flight Center, which he had headed since it was carved out of Redstone Arsenal. He left the area where he had worked nearly 20 years, first for the Army, then for the National Aeronautics and Space Administration.

Thousands of Huntsville residents turned out for farewell ceremonies as he left for his new post at NASA headquarters.

In 1972, with the space program in decline, he quit NASA and became a vice president of Fairchild Industries, the first nongovernment job of his career.

This month, still short of 65, he retired. He has been hospitalized for weeks in Alexandria, Va., undergoing treatment for cancer.

Most of the German rocketry experts were in their 30s when Von Braun singled them out to come to the United States. They rushed into middle age while developing the Redstone and Jupiter missiles, launching the first satellite, and sending astronaut Alan Shepard on a suborbital flight in preparation for John Glenn's three-orbit journey in 1962.

They cheered in Von Braun's conference room when they heard John F. Kennedy's call for a manned landing on the moon in the 1960s, and they went on to develop a new generation of rockets, dwarfing anything ever tried before.

A few of them, realizing the American space program had reached its zenith even before Neil Armstrong and Edwin Aldrin walked on the moon, decided to get out early.

"I did not see much excitement ahead," said Walter Wiesman, one of the youngest of the Peenemunde men and one of the first to retire. "I had enjoyed a good 25 years, but it appeared too much of a coasting proposition for the future."

Some lingered in the hope that the country would set another great goal in space, that new machines would be required to take an expedition to Mars, that something like the Sputnik launch would happen again and shake the country out of a deepening indifference to space exploration.

It was not to be. Three of every four workers who had been involved in the moon race had to find new jobs.

The Germans who had held key posts in the hierarchy were not eligible for the preferential treatment reserved for U.S. military veterans in government employment matters.

So it fell to Rocca A. Petrone, who had first worked with them as a young Army officer in 1952 and was later their boss as Apollo program director and head of the Marshall Center to let some of them know they should now step aside.

"I had to start telling them it was time to move on," Petrone recalled recently. "They would talk about how proud they were that they had been permitted to do what they did, and how proud they were that they had been trusted in this country. They were the most willing, unselfish, quality people I've ever been with."

Of the 118 Peenemunde engineers and scientists brought to the United States in the secret operation later known as "Paperclip," only two continue to work for NASA at the Marshall Center here.

Walter W. Jacobi and Gustav Kroll are both at work on the space shuttle being designed to carry astronauts and equipment between the ground and earth orbit. It will render conventional rockets obsolete, making a leap forward in aeronautics comparable to the Germans' introduction of the V–2.

There are flashes of bitterness among some of the Peenemunde veterans, who find themselves specialized in a field where the market for their talents has withered. They refuse, nonetheless, to view their development of the 3,000-ton Saturn 5 rocket and the Apollo Moon program as empty accomplishments.

For most of them Apollo II was the high-point of their professional careers, with the launching of Explorer close behind.

Now there is an increasing recognition of changes in the country's priorities.

Karl Heimburg, who test-fired rockets from V–2 to Saturn 5, the latter bringing alarmed telephone calls to Huntsville from as far away as Vicksburg, Miss., several hundred miles away, is one of the more outspoken. What the country needs, he said in an interview at his home, is not a space program but an energy program. When he quit NASA, he said, he did so because he could not defend old men staying on while young men were turned out of jobs.

But, he added, "It was clear to me the energy problem must have priority. That is closer to us now than space.

"That is where I would put my stress . . . This is an area where I would like to be productive again."

For their first five years in the United States, beginning as $6-dollar-a-day workers under Army surveillance at Ft. Bliss, Tex., the "paperclip scientists" worked with the remains of their V–2 research.

They reassembled V–2s and sent them to record altitudes from White Sands Missile Range, and they began work that was really the beginning of the Army's ballistic missile program.

In 1950, they were moved to Huntsville's Redstone Arsenal. Two years later Von Braun was attracting national attention with speeches and magazine articles on space exploration. In interviews he began to talk confidently of someday visiting the moon with his family.

Remarkably, since they had developed weapons that Hitler fired on civilians toward the end of World War II, the German rocket men were received with little bitterness in Texas and Alabama.

Heimburg does recall one incident when he heard a secretary refer to him behind his back as a "butcher," but such incidents were few.

In Texas, living in barracks under the watchful eye of the Army, they made contact with the outside world slowly, drawn children began going to Texas schools well over a year after they had been slipped into the United States.

Life was made easier for them by Col. H. N. Toftoy, the Army officer who played the key role in getting them to the United States.

In moving the scientists to Huntsville to begin work on Army missile development, Toftoy emphasized to leaders of the civilian community that the engineers had come to the United States of their own choice, that they could have gone to the Soviet Union, Great Britain or France.

Their integration into the community was rapid—Walter Wiesman was elected president of the Huntsville Jaycees before he had even been in the country long enough to become a citizen.

By the time the rocket team began work in Huntsville, the refugees from Peenemunde were by far outnumbered by native-born American engineers. While they were accepted by the community, the V–2 developers were still "different" from their new colleagues.

They were, for example, still under orders from the Army not to speak German during working hours.

But, during the later heyday of missile and space development programs, members of the original German team held most of the key management posts.

William R. Lucas, now director of the Marshall Center, began working with the group shortly after their arrival here.

He recalls that "there was some feeling" that the Germans were shown favoritism. But he added, "I think Von Braun, because he was their leader and had brought them over here, was only trying to see that they got a fair shake."

Lucas said the Germans inevitably were given the critical posts in the early days because they had experience that was then unique.

The last chance to continue the momentum the U.S. space program developed on the way to the moon apparently was lost not long after Von Braun left Huntsville for Washington.

Thomas O. Paine, president of Northrop Corp., who was then administrator of the space agency, had asked Von Braun to move to NASA headquarters to lead development of plans for a manned Mars expedition after the Apollo program.

Paine did not think the chances were good that the Nixon administration would make such a commitment, but he said, "I thought it was NASA's duty to put before the public the best possible proposal." Von Braun was needed not only for his imagination and technical competence, but because he was unmatched as a spokesman for the space program.

The Mars program got nowhere with the Nixon White House.

Not long afterward, Paine resigned, and von Braun, like his old colleagues, undoubtedly realized that there was no way to make space a high national priority at any time soon.

Looking back at his close association with von Braun's Peenemunde group, Paine credits them with other accomplishments as important as their role in the Apollo moon landing.

They provided the foundation for Rocket developments in both the United States and the Soviet Union after World War II; they were the first to capitalize on theoretical work done in the 1920s and 1930s by scientists in Germany and the Soviet Union, and by Robert Goddard in the United States; and they showed a great deal about themselves and about the United States by the way they were able to move into American society almost immediately after the war.

Mr. DERWINSKI. Mr. Speaker, this is the birth date—65 years ago—of Wernher von Braun. I am pleased to offer warmest congratulations to Dr. von Braun and his devoted family. In the annals of man's ascent to space, his name will be emblazoned. Among the thousands whose skill and energy opened the ultimate frontier, he is a giant.

Dr. von Braun led the brilliant team that placed the first U.S. satellite in orbit. As Director of NASA's Marshall Space Flight Center, he was responsible for developing the mighty Saturn 5 rockets that took Americans to the Moon. He believes that the catalyst of space exploration will unite humanity to supplant the war, terror, and political turbulence of the 20th century.

As President of the National Space Institute, Wernher von Braun reminded the membership that—

> The space program already has produced unexpected blessings and byproducts too numerous to list. But we should never forget that it all started as a dream. Perhaps the most important mission of the National Space Institute is to keep that dream alive. Therefore, we invite all of you who are young at heart and believe in a continued material and spiritual growth of mankind to join us. The Earth does not pose a limit. Our limit is the sky.

Those words represent the devout patriotism and religious convictions of Wernher von Braun. He is 65 today and we are all the richer for those years.

Mr. ABDNOR. Mr. Speaker, mention of the name Wernher von Braun conjures up images of rockets and visions of spaces. Indeed, this gentleman's insights have been largely responsible for our many technological achievements. These achievements, however, go far beyond thrust power, our awesome lunar landings, our satellite technology, our deep space probes, all a part of the mighty rockets he has been designing much of his life.

The rockets, and the exploration which was possible because we had the rockets, are in themselves a magnificent tribute to the von Braun genius. Also a tribute,

albeit indirectly, are the many spinoffs of the space program which we now accept as part and parcel of our daily lives. Achievements in communications, in medicine, in electronics, in energy, in resource conservation, in thousands of products with everyday application, all have their origin in the space program.

It is highly appropriate the Members of Congress join in recognizing the sterling contributions of Dr. von Braun to our science and industry, to thank him for his dedication and perseverance, and to wish him well.

Mr. KEMP. Mr. Speaker, I commend the efforts of my colleague, DON FUQUA, for focusing congressional attention and commendation on this, the 65th birthday of America's great space pioneer, Dr. Wernher von Braun.

It is a great honor for me to have this opportunity to help express the appreciation of the American people and myself for the outstanding contributions Dr. von Braun has made to our country.

Working toward the ultimate goal of landing a man on the Moon and returning him safely to Earth, he expounded his belief that the probability of man's voyage into space was, in fact, a down-to-earth possibility.

Dr. von Braun was born in Wirsitz, Germany, and as a youth, he joined the German Society for Space Travel. Writing in his textbooks at the age of 13, he expressed the belief that, "space travel's time had come." After receiving his Ph. D. in physics from the University of Berlin in 1934, he subsequently began full-time work on rocket motors; bringing the level of technology of rockets and missiles many years ahead of all other countries.

After having come to the United States at the end of World War II with key members of his technical staff, he became by 1950 the director of the U.S. Army ballistics weapons program at Huntsville, Ala. It was here that the Redstone, Jupiter–C, Jupiter, Juno, and Pershing missiles were developed.

After the Soviet Union launched Sputnik I on October 4, 1957, von Braun and his team placed the first U.S. satellite, Explorer I, in orbit on January 31, 1958, and continued to lead the way in making new advances in the field of space exploration.

As Director of the George C. Marshall Space Flight Center, he continued to pursue the goal of landing man on the Moon by developing large space launch vehicles, like the Saturn V for Project Apollo.

Although the field he worked in was extremely complex, Dr. von Braun remained a practical man. He knew what could and could not be done. He analyzed the obstacles laying before him, and by sheer dedication and perseverance he removed them. Supplying enthusiastic leadership to his team and the promotion of his goal, he exemplified the spirit of spending one's self in a worthy cause.

It was under his direction that the development of the Skylab was initiated, as well as the development of the lunar roving vehicle which provided the transportation for the astronauts on the Moon's surface. He conceived the idea of docking in space as a means of traveling to the Moon a decade before it was ever physically produced. It can honestly be stated, that had it not been for his dynamic leadership, we would never be as far advanced in the field of space travel and exploration as we are today.

Due to the direction of Dr. von Braun and the great devotions of his team, we have been taken to the threshold of the stars. This drive has yielded immeasurable benefits to man here on Earth. Under the space program, we have greatly profited by the continual operations of orbiting weather and communications satellites. The Nimbus, and other weather satellites can determine why and how tornadoes form, as well as how they might be prevented. In the field of weather forecasting, these satellites will save up to $5.5 billion per year by initiating weekly forecasts.

Being able to communicate around the world, monitoring and observing the Earth from above the surface, locating and identifying deposits of oil, coal, and other natural resources from space, benefiting by the use of precision guidance systems, and gaining by the institution of safety and quality control standards, are all but a few of the many utilizations due to the space program. Research and development in this field has also flowed over in spinoff benefits to other industries. A study conducted by Chase Econometric Associates, Inc., in 1975, stated that each new dollar invested annually on space R. & D. would return $23 over a 10-year period. This is the true human value of Dr. von Braun's dream of space exploration, and of making man's life more productive by opening new areas of technology here on Earth.

It became Dr. von Braun's belief that it was part of man's destiny and evolution to reach out and venture into space. It was now in the destiny of man to take the next step in extending his life—a step into space. Man would in this way learn more about himself and develop a closer relationship with the world, and the forces of nature around him. It is the "wanderlust" and the adventure spirit in man which is responsible for this, and he should not be held back from it. In essence, Von Braun believed that man could get the most out of Earth, by going out into space.

I only hope that our efforts in space travel and exploration have not become diluted and jeopardized by recent delays in this program. Dr. von Braun has taken us far and has accomplished much before he retired, but it is now up to us to take the next step by assuring a rebirth of that spirit of the 1960's associated with man's voyage into space. We celebrated the Bicentennial last year, but we also witnessed the soft landing of the Viking Explorer on Mars and the development of the Space Shuttle.

We must continue to make realities out of the dreams of men like Dr. von Braun, who through vision and dedicated work can in the end know the great enthusiasms and the triumphs of high achievement.

Mr. Speaker, let us continue the legacy of Dr. Wernher von Braun, by keeping our feet on the ground, while continuing to reach for the stars.

Mr. BEVILL. Mr. Speaker, I wish to join my colleagues today in saluting Dr. Wernher von Braun on the occasion of his 65th birthday.

The accomplishments of this remarkable man are numerous, but his efforts in pioneering and administering our national space program during the past two decades are particularly noteworthy.

And it is those efforts in behalf of our exploits in outer space around which I wish to center my remarks during this special salute to Dr. von Braun.

As a Representative from Alabama, I have always attached special significance to the work of Dr. von Braun and have followed closely his dedicated career in the field of space exploration.

For 20 years from 1950–70, Dr. von Braun was a resident of Huntsville, Ala., where he held various administrative positions at the U.S. Army's Redstone Arsenal and later in the George C. Marshall Space Flight Center.

When the Marshall Space Flight Center began operations in 1960 with its mission to land an American on the Moon by the end of the decade, Wernher von Braun was there as its director.

As has always been characteristic of the man, he saw the mission successfully completed. He left Huntsville in early 1970 for assignment in Washington, D.C. as the National Aeronautics and Space Administration's deputy associate administrator in charge of charting a course for future American space exploits.

Dr. von Braun later accepted a position as vice president of engineering and development with Fairchild Industries, a post he held until his retirement on January 1 of this year.

As I stated previously, the scientific accomplishments of Wernher von Braun are innumerable. But allow me to share with you an example of one of his many accomplishments which I believe more than adequately points out the dedication and zeal with which Dr. von Braun approached his work.

During the mid-1950's, Dr. von Braun pressed his superiors in the Defense Department for the authority to attempt a satellite launch. However, his superiors were not quite ready for space exploration.

The successful orbit of the Soviet Union's Sputnik I and II in October and November 1957, changed the Government's mind about space and the result was an around-the-clock effort at Huntsville's Redstone Arsenal to get the United States into the space business.

As head of that effort, von Braun knew what had to be done and how, since he had planned for such an opportunity almost all of his life.

On January 31, 1958, the American satellite Explorer I went into orbit around the Earth—an incredibly brief 84 days after von Braun had been given the green light to develop such a mission.

The rest of Dr. von Braun's association with the U.S. space program is history. From the successful orbit of Explorer I in 1958 to the climactic landing on the Moon of July 20, 1969, the role played by Wernher von Braun can only be described as immeasurable.

As much as any single person, Dr. Wernher von Braun is responsible for our successful mission in outer space to date. And all future ventures in that realm will be indebted to him, for without his foresight and perception, the feasibility of such missions would have diminished greatly.

With that in mind, it is with a sense of appreciation for his efforts in behalf of the United States that I enthusiastically join my colleagues in saluting a great American—Dr. Wernher von Braun.

Mr. DUNCAN of Tennessee. Mr. Speaker, it is most appropriate that we should take this opportunity to pay tribute to Dr. Wernher von Braun, a man who for nearly five decades has been preeminent in the development and application of rocketry in science, industry and space exploration and research, and a man who has made invaluable contributions to the quality of human life.

Dr. von Braun, since his imagination was stirred at the age of 12 by a auto racer using crude rockets on his car, has been a visionary in the field of rocket science. He has always demonstrated an almost uncanny ability to assess present knowledge and project how that knowledge might be improved and applied successfully to future endeavors. Dr. von Braun has also been a realist and a pragmatist. He has consistently taken dreams of the future and used them to create improvements in the quality of life today. Taken separately, these qualities are not so remarkable, but combined they are the essence of an extraordinary individual.

The contributions Dr. von Braun has made thus far to the advancement of humanity are rather easily discerned. However, the rewards which will be reaped by future generations as a result of the pioneering efforts of Wernher von Braun will most likely be even greater than those we recognize today. This is surely the truest measure of greatness and of Dr. Wernher von Braun.

Mr. RHODES. Mr. Speaker, outer space is the latest great frontier for us who live on this Earth. March 25 marked the 65th birthday of a man who has contributed much to our exploration of the celestial universe.

He is one of the major architects of our Apollo lunar landing program. He began his scientific career in the days when rocketry was little more than a glorified roman candle. He came to America from Germany, and has established himself as an innovator and visionary scientist in evolving the concepts that have seen our Nation move into world leadership in outer space exploration.

The spin-offs in technology and practical products from our space program help improve the standard of living of the American people. We are deeply indebted to Dr. Wernher von Braun for his dedication to space science, his imagination and knowledge of the technology, which has enabled us to move from the experimental to useful satellites and prospects for a space shuttle that will open new vistas of opportunity in future years.

I join my colleagues in extending our appreciation to Dr. Wernher von Braun, who has made an indelible impression on history and carved out an outstanding career as one of America's space pioneers.

Mr. SYMMS. Mr. Speaker, I am pleased to associate myself with Mr. FUQUA and my other colleagues in the House in paying honor to Dr. Wernher von Braun—truly one of the giants of the 20th century—on his 65th birthday.

There are all too few men and women among us with the vision and innovative thinking that is characteristic of Dr. von Braun. I will always regard him, as will most Americans, as the father of America's space program as well as the world's most distinguished rocket engineer.

It is safe to say, I am sure, that had Dr. von Braun not chosen to come to America at the end of World War II the United States would not be the world leader today in rocket and space technology, and in all likelihood we would not have been able to send men to the Moon and back by the year 1969

Many years ago when rocket technology was very young Dr. von Braun was already doing studies on advanced space missions. One of these was entitled "The Mars Project," a most impressive description of the technical requirements for a manned interplanetary journey to Mars and back. Dr. von Braun was also one of the first to emphasize the importance of a permanent space station in orbit around the Earth.

Furthermore, Mr. Speaker, he has authored a number of books on rocketry and space travel that I would highly recommend to anyone interested in the subject. Two of these are "History of Rocketry and Space Travel," and the recently published "Rockets Red Glare."

In July of 1963 Popular Science magazine carried a most interesting article by Dr. von Braun entitled "Can We Ever Go to the Stars?" I would like to include this article in my remarks today; it reads as follows:

DR. WERHNER VON BRAUN LAYS THE CARDS ON THE TABLE: CAN WE EVER GO TO THE STARS?

Q. Will we ever be able to travel to solar systems beyond our own?

A. The past 20 years should have taught us to use the word "impossible" with utmost caution. Nevertheless, human travel beyond our own solar system is a staggering concept. Even the most reckless optimists do not expect it to come about in our generation—or the next.

Light, traveling at 186,000 miles per second, needs 8.3 minutes to span the 93 million miles between the sun and earth. Light takes 5½ hours to travel from the sun to Pluto, outermost planet of our solar system. But it takes 4.3 years to reach Alpha Centauri, the nearest fixed star (4.3 light-years away); 470 years to Polaris; and 27,000 years to get to the center of our galaxy—a lens-shaped island in space, a little less than 100,000 light-years in diameter, made up of an estimated total of some 200 billion suns.

Q. Can we build a rocket powerful enough to travel so far?

A. We have to impart to an object a velocity of slightly more than 25,000 feet per second to place it in a low orbit around the earth. About 36,000 feet per second is needed to hurl it to the moon—which is still within range of the earth's pull—and just a trifle more to kick it completely out of the earth's gravitational field. If we accelerate it up to a terminal speed of 56,000 feet per second (in such a fashion that it leaves the earth in the same direction in which the earth is orbiting at 107,000 feet per second around the sun), it will enter a parabolic flight path and escape from our solar system.

From the point of view of power requirements, a needed velocity of 56,000 feet per second (38,000 m.p.h.) may not sound too bad. Just one extra stage on top of the Saturn V, our Apollo moon rocket, could impart that speed to an object of about 8,000 pounds. But as the object coasted, its power spent, on its "uphill" path out of the pull of the sun's gravity, its speed would gradually diminish almost to zero. Millions of years would elapse before it reached one of the nearest fixed stars.

To reduce travel time to figures compatible with the life span of man, travel speeds must approach the speed of light.

Not even nuclear-fission or nuclear-fusion processes are adequate to produce such speeds. For all their dramatic display of power, they convert only a tiny fraction of the mass involved into energy. It would be necessary to devise a rocket mechanism wherein the *entire* mass, M, of the injected "propellant" is coverted into radiation energy, E, according to Einstein's famous equation: $E=M\times C^2$. The exhaust of such a "photon rocket" would be a beam of radiation, and the exhaust velocity would of course be equal to the velocity of light, C.

The problem is that nobody knows how to build a photon rocket. Certain subatomic processes are known, such as the joining of an electron (a small negatively charged particle) with a positron (an equally small positively charged particle), that directly transform matter into energy according to Einstein's equation. But so far, physicists have been unable to devise any large-scale processes for this transformation.

There are also tremendous engineering obstacles. By definition, a photon rocket converts its propellant stream into an extremely powerful light beam. To bundle this beam, some sort of mirror is needed. Even if it had a reflectivity of 99 percent, better than our best existing ones, that one percent of absorbed radiation energy would instantly melt the mirror—considering the billions of kilowatts converted into the power carried away by the light beam.

Q. Is it true that it is impossible to exceed the speed of light?

A. Yes. But as we shall see, this is partly a matter of definition. Suppose we had overcome the "minor" problems just described, and we did have a rocket capable of "beaming away" 100 percent of the mass of its propellant with an exhaust velocity equal to the speed of light. What could we do with it?

If the rocket had a mass ratio (the ratio between its fully fueled and empty weight) of 3, it could reach 80 percent of the speed of light. With a mass ratio of 10, its terminal velocity would be about 98 percent; and with a mass ratio of 1,000 (about what we have today in some of our chemical multistage planetary rockets), we would hit 99.9998 percent of the speed of light.

Again we refer to Dr. Einstein. His Theory of Relativity (which has stood the test of many critical experiments, and has been universally accepted by the scientific community) shows that the inertia of an object's mass approaches infinity as the object approaches the speed of light. Hence it would take infinite power to accelerate an object beyond the "light barrier."

But, amazingly enough, the same theory states that a stellar astronaut could still travel to a star 1,000 light-years away and return within his adult life.

Q. How could an astronaut travel 2,000 light-years in a lifetime?

A. "Time dilation" would help him to stay young. For many people, the strange phenomenon called time dilation is a hard pill to swallow. The flow of time appears to us completely unaffected by physical conditions. Whether we sleep or work, sit at a desk or in a speeding jetliner, our wrist watch seems to tick away at the same pace. So does our heart.

But the fact is that this cherished piece of "everyday experience" is valid only in the realm of relatively low velocities in which we slowpokes live.

A meson (an unstable subatomic particle), when trave ing at a velocity close to the speed of light, has a clearly longer decay time than its 2.1-microsecond "half-life" at lower speeds—when an earth-fixed observer does the timing. But if the observer were flying along with the meson, the half-life of 2.1 microseconds would not seem to be affected by the particle's speed, since the observer's watch would be subjected to the same time dilation as the meson itself.

The Theory of Relativity tells us that the pace of time becomes slower and slower for an object approaching the speed of light, compared with time's rate of passage for a stationary observer. At the speed of light itself—an upper limit that no object can ever reach—time would come to a complete standstill. If an object could go so fast, it could cover vast distances while, for a man flying along with it, no time would elapse—neither for his watch nor for his heartbeat, which controls his life span.

This strange effect makes it possible for a stellar astronaut to travel from the earth to a fixed star 1,000 light-years away, in what he would think was 13.2 years. For the trip back he would need another 13.2 years. If he didn't spend any additional time at his destination, he would thus have been away from the earth for 26.4 years. The trouble is that during his absence, more than 2,000 years would have elapsed on earth. Thus, upon return, he might wind up in a zoo.

Q. What would a trip to a star be like?

A. Let us assume we have a photon rocket of 1 G. Suppose, too, that our mass ratio is large enough to get us very close to the speed of light; carry us to a star 1,000 light-years away; and slow us down again to normal speeds, so we can visit one of the star's planets. The rocket is also to be capable of flying us back to earth—possibly by "refueling" during the stay at that distant solar system.

As we depart from the earth, the stars of the firmament will first appear in their familiar yellowish hue. As our vehicle builds up speed toward our target star, the Doppler effect will cause a striking change in this star's color. From its original yellow, the light received from it will shift through green, blue, and violet, and toward ultraviolet—in other words, to higher frequencies. Simultaneously the color of the receding sun will slowly change from yellow to orange, red, and toward infrared—that is, to lower frequencies.

This is easy to understand: A boat running against the waves is hit by them at a higher frequency than a stationary pier is; a boat running with the waves, at a reduced frequency.

After about 3½ months our stellar photon rocket has reached about 30 percent of the speed of light. The frequency of the sun's peak radiation output now passes the border of the visible spectrum and moves into the infrared. As a result, the sun dims rapidly, and soon becomes invisible. One month later, the destination star likewise becomes invisible—the peak of its radiation intensity has shifted into the ultraviolet.

As our velocity keeps increasing, two circular dark spots are formed around the destination star and the sun, and keep growing in diameter. Between these blind "bow and stern spots," the stars of the firmament appear as a multicolored array of concentric circles, like a huge rainbow:

Near the black bow spot, the stars look violet. Further aft, they are blue and green. Abeam, they shine in their original yellowish hue. Still farther aft, they look orange, and the dark stern spot is surrounded by a ring of red stars.

Due to "relativistic" effects, the dark bow spot grows only to an opening angle of 43 degrees. After we exceed 74 percent of the speed of light (11 months after departure), it begins to contract again. But the stern spot around the sun continues to grow steadily. Hence, as our traveling speed approaches the speed of light, the visible portion of the firmament will become compressed into an ever-narrowing rainbow around the invisible target star.

The opening angle of the yellow ring, in this rainbow, is a perfect yardstick for the ratio between our traveling speed and the speed of light. In analogy to the well-known Mach Number (ratio of flight speed to speed of sound), this ratio is sometimes called the Einstein Number.

In 6.6 years from the time of departure, our speeding photon rocket hits Einstein Number .999998, and we are at the halfway point of our journey. However, on trying to measure the remaining distance to our destination star (now emitting predominantly X rays), we find it only about a light-year away! In fact, without further power application, we would pass it a year later—7.6 years' "dilated ship's time" after departure—if we were to refrain from slowing down for our forthcoming visit.

But in order to visit one of the star's planets, we have to turn our ship around and use our photonic rocket thrust for braking. Of ccurse our slowing down means that we'll reach our target, not in another year, but much later. Only after another 6.6 years—13.2 years after departure—will we near our target, at a relative approach speed close to zero. During the second 6.6 years—that is, during the retardation maneuver—all those celestial "rainbow" phenomena of the acceleration period will take place in reverse. Upon arrival, the firmament will look like its old self again.

If we had a telescope powerful enough to observe events on earth from our new vantage point, we would find our home planet very much as it was when we left it. But, being 1,000 light-years away, we are actually watching events that happened on earth 1,000 years ago. (This is the nondilated time that has elapsed on *earth* since we left.) The amazing thing is that, due to the time dilation aboard our speeding rocket, we have aged only 13.2 years during our outbound voyage.

Eerie as this may sound, it is all in perfect harmony with modern ideas of the laws of space and time. (Men today have the same difficulty in accepting the concept of relativistic time that our ancestors had in seeing how people "down under" in Australia could walk head down without dropping off the globe. But that is because our experience does not include very great distances and extremely high speeds.)

While the insights of modern physics permit us to dissect the anatomy of interstellar flight, we must forego rash conclusions that any such flights are imminent, or feasible. We cannot yet even define an adequate power source. If we had it, many problems of using it would be beyond us. Other obstacles may be even more formidable. For instance, what would happen to an interstellar rocket that hit even a small meteoroid, if the collision were at nearly the speed of light?

In summary, with our present knowledge, we can respond to the challenge of stellar space flight solely with intellectual concepts and purely hypothetical analysis. Hardware solutions are still entirely beyond our reach and far, far away.

It is a pleasure, Mr. Speaker, for me to have the opportunity to join with my colleagues in honoring this great American who has contributed so much to the knowledge and enlightenment of mankind. To Dr. Wernher von Braun we say thank you and all the best wishes in the future.

GENERAL LEAVE

Mr. WALGREN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks, and to include therein extraneous material, on the subject of the special order taken today by the gentleman from Florida (Mr. FUQUA).

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

AN END TO THE GILBERT INEQUITY

The SPEAKER. Under a previous order of the House, the gentleman from Connecticut (Mr. MCKINNEY) is recognized for 5 minutes.

Mr. MCKINNEY. Mr. Speaker, since the Supreme Court's decision in the General Electric against Gilbert case last December, I have been in close contact with those who feel, as I do, that legislation is necessary to reverse the effects of that clearly erroneous decision. Therefore, it is in the hope of bringing real equality to over 1.3 million working American women that I join in sponsoring a bill to amend title VII of the 1964 Civil Rights Act and thereby include pregnancy among prohibited sex-based discriminatory classifications.

This bill would insure that, notwithstanding the Gilbert decision, unlawful employment discrimination would include any reduction in pay or seniority as well as termination solely because a female worker became pregnant. There can be no doubt of the need for immediate action in this area. A vast and important cross section of our population is directly affected by this court-produced lack of employment protection. We are not dealing with the needs of a few poor families but with 85 percent of working women who, at some time, become pregnant and who now must suffer a loss of earnings or employment as a result. Those employed women are either the sole wage earner in the family or those whose husbands make less than $7,000 annually. When these women lose income or return to a job with a reduction in status after pregnancy, a great setback can occur in family finances just when there is another mouth to feed.

As in the General Electric case, the standard company-financed disability program provides for:

Nonoccupational sickness to all of its employees for each week the employee is absent from and unable to work on account of any disability resulting from non-occupational accident or illness up to and including 26 weeks for any one continuous period of dis-

ability or successive period of disability due to the same or related cause.

Although this states that it must be an accident or illness which triggers benefits, cosmetic surgery—a clearly voluntary disability—is most often covered under the standard plan. Thus the Court's thin argument that pregnancy is of necessity a "voluntary condition" and therefore, not worthy of civil rights protection is simply factually incorrect. It is widely agreed that there is no perfect contraceptive. This means not all pregnancies are planned and, as a matter of fact, 44 percent of all births to married women are unplanned or "involuntary," according to the national fertility survey conducted by Princeton University.

Even if existing disability policies do not clearly cover arguably voluntary conditions, it is clear to me that as a matter of commonsense and public policy pregnancy should be covered in any discrimination-free disability plan. My understanding of the civil rights law has always been that sex discrimination in any form was forbidden in employment practices. Since it is an obvious biological fact that only women can become pregnant, job discrimination based on pregnancy seems to me the most fundamental form of sex-based bias. The dissenting Justices in Gilbert described as "simplistic and misleading" the majority's claim that General Electric's disability plan was "gender-neutral." In view of the fact that vasectomies and other solely male disabilities are covered by the standard plan, the conclusion is inescapable that the exclusion of pregnancy in an otherwise comprehensive plan constitutes sex-based discrimination.

Mr. Speaker, the road to equal employment opportunity for minorities and women has been too long and too hard for us to tolerate this unnecessary obstacle which clearly flies in the face of known fact, statutory language and administrative policy as set forth by the Equal Opportunity Commission. It is, therefore, with the greatest sense of urgency that I join in sponsoring this bill and urge prompt House action before those who do cover pregnancy equally begin to rescind that coverage. Adoption of this measure will forestall the damage of Gilbert and its inevitable progeny while bringing job security to an important segment of the national labor force.

LEGISLATION TO EXEMPT INFLATABLE BOATS FROM PROVISIONS OF JONES ACT

The SPEAKER. Under a previous order of the House, the gentleman from Alabama (Mr. EDWARDS) is recognized for 5 minutes.

Mr. EDWARDS of Alabama. Mr. Speaker, today I am introducing legislation to protect inflatable river rafts from a totally absurd application of the law.

The Jones Act, which prohibits traffic between points in the United States by any foreign vessels, is being applied by the U.S. Customs Service to rubber rafts used for recreational river running. This is in my opinion excessive and ridiculous. True, these rafts do carry cargo (if you consider food, clothing and sleeping bags of the river runners as cargo), and they do travel on navigable U.S. waterways between points in this country. But there is no way that they pose a threat to the U.S. merchant marine. They cannot be and are not used for the large-scale, profitable transport of commercial goods. They carry at most 12 people, and they are used only seasonally. Nor do the rafts represent a threat to U.S. manufacturers—rafting enthusiasts have to buy foreign rafts because the domestic supply is exhausted and American manufacturers simply cannot produce enough rafts to satisfy the growing demand. My bill would solve this problem by exempting inflatable boats used for river running from the provisions of the Jones Act.

This is only sensible; and I urge all my colleagues—those who enjoy rafting as I do and those who simply appreciate the need for this exemption—to support me in this effort.

POST OFFICE LEGISLATION

The SPEAKER. Under a previous order of the House, the gentleman from Maryland (Mr. STEERS) is recognized for 5 minutes.

Mr. STEERS. Mr. Speaker, today I am introducing two pieces of legislation that deals with Postal Service rules and regulations.

The first bill would require the Postal Service to consult with agencies of State and local government with respect to the construction of certain Postal Service facilities. This bill would establish hearings and consultation with local governments when the Postal Service wants to build an office in that town or city.

This is a proposal that was originally introduced by my predecessor Gilbert Gude. During Mr. Gude's outstanding tenure as the Congressman from the Eighth Congressional District of Maryland, he was confronted with the problem of construction of a postal facility in Olney, Md. The whole process of consultation with people interested in local scenic values was handled so informally, that the process broke down. The citizen's association in Olney felt that the design of the new post office was not in keeping with the way the town likes to present itself.

When we consider that the local post office is the "front line" of Federal contact with all citizens it is especially important that the Postal Service and the local citizens discuss and work together to handle problems as they arise.

The second bill I am proposing is to allow certain organizations to deposit mailable material in letterboxes, without having that material go through the mail delivery system.

I have long felt a person's mailbox is his own and should receive material other than what the mail services deposit in it. A member of the Maryland House of Delegates, Ms. Judith Toth contacted me soon after I assumed office and asked that I check into this matter. In so doing, I can find no reasonable reason why a private mailbox cannot be used by worthy nonprofit organizations to communicate to citizens in a given area. I foresee where this measure would help defray costs for organizations that can least afford the cost of mass mailings.

I am hopeful that these two measures will meet with the approval of the 95th Congress.

EPA'S PROPOSED CLEAN AIR STANDARDS FOR GRAIN ELEVATORS NEED FURTHER STUDY

The SPEAKER. Under a previous order of the House, the gentleman from Minnesota (Mr. HAGEDORN) is recognized for 5 minutes.

Mr. HAGEDORN. Mr. Speaker, on January 13, the Environmental Protection Agency issued proposed clean air standards for grain elevators throughout the country, arguing that they contribute "significantly" to air pollution and the endangerment of public health and welfare.

If nothing else, the experience with Government regulation over the past several years should have taught us that there must be some consideration of both costs and benefits. I question whether or not that has been fully done here. EPA has filed no inflation impact statement with these regulations, engaged in little discussion or alternative methods for achieving its standards, and with respect to many of the cost estimates seems to have insufficient data. No data was collected on the standards for hopper car loading operations which EPA contends, nevertheless, represent the "best demonstrated technology". National standards for boxcar loading operations are justified on the basis of 120 minutes of observation. And, despite the admission that they were unable to locate any truck loading operations in the grain industry, EPA feels no hesitation at proposing detailed regulations on how to reduce emissions generated by such operations.

Indeed, there is little discussion devoted to whether or not the slight incremental improvements in air quality which will be occasioned by Federal involvement justify any regulation whatsoever. It is no secret that elevator operations are not commonly located in those areas of the country most beset by poor air quality and noxious levels of pollution.

EPA estimates that its proposed standards will only affect an approximate 500 elevators over the course of the next 5 years, involving $26 million in capital costs, $5.5 million in annual maintenance costs, and added production costs of "less than 1 cent per bushel." As usual, these estimates do not presumably include the cost of hiring lawyers to interpret EPA regulations, the effort involved in commenting upon proposed regulations, and the costs and time involved in filing and maintaining the paperwork necessitated by these regulations. Nor, apparently, does it reflect fully the increased energy costs imposed upon companies by the addition of pollution control equipment.

EPA cost estimates are not shared by the industry. They suggest that the number of affected elevators, which includes all new, modified, and recon-

structed operations, could total as many as 4,000, with each of them subject to costs as high as six times the official EPA estimate. EPA's 1-cent-per-bushel figure, critics suggest, will more closely approximate the additional cost involved at each step of the grain handling operation, with the average bushel passing through at least four steps: from the elevator to the terminal, from the terminal to the barge terminal, and from the barge terminal to the processor or export terminal. In any event, EPA's understanding of the market conditions in the grain industry are probably best illustrated by its assurances that any increases would be "negligible," easily passed on to the producer, and completely irrelevant to the supply and demand situation in the industry.

In its regulations, EPA repeatedly alludes to absolute concepts such as "zero percent capacity", "no visible emissions", and "99 percent reductions in uncontrolled particulate matter." These references, all too typical of environmental regulation in recent years, are premised upon the idea that man is an intruder in his own environment rather than an integral part of it. There are serious difficulties in the implementation, administration, and the enforcement of such laws. What is the feasibility of a standard which precludes even the occasional, sporadic release of dust? To require devices with emission collection efficiency of 99 percent, as EPA proposes, is to at least double the cost that would otherwise be imposed through slightly more flexible 90 percent standards, as, for example, the State of Illinois has required.

There are other questions that EPA seems to have left unanswered in the discussion of its regulations. What possible conflicts are there with EPA's own noise regulations as a result of the required installation of fabric filters with large motors and fans? Have they considered the studies of the National Institute of Occupational Safety and Health in measuring random emissions, a concept which EPA states is currently impractical? What about the possible safety hazards involved in requiring the individual decoupling of unit trains in totally enclosed shelters? What about the suggestion that fabric filters are the source of potentially serious explosions? What is the justification for subjecting the grain industry to more stringent emission standards than other industries which contribute far more substantially to air pollution problems?

If EPA has given greater consideration to these issues than its proposed regulations suggest, those in the grain industry ought to be apprised of these facts. As it currently stands, there is not a great deal of confidence in what EPA has done. The deadline for comment on EPA's proposed regulations is May 14.

THE ILLEGAL ALIEN SITUATION

The SPEAKER. Under a previous order of the House, the gentleman from California (Mr. BOB WILSON) is recognized for 5 minutes.

Mr. BOB WILSON. Mr. Speaker, over the past weekend, almost 2,000 illegal aliens were apprehended in 36 hours in the San Diego area by the U.S. Border Patrol in a series of surprise weekend checkpoints near the Mexican border and on northbound freeways. During a single 4-hour period between daylight Sunday and 9 a.m., a Border Patrol unit working with San Diego police and California State Highway Patrol officers apprehended 436 aliens at a surprise checkpoint on Interstate 805, south of Del Mar. Included in the haul were 57 vans used by the smugglers.

Incredible is too mild a word to describe the illegal alien situation in the United States today. Since illegal aliens try not to get caught, no one knows exactly how many of them are secretly living and working in the United States, but estimates generally run in the 6 to 8 million range. The cost in terms of both jobs and social services is staggering.

To cite just one example, emergency medical care for indigent illegal aliens cost San Diego County taxpayers $800,000 last year. For Los Angeles County, this figure was over $10 million. Yet, the influx continues at an ever-increasing pace with no end in sight. Congress must take decisive action to stop the influx and to protect the jobs and pocketbooks of U.S. citizens. Although communities close to the Mexican border bear the initial and greatest burden of illegal entries, many areas across the country are heavily impacted.

I hope the House Judiciary Committee will schedule expeditious consideration of legislation to penalize employers who knowingly hire illegal aliens. As an adjunct to that, I woud urge the committee to approve the legislation, which I am reintroducing today, to confiscate the means of transportation used to smuggle illegal aliens.

During the weekend raid, 57 vans and 6 taxicabs carrying aliens were seized. Most of the vehicles, like the smugglers themselves, are repeat offenders. Smuggling is big business with lots of money to be made by exploiting human misery. My bill would do much to take the profit out of alien smuggling by allowing the confiscation and forfeitures of the vehicles, vessels, and aircraft used. Similar authority now exists for confiscating the means of transportation used in smuggling cases involving narcotics and dangerous drugs.

The Department of Justice has on several previous occasions endorsed the passage of this legislation. Additionally, the December 1976 report of the Domestic Council Committee on Illegal Aliens said that such seizure and confiscation authority would greatly enhance enforcement of current immigration laws.

I cannot help wondering how many illegal aliens those 57 vans have brought into southern California in the past year—or what their total will be by the end of 1977. This bill is not a cure-all to the illegal alien problem. Its passage, however, will plug a major hole in the dike, while we attempt to deal with the situation on a comprehensive and long-term basis.

We have reached the crisis point—Congress must act and act quickly. This is not simply a problem for southern California, or Texas, or even the Southwest. Illegal aliens are a major economic drain in Chicago, in New York, in Washington, D.C., and probably in Atlanta, Ga.

GREEK INDEPENDENCE DAY

The SPEAKER. Under a previous order of the House, the gentleman from Illinois (Mr. ANNUNZIO) is recognized for 5 minutes.

Mr. ANNUNZIO. Mr. Speaker, the celebration of the 156th anniversary of the day, March 25, 1821, on which the Greek people declared their determination to once again become a free people after centuries of foreign domination is a great occasion in the history of mankind. It is this occasion that provides us with the opportunity to recall the immense contributions of Greece to Western civilization, and the awakening of modern interest in the fate of the Greek people as a result of their resolve to once again become an independent nation, announced to an unconcerned world over a century-and-a-half ago.

It is fitting that we in America should join the Greek people in celebrating this great moment in Greek history for several reasons. One of these is our debt to Greece for many of our American institutions, including our democratic system of government. The impact of Greek philosophy, art, literature, and political thought has contributed immeasurably to our own civilization. The emphasis on the dignity of men and the freedom of the human mind which marked Greece's golden age has been a rich legacy which has helped to shape our American traditions of law and government.

It is to Sophocles, Euripides, Aristophanes, and other playwrights that we owe the birth of drama as we know it. It is to Euclid, Archimedes, Hipparchus, Hippocrates, Aristotle, and others that we owe the birth of the sciences which have so changed the face of the world in which we live.

Although in 1821 other European nations gave little support to the Greek people in their quest for independence, here in the United States, support for their cause was found. It grew quickly as the North American nation which had fought for and secured its own liberty, wholeheartedly determined that a people whose tradition was a source of inspiration to American democracy should be free.

As President Monroe told the Congress:

> Genius and delicacy in the arts, daring and heroism in action, unselfish patriotism, enthusiastic zeal, and devotion to public and private liberty, all these are connected with the name of ancient Greece. It is natural, therefore, that their contest should arouse the sympathy of the entire United States.

For its part, the Greek nation looked upon the United States with hope and admiration. In May 1821, the first Greek Senate addressed the American people, saying:

> Friends, fellow citizens, and brothers, having formed the resolution to live or die for freedom, we are drawn toward you by just

sympathy, since it is in your land that liberty has fixed its abode.... Though separated from us by mighty oceans, your character brings you near us. . . . Our interests are of such nature as to cement more and more an alliance founded on freedom and virtue.

The contributions made and still being made to the growth and greatness of the United States by the Greeks who have chosen to make their homes here continue to cement the feelings we have for Greece, and on this anniversary of their independence, it is a pleasure for me to extend greetings to Americans of Greek descent in the 11th Congressional District, which I take pride in representing, as well as those in Chicago and across our nation as they celebrate the 156th anniversary of Greek independence.

ON THE NEED FOR CONTINUED RENT REGULATION IN NEW YORK CITY

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. KOCH) is recognized for 10 minutes.

Mr. KOCH. Mr. Speaker, in what has become an annual exercise, the New York State Legislature has taken up the future of rent regulation for millions of tenants who reside in rent controlled and rent stabilized apartments. State legislative action is made necessary by the expiration on June 30 of the 3-year-old Emergency Tenant Protection Act which authorizes rent stabilization for about two-thirds of New York City's 750,000 rent stabilized units. Unless the legislature, and particularly the State senate. acts in time, owners will be free to seek any amount of increase. Increases at this time are limited to 11% anually during the life of a 3-year lease.

As my colleagues from New York City know all too well, rent regulation is an emotionally laden issue. In an effort to acquaint my colleagues with the facts, I recently circulated an analysis of the arguments most often voiced against the extension of rent control. The memorandum, prepared by the New York State Tenants Coalition, parallels my own view, that while the present system of rent regulation in New York City is not beyond improvement, its elimination would cause undue hardships to millions of tenants, particularly those living on fixed or low incomes. In this regard, a little known fact is that despite rent control and rent stabilization programs, New York City apartment rents generally rose more than three times faster than tenant incomes between 1970 and 1975. I would submit, Mr. Speaker, that New York City's severe shortage of decent, moderately priced housing will not be ameliorated by the expiration of rent regulation statutes and the State legislature should recognize this and act with dispatch to extend the Emergency Protection Act of 1974.

My letter to my colleagues in the New York State delegation and the memorandum from the New York State Tenants Coalition follow·

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C.

DEAR COLLEAGUE: Last November, members of the New York City Congressional Delegation met with representatives of the New York State Tenant and Neighborhood Coalition. The Coalition has asked me to circulate the attached letter outlining the proposals which we discussed at that meeting. I am asking your support for these proposals and your continuing cooperation in working to help resolve the long range problems which are pointed out. The major issue discussed at the November meeting was the urgent need for renewal of existing rent and eviction regulations by the New York State Legislature and the potential impact of Administraitve and Congressional influence on Governor Carey and the State Legislature.

Although the legislative responsibility for rent and eviction regulation lies solely within the realm of the State Legislature, the Ford Administration had several times indicated that it intended to use the threat of withholding additional loans to New York City to force the State to amend or abolish these regulations. This posture caused considerable concern on the part of responsible housing groups like the Coalition, which feared the policies advocated by former Secretary of the Treasury Simon and members of Senator Proxmire's Banking, Housing, and Urban Affairs Committee staff might be pursued by the incoming Carter Administration.

I believe that the reform of existing rent legislation ought to continue to remain the prerogative of the State Legislature and not be dictated by outside agencies or bodies ill equipped to assess the real impact of such changes on the residents of New York Statc. The most cursory review of the arguments offered by Treasury officials and by Senator Proxmire's staff in support of proposed changes in existing rent regulations governing New York State reveals several misconceptions of the facts which invalidate the premises on which these arguments rest. They contend that the present rent and eviction laws should be phased out because they have caused housing deterioration and abandonment, erosion of the City's tax base, and lack of payment of real estate taxes by landlords.

In fact, abandonment occurs widely in upstate New York and in almost all the major cities where there are no rent and eviction regulations. Furthermore, abandonment is found in single and double family dwellings as well as multiple family dwellings. There is no indication that New York State's regulations have caused or even exacerbated a problem which exists nationwide in both regulated and non-regulated housing.

A recent study concluded by Professor Emanuel Tobier of the New York University Graduate School of Public Administration demonstrated that the tax assessments on New York City's lower income dwellings are significantly higher proportionately than those on higher income dwellings. Other studies show that the lowest income residents pay an average of as much as 25%–35% of their income for rent. Clearly, abandonment and loss of the tax base are not related to rent protections available to tenants, but to overassessments of taxes on low income properties and the inability of poorer tenants to pay the resultant inflated rents.

Finally, the City Council's report on non-payment for real estate taxes, which can be ordered from the City Council Committee on Charter and Government Operations, demonstrates that non-payment is not the result of excessive regulation but it is largely accounted for by (1) improperly enrolled properties which are tax exempt, (2) non rent controlled properties, and (3) landlords who eventually demonstrate the ability to pay (75% of non payments are ultimately paid as result of legal action).

It is of preeminent importance that members of the State Administration and Legislature be approached before June 30, 1977 when the three state laws which regulate rent and evictions expire. I urge you to use whatever influence you can with the state legislators representing your area to preserve these most essential protections for tenants.

Sincerely,

EDWARD T. KOCH.

NEW YORK STATE TENANT
AND NEIGHBORHOOD COALITION,
New York, N.Y., December 27, 1976.

Hon. EDWARD I. KOCH,
Member, U.S. House of Representatives,
New York, N.Y.

DEAR REPRESENTATIVE KOCH: Please accept our thanks for arranging the November 11, 1976 meeting with representatives of our organization and the New York City Congressional delegation. This letter is being sent to you in order for you to circulate it to the delegation, as we agreed; its purpose is to summarize the points we discussed November 11th.

We have been concerned for some time about the possibility of federal pressure on state and city government to abolish or further weaken rent and eviction regulations especially in light of the fact that on June 30, 1977 three state laws which regulate rents and evictions will expire unless extended by the State Legislature, and June 30, 1977 also marks the end of the current cycle of seasonal federal loans to New York City. It is common knowledge that the City of New York will be back in Washington on July 1, 1977 for another round of seasonal loans, and it is clear by statute that the Secretary of the Treasury has sole power to determine whether or not to grant additional loans.

It does not unduly stretch the imagination to construct a scenario whereby Washington refuses to approve new loans unless "concessions" are made in Albany on the rent issue. Certainly this is consistent with repeated statements by the current Secretary of the Treasury and his assistant deputy in charge of the New York City loan program, and with the report issued this year by the Congressional committee chaired by Senator Proxmire which oversees the loan program, and consistent with the role played this past June by Simon and Proxmire to force the State to reduce municipal employee pension benefits.

Even though the question of renewal of the existing rent laws is entirely within the jurisdiction of the State Legislature, it is nevertheless clear that the attitude of federal officials will be an imporant factor in the overall political framework in which the renewal or non-renewal of these laws is discussed in Albany.

We should point out that we are working for comprehensive reform of the existing rent laws, which are confusing and inadequate. As badly in need of reform as they are, however, should the existing rent laws be allowed to expire, widespread disruption and hardship will be the lot of the tenants who are presently covered by them. Even though tenants outside of New York City will be affected by the renewal or non-renewal of these laws, any federal involvement in the issue is likely to be focused on the City, and this is the reason we are asking the City delegation to involve itself in this struggle.

There are two basic arguments advanced by Treasury officials and Senator Proxmire's staff to support their position that rent and eviction regulations should be phased out: that these laws have resulted in housing

deterioration and abandonment, and that they have resulted in erosion of the City's tax base and non-payment of real estate taxes by landlords. It is our position that these arguments are contrary to fact.

Abandonment is a complex phenomenon. Our own experience as a statewide organization is that many inner cities in upstate New York which have not had rent and eviction regulation for many years nevertheless have serious problems of housing abandonment and neighborhood decay. We know of communities in Albany where one finds well-maintained apartments still subject to the old state rent law (one of the three laws due to expire next year) and, next door, speculator-owned buildings removed from regulations under the vacancy decontrol law which are filled with code violations. In late 1975 an Oceanside (Nassau County) owner abandoned a 100-unit luxury building which was constructed in 1961 and was never subject to any rent law; the property was fully-tenanted at the time of abandonment and in a state of extreme disrepair, with an unpaid mortgage and a substantial unpaid real estate tax bill. This abandonment, entirely ignored by New York City media, can hardly be blamed on rent regulations. Nor, certainly, can the abandonment of one and two family homes.

In 1971 the National Urban League published The National Survey of Housing Abandonment, a report of the League's study of this problem in the cities of St. Louis, Cleveland, Chicago, Hoboken, New York, Detroit and Atlanta. Of the cities surveyed, only New York had rent and eviction regulations, but abandonment was a severe problem in all the cities except Detroit, where the survey predicted it would become a problem, and Atlanta, where the survey determined it was not a problem. While this letter cannot extract at length from this important publication, a quote from its introductory paragraph is in order: "The survey has produced extensive evidence that entire neighborhoods housing hundreds of thousands of central city dwellers are in advanced stages of being abandoned by their owners. The phenomenon affects many but not all Eastern and Midwestern cities."

As for the question of the erosion of the City's tax base: Professor Emanuel Tobier of the New York University Graduate School of Public Administration recently concluded a study of trends in market values, assessments, effective tax rates and property tax delinquency in New York City during the period 1960–1974. His findings, published by the Citizens Housing and Planning Council, entitled "Aspects of the New York City Property Market," showed that the city regularly assesses walk-up and elevator apartment buildings at a significantly higher rate of their market values than is the case for one and two family dwellings. And among the former classes: "One of the most striking effects of current assessment practice is that New York City's lower-income population lives in significantly over-assessed residential buildings compared to other New Yorkers."

At the same time, recent studies by Professor George Sternlieb and Dr. Frank Kristof show that rent-to-income ratios for lower-income New Yokers exceed twenty-five percent. Indeed, the lowest income residents, those earning less than $6,000 per year, pay rents which average over 35 percent of their incomes.

Thus, the problem is clearly not rent regulation but rather one of inadequate incomes to pay the rents required by many small landlords in order to enable them to pay real estate taxes which are too high in relation to the true values of their properties. There is no question that as the cost of maintaining older, deteriorating housing goes up the real estate tax burden on many small owners becomes impossible and must be relieved. The only solution is to reduce, or restructure, property taxes on this housing—one of the recommendations made in the 1971 Urban League survey, incidentally. It is time for government to stop anticipating tax revenues from older, deteriorating housing which cannot produce them; the money isn't there.

Concerning non-payment of real estate taxes, the City Council Committee on Charter and Governmental Operations, chaired by Councilman Edward Sadowsky, on May 13, 1976 issued a report on real estate tax delinquencies which belies many of the inability-to-pay arguments advanced by the real estate industry. A copy of this report is enclosed.

The Committee focused on the much-mentioned $502.3 million aggregate real estate tax arrearage through June 30, 1975. This $500 million figure is still referred to as fact by the press and by many public officials despite the Sadowsky report, which found that "approximately $282.6 million consists of assessments made against properties which should not have been included in the tax rolls in the first place because they are entitled to an exemption of one kind or another;" these included municipally-owned and diplomatic properties, and inflated tax liabilities for Mitchell-Lame projects. Therefore, the Committee found that the true tax delinquency was $219.7 million, not $502.3 million.

Furthermore: "Contrary to the impression held by many, the delinquencies are by no means limited to rent controlled property. Rather, they pervade the entire real estate market. There are 17,383 parcels which are in arrears for a period of more than one, but less than two years. The total amount of taxes owed for that period was approximately $55 million. Of this amount, approximately $15 million, or 27 percent, consisted of walk-up apartments, and another $7 million or 13 percent consisted of elevator apartments. However, another 27 percent consisted of commercial structures and another 12 percent consisted of one and two family houses. The balance of 21 percent of properties in tax arrears consisted of all other uses such as: transportation facilities, vacant land and condominiums."

Furthermore: "The initial filing of an in rem petition results in the immediate payment of tax arrearages by the owners of 50 per cent of the delinquent parcels. Prior to the additional 25 per cent of the properties are redeemed." In plain English, 75 percent of the owners of properties in tax arrears have the ability to pay their real estate taxes but are not doing so voluntarily.

And Professor Tobier found that as of June 1974, ten percent of all of New York City's housing was delinquent in tax payments. Here again, buildings housing the poorest classes of tenants (walk-up apartments) and the highest percentage, 22 percent, of tax arrears. Elevator buildings had an 11 percent delinquency rate, but even among the under-assessed one and two family houses, which are not subject to any rent laws, between 6 and 7 percent had tax arrears.

This is a very brief summary of what we discussed at the November 11th meeting. We believe that the Congressional delegation should undertake to bring these facts to the attention of the incoming Carter Administration, in particular the Secretary of the Treasury-designate, and to correct some of the misinformation which has been promulgated concerning rent regulations.

We welcome the opportunity to work with the delegation on this matter of vital concern to the residents of New York. We are ready to meet with you and your colleagues at any time: we are ready to travel to Washington to participate in any discussions which the delegation may initiate with Treasury Department or other Administration officials, or Members of Congress. Perhaps a joint meeting with the new Secretary of the Treasury, members of the New York City Congressional delegation and representatives of the New York State Tenant and Neighborhood Coalition would be a good thing.

We also want to establish a working relationship with the delegation in order to explore possible federal solutions to the problems of housing and neighborhoods; in particular we are interested in exploring federal participation in solving the Mitchell-Lama problem, which we feel cannot be solved without an infusion of capital, and to develop programs to deal with housing rehabilitation and neighborhood preservation. In addition, there is the recent problem of H.U.D. overrides of local rent statutes.

We look forward to a productive working relationship with you and your colleagues.

Sincerely,

MICHAEL MCKEE,
Chairperson.
BARBARA CHOCKY,
Southern Region Chairperson.
MARIA MARKOVICS,
Northern Region Chairperson.

U.S. CANAL ZONE TERRITORY: NON-VOTING DELEGATE IN THE CONGRESS

The SPEAKER. Under a previous order of the House, the gentleman from Pennsylvania (Mr. FLOOD) is recognized for 5 minutes.

Mr. FLOOD. Mr. Speaker, as one with long experience in the observation and study of the problems of the Panama Canal, including the operations of congressional committees, I have repeatedly found that the interests of the United States and its citizens in the Canal Zone have not been safeguarded as well as they should be. There is an urgent need for the continuous presence in the Congress from the Canal Zone of an elected delegate. At present, four other U.S. territorial possessions are so represented in the Congress as follows:

	Population	Land area (sq. mi.)
Resident Commissioner (4-yr. term) Puerto Rico	2,712,033	3,421
Delegate at large (2-yr. term):		
Washington, D.C.	756,510	61
Guam	84,996	209
Virgin Islands	62,468	132

The Canal Zone is an unincorporated territory of the United States with a land area of 362 square miles and a population of 44,198 of whom 39,200 are U.S. citizens who are subject to Federal taxation.

Since the opening of the Panama Canal, the Congress has served as the legislature of the Canal Zone. It established a government for the territory and has enacted an extensive three volume Canal Zone Code. Morever, the zone has a strategic importance greater than either Alaska or Hawaii, which for many

years before statehood, had delegates in the Congress. Under existing laws, the Canal Zone Government is called upon to perform many of the functions of State, city, and county governments.

The executive branch of its government is headed by a Presidentially appointed Governor of the Canal Zone, the judicial branch by a U.S. district judge, but its legislative branch, the Congress, has no permanent representative in it from the territory. Thus, many problems that require legislative supervision or action find the Congress without a continuously available delegate to assist in arriving at wisely reasoned decisions.

To remedy the situation thus presented, I have introduced a bill to authorize the election of a nonvoting delegate at large from the Canal Zone. Because of the importance of having such representation in the Congress, prompt action is urged. The indicated measure follows:

H.R. 1588

A bill to provide that the United States Canal Zone shall be represented by a Delegate to the House of Representatives

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

DELEGATE FROM THE CANAL ZONE

SECTION 1. The first section of the Act entitled "An Act to provide that the unincorporated territories of Guam and the Virgin Islands shall each be represented in Congress by a Delegate to the House of Representatives", approved April 10, 1972 (48 U.S.C. 1711), hereinafter in this Act referred to as the "Act", is amended by striking out "and the territory of the Virgin Islands" and inserting in lieu thereof the following: ", the territory of the Virgin Islands, and the Canal Zone".

ELECTION

SEC. 2. Section 2(a) of the Act (48 U.S.C. 1712(a)) is amended—

(1) in the first sentence thereof, by inserting "from Guam and the Delegate from the Virgin Islands" immediately after "The Delegate";

(2) by inserting immediately after the first sentence thereof the following new sentence: "The Delegate from the Canal Zone shall be elected by the citizens of the United States residing in the Canal Zone at a general election held in November 1978, pursuant to regulations established under section 4(b), and at a general election every second year thereafter."; and

(3) in the second sentence thereof, by striking out "The Delegate" and inserting in lieu thereof "Each Delegate".

ELIGIBILITY

SEC. 3. Section 3(c) of the Act (48 U.S.C. 1713(c)) is amended by inserting "or possession" immediately after "territory".

ELECTION PROCEDURE

SEC. 4. Section 4 of the Act (48 U.S.C. 1714) is amended—

(1) by inserting "(a)" immediately after "SEC. 4.";

(2) by striking out "The legislature of each territory" and inserting in lieu thereof the following: "The Legislature of Guam and the Legislature of the Virgin Islands"; and

(3) by adding at the end thereof the following new subsection:

"(b) The Governor of the Canal Zone shall prescribe regulations for conducting general elections for the office of Delegate from the Canal Zone, and shall submit a copy of such regulations to each House of the Congress not later than January 1, 1978. Such regulations shall take effect on March 1, 1978, unless either House of the Congress passes a resolution before such date which specifically disapproves of all or part of such regulations.".

PRIVILEGES OF DELEGATE

SEC. 5. Section 5 of the Act (48 U.S.C. 1715) is amended—

(1) by striking out "and the Delegate from the Virgin Islands" and inserting in lieu thereof the following: ", the Delegate from the Virgin Islands, and the Delegate from the Canal Zone"; and

(2) by striking out "the Delegate from each territory" and inserting in lieu thereof the following: "each Delegate".

SPECIAL ELECTION

SEC. 6. The Governor of the Canal Zone shall conduct a special election for the office of Delegate from the Canal Zone not later than thirty days after the date of the enactment of this Act. Such Delegate shall be elected by the citizens of the United States residing in the Canal Zone on the date of such special election. The term of such delegate shall commence not later than ten days after the date of such special election and shall end upon the commencement of the term of the person elected Delegate in the general election in 1978.

POSTAL REFORM LEGISLATION

The SPEAKER. Under a previous order of the House, the gentleman from Arkansas (Mr. ALEXANDER) is recognized for 60 minutes.

Mr. ALEXANDER. Mr. Speaker, I am today introducing postal reform legislation which calls for a biennial authorization and appropriation for the Postal Service and an extension of the moratorium on Postal Service cutbacks and rate increases that expired on March 15.

The first provision is similar to the one I brought to the House floor last year and which this body on two occasions approved. As most of my colleagues will remember, my accountability provision sought an annual authorization and appropriation, and was subsequently dropped when the postal reform bill went to conference.

Mr. Speaker, the problems of the Postal Service are no less severe than they were a year ago.

The 94th Congress virtually "passed the buck" to the 95th Congress on significant postal reform.

This morning I testified before my colleague CHARLES WILSON of California and the Subcommittee on Personnel and Modernization. I would like to share with my colleagues that statement, as well as the text of my bill. I commend both for the consideration of my colleagues:

STATEMENT BY BILL ALEXANDER BEFORE THE SUBCOMMITTEE ON POSTAL PERSONNEL AND MODERNIZATION, MARCH 23, 1977

Mr. Chairman, I appreciate the opportunity to appear before the Subcommittee on H.R. 19, postal reorganization act amendments of 1977. I want to applaud the gentleman's initiative in scheduling these hearings while we await the recommendations of the Commission on the Postal Service, which I understand will present its report to the Congress sometime around April 18. I trust that the Chairman and members of the Subcommittee share my concern that the report will come one month later than mandated by the law we passed in the last session.

I also want to congratulate the Chairman's leadership in the quest for postal reform and thank him again for his support of my efforts last year to get accountability provisions with "teeth" in them included in that law. After his support of these efforts, I had hoped that the concept of accountability of Postal Management to the American people would have been included in his proposal.

Mr. Chairman, I remain convinced that, until we remove the Heavily-Padded Insulation that surrounds the Postal Service and make its management fully accountable to the Congress and the people, we will continue to be plagued with the problems with which this Committee is so familiar and which were articulated in this Committee's report last year—namely, that the Postal Service suffers from Favoritism, Waste, and Inefficiency.

Last year, the House on two occasions approved a proposal which I offered, calling for an Annual Authorization and Appropriation for the Postal Service.

Yet, supposedly in the interest of securing some meager measure of postal reform in the 94th Congress, House and Senate conferees chose to pass the buck on this issue to the 95th Congress. We are now confronted with that issue of Accountability.

I have said time and time again that I support a subsidy for the Postal Service. I represent a nonmetropolitan district. Statistics show that it is simply not profitable for the Postal Service to deliver mail in rural areas. Americans living in the countryside have just as much right to convenient mail services as those Americans who live in the cities. What I do not support is the philosophy of unaccountability that the Postal Service symbolizes.

Mr. Chairman, your bill goes far in correcting a number of problems with the current postal operation. I wholeheartedly support the provisions of H.R. 19 which call for Presidential appointment and Senate confirmation of the Postmaster General, as I did last year. I support the provision to abolish the Board of Governors.

I agree with the gentleman's contention that it would be unwise for the Congress to totally re-inject itself into postal ratemaking but that Congress does need to have some input in this process. The gentleman's proposal on ratemaking authority is reasonable. And I support the provision of H.R. 19 that expressly states the intent of the Congress not to disrupt USPS' currently mandated collective bargaining system, as I tried to convey when my proposal was considered on the House floor last year.

I would, however, urge the Committee to consider several other options. While no one doubts the need for a review of all capital investment projects, I still maintain that full review of the entire postal service operation will give the best measure of accountability of the postal management to the Congress and the American people.

I am prepared to compromise on this point. I recognize both the planning and collective bargaining ramifications of an annual authorization and appropriation. I believe the measure of accountability of top postal management for which the House expressed itself so loudly and strongly in the last session can be obtained by a biennial authorization and appropriation and still give USPS a reasonable period of time for planning and contract negotiation. I am today introducing legislation to that effect. I hope the Subcommittee will give that alternative serious consideration.

I have two other concerns, Mr. Chairman. As you know, the moratorium on postal rate increases and service cutbacks expired on March 15. It is conceivable that the Postal Service could reinstitute its plans to close scores of small post offices throughout the Nation before the blue-ribbon Commission ever submits its report to the Congress. I hope the Subcommittee will give considera-

tion to an extension of the moratorium for six months or for a period of time sufficient for the Congress to act on the Commission recommendations. That provision will be a part of my bill as well.

I would also urge this Subcommittee to consider a provision in the bill mandating that a person in charge of a post office of any class shall be a postmaster.

Mr. Chairman, let me close with a comment and a question on the suddenly bright financial picture we get from the bookkeeping department at the Postal Service. Is the gentleman satisfied that these financial reports are a true picture of the financial standing of USPS, that the Postal Service is actually making a profit, or are they simply not losing as much as their quarterly forecasts had predicted?

I thank the Subcommittee for its attention.

H.R. 5549

A bill to amend title 39, United States Code, to authorize the appropriation of funds necessary to operate the United States Postal Service, to provide that revenues of the Postal Service shall be deposited in the Treasury of the United States, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Postal Service Reform Act of 1977".

AUTHORIZATION OF FUNDS FOR POSTAL SERVICE

SEC. 2(a)(1). Section 2401(a) of title 39, United States Code, is amended to read as follows:

"(a)(1) There are authorized to be appropriated to the Postal Service, for fiscal year 1978 and fiscal year 1979, such sums as may be necessary to enable the Postal Service to carry out the purposes, functions, and powers authorized by this title.

"(2) The Postal Service, in requesting amounts to be appropriated under this subsection, shall present to the appropriate committees of the Congress a statement containing a description of the operations of the Postal Service together with any other information which any such committee considers necessary to determine the amount of funds to be appropriated for the operation of the Postal Service.

"(3) All revenues and fees collected by the Postal Service shall be deposited in the general fund of the Treasury of the United States.".

(2) Section 2003(b)(1) of such title is amended to read as follows:

"(1) amounts appropriated pursuant to the authorization made by section 2401(a)(1) of this title;".

(3) Section 2003(b)(3) of such title is amended by inserting "in addition to amounts appropriated pursuant to the authorization made by section 2401(a)(1) of this title" immediately after "Postal Service".

(4) Section 4(b) of the Postal Reorganization Act (Public Law 91-375; 84 Stat. 774) is amended by striking out "Postal Service" and inserting in lieu thereof "United States, and shall be deposited in the general fund of the Treasury of the United States in accordance with section 2401(a)(3) of title 39, United States Code, as added by the Postal Service Reform Act of 1977".

(b)(1) Section 2401(b)(1) of title 39, United States Code, is amended to read as follows:

"(b)(1) There are authorized to be appropriated to the Postal Service such sums as may be necessary as reimbursement to the Postal Service for public service costs incurred by it in providing a maximum degree of effective and regular postal service nationwide, in communities where post offices may not be deemed self-sustaining, as elsewhere.".

(2) Section 2401(b) of such title is amended—

(A) by striking out "(1)" immediately before "As reimbursement";

(B) by redesignating subparagraph (A) through subparagraph (G) as paragraph (1) through paragraph (7), respectively; and

(C) by striking out paragraph (2).

(c)(1) Section 3621 of title 39, United States Code, is amended by striking out "income" and inserting in lieu thereof "revenue".

(2) Section 3625(d) of such title is amended by striking out "income" and inserting in lieu thereof "revenue".

MAIL DELIVERY SERVICES

SEC. 3. Section 2401(f) of title 39, United States Code, is amended by striking out "the date on which the Commission" and all that follows through "House of Congress" and inserting in lieu thereof "September 15, 1977".

GETTING THE PICTURE

The SPEAKER. Under a previous order of the House, the gentleman from Pennsylvania (Mr. GAYDOS) is recognized for 30 minutes.

Mr. GAYDOS. Mr. Speaker, I read with great interest the recent recommendations of the U.S. International Trade Commission to impose tariffs on imported color television sets.

I was gratified to see this. I hope others in our Government now get the picture that I, and a few of my colleagues, have been viewing for years; that is, the steady deterioration of major domestic industries through the erosion by the flood of uncontrolled foreign imports.

The latest ITC recommendations, which would boost the cost of a foreign-made color set by $56, have been sent to President Carter. He has 60 days to decide whether to accept, reject, or modify them. If he does not act, the Commission's proposals go into effect automatically; if he rejects the ITC proposals, Congress will have the chance to override his decision through a majority vote.

I would hope President Carter concurs in the ITC recommendations for, I believe, it can no longer be denied that foreign-made color TV sets have seriously damaged the domestic color television industry and cost thousands of American workers their jobs.

According to a recent article in the Washington Post, imported color sets, which accounted for a healthy 17.9 percent of domestic sales in 1975, soared to 42 percent in 1976. Employment in the color TV industry, however, has fallen drastically over the years, from 36,500 workers in 1971 to only 23,000 in 1975.

There are those, of course, who will oppose the ITC recommendations on the stale, old arguments of protectionalism. They will continue to try to convince the American worker that it is in the best interest of his nation that he lose his job to a foreign counterpart. They will argue that it is America's moral obligation to lead others by opening wide the door to her own markets.

Lead where? Lead whom? Fifteen or 20 years ago, America was the greatest exporter of goods. Now we have become the greatest importer. Less than a decade ago, we had a national unemployment rate of 3 percent. Today it is 10 percent, despite the glossed-over figures issued by the Department of Labor.

We are rapidly becoming a nation whose workers only service and sell the products produced by others. We have become so blinded by this mysterious moral obligation to the rest of the world that we are willing to put our workers' heads on the chopping block to provide employment for a foreign headsman.

For those who shudder at protecting American industry and the American worker, I would hope they find some solace in the words of one of our most prominent industrialists, Mr. Richard P. Simmons, president of Allegheny Ludlum Steel Corp.

In a speech earlier this year before the Purchasing Management Association of Chicago, Mr. Simmons, an admitted passionate believer in the concept of free trade and an avowed opponent of Government aid to private corporations, had this to say about the injury being inflicted upon the American specialty steel industry by foreign-made products.

The issue is far more complex than a doctrinaire clash between "free trade" and "protectionalism." It is a battle between economic systems; a battle that increasingly places our nation and our economy at a disadvantage in the area of world trade. It is a battle—if lost by this nation—will have not only grave economic consequences, but social, political, and strategic consequences as well.

Mr. Simmons went on to say that certain nations have begun to use their specific strategic industries to distort the economic principles of free trade. He pointed out the American market was being used as an outlet for the products of these nations, even when not monetarily profitable, in order to achieve a broader national purpose. And, as a result, the private sector in the United States watched market after market "captured or severely impacted, not by more efficient foreign competition—but by foreign competitors, government-owned or subsidized, being used as instruments of national policy."

Mr. Simmons aptly described the difference between "free trade" as practiced by the United States and foreign governments.

The removal of profit as a measure of efficiency through government subsidization or ownership makes a mockery of the terms "competition", "free trade", "comparative advantage" ... and may be the greatest threat to our economic system since this nation was formed.

Mr. Speaker, many years ago the leaders of our Nation used to practice the axiom of never mixing our foreign trade policy with foreign affairs. Unfortunately, this practice was discarded after World War II until now it has reached the point where our foreign trade policies are so closely entwined with foreign affairs that it is difficult, if not impossible, to separate them.

And, in recent years, we have seen what has been the result. Trade deficits. We have recorded more trade deficits in the last 5 years than we did in the previous 195 years of our Nation's history. Look at last year's deficit. $5.87 billion.

The seriousness of this turnabout in

trade at last became obvious in 1975 when the U.S. International Trade Commission, formerly the Tariff Commission, embarked on a radically new venture in hearing complaints from impacted industries.

Thanks to the efforts of Catherine Bedell, former Chairman of the Commission, and Will E. Leonard, the present Chairman, the ITC left Washington and took hearings on the impact of foreign steel products directly to the people.

I recall the Commission came to the steelmaking area around Pittsburgh, and perhaps for the first and only time, our people had a chance to plead their case without the expense and inconvenience of traveling to and from Washington, D.C.

Since then, Mr. Speaker, we have seen some remarkable proposals from the ITC. The Commission just last year recommended import quotas on specialty steel. It was the first time such proposals were made. And, earlier this year, the Commission recommended a combination of tariffs and quotas on foreign-made shoes. Now, it is proposing controls on foreign-made TV sets.

The picture being shown to those in Government may not be pleasant but it is clear and sharp. It would behoove everyone to look at it and act accordingly.

CONGRESSIONAL CONTROL OF EXPENDITURES

The SPEAKER. Under a previous order of the House, the gentleman from Connecticut (Mr. GIAIMO) is recognized for 5 minutes.

Mr. GIAIMO. Mr. Speaker, during the 94th Congress the Budget Committee established an Ad Hoc Task Force on Budget Controllability, chaired by our colleague from South Carolina, BUTLER DERRICK.

I want to bring to the attention of the House an outstanding study prepared for that task force. It is entitled "Congressional Control of Expenditures," and I understand that it has been sent to all Members of the House.

The study analyzes a wide range of budget control issues that the Congress will be confronting increasingly over the next few years—issues such as off-budget agencies and their financial operations, guarantee and insurance programs, backdoor spending, permanent appropriations, and many others. It traces how Congress has, over the years, surrendered control over large portions of the budget to the executive branch and to many virtually independent or semi-independent agencies.

The study outlines the very major changes made by the Budget Act and, more importantly, specifies the areas where further change is needed to truly bring the budget under control. However, it does not make specific recommendations in any area.

I believe this study to be a landmark in the field of budget literature. I urge all Members to give it their very careful consideration.

Once again, I want to commend BUTLER DERRICK for his outstanding work in helping to prepare this study.

COMMENTS AND ANALYSIS OF COMPLIANCE OF 16TH ACDA ANNUAL REPORT

The SPEAKER. Under a previous order of the House, the gentleman from Wisconsin (Mr. ZABLOCKI) is recognized for 5 minutes.

Mr. ZABLOCKI. Mr. Speaker, Public Law 94–141 established new legislative requirements for the annual report submitted to Congress by the Arms Control and Disarmament Agency. Briefly stated, the intent was to have the report provide a more "complete and analytical statement of arms control and disarmament goals, negotiations, and activities." Further, the report was also to present "an appraisal of the status and prospects of arms control negotiations and of arms control measures in effect."

In fulfillment of its oversight responsibility the House International Relations Committee Subcommittee on International Security and Scientific Affairs, of which it is my privilege to chair, requested the Congressional Research Service of the Library of Congress to evaluate ACDA's 16th annual report in terms of its compliance with the new requirements. The evaluation was prepared by Mr. Charles Gellner.

On balance, Mr. Gellner concludes that the 16th annual report is a step backwards away from fulfillment of congressional intent to be supplied with information to enable it to make an informed judgment on arms control and national security matters. Mr. Gellner notes further that since the report was prepared by an outgoing Director of the Agency, the report might have presented his evaluation of the Agency's accomplishments during his tenure. Unfortunately, in Mr. Gellner's view, the report is little more than a summary narrative containing little substantive analysis or information vital to congressional consideration of arms control and national security issues. Mr. Gellner concludes that—

> If the 15th annual report was a quantum jump forward in usefulness to Congress, the 16th annual report is a quantum slip in the opposite direction.

I believe Mr. Gellner's detailed comments and observations on the 16th annual report will be of interest to all Members of Congress and the public at large. I would hope that the constructive criticisms contained in Mr. Gellner's evaluations of the 15th annual report published in the RECORD of October 1, 1976, and the 16th annual report would be received by ACDA in the positive spirit in which they are offered.

Mr. Speaker, I ask unanimous consent that the evaluation be printed at this point in the RECORD:

THE U.S. ARMS CONTROL AND DISARMAMENT AGENCY'S 16TH REPORT TO THE CONGRESS, 1976: A COMMENT THEREON

(By Charles R. Gellner)

The Foreword of the 16th Annual Report of ACDA quotes the 1975 amendment to the Arms Control and Disarmament Act setting forth new legislative requirements for the Agency's annual report. The new requirements stipulated that the annual report should "include a complete and analytical statement of arms control and disarmament goals, negotiations, and activities and appraisal of the status and prospects of arms control negotiations and of arms control measures in effect."

The Foreword does not allude to the elaboration in the House International Relations Committee report on the 1975 legislation expressing the intent of Congress regarding the annual report. The House Committee declared that its intent was to attain an "expanded" version of the report to Congress that would provide "more comprehensive and updated information" with which Congress could "more effectively and intelligently carry out its role of advising and consenting in the formulation of foreign policy." The International Relations Committee said that the annual report should serve as "complement" to the arms control impact statements required by the same amendment to the Arms Control and Disarmament Act and should be "analogous" to the annual posture statement of the Secretary of Defense.

The Foreword to the 16th Report asserts that the 15th Report was "responsive" to the new legislative directive. This assertion would appear to be substantially correct. A comment on the 15th Report prepared by the Congressional Research Service in essence indicates that, while the 15th Report did not fully meet the requirements of law in every respect, it advanced far in that direction and introduced in comparison with earlier reports a totally new style, scope and depth, and a "new degree of usefulness."[1]

The Foreword to the 16th Annual Report points out that the 15th Annual Report was not submitted until July 1976 and therefore really covered a period of 18 months. Since, it says, the annual report is to be submitted to Congress by January 31, "in order to comply with this requirement, the present report complements the 15th Annual Report by completing the coverage of developments in 1976." The Foreword does not point out that the Presidency of Gerald Ford terminated on January 20 and therefore that the 16th Report was the closing report of his administration and of Director Fred Ikle.

There is no sign either in the written text or in any statements issued by Executive officials that the comments made by Representative Zablocki on the 15th Annual Report were seriously heeded.[2]

After what was a noteworthy effort to comply in the 15th Report with the new legislative requirements, the 16th Report relapses into a brief summary listing developments in a cursory way with little or no analysis of problems or issues. Indeed it is generally less informative than reports issued before the 1975 legislative standards were passed.

The emphasis in the 16th Report is almost wholly on events and activities rather than an explanation and analysis of issues. It contains a series of factual surveys of events relating to individual arms control and disarmament subjects. They include the following: non-proliferation of nuclear weapons, nuclear explosives testing, strategic arms limitation talks (SALT), mutual and balanced forces reduction, Conference on Security and Cooperation in Europe, arms transfers, restriction of environmental modification, and prohibition of chemical weapons.

A position of prominence in the Report is given to the question of limiting or preventing the proliferation of nuclear weapons capabilities to other countries. An excellent explanation and analysis of the basic issues in this problem were given in the 15th Report of ACDA. The brief account of events of recent months in the 16th Annual Report focuses on the President's announcement of a new United States policy on October 28,

[1] Congressional Record, October 1, 1976; pp. 35314–35317.

[2] Ibid.

1976, on ACDA's own activities within the Executive branch in policy formulation and on its efforts to assist the International Atomic Energy Agency. An explanation of the developments elsewhere in the world which prompted in whole or in part the President's policy initiative is not given. There is, moreover, no mention of the considerable activity in Congress to deal legislatively with U.S. policy on exports of nuclear materials as a means of mitigating the intensification of the proliferation problem. The administrative responsibility within the United States Government for matters relating to the world proliferation problem is divided among a number of organizations with at least some of which ACDA must interrelate. The report mentions ACDA's participation in the governmental network, but no description how this network operates the way responsibility is divided, nor what initiatives and programs are being undertaken to deal with the proliferation problem, is offered. It is not possible to obtain from this report much understanding of ACDA's influence within the Executive branch and in what respects it is exerted in conjunction with other government agencies, for example, the Energy Research and Development Administration and the Department of State, in the drafting of national policy. A fuller exposition of ACDA's approaches to the difficult problems associated with proliferation of nuclear energy capabilities and preventing the acquisition of nuclear weapons knowledge, would be enlightening to Congress and inform its decisions on authorizing support to ACDA. One of the characteristics of this 16th Annual Report, and it is not an unusual characteristic of such publications, is that it shies away from politically sensitive subjects which are often the most meaningful elements of a problem.

The section on nuclear explosives testing gives a brief run-down on the current status of the Threshold Test Ban Treaty and the Treaty on Underground Nuclear Peaceful Explosions as well as on the negotiations for a comprehensive ban on nuclear testing. The main preoccupation of this section is with the questions of verification of treaties restricting nuclear testing. Political and military aspects of these treaties and proposals for treaties are not broached. Questions, for example, of how such restrictions on testing would affect the development of weapon systems are not alluded to. The controversy between the relative merits of the threshold test ban and the comprehensive test ban is not cited nor is the idea of a moratorium on nuclear testing for a limited period of time, such as has been suggested by President Carter.

The description of the current status of the SALT negotiations is short. Although it mentions an issue in those negotiations regarding the Backfire bomber and cruise missiles, details of proposals made by both sides are not given nor is there any hint of contrasting views within the United States Government in regard to so-called "gray area" weapons or other SALT matters.

Furthermore, there is no exploration of the subsequent weapons development by both signatories of the 1972 SALT agreements which has so affected the negotiations looking toward new agreements in 1977.

A separate short section in the report is devoted to the so-called Standing Consultative Commission which was established to afford a channel of communication and mutual discussion between the USSR and the United States in reference to problems arising under the SALT agreements of 1972. The fact that this Commission has held discussions on charges of violations or possible violations of the SALT agreements by either side is mentioned but there is no elaboration. A general conclusion is stated that neither side has been responsible for violations which would jeopardize the security of either signatory or bring into the question the viability of the SALT agreements.

The report mentions that the U.S. and Soviet representatives on the Standing Commission concluded two agreements in the fall of 1976, one relating to the communication arrangements that implement an earlier agreement concluded in 1971 on measures to reduce the risk of outbreak of nuclear war, and the other establishing procedures for replacing ABM systems carried out in implementation of the ABM treaty of 1972. The report does not mention that these two agreements or protocols, are classified or why they are. An obstacle to the exercise of Congressional oversight in regard to the SALT negotiations is that they are conducted in an environment of secrecy which has not been strongly challenged. U.S. Government spokesmen have declared that the SALT negotiations and proceedings of such bodies as the Standing Commission are kept secret because of the wishes of the Soviet Union. This, however, has not prevented many leaks from the Executive branch, relating to the SALT negotiations and the proceedings of the Standing Commission. Various partisans of one view or another apparently take advantage of the poorly safeguarded confidentiality of the negotiations to issue information selectively about the negotiations and proceedings of the Standing Commission which can give partial or distorted interpretations of what is transpiring. There remains a serious question whether this condition of sieve-like secrecy actually serves a better purpose than what would result from a policy of official disclosure of the entire record.

The brief outline of the positions of the two sides in the negotiations for mutual and balanced force reductions in Europe adds little to the excellent description of these negotiations in the 15th Annual Report. The 16th Report adds a paragraph sketching the participation of ACDA representatives in executive and diplomatic bodies responsible for formulation of policy and positions for MBFR. It is difficult, however, to assess the ACDA participation in these organizations and procedures in the absence of a description of the entire bodies and of the participation of other agencies and government authorities in them.

The few lines devoted to the Conference on Security and Cooperation in Europe center on the point that ACDA is participating in the preparation for the follow-up meeting on that 1975 Conference to be held in Belgrade in 1977. The statement is made that in preparation for the Belgrade Conference a review of implementation of the agreements at Helsinki is being made in regard to the measures on arms control. However the report does not discuss how these measures have been implemented or what will be undertaken at Belgrade.

The implementation of the measures agreed upon at the Helsinki Conference in 1975 has become of great concern to many members of Congress. In fact Congress has established a commission to oversee the observance of the Helsinki accords. For this reason the arms control provisions of the Helsinki agreement could be worth additional attention in future reports of the U.S. Arms Control and Disarmament Agency.

One of the most informative sections in this otherwise brief, routine annual report is that on arms transfers. It gives a helpful rundown on recent legislation passed by Congress relating to arms exports by the United States, the activities of ACDA in preparing reports and studies, and the Agency's participation in Executive branch policy and decisionmaking bodies relating to United States arms transfers. This supplement to the informative chapter on arms transfer in the 15th Annual Report does not remedy what has been a notable deficiency in most ACDA publications on the subject of U.S. arms sales and transfers of armaments to other countries. ACDA reports have usually been informative in regards to general aspects of the problems raised by this national defense activity, which has a highly significant arms control impact, but they have been seriously lacking in discussions of particular problems regarding specific countries and geographic regions of the world.

Two remaining sections in the 16th Annual Report, one on the recent international convention relating to prohibition of military or hostile use of environmental modification techniques and the other on a recently proposed draft treaty prohibiting chemical warfare agents and weapons, are factual accounts bringing up to date developments in the United Nations and in the Conference on the Committee on Disarmament. Following the usual pattern in this 16th Report, they do not expand upon major issues involved.

The main text of the 16th Annual Report is concluded by a one page description of ACDA's research program, which consumes one quarter of the Agency's annual budget, and a brief account of public affairs activities. The contract research program of the Agency has been recovering substantially over the past couple of years from a deep slump and could become one of the most significant activities of the Agency. In the original legislative mandate given to ACDA research on many aspects of arms control and disarmament was a principal obligation laid upon the Agency. As international negotiations and specific agreements on arms control and disarmament came to occupy more and more of the attention and resources of the Agency the resources assigned to the research program declined. Because of the many significant negotiations now underway on arms control measures that could be of great importance to U.S. national security and a great number of which involve complex technical questions, a stepped-up research program would appear to be not only in order but could be a vital necessity in facilitating successful pursuit of those negotiations. The account in the 16th Annual Report of the research program is not comprehensive. It does not afford Congress sufficient information on which to base further decisions on appropriating funds for this phase of ACDA's activities.

The short comment in the 16th Annual Report on ACDA's public information activities provides some additional evidence that ACDA has responded more positively to the interest expressed by Congress in the Arms Control and Disarmament Amendments of 1975 in an enhanced program of public information to be carried on by the Agency. In its 15th Report, the Agency mentioned steps it was taking to heed the expression of this intent of Congress. The survey and feedback operation on ACDA publications, described in the 16th Report, could be a springboard for further examination of the Agency's response in the public information sector.

A notable gap in the 16th Annual Report is that there is no mention of the arms control impact statements nor of the procedure whereby they are developed. The impact statements are required under the same amendments to the Arms Control and Disarmament Act that imposed new standards for the Annual Report. The absence of comment on this significant additional responsibility suggests a negative attitude on the part of ACDA or the possibility that ACDA was not brought prominently into the procedure. There is no sign in the impact statements themselves, submitted to Congress by the Executive in January 1977, what role, if any, ACDA had in their preparation. The annual report of ACDA is intended to "complement" the impact statements. In a sense it does. Neither meets the standards evidently intended by Congress in the legislative requirements passed in 1975.

Since the 16th Annual Report was the final report by an outgoing Director of ACDA it might have been helpful to have had his evaluation of the history of the Agency during his tenure. But the brevity of the report and the lack of review of the Agency's record are reflections perhaps of the diminished role allotted to the Agency within the Executive branch in recent years, a trend the legislative amendments of 1975 attempted to help counteract. If the 15th Annual Report was a quantum jump forward in usefulness to Congress, the 16th Annual Report is a quantum slip in the opposite direction.

Ostensibly intended merely to bring the improved 15th Annual Report up to date, the 16th Report represents a minimum effort. For the most part it is a summary narrative, without much analysis of substance, of arms control events from July to December 1976.

It complies with the legal requirement that a report be submitted, but measured by the standards which ACDA itself set in the 15th Report, it falls short of meeting the criteria established by the legislative amendments of 1975. Speaking of the character of ACDA's Annual Report prior to the legislative amendments of 1975 the House International Relations Committee said that it presented "little more than a sketchy update on the Agency's activities generally. It provides the Congress with little if any substantive information on which to base an informed judgment as to progress and needs in achieving arms control goals." The 16th Annual Report has relapsed into that earlier format. It would be a poor model for future agency efforts to comply with the law.

LEGISLATION TO REFORM THE SUMMER FOOD PROGRAM

The SPEAKER. Under a previous order of the House, the gentlewoman from New York (Ms. HOLTZMAN) is recognized for 20 minutes.

Ms. HOLTZMAN. Mr. Speaker, I have today introduced legislation to make some essential reforms in the scandal-plagued summer free food program for children.

This morning I explained the bill in testimony before the Elementary, Secondary and Vocational Education Subcommittee. I would like to bring that testimony to the attention of my colleagues so that they may appreciate why this legislation is needed, what it would do, and what other steps must be taken to end the waste and abuse in this program and to assure that it provides needy children with healthful, nutritious food:

TESTIMONY OF REP. ELIZABETH HOLTZMAN

SUMMER FOOD SERVICE PROGRAM FOR CHILDREN

I would like to thank the Subcommittee for allowing me to appear today to discuss the Summer Food Service Program for Children and my recommendations for legislative improvement.

Last July, when I last testified before this committee about the summer food program, I told you of the wholesale waste, fraud and abuse I had encountered in this program in New York City.

While my efforts, those of some of my colleagues from New York and the concern expressed by your committee forced the Department of Agriculture to take some remedial action last summer, it was far too little and much too late.

The program cost nearly $77 million in New York last summer, and it paid for more than 100 million meals. On the basis of my own visits to sites, visits conducted by my staff, and other reports I received about this program, I suspect that most of those meals never actually reached needy childen, that most of the meals which did get to children were rotten, inedible or prepared under unsanitary conditions, and that many of the meals for which the government paid never even existed, but were rather fictitious meals at phantom sites.

One thing is certain about last summer's program in New York: millions of dollars and tons of food were wasted, while children went hungry and unscrupulous vendors and sponsors enriched themselves.

I am deeply concerned, as I know your committee is, that this appalling waste and abuse not be repeated—next summer or at any time in the future. I would like to advise you of the efforts I have already made to see that essential reforms are made in the program by the U.S. Department of Agriculture and the New York State Education Department, and to suggest to you some additional steps which must be taken to prevent a recurrence of the problems which plagued the program in 1976.

In December, I submitted a detailed set of recommendations for improved administration of the summer food program to the Department of Agriculture and the State Education Department. Many of these recommendations were incorporated in the proposed USDA regulations issued later in December. Subsequently, in January, I submitted formal comments on the proposed USDA regulations, urging that they be tightened further.

I request permission Mr. Chairman to have inserted at this point in the record the recommendations I made to the Department of Agriculture in December and January. I would like to summarize them briefly for you.

1. The screening of program sponsors so as to eliminate those who are incompetent or dishonest.

2. Strict controls to prevent collusion in the competitive bidding process by which sponsors choose vendors—food suppliers. This problem deserves special mention because it was, in my judgment, at the heart of the breakdown of last year's program. When a sponsor and a vendor do not deal at arms length, but instead work together to exploit the program, the result is artificially inflated meal prices and no control over the amount or quality of food delivered.

3. The exclusion of unsatisfactory vendors.

4. The inspection of all program sites prior to approval and again during the first weeks of operation.

5. The inclusion of certain certification requirements so as to facilitate the criminal prosecution of sponsors and vendors who exploit the program.

6. Increased monitoring of vendors to assure healthful and nutritious food.

7. Increased State administrative authority over program operations.

8. Tighter monitoring of State administration by USDA.

I am pleased to note that all of these recommendations were either incorporated by USDA in its final regulations or included by the State Education Department in its State plan. Although the specific provisions adopted by USDA and the State with regard to these recommendations are not as strong as I think they should be, they do represent major progress.

I would also note two very promising changes of administration. On the State level, New York State's Education Department officials who presided over last summer's total bureaucratic breakdown have, at my insistence, been removed from any responsibility for the 1977 program. They have been replaced by someone, who I understand will be testifying shortly, who has a well-established reputation for administering a good program.

On the Federal level, the prospects are even more promising. Under former Secretary Butz, as this committee knows well, the Department of Agriculture totally abdicated its responsibility to help clean up the summer food program mess. In this connection, I would recall to you my request, in July 1976, for a special USDA task force to help stop the waste and abuse then taking place in New York. Your committee endorsed this request. Yet then-Secretary Butz did not even reply to my letter until several weeks after the program ended.

Secretary Bergland, on the other hand, seems genuinely committed to tight management of the summer food program. I have been greatly encouraged by his response to my suggestions for improved regulations, and hope that these early actions indicate a much more active role by USDA in preventing abuses.

Incidentally, I have requested a special USDA task force to oversee New York's administration of the 1977 program. I hope your committee will again join me in this request. Such a task force would repay the taxpayers many times over in terms of money saved and waste prevented.

In addition to these regulatory and administrative improvements, I would like to address myself to legislative changes which I believe are needed to strengthen the program. These changes are incorporated in a bill which I will introduce this afternoon. You should have received copies of this bill, which I would like to review with you.

Section 1 authorizes the program for one additional year. In view of the history of this program, I believe it should be put on trial. The new regulations, and tightened administration at the Federal and State levels should allow us to determine whether the summer food program can be made to work effectively for the benefit of needy children without waste and scandal. Until we have had such a test, I do not believe a long term authorization can be justified.

This section also provides explicit authority for the screening out of unsatisfactory sponsors. Although the present law implicitly permits such screening, in my judgment this requirement should be made explicit in the law.

Section 2 freezes the 1977 maximum per meal reimbursement levels and mandates the Secretary to conduct a study to determine whether these levels should be adjusted. In view of the enormous profits made by vendors in the 1976 program and the inflation of meal prices through collusion, it may be possible to lower reimbursement rates and program costs without reducing food quality.

This section also directs the Secretary to find a new basis for reimbursing sponsors for administrative costs. As long as sponsors are reimbursed for administrative costs on a per meal basis, they have a built in incentive to serve more meals, regardless of whether they are needed. The per meal rates are retained, however, for guideline purposes to limit total nationwide reimbursement.

In addition, this section revises the basis for reimbursing residential camps. Under present law and regulations a residential camp can receive Federal reimbursement for every meal that it serves as long as one third of the children who attend it are eligible for free or reduced price lunch. The remainder of the children may be from middle or upper income families which pay $1000 to send their children to the camp, yet everyone's food—rich or poor—is paid for by the program. In the alternative, a camp may get Federal reimbursement for all of its meals as long as all of the children who attend it come from areas in which one third of the children receive free or reduced price lunch. Not one child need be poor for the camp to get the Federal money under this provision. My bill provides that the program will only pay resi-

dential camps for meals that actually go to needy children.

Finally, this section allows States to restrict the number of different meals which a sponsor which has administrative problems may serve.

Section 3 deals with one of the most serious potentials for abuse in the program: advance payments. Because sponsors can receive most of their money in advance, they need not fear that incompetent or dishonest administration will prevent them from being paid. In addition, since most of the funds already have been paid out, the State and Federal governments have little hope of recouping money from sponsors, no matter how bad.

This section limits advance payments for any sponsor to 50 percent of its projected expenditures for a month (as opposed to 65 percent and provides that advance payments may not exceed $10,000 per sponsor per month. These limits will allow the small sponsor—the legitimate church or community group which buys its own food—to operate. At the same time, it will keep the large sponsors who operate on a contractual basis with large vendors—and who thus do not need to spend their own funds—from taking the money and running.

This section also makes explicit the State's authority to withhold advance payments from sponsors who violate program requirements.

Section 4 allows the Secretary to make additional administrative funds available to States which have experienced severe program problems. If such additional funds enable a State to run a tight program, they will be repaid many times over.

This section also corrects a catch-22 in the present law under which a State which runs a good program, limiting waste, may be penalized. States are entitled to 2 percent of program expenditures in the State for administration. If a State holds program expenditures below the amount anticipated, its administrative reimbursement will be reduced—perhaps below its actual expenditures. My bill allows the reimbursement of a State for its actual expenditures under such circumstances.

The last provision of this bill directs the Secretary to conduct demonstration projects to determine if other means for feeding needy children in the summer may be more effective than the present program. While I hope that the present program can be made to work properly, we should at the same time be experimenting with other approaches in the event that it cannot. That we are willing to seek alternatives does not mean that we are any less committed to the goal of feeding needy children. Indeed, our search for the best way to achieve this goal demonstrates our commitment to it.

I hope that this committee will give serious consideration to my legislation and to the other recommendations I have made today. I will be happy to work with you in any way that I can to assure that this nation's hungry children receive decent, nutritious meals, efficiently and without waste.

The text of my bill follows:

H.R. 5488

A bill to amend the National School Lunch Act with respect to the summer food service program for children

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 13(a) of the National School Lunch Act is amended by—

(1) striking out "and" immediately after "September 30, 1976,", and inserting immediately after "September 30, 1977," the following: "and for the fiscal year ending September 30, 1978,", and

(2) inserting immediately after paragraph (3) the following new paragraph:

"(4)(A) No service institution shall be eligible to participate under the program authorized under this section if it participated in the program during any previous year and was seriously deficient in program operations.

"(B) No service institution shall be eligible to participate under the program authorized under this section unless it demonstrates financial and administrative capacity for program operations.".

Sec. 2. Section 13(b) of such Act is amended to read as follows:

"(b)(1) Disbursement to service institutions shall equal the full cost of food service operations, except that such financial assistance to any such institution shall not exceed (A) 85.25 cents for all costs expecting administrative costs for each lunch and supper served, (B) 47.75 cents for all costs except administrative costs for each breakfast served, (C) 22.5 cents for all costs except administrative costs for each meal supplement served, and (D) payment for administrative costs in accordance with a formula developed by the Secretary pursuant to paragraph (2). The cost of food service operations shall include the cost of obtaining, preparing, and serving food and related administrative costs.

"(2) The Secretary shall conduct a study of the cost of food service operations to determine (A) whether the maximum levels of reimbursement set by paragraph (1) are reasonable or should be adjusted and (B) whether differentials should be established in such levels so as to assure that advantage is taken of economies of scale. The Secretary shall report his findings and recommendations to the Congress no later than November 15, 1978.

"(3) The Secretary shall conduct a study of administrative costs incurred by service institutions in operating the program and shall develop a formula or formulas for the reasonable reimbursement of such costs based upon the number of sites operated by a service institution and such other factors as may be appropriate. In developing such formula or formulas the Secretary shall provide, to the maximum extent feasible, that a service institution shall not lose reimbursement for expenses actually incurred when sound administration by such service institution leads to the closing of sites, reductions in numbers of meals served, or changes in any other factor upon which such formula or formulas may be based. The total disbursement for administrative costs in accordance with such formula or formulas in any fiscal year shall not exceed the total of (A) 6.75 cents for each lunch and supper, (B) 3.5 cents for each breakfast, and (C) 1.75 cents for each meal supplement served in such fiscal year. The Secretary shall propose such formula or formulas for administrative reimbursement by regulations published no later than October 15, 1977, and shall publish final regulations for such formula or formulas no later than December 15, 1977.

"(4) Service institutions which are residential camps shall be reimbursed for the cost of food service operations only for meals served to children eligible for free or reduced price school meals under the National School Lunch Act and Child Nutrition Act.

"(5) No service institution shall be prohibited from serving breakfasts, suppers, and meal supplements as well as lunches unless (A) the service period of different meals coincides or overlaps or (B) a service institution lacks the capacity or otherwise fails to administer the program in accordance with the requirements of this section and regulations promulgated under this section.".

Sec. 3. Section 13(d) of such Act is amended by—

(1) inserting "(1)" immediately after "(d)",

(2) striking out the first sentence and inserting in lieu thereof the following: "No later than June 1, July 15, and August 15 of each year, the Secretary shall forward to each State an advance payment for meals to be served in that month pursuant to subsection (b), which amount shall be sufficient to enable the State to make advance payments in accordance with paragraph (2) of this subsection.", and

(3) inserting at the end thereof the following new paragraph:

"(2) No later than June 1, July 15, and August 15 of each year, the State shall forward to each participating service institution which has made application therefor an advance payment for meals to be served by the service institution in that month in the amount of 50 per centum of the estimated reimbursement to that service institution for that month except that no advance payment to a sponsor for any month shall exceed $10,000 and except that a State may withhold or reduce any advance payment for any sponsor which fails to administer the program in accordance with the requirements of this section and regulations promulgated under this section.".

Sec. 4. Section 13(k) of such Act is amended by inserting immediately before the period at the end thereof the following: ": *Provided, further,* That if the Secretary finds that a State has experienced or reasonably anticipates special administrative difficulties in connection with the program, the Secretary may pay such State for administrative costs an additional amount not to exceed 1 per centum of the funds distributed to that State pursuant to subsection (b). If the Secretary determines that sound administration by a State has reduced the amount of funds distributed to that State in any year pursuant to subsection (b) below the amount reasonably anticipated prior to the beginning of that year's program, the Secretary shall reimburse the State for administrative costs incurred on the basis of the initially anticipated amount".

Sec. 5. Section 13 of such Act is amended by adding at the end thereof the following new subsection:

"(n) There are hereby authorized to be appropriated to the Secretary $5,000,000 for the fiscal year ending September 30, 1978, for the purpose of carrying out and evaluating demonstration projects to determine whether there may be more efficient, economical, healthful, and reliable means than those provided by the program authorized under this section for assuring that needy children receive nutritious meals during the summer. The Secretary shall evaluate such projects and report his findings to the Congress no later than January 15, 1979.

Sec. 6. The amendments made by this Act shall take effect on October 1, 1977, except that the studies which the Secretary is directed to conduct pursuant to Section 2 shall begin as soon as is practicable after the date of the enactment of this Act.

LEGISLATION TO REORGANIZE GOVERNMENT PERSONNEL STRUCTURE

The SPEAKER. Under a previous order of the House, the gentleman from Arizona (Mr. UDALL) is recognized for 5 minutes.

Mr. UDALL. Mr. Speaker, during the coming year the Congress is going to be dealing with a variety of governmental reorganization questions. Already the President has asked for authority to reorganize various subcabinet operations and we will also be debating his request for a new Energy Department.

In this light, it is imperative that the Congress also review the existing personnel structure of Government and assess its effectiveness and efficiency. The Committee on Post Office and Civil Service is beginning an active legislative program which will include major proposals on such items as: Collective bargaining for Federal employees, and revisions of the Hatch Act. While these are important rights that are deserving of consideration, there are other aspects of employee management that deserve careful attention.

In order for President Carter to effectively reform the Government, he is going to need good personnel and the necessary tools to manage them. Today I am introducing two bills: The first of a series that are designed to begin the reorganization of the personnel system in our Government. While modest in scope, they address two serious management problems facing the executive branch.

The first problem is simply this:

We have established a pay system which regularly adjusts Federal employee salaries. It now has a limit for top level employees—GS–15—of $47,500 per annum. The result of this system is that many executives find that they are being paid the same amount as their subordinates, with diminishing morale and psychological problems. Now, we did not intend for this to happen, but it did, and continues to this day. Therefore, I am introducing a bill which will let the President administratively set rates of pay for employees whose salaries would otherwise be compressed at $47,500, or whatever the future ceiling may be. Thus, we will insure that some means of pay distinction is maintained. However small the distinction may be, it will allow the President to set the pay of his managers so that a supervisor will not receive the same pay as those he supervises.

Second, I am also concerned about the continuing trend of the Congress to authorize more and more supergrades and at the same time not provide some central managerial authority to determine how those positions can best be utilized.

Congress originally created a mechanism by which the Civil Service Commission, as the personnel manager for the President, could supervise a supergrade pool which presently has some 2,700 positions. But there are another 8,000 positions which have been separately authorized and not subject to the managerial prerogatives of the administration. Therefore, I am also introducing, at this time, legislation which does two things:

First. It reaffirms the rule of the House that all legislation affecting the establishment of these positions must be referred to the Committee on Post Office and Civil Service prior to any floor action so that this committee, which is the committee's jurisdiction, can judge the matter in terms of the overall Government, rather than simply assisting an individual agency or subagency.

Second. It repeals most of the existing authorities for those supergrade positions outside of the manpower pool and replaces that authority with Commission authority so that they can manage all the senior level positions in the career service rather than some 25 percent of it.

These two bills are but the first steps of more to come in trying to rationalize our personnel system. I want to inform my colleagues that I intend to continue introducing legislation of this type and hope to have for early introduction, a proposal for a major reevaluation of the Civil Service Commission and its functions. I intend to press for early hearings and believe that our President will support these steps toward effective and efficient management of the civil service.

PERSONAL STATEMENT

The SPEAKER. Under a previous order of the House, the gentleman from Indiana (Mr. BRADEMAS) is recognized for 5 minutes.

Mr. BRADEMAS. Mr. Speaker, I insert in the RECORD at this point a statement regarding two recorded votes I missed on Tuesday, March 22, 1977, and an indication of how I would have voted had I been present. Each of the following votes came on a motion to suspend the rules and pass the bill, and I note, Mr. Speaker, that a vote of two-thirds of those present and voting is required for passage under this procedure.

The votes are as follows:

Rollcall No. 89, a vote on a motion to suspend the rules and pass H.R. 3437, Vocational Education Act Technical Amendments. The motion was agreed to by a vote of 396 to 1. I was paired for this motion, and had I been present, would have voted in favor of it.

Rollcall No. 90, a vote on a motion to suspend the rules and pass Senate Concurrent Resolution 7, a resolution relating to the harassment of Soviet Jews and other minorities. The motion was agreed to by a vote of 400 to 2. I was paired for this motion, and had I been present, would have voted in favor of it.

REPORT ON INTERNATIONAL BROADCASTING

The SPEAKER. Under a previous order of the House, the gentleman from Florida (Mr. FASCELL) is recognized for 10 minutes.

Mr. FASCELL. Mr. Speaker, yesterday the President released a report to Congress detailing his recommendations to increase the effectiveness of U.S. international broadcasting. This report was prepared in response to legislation passed by Congress last year calling for a comprehensive report:

(1) recommending steps to be taken to utilize more effectively the transmission facilities for international broadcasting, both existing and planned, of the United States Government;

(2) examining the feasibility of greater cooperation with foreign countries to insure mutually efficient use of nationally owned and nationally funded transmission facilities for international broadcasting;

(3) containing a comprehensive outline of projected needs for United States international broadcasting operations based on anticipated language requirements and anticipated cooperation among various agencies of the United States Government, United States Government-funded organizations, and foreign governments involved in international broadcasting; and

(4) recommending steps which should be taken to extend broadcasting operations similar to those carried out under the Board for International Broadcasting Act of 1973 to additional countries where access to information is restricted by the policies of the governments of such countries.

Mr. Speaker, next week the Subcommittee on International Operations will begin hearings on the fiscal year 1978 budget requests of the Board for International Broadcasting and the U.S. Information Agency. In the course of those hearings we will certainly give the President's recommendations most serious consideration.

Because of the great interest in Congress in broadcasting by both the Voice of America and Radio Free Europe/Radio Liberty, I would like to call to the attention of the House the text of the President's report.

REPORT ON INTERNATIONAL BROADCASTING

INTRODUCTION

International broadcasting is a key element of United States foreign policy. Communicating our policies, ideals and traditions of free information to the peoples of the world is of vital importance to the security of the United States and the structure of peace. Our most crucial audiences for international broadcasting are in the Soviet Union and Eastern Europe, where censorship and controlled media give the peoples of the area distorted or inadequate views of the U.S., as well as of crucial events within their own countries and in the world at large.

There are two separate U.S. international broadcasters to these audiences—The Voice of America and Radio Free Europe/Radio Liberty. The VOA is an integral part of the United States Government. Its mission is worldwide and the primary functions are to present world news, to express and explain U.S. official policy and American society and institutions. RFE/RL, on the other hand, is organized as a nonprofit corporation funded by Congress under the statutory oversight of the Board for International Broadcasting. Its task is to encourage a constructive dialog with the peoples of the USSR and Eastern Europe, and broadcast content is focused on the concerns of these peoples. VOA broadcasts are generally, if reluctantly, accepted by the Soviet and East European regimes as an official activity of the USG. RFE/RL broadcasts are heavily jammed in the USSR, Czechoslovakia and Bulgaria and to a lesser extent in Poland as well. (The Soviet and East European authorities have failed to acknowledge the manifest changes in RFE/RL funding, oversight and programs since 1971.)

This report is the result of a comprehensive examination of a variety of options on how to improve the effectiveness of U.S. international broadcasting, in accordance with Section 403 of the Foreign Relations Authorization Act, Fiscal Year 1977.

EFFECTIVE USE OF BROADCASTING FACILITIES

To establish with authority the requirements for broadcasting by VOA and RFE/RL, a recognized authority in the field of international broadcasting was requested to prepare a report. In his thorough study, he examined the technical requirement for effective broadcasting for both VOA and RFE/RL, treating all their transmitter facilities in the European area, for purposes of study, as a single integrated network. His

technical findings have been generally accepted by BIB and USIA.

After reviewing the technical and political requirements for effective international broadcasting, the study examined options for reducing the cost of meeting those requirements. The study finds that the present transmission facilities of both the Voice of America and Radio Free Europe/Radio Liberty are inadequate to assure a satisfactory probability of reception in all current languages of broadcast to the USSR and Eastern Europe—particularly in view of the continued jamming of RFE/RL broadcasts in much of the area. Both radios are presently vulnerable to the possibility of equipment failure or to transmitter site loss; neither has much capacity to increase broadcasting during periods of international crisis. Given these problems, the study and its review have determined that sixteen new 250 kilowatt transmitters are required for this U.S. broadcasting effort.

A full range of alternatives has been carefully reviewed; these alternatives would reduce the overall transmitter requirement by curtailing, reducing or combining VOA and RFE/RL broadcast efforts in various languages. The options examined—and rejected—included eliminating broadcasts to many non-Russian nationalities of the USSR and integrating the RFE/RL and VOA program schedules as well as their transmitter networks.

While several of these options would reduce potential capital investment costs and annual operating costs, the political disadvantages of such measures far outweigh the budgetary savings or technical efficiencies. Sharing present transmitter facilities for VOA and RFE/RL broadcasts would *not* reduce the need for new transmitters, given present program and language requirements. The savings that might be achieved by integrating program schedules would be at the cost of significant reductions in current prime-time broadcasting in such major languages as Polish, Czech, Hungarian and Ukrainian. Eliminating broadcasts in some or most non-Russian languages of the USSR could be widely interpreted as a weakening of the U.S. commitment to the Helsinki provision for "freer and wider dissemination of information of all kinds," and as a lessening of U.S. interest in the non-Russian nationalities of the Soviet Union.

On the other hand, the requirement for additional transmitters could be reduced if the USSR, Poland, Czechoslovakia and Bulgaria halted their jamming of RFE/RL broadcasts. Such a halt would be in conformity with the final Act of the Conference on Security and Cooperation in Europe, which expressed hope for the continued "expansion in the dissemination of information broadcast by radio." At the time of this writing, there is no indication that jamming will be halted.

COOPERATION WITH FOREIGN GOVERNMENTS

Other Western Governments (UK, FRG, France, Canada, the Netherlands, Luxembourg) with transmitters that can reach the USSR and Eastern Europe have almost no unused transmitter capacity to share with the VOA or RFE/RL. These other broadcasters (including BBC, Deutsche Welle and Radio Netherlands) maintain transmission schedules that leave virtually no free time on their transmitters when RFE–RL and VOA needs are greatest (i.e., prime time). These broadcasters are demonstrably under-capitalized in terms of the transmitter capacity to meet their own responsibilities and requirements. For example, Deutsche Welle's eight powerful 500 KW transmitters are in use 24 hours daily. BBC, the only Western broadcasters that has a worldwide mission and resources comparable to those of VOA, employs 97% of its total capacity during prime-time broadcasting hours. Radio Netherlands has no open time in any of its transmission schedules during prime-time broadcasting hours and all its transmitters broadcast 18 hours daily.

A COMPREHENSIVE U.S. BROADCASTING OUTLINE

The technical requirements to meet U.S. needs for broadcasting to the USSR and Eastern Europe have been defined above. To ensure an acceptable minimum level of broadcasting effectiveness for VOA operations in other parts of the world, USIA* has recently completed a study of its worldwide requirements and identified these new transmitter requirements. The USIA study has been reviewed and its conclusions reassessed in the context of the technical analysis developed for this report. When these findings of the USIA study are meshed with the determined needs for transmitter facilities in Europe, the results indicate an additional requirement for four new 250 KW VOA transmitters in sub-Saharan Africa to provide a reliable signal in East and South Africa and eight similar transmitters to strengthen existing VOA broadcasting facilities in the Western Pacific region.

Once the required new transmitters are installed—and three to five years will be required to complete their installation—all present U.S. broadcasting needs and commitments can be effectively met. Although language priorities may change in response to political events and some languages may be added or dropped, the total transmitter capacity will be sufficiently flexible to accommodate all probable changes short of a fundamental transformation in U.S. broadcasting policy.

EXTENDING U.S. BROADCASTING OPERATIONS

An examination of the feasibility of extending BIB-type broadcasting operations to additional countries where access to information is restricted reveals immense difficulties. Except for Western Europe, Canada, Australia, New Zealand, Japan, some Latin American and a few other countries, most of the governments of the world restrict in various degrees their citizens' access to information. In many instances, these restrictions are severe. Moreover, political conditions can and do change rapidly and often result in sharp fluctuations in the amount of information available to the average citizen. It follows that the list of countries to which we would broadcast would have to be constantly changing.

Therefore, to undertake additional BIB-type broadcasting to countries outside the USSR and Eastern Europe might require the construction of a new worldwide network of transmitters, the cost of which could run well over $100 million. The transmitters would have to be installed in a number of appropriately located countries in Asia, Africa and Latin America. It is doubtful that the U.S. Government would be able to obtain agreement from third countries to lease most of the required transmiter sites.

CONCLUSIONS

With present program scheduling, there is no significant unused transmitter capacity available for sharing between VOA and RFE/RL, or between other Western broadcasters and either of those radios.

The rationale for two U.S. broadcasters to the USSR and Eastern Europe (VOA and RFE/RL), with distinct missions and separate identities, remains valid. Blurring the distinction between them, through merged program schedules and integrated transmitter networks, would diminish their individual effectiveness. While the Soviet and East European Governments might choose to use facilities sharing or program integration as a pretext for undermining other U.S. informational programs, these considerations should not prevent the short-term sharing of transmitter facilities in the future if that should prove necessary in an emergency.

A comprehensive outline of U.S. worldwide broadcasting needs calls for an addition of sixteen 250 KW transmitters for broadcasting to Eastern Europe and the USSR (5 for Voice of America, 11 for RFE/RL) and an addition of 12 VOA transmitters for broadcast to Asia and Africa, all of which can be installed in a period of three to five years.

Extending BIB broadcasting operations to countries outside Europe which restrict access of information to their citizens would be impractical for several reasons, including the large number of such countries, the frequent political changes taking place within them, the high cost of building a new worldwide transmitter network, and the difficulties in obtaining sites for the new transmitters.

The current crowding of shortwave broadcasting bands continues to reduce the quality of the signals on available frequencies. There will be a World Administrative Radio Conference in 1979 to address, among other subjects, the question of expanding the shortwave broadcast band. The Interdepartmental Radio Advisory Committee will consider the need for expansion of the shortwave broadcast bands in preparation for the conference.

RECOMMENDATIONS

1. The Administration recommends the acquisition of sixteen new 250 KW transmitters for Europe (costing approximately 22–25 million) to provide VOA and RFE/RL with the capacity to meet the minimum technical requirements for the fulfillment of their missions, to permit RFE/RL to increase its ability to penetrate jamming, to upgrade existing underpowered facilities and to provide reserve capacity for equipment failure and times of international crisis. Acquisition of these transmitters should proceed as expeditiously as possible. Both BIB and USIA have determined that it is possible to locate the required new transmitters at existing sites in Western Europe.

2. The United States Government must keep under constant review situations that might arise to impair the technical effectiveness of our international broadcasting efforts (i.e., unwillingness of host governments to renew essential transmitter leases or expedite expansion of existing transmitter sites, renewed jamming of VOA as well as RFE/RL broadcasts). Should any of these situations arise, we should be prepared to re-examine the practical questions related to sharing transmission facilities and to discuss with appropriate countries the installation of at least six additional transmitters for use by VOA and/or RFE/RL. VOA transmitters for Asia and Africa will be requested through normal budgetary channels.

*VOA presently broadcasts in 36 languages to diverse parts of the world for a total of 789 hours weekly. The VOA English Service is worldwide and averages 164 hours weekly. Among the major languages, Spanish to Latin America is on 38 hours each week, French to Africa 37 hours, and Arabic 49 hours weekly. At times, unusual political circumstances arise in a single country which call for increased VOA activity. RFE/RL broadcasts in 22 languages (6 in Eastern Europe, 16 in the Soviet Union) for a total of 980 hours weekly.

AMNESTY INTERNATIONAL REPORT DETAILS HUMAN RIGHTS VIOLATIONS IN ARGENTINA

The SPEAKER. Under a previous order of the House, the gentleman from Massachusetts (Mr. DRINAN) is recognized for 30 minutes.

Mr. DRINAN. Mr. Speaker, today at simultaneous press conferences in Washington and London the report of the Amnesty International mission to investigate the human rights situation in Argentina was released. This comprehensive, 92-page report, released exactly 1 year after the coup which installed Argentina's military government, is by far the most thorough examination to date of that government's systematic violations of the human rights of its citizens. These violations recently led to the termination of U.S. military assistance to Argentina. Neither the State Department report on human rights in Argentina nor the announcement of the termination of military aid, however, provided a detailed analysis of the human rights situation in that troubled nation. The report which we release today provides an unprecedented analysis of the pervasive denial of fundamental human rights in Argentina.

Reports of widespread political violence and human rights violations prompted Amnesty International to send a mission to Argentina in November 1976. The delegates conducting the investigation for Amnesty International were Lord Avebury, a member of the British House of Lords and of the Human Rights Parliamentary Commission, Ms. Patricia Feeney of the International Secretariat of Amnesty International, and myself. Throughout our stay in Argentina, from November 5 to 16, the mission was subject to intense surveillance by the internal security forces. At least 20 plainclothes police followed us wherever we went, and they questioned and intimidated a number of people whom we met. One young woman, without any suspicious political affiliations, disappeared immediately after meeting with me and was released 24 hours later, without explanation, by the police. Another woman was held by the police for 2 weeks following a discussion with one of the members of the Amnesty International delegation.

As is common practice in Argentina, the families of the two women arrested after meeting with us were not informed of their detention. The Amnesty International report estimates that more than 15,000 individuals have disappeared or been abducted in Argentina in the past 2½ years. The situation has manifestly grown worse since the coup; we were able to determine that the Argentine Government receives an average of 10 requests for writs of habeas corpus per day. In August 1976, at the Ministry of the Interior, a register was opened in which the names of missing persons could be entered by their relatives. The daily limit for the receipt of such complaints was set by the government at 40. The maximum figure was attained routinely.

The refusal of the Argentine Government to release a list of political prisoners constitutes a particularly outrageous and cruel violation of human rights. We met with many Argentine families whose relatives had been kidnaped, presumably with the complicity of the police or armed forces. These abductions typically take place in the middle of the night, and the abductors usually appeared to be off-duty police or military forces. The families of those so abducted—we met with more than 100 of them—are left completely in the dark as to the physical well-being and whereabouts of their relatives. Even among nations which are universally recognized as violators of human rights, the failure of the Argentine military junta to release the names of those arrested and imprisoned without charge or trial is a singularly outrageous action. Our report contains as one of its principal findings a recommendation that the government compile and release a list of those imprisoned for political reasons.

Frequently, relatives and friends of suspected "leftists" have also been kidnaped. A typical case which was described to us involved the family of a well-known political figure who had left Argentina and subsequently criticized the military regime from abroad. His wife and two children were abducted by men claiming to be the federal police. None of these individuals had any political associations whatsoever. His daughter, who was in poor health, was released from a federal prison after 10 days; the other two are still missing, more than 6 months after their abduction.

Our mission was able to compile, for the first time, a comprehensive list of those disappearances which have occurred since the March 24, 1976, coup. This list includes all the cases which Amnesty International has been able to corroborate, and it omits the names of all those who have been released, found dead, or acknowledged to be held in official custody. A total of 480 individuals appear on this list of Argentines who have been abducted and whose whereabouts is not known.

Based upon direct contacts with individuals in Argentina and testimony by people who have emigrated from that nation and Uruguay, our report was able to conclude that Argentine and Uruguayan internal security forces acted in concert to abduct from Argentina and transport to Uruguay at least 17 refugees. These people left Uruguay when a military dictatorship assumed power there. Direct testimony indicates that these refugees were abducted by agents of the Uruguayan security forces. The scale of these kidnapings inevitably implies the cooperation of at least some members of the Argentine armed forces and police. This action by the Argentine Government constitutes a direct breach of the Treaty on International Penal Law and the Convention on Extradition, to which it is a signatory.

The military junta has suspended virtually all civil rights and individual liberties. As the report states in detail, the Argentine Government has prohibited all political activity, suspended parliament, imposed strict censorship, authorized arrest and indefinite detention without charge or trial, established military tribunals for all crimes pertaining to "subversion," permitted widespread torture of political prisoners, and engaged in abductions of its citizens. The report concludes:

[M]erely on suspicion of subversion, a citizen may be abducted or arrested, held for a long period *incommunicado*, tortured and perhaps even put to death. He has no legal safeguards against these measures, and, if it happens that he is released, no hope of legal redress.

During our discussions with officials of the Argentine Government, including the Under Secretary of Foreign Affairs, the Under Secretary of Justice, and an official at the Ministry of the Interior who is in charge of internal security, we received no assurances of any forthcoming reduction in the "state of siege" measures abridging fundamental human rights. They gave us no indication of a limit on the duration of the state of siege or of the military government which implements it. The draconian policies of the junta were ostensibly adopted to counteract left-wing terrorism. But government officials admit that left-wing violence has been greatly reduced; indeed, violence perpetrated by the security forces far exceeds that of the terrorists. In its efforts to combat left-wing terrorists, the government has itself established a far broader and more pervasive form of terrorism. As we state in our report:

The actions taken against terrorists have therefore been self-defeating: in order to restore security, an atmosphere of terror has been established; in order to counter illegal violence, legal safeguards have been removed and violent illegalities condoned.

The extreme human rights violations of the Argentine military government bring into sharp focus the complex question of the proper United States and multilateral response to systematic abuses of this nature. Efforts such as that of Amnesty International to bring human rights violations to the attention of the world are certainly useful. As our report recommends, greater investigatory activity by the United Nations in the area of human rights is necessary. The decision of the Carter administration to drastically reduce military assistance to Argentina resulted, as we know, in the announcement by the Argentine Government that it no longer desired U.S. security assistance. In the light of similar pronouncements by other Latin American nations, including Brazil, Guatemala, and El Salvador, some have questioned the Carter administration's decisions. These questions ignore the central fact that U.S. law prohibits the provision of military assistance to any nation which engages in the systematic violation of the human rights of its citizens. This provision of the law, section 502(b) of the Foreign Assistance Act, is mandatory, not discretionary, in nature. It reflects not a tactical judgment, but a moral commitment. We must cease providing military equipment to nations such as Argentina not only in the hope that this will influence them to alter their human rights policies, but also because it is fundamentally wrong for the United States to arm a government which turns its arms against its citizens to deprive them of their fundamental rights.

The question is, what more can we do? President Carter and Secretary Vance are to be commended for their forthright actions on the issue of human rights. The experiences of the Amnesty International delegates in Argentina and the report which we prepared bring home

the essential point that the international debate on human rights involves the lives of thousands of people. The increasing violations of human rights in the Western Hemisphere and the demonstrated utility of the Helsinki Agreement in Europe suggest that the United States should take the lead in enforcing existing agreements among the nations of the Western Hemisphere pertaining to human rights. We should also endeavor, within the framework of the Organization of American States or in a separate international forum, to reach an intrahemisphere agreement on the inviolability of certain basic human rights. Perhaps such an agreement could be accompanied, as is the Helsinki Final Act, by guarantees of increased economic cooperation, conditioned upon observance of human rights guarantees. Recent experience suggests that the United States is far more effective in appealing for the observance of fundamental human rights when we can speak in the context of multilateral agreements. This removes to some degree the stigma of the "meddling outsider," and provides us with a legal as well as a moral basis for our position.

There are no easy solutions to the problem of systematic human rights violations such as those occurring in Argentina. By speaking out forcefully and consistently, we risk the temporary loss of influence in certain nations. But by failing to speak out, we risk the permanent betrayal of our most cherished principles. Our human rights policy must always concern itself with the question, "What is most effective?" But we must not permit that concern to obscure the even more important question, "What is right?"

Those who wish to obtain a copy of the 92-page Amnesty International report on Argentina may do so by sending $1.70 plus postage to Amnesty International, 6 E Street SE., Washington, D.C. 20003.

ROMANIA AND HUMAN RIGHTS

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, I am deeply concerned with the status of human rights in Romania. I submitted testimony March 15 at hearings held by the Commission on Security and Cooperation in Europe, also known as the Helsinki Commission, on the subject of family reunification. I would like to share that testimony with my colleagues in Congress because I believe we have a right to expect more open emigration policies from Romania than now exist if we are to extend Romania's status as a most favored nation under our trade laws this summer.

I have been equally concerned for some time about the status of ethnic minorities who choose to continue living in Romania but ask, indeed demand, that their own cultural heritage and rights of free expression be respected by the Romanian Government. I am referring in particular both to the situation of the nine individuals recently subjected to harassment after publicly appealing to the signers of the Helsinki Treaty, and more generally to the situation of the 2.5 million Hungarian-speaking Romanians who seek to retain their linguistic and cultural identity as a minority in Romania. These persons do not wish to leave Romania for some other country, but seek to have basic rights accorded them. The guarantees of Helsinki are even more significant for these Romanian citizens who remain than for those few who successfully emigrate.

I am distressed, Mr. Speaker, at reports that indicate that discrimination taints many aspects of life for the Hungarian-speaking minority. Last year I was shown a copy of the Romanian laws that now require a minimum of 25 students for any grade school class to be conducted in Hungarian, while only two students are required to form a class taught in the Romanian language. Previously, only 15 students were needed to form a class in a "minority" language. I brought this matter to the attention of the Romanian Embassy in the United States, but I have not yet received a satisfactory reply.

According to a number of reports I have received, the Hungarian-speaking population in Romania as a whole has suffered from an elaborate series of government maneuvers which they fear are intended to gradually phase the Hungarian culture out of Romanian life. I am disturbed by reports of falsification of population statistics intended to minimize the number of Hungarian-speaking citizens, of the dissolution of Hungarian communities by assigning workers and professionals to work projects outside their ethnic community and of a forced reduction in the number and volume of Hungarian language publications. The government has also been accused of rewriting the history of Transylvania in textbooks to minimize the importance of the Hungarian-speaking population that has been native to that region for centuries.

Perhaps the most overtly oppressive action was the apparent confiscation of Hungarian church archives under the pretext of protecting them in government archives. These are all grave allegations and I believe they must be taken seriously. Along with Representative DRINAN and Representative DODD, I have introduced House Resolution 37, which seeks reports from both the President and from the Helsinki Commission concerning the status of minority rights in Romania and the freedom to emigrate. We are not questioning territorial claims, but simply asking questions about whether Romania will respect the ethnic heritage, including the use of language, of ethnic minorities in that country.

Most recently, the Western press has received reports of repression in Romania which only add to the fears for human rights. On February 8, nine Romanians, including the writer Paul Goma, signed an appeal to the governments that signed the Helsinki Treaty, asking for their help in gaining more respect for human rights, including the right of expression, in Romania. According to the news accounts, Romanian President Nicolai Ceausescu immediately denounced as "traitors" those Romanians attempting to emigrate or "carry on propaganda against the government." A number of persons were placed under house arrest and telephones were disconnected. Such reaction to dissent is a blow against free expression and deserves the strongest condemnation of those supporting human rights.

Subsequent news reports indicate that the Romanian Government, apparently reacting to the international outcry at its harassment of the dissidents, had relaxed its harsh treatment of these dissidents. The Romanian Government has allowed several dissidents to emigrate and has lifted police barricades from the homes of those who chose to stay in their homeland. Significantly, Mr. Goma has reportedly now received an offer to publish his novels in Romania. Until now, his works had only appeared abroad in French and English translations, as the Government-controlled publishers avoided his works.

If these newest reports are confirmed, a significant step will have been taken. Hopefully, the Romanian Government will continue on this course in the future and extend the basic protections offered by the Romanian constitution and the Helsinki Treaty. This would mean not only better treatment of those who express views contrary to the Government, but also for those who wish to use their own language, and those who wish to emigrate.

In the meantime, we in the United States must continue to provide strong support for the citizens in any country whose human rights are threatened. I am delighted that President Carter himself has taken a position of leadership in the cause of human rights. I applaud his statement yesterday that he will not back down on his concern for human rights anywhere.

I have appended my testimony and a recent article from the New York Times describing developments in Romania:

TESTIMONY OF CONGRESSMAN EDWARD I. KOCH FOR THE COMMISSION ON SECURITY AND COOPERATION IN EUROPE

MR. CHAIRMAN: I'm certain I mirror the thoughts of my colleagues in Congress as well as all Americans in expressing the deepest sympathy with the Romanian people as they struggle to rebuild their country in the wage of the disasterous March 4 earthquake. The severe blow to Romania's progress in developing its industry and in providing housing and other essential human needs is exceeded only by the staggering toll of more than a thousand dead and thousands more injured by the quake.

I am pleased that the United States has not hesitated to respond to the Romanian government's request for emergency aid. I understand that a planeload of food and medical supplies from our government has already landed in Bucharest and $25,000 in aid has been made available through our Ambassador in Romania. I believe we have a duty to help any country, regardless of the politics of its government to alleviate human suffering caused by such natural disasters.

However, we should not allow this tragedy to divert our attention from the obligations of all governments to respect fundamental human rights, including basic rights such as the freedom to emigrate.

Romania is one of the three East-bloc countries currently enjoying "most favored

nation" status in trade relations with the United States. Under the terms of the 1974 Trade Act, one requirement for this status is the right of emigration, a right that is seriously restricted by Romania today. In addition, by signing the Helsinki agreement, Romania has officially promised to facilitate reunification of families separated by national boundaries. I have brought a number of cases of individuals seeking exit visas to the attention of the Romanian government. In an apparent violation of the Helsinki accords, which it signed along with thirty other countries, Romania has continued to delay and to deny emigration and travel visas to citizens wishing to join their families abroad. In many cases, I have been informed that the mere act of applying for a visa has resulted in unjustified harassment of those wishing to leave. Let me describe some of these cases.

Six months ago, at the time Romania was concerned about the extension of its most favored nation status, I wrote the Romanian Embassy in Washington concerning an emigration visa for Vladimir Fridman to come to the United States to join his wife, who is one of my constituents. I was told by the Romanian Ambassador that the application had been approved. However, I learned last montth from Mr. Fridman's wife that he had not yet been notified of the approval and he is still waiting to leave Romania. If Mr. Fridman's application for emigration has been approved, why has he not yet left the country?

More than six months ago, I wrote the Romanian Ambassador concerning emigration applications for Alexandru and Stefan Suciu, who want to join their father in this country. I was told by Dr. Traian Suciu that his sons have repeatedly visited the local police station in Bucharest but the application forms have been denied them. Similarly, Alexandru Marndici, his wife Sorana and their son Mircea have not been able to emigrate because, according to Mrs. Marandici's sister, a resident of New York, application forms were not available. My request for a clarification of Romanian government policy in these cases is still unanswered.

Last fall I also inquired into the application of Ion Bals and his wife and children to join relatives here. I am told by his aunt, a resident of New York, that Mr. Bals has been dismissed from his job and is not allowed to apply for another because of his expressed desire to emigrate. The Romanian government's failure to respond to my letter, now almost four months old, only serves to confirm our fears for Mr. Bals' situation. Six months has also passed without a saisfactory answer to my inquiry concerning the emigration application of Michael Giuran of Slatina, Romania.

Gabriella Teodorescu, her husband Liviu and their son Dan Christian have been trying for three years to make a 45-day trip to the United States to visit Mrs. Teodorescu's sister, a New York resident. I have waited with them for the past five months, hoping for some response to my letter to the Ambassador in their behalf.

More recently, I learned that 15 year old Roxana Deleanu was expelled from an important scholastic society in Romania, reportedly because she expressed a desire to join her mother in the United States. Roxana's case is complicated by the fact that her father, Mihai Deleanu, opposes her emigration, although he has remarried and does not in any way contribute to her support. Separated from her mother, Roxana must live with her 65-year old maternal grandmother. It would indeed be unfortunate if the father refused to grant his permission because of fears of reprisal. I am told, for example, that Roxana's uncle, Serban Enculescu, was forced from his job as an engineer-chemist after Roxana's mother filed a petition for emigration for himself and his family.

I am particularly upset and outraged by the denial of a visa for Josef Teleky, reportedly a result of the Romanian government's suspicion that Teleky's son-in-law, a U.S. resident, was engaged in activities contrary to the interests of Romania. The activity in question was attendance at a meeting concerning the status of religious affairs in Romania which I hosted in my New York office at the suggestion of the Consul to the Romanian Embassy. It would be a severe setback to relations between our countries if Romanian citizens suffer because their relatives in the United States exercise their right to meet with Members of Congress. Whatever powers Romania may assume in attempting to control the activities of its own citizens, it has no right to intimidate residents of the U.S. in the exercise of their constitutional rights.

These, then, are some of the experiences with Romanian emigration policies that have been brought to my attention by constituents in my district in New York. I have raised these and similar problems with the Romanian Embassy on many occasions, but the Embassy has repeatedly denied their validity and have claimed that a large number of visa applications to the United States have been approved. I believe, however, that those charges of restrictive emigration policies can only be effectively rejected when the individuals named in these particular cases arrive in the United States.

I join with Senator Edward Kennedy of Massachusetts in commending the U.S. Disaster Relief Office for its quick dispatch of emergency supplies to Bucharest following the earthquake. It is our moral obligation to provide such aid, regardless of political differences between governments. Senator Kennedy, in his statement in the Congressional Record on March 9, 1977, also declared himself ready to introduce legislation offering aid to Romania is "longer-term rehabilitation and reconstruction needs are identified." This vital country has shown an admirable spirit of independence in its dealings with the Soviet Union and I, too, stand ready to support closer economic cooperation with Romania in the future. Such cooperation, though, must go both ways. We have all right to expect a response from the Romanian government to inquiries about particular emigration cases such as those I have described. Our cooperation is off to a healthy start with Romania's designation as a most favored nation under our 1974 Trade Act. Both the U.S. and Romania were among the signers of the Helsinki Treaty. I look forward to this commission's final report to see if Romania and other East-bloc countries have decided to continue this promising atmosphere of cooperation by pursuing open emigration policies and by ending repressive internal policies against ethnic minorities and others who choose not to emigrate, but rightfully demand full rights as Romanian citizens.

[From the New York Times, Feb. 19, 1977]

CURBS ON DISSIDENTS EASED BY RUMANIANS

(By Malcolm W. Browne)

BUCHAREST, Rumania, Feb. 18.—The Rumanian police today partly lifted their cordon around the homes of several dissidents here, and at least 10 passports were promised to members of their families.

The apparent easing of police measures against public critics of the Government followed a day in which a number of dissidents were believed to have been arrested after President Nicolae Ceausescu had branded them "traitors."

Telephones at the homes of dissidents were disconnected yesterday and remained more or less inoperative today.

One dissident, the novelist Paul Goma, said that he and his wife, Ana Maria Navodaru, had watched yesterday as police cars and men around their apartment building turned away would-be visitors, but that the police had never called on the family themselves.

COUPLE GET THREATS

He said that yesterday and today, although their telephone was not functioning for normal calls, they had received a series of threats, mostly anonymous. Mrs. Navodaru has prepared a list of foods and other necessities for the couple's year-old baby, in case they both should be seized.

Attention has centered on Mr. Goma, partly because translations of his novels have been published in France and West Germany, and partly because he has said he wants to stay here rather than emigrate, so that he can continue his civil-rights campaigns.

The Gomas were among eight persons who drafted an appeal 10 days ago calling for greater observance of human-rights provisions in the Rumanian Constitution. The appeal was directed to the 35 nations that will convene in Belgrade, Yugoslavia, in June to discuss European security and cooperation.

Two other signers of the appeal are Mrs. Carmen Maria Manoliu and her son Sergiu, both artists, who for three years have been seeking permission to emigrate. Their apartment was blockaded yesterday, but today an army major called on them and asked them to accompany him to the passport office.

Mrs. Manoliu said they were politely received by a major general who promised that their papers would be in order and that they would get one-way tickets that would get them to Paris next Tuesday. He said he would arrange to obtain French visas, despite the fact that the French Embassy here had earlier indicated it was unlikely the Manolius would be admitted, even if they could get out of Rumania.

Two signers of the appeal, Mr. and Mrs. Erwin Gesswein, and six members of their family, also received emigration papers yesterday.

One signer, Serban Stefanescu, could not be located today, however, and there were fears that he had been arrested. Mr. Stefanescu does not wish to emigate. And another signer, Adalbert Feher, was summoned today to answer charges stemming from an earlier automobile accident. The charges had been dropped, but were reinstated today with no explanation.

MAYOR SAM BRENNER RECEIVES THE ISRAEL KOAH AWARD

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, on the evening of December 23, 1976 in the community center at Surfside, Fla., Mayor Sam Brenner was honored by the city of Surfside when he was presented with the Israel Koah Award for his years of dedication, service, and leadership on behalf of the community and the State of Israel. It was my privilege to be present on that meaningful occasion and to present the richly deserved award to Mayor Brenner. The mayor delivered an eloquent and deeply moving message, reminding all of us who were present of the horrible atrocities which were perpetrated against the Jewish people. He set forth the hope that one day our world would have a representative organization of international law and order which would have its own peacekeeping force and that all nations would be protected, regardless of their race, color, creed, or form of government. I commend Mayor Brenner's powerful address to all those who read the RECORD and ask, Mr. Speaker, that it be included

in the body immediately following these remarks:

ADDRESS BY MAYOR BRENNER

I will read the poem "memorial" by Hannah Kahn, from her book "Eve's Daughter," in which she depicts a Polish village during World War II, wherein the Jews were made to take their shoes off in the fields, and were murdered by the Nazis.

"Six hundred shoes were left in the village:
Testament of violence, testament of fear.
Monument of terror that three hundred people
Left for us to remember a town, a year.

"Six hundred shoes of different sizes,
Different colors, piled in a field.
Who will wear the shoes of the silent people,
Who will speak for those lips are sealed?"

* * * * *

"Who will wear the shoes of the silent people,
Who will speak for those whose lips are sealed?"

I would like to see those lines immortalized and placed under a torch for Israel. For I am smitten every time I read those lines. Had I ever written two lines so timely, and yet so timeless, I would be prone to say to my maker, "You can have me now for I have fulfilled my purpose."

For the challenge of our times rests in those lines. All humanity should have been wearing those shoes from the time the martyred people took them off and were murdered by the damnable Nazis.

But I do not see 600 shoes. Twelve million shoes is what I see, plodding over the conscience of mankind, with their slow torturous tread crying out to me, "six million people; six million people," they cry to me:

"COUNT TO SIX MILLION

"One! two! three! four!
And so on thru to many more
To six million!
Count, I defy you to count!
Do you know how long it would take you to count to six million with each number representing a human being like you and me?

"One hundred orange bowl football stadiums fully packed
With sixty thousand people to a bowl!
That's six million!
Line them up!
One stadium fully packed alongside the others,
Now kill them all!
That's what they did to us!

"Who knoweth one?" my father cries
Reading the hagguda with watery eyes.
I know one.
But I do not know six million!
I have no conception, no idea, no understanding
Of so vast an amount as six million people.

"Five! six! seven! eight! nine! ten!
Count, count to six million!
Who was number six hundred three?
Was it a he or was it a she?
Or was it you and I
In the cauldrons there to die?
And sputter in the nazi flame!

"Who can count the waves of the sea?
Who was eight hundred eighty three
Or four million two hundred eighty seven thousand
Two hundred twenty four?
It was really you and I who died!"

The conscience of humanity owes us a place in the sun! The inquisition owes us a place in the sun! The pogroms owe us a place in the sun! The holocaust owes us a place in the sun!

And that place is Israel.

And if you think that no one owes us anything, then from every inhumanity to man which we have suffered, from bondage and slavery, from the diaspora, from inquisition, pogrom to holocaust we have more than earned and deserve our place in the sun. And that place again I say, is Israel.

How many Hitlers do we have to outlive before we can take our rightful place alongside a brotherhood of all nations? We will outlive them all, with your help and with God's help.

Until the time comes when a duly representative organization of international law and order will have its own peacekeeping force strong enough to protect all nations regardless of their race, color, creed, or form of government, and towards which new era we must begin to strive as an additional form of insurance and security to what we now have in the state of Israel—but not only for Israel, but for all nations! Until that will replace the international anarchy which now prevails and until that time comes we must be engaged in a life and death struggle to strengthen Israel!

There is no candle we can light for all humanity to pierce the darkness and shed a greater light around the world than that of international law and order.

We can no longer live in a world where nations are wild beasts roaming the jungles of nationalism. We must now clear the jungles and tame the wild beasts. International law and order must be created to protect all nations. That is the ultimate salvation of the world from every political, social and economic viewpoint.

This cannot be and must not be the world we leave behind us for our children to inherit, that men should come and plunder men again and again.

For surely this is not the world mankind thought he was awakening to when the wand of light touched his eyes!

But while it is that world, and this inadequacy exists we must struggle to keep Israel strong. We need a healthy Israel to bolster the image of the Jew all over the world.

If we don't do anything about helping Israel how can we expect other generations to come to her aid, when we were the ones who lived thru it all?

Israel is the nostalgia of our lives, the heart of our yearning for thousands of years, in our cry of "next year in Jerusalem!"

The martyred people from the holocaust cry out for us to help Israel. How they wish there had been an Israel then. Let the torch of martyrdom and brotherhood not slip from the hands of Israel.

Oh Yerusahalaem! Oh Israel, if I turn from thee may I become bereft of my feet so that I cannot walk, and if I lose sight of you may my eyes become sightless to all things.

"Mourn not for me when I am dead.
Count to six million instead!
On all the battlefields of time,
Tally the toll for me!
Weep not for me
Say no Kadishes for me
Count, just count to six million!"

We stand up to protect the animal kingdom from any acts of man endangering any one of their species, yet in the human kingdom who will stand up and protect an endangered species of the human race? What manner of mankind are we that we preserve the animal kingdom but not our own?

"Who will wear the shoes of the silent people?" I will wear the shoes of the silent people! You will wear those shoes! We all must wear those shoes by helping Israel now!

(NOTE.—Delivered by Sam Brenner, "Night in Israel", December 23, 1976 at community center of Surfside, Florida, honoring Mayor Sam Brenner, recipient-elect of the Israel Koah Award.)

PERSONAL EXPLANATION

(Mr. GILMAN asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. GILMAN. Mr. Speaker, on March 17, 1977, due to a prior commitment in New York, I was unavoidably absent for the legislative day. Had I been present, I would have voted in the following fashion: On Rollcall No. 83: H.R. 4088, NASA Authorization, "yea."

AMERICAN CONGRESS OF REHABILITATION MEDICINE GOLD KEY AWARDS

(Mr. PERKINS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PERKINS. Mr. Speaker, my colleague and good friend, JOHN BRADEMAS, the chairman of the Subcommittee on Select Education and the majority whip, was recently honored with the Gold Key Award by the American Congress of Rehabilitation Medicine. This award, the highest honor bestowed by the American Congress of Rehabilitation Medicine, gives well deserved recognition to the outstanding leadership and untiring effort that JOHN BRADEMAS has put forth in advancing programs related to rehabilitation of the handicapped.

A Gold Key Award was also presented to Senator HARRISON WILLIAMS in recognition of his vigorous and effective efforts in this field as well.

The third recipient of the Gold Key Award was Prof. Sir Ludwig Guttmann, a distinguished pioneer, innovator, and world-renowned scholar in rehabilitation medicine.

Mr. Speaker, I would like to include in the RECORD at this point a recent article describing the Gold Key Awards:

THREE RECEIVE GOLD KEY AWARDS

The American Congress of Rehabilitation Medicine presented its highest honor—the Gold Key Award—to three individuals who have made significant contributions to advancing the cause of rehabilitation medicine. The three are Professor Sir Ludwig Guttmann, director of the Stoke Mandeville Sports Stadium for the Paralyzed and Other Disabled in Aylesbury, England; Rep. John Brademas of Indiana, the Democratic Party whip in the U.S. House of Representatives; and Sen. Harrison A. Williams, Jr., of New Jersey, chairman of the U.S. Senate Labor and Public Welfare Committee.

REP. JOHN BRADEMAS

The citation accompanying Representative Brademas' Gold Key stated:

"This Gold Key is awarded to John Brademas, for his extraordinary efforts as Chairman of the Select Subcommittee on Education and as deputy whip of the Democratic Party in the House of Representatives on behalf of the handicapped and programs related to rehabilitation of the handicapped. Mr. Brademas was educated at Harvard University and is presently a member of the Board of Overseers of Harvard University. He also was a Rhodes Scholar.

"As Chairman of the Select Education Subcommittee, Congressman Brademas has been responsible for the passage of legislation which has significantly expanded and improved the Rehabilitation Act. Through his efforts, the Act has focused on the severely disabled; a major research and training title

has been added to the Rehabilitation Act and special programs regarding spinal cord centers have been established. In addition, through his efforts the Rehabilitation Services Administration has received recognition as an independent legal entity with power over the rehabilitation program being vested in the Commissioner of the Rehabilitation Services Administration, thus eliminating many problems of confusion with regard to program responsibility at the federal level. Not only has the Subcommittee which he chairs been active in legislating with regard to the Rehabilitation Program, but it is also legislated with regard to education programs for handicapped children and programs for the aged, many of whom suffer from disabling conditions. Congressman Brademas, through his chairmanship and his position as deputy whip for the Democratic Party in the House of Representatives, has also been a very strong leader with regard to the civil rights of the disabled, the aged, and other minority groups.

"Of particular importance, however, is that Congressman Brademas has not only served as an able chairman and proponent and manager of legislation, but he has also used his chairmanship and committee to actively oversee the operation of the programs which his subcommittee has created. The oversight function of Congressional committees is one which is extremely important to the effective operation of programs. The oversight function performed by Congressman Brademas' subcommittee with regard to the Rehabilitation Act has produced major change. Congressman Brademas has also always provided an attentive ear to those organizations on behalf of the handicapped which have come to him to plead their case. To those of us in the rehabilitation movement who have worked closely with him, his name is a fitting addition to a list which includes Franklin Roosevelt, Hubert Humphrey, Howard Rusk, Mary Switzer and Mary Lasker."'

SEN. HARRISON A. WILLIAMS, JR.

The citation accompanying Senator Williams' Gold Key stated:

"This Gold Key is awarded to Harrison A. Williams, Jr., Chairman of the Senate Labor and Public Welfare Committee for extraordinary service on behalf of the handicapped and the rehabilitation program, As Chairman of the Senate Labor and Public Welfare Committee, Senator Williams is responsible for the passage and review of major programs dealing with the handicapped, as well as nearly all health and education legislation. He has been a major proponent of the rehabilitation program and the major amendments to that program which were enacted in 1973. He has also shown a major interest in rehabilitation research and training activity, as well as in the rehabilitation services supported under the Federal-State Rehabilitation Program. Through his efforts, regulations under the Rehabilitation Act now require the establishment of peer review for research and training activity which had formerly been a part of the Rehabilitation Program but had been abandoned by the Administration after 1970.

"Beyond the Rehabilitation Act and the Education for the Handicapped Act, Senator Williams has been very involved in all major health legislation during the past few years. Through his leadership, rehabilitation services have become an integral part of major health legislation enacted during the past five years, including the Health Revenue Sharing legislation, Health Maintenance Organization legislation, and Health Manpower legislation. In addition, Senator Williams has been a leader in attempts to reform the Workers Compensation laws to, among other things, set national standards for medical and other services to disabled workers. His legislation, unfortunately not yet enacted, would require that comprehensive medical rehabilitation services be provided in all states to disabled workers.

"The nation and the disabled owe much to the efforts of Senator Harrison A. Williams, Jr., and the Gold Key Award is to demonstrate the appreciation of professionals in the medical rehabilitation field for his efforts in support of programs for the rehabilitation of disabled people and health programs generally."

PROF. SIR LUDWIG GUTTMANN

The Congress selected Sir Ludwig to receive the Gold key in "recognition of his unique contributions to the medical, social and recreational problems of the neurologically disabled throughout the world for the past 53 years."

Sir Ludwig's Gold Key citation continued: "As director of the National Spinal Cord Injuries Center for the United Kingdom since World War II, Sir Ludwig's name has become synonymous with, and a symbol of hope and health, for the spinal injured of the world. No one has done more to extend the life expectancies of this group over the past half century.

"He pioneered the sports movement for handicapped persons, organizing what has become the International Olympics for the Paralysed. He has guided the International Wheel Chair games away from the political, racial and religious pressures imposed upon some athletes and their countries into a force for world peace, communication and understanding.

"Sir Ludwig graduated from the Medical School of the University of Freiburg, Germany, in 1923. He subsequently was appointed reader of neurology and neurosurgery at the University of Breslan. When in 1933 the Nazi regime came to power, he became director of the neurology department at Jewish Hospital in Breslan and in 1937 he became the medical director of that hospital. In this capacity he was able to help people persecuted by the Nazis to escape to other countries, ignoring the dangers to his own life. In 1939 he emigrated to England, where in 1943 he was asked to establish a spinal injuries center at Stoke Mandeville Hospital in Aylesbury. It was here that he developed his concept of comprehensive management and rehabilitation of traumatic paraplegics and tetraplegics. He continued to direct the program at Stoke Mandeville after World War II and upon his retirement from the directorship of the center in 1966, he was knighted by Queen Elizabeth II.

"Sir Ludwig has been awarded numerous honorary degrees in law, medicine and science from universities and scientific associations over the world. Spinal injury centers in many countries have been named in his honor and streets in Heidelberg, Germany, and Doorn in the Netherlands bear his name.

"He is an unprecedented author and editor of numerous scientific articles, journals and books. He was founder and president of the International Medical Society of Paraplegia for nine years and he is editor of the *International Journal of Paraplegia*. His own management on spinal cord injuries exceeds 400 patient case studies. He has consistently probed the scientific credibility of his own methods and has sought to stimulate his medical and surgical colleagues around the world to explore with penetrating insight and honesty their own approaches to patient care.

"He is a man of warm and deep compassion, and to all men he has always a word of support and encouragement. He has never retired and is still the director of the Stroke Mandeville Sports Stadium for the Paralyzed and other Disabled, which he build in 1968.

"This Gold Key Award is therefore presented to Sir Ludwig in recognition of his service to the improvement of the quality of life for all mankind disabled by disease or injury, and to the causes of international understanding and peace."

PERSONAL EXPLANATION

Mr. CARTER. Mr. Speaker, on rollcall No. 89, a vote to suspend the rules and pass H.R. 3437, making technical and miscellaneous amendments on vocational education to the Education Amendments of 1976 as amended, I was absent due to my appearance before the American Psychiatric Association at that time. Had I been present I would have voted "yea."

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. JOHNSON of Colorado (at the request of Mr. RHODES), for the balance of the week, on account of death in family.

Mr. BADHAM (at the request of Mr. RHODES), on Thursday, March 24, 1977, on account of official committee business.

Mr. DAVIS (at the request of Mr. WRIGHT), for today, on account of official committee business.

Mr. GILMAN (at the request of Mr. RHODES), on March 28, 1977, on account of committee business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. JEFFORDS) to revise and extend their remarks and include extraneous matter.)

Mr. MCKINNEY, for 5 minutes, today.

Mr. FREY, for 5 minutes, today.

Mr. EDWARDS of Alabama, for 5 minutes, today.

Mr. STEERS, for 5 minutes, today.

Mr. WHALEN, for 5 minutes, today.

Mr. HAGEDORN, for 5 minutes, today.

Mr. BOB WILSON, for 5 minutes, today.

(The following Members (at the request of Mr. WALGREN) to revise and extend their remarks and to include extraneous material:)

Mr. GONZALEZ, for 5 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. KOCH, for 10 minutes, today.

Mr. MCDONALD, for 5 minutes, today.

Mr. KASTENMEIER, for 5 minutes, today.

Mr. FLOOD, for 5 minutes, today.

Mr. ALEXANDER, for 60 minutes, today.

Mr. GAYDOS, for 30 minutes, today.

Mr. GIAIMO, for 5 minutes, today.

Mr. ZABLOCKI, for 5 minutes, today.

Ms. HOLTZMAN, for 20 minutes, today.

Mr. BAUCUS, for 10 minutes, today.

Mr. UDALL, for 5 minutes, today.

Mr. BRADEMAS, for 5 minutes, today.

Mr. FASCELL, for 10 minutes, today.

Mr. DRINAN, for 30 minutes, today.

Mr. MITCHELL of Maryland, for 60 minutes, March 24.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Mr. JEFFORDS) and to include extraneous material:)

Mr. BROWN of Ohio in two instances.
Mr. GILMAN in three instances.
Mr. CONABLE.
Mr. BURKE of Florida in two instances.
Mr. STEIGER in two instances.
Mr. DERWINSKI in three instances.
Mr. MICHEL.
Mr. TRIBLE.
Mr. PURSELL.
Mr. BROYHILL.
Mr. WALSH.
Mr. SYMMS.
Mr. FRENZEL in three instances.
Mr. GOLDWATER.
Mr. ABDNOR in two instances.

(The following Members (at the request of Mr. WALGREN) and to include extraneous matter:)

Mr. STUMP.
Mr. MCDONALD in three instances.
Mr. HAMILTON.
Mr. FISHER in 10 instances.
Mr. MAZZOLI in two instances.
Mrs. BURKE of California.
Mr. SOLARZ.
Mr. MOORHEAD of Pennsylvania.
Mr. DRINAN in three instances.
Mr. WEISS.
Mr. JOHNSON of California.
Mr. BLANCHARD.
Mr. JACOBS.
Mr. CONYERS.
Ms. MIKULSKI in two instances.
Mr. DINGELL in three instances.
Mr. ZABLOCKI in two instances.
Mr. BOLAND in two instances.
Mr. EDWARDS of California in two instances.
Mr. VENTO.
Mr. AUCOIN in two instances.
Mr. MCFALL.
Mr. FRASER in five instances.
Mr. PATTISON of New York.
Mr. MOAKLEY in two instances.
Mr. HARKIN.
Mr. UDALL in eight instances.
Mr. EARLY in three instances.
Mr. HAWKINS.
Mr. BLOUIN.
Mr. MCCORMACK.
Mr. HANNAFORD.
Mr. NEAL.
Mr. BONKER in three instances.
Mr. HARRIS.
Mr. BRECKINRIDGE.
Mr. BEDELL.
Mr. RANGEL.
Mr. OTTINGER.

BILL PRESENTED TO THE PRESIDENT

Mr. THOMPSON, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, a bill of the House of the following title:

H.R. 2647. An act to amend the Small Business Act and the Small Business Investment Act of 1958.

ADJOURNMENT

Mr. WALGREN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 8 o'clock and 13 minutes p.m.), the House adjourned until tomorrow, Thursday, March 24, 1977, at 11 o'clock a.m.

CONTRACTUAL ACTIONS, CALENDAR YEAR 1976, TO FACILITATE NATIONAL DEFENSE

The Clerk of the House of Representatives submits the following report for printing in the CONGRESSIONAL RECORD pursuant to section 4(b) of Public Law 85–804:

ASSISTANT SECRETARY OF DEFENSE,
Washington, D.C., March 22, 1977.

Hon. THOMAS P. O'NEILL, Jr.,
Speaker of the House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: In compliance with Section 4(a) of Public Law 85–804, the calendar year 1976 report on Extraordinary Contractual Actions to Facilitate the National Defense is transmitted herewith.

Table I shows that 197 contractual actions were approved and that 72 actions were disapproved. Included in the number of actions approved are 94 actions for which a potential Government liability cannot be estimated.

Table II lists the actions which have an actual or potential cost to the Government of $50,000 or more. Also included in this list are the 94 actions above for which a potential cost cannot be estimated.

Sincerely,

J. S. GANSLER,
Acting Assistant Secretary of Defense (Installations and Logistics).

EXTRAORDINARY CONTRACTUAL ACTIONS TO FACILITATE THE NATIONAL DEFENSE (PUBLIC LAW 85–804) JANUARY TO DECEMBER 1976

TABLE II.—LIST OF CONTRACTUAL ACTIONS WITH ACTUAL OR POTENTIAL COST OF $50,000 OR MORE TAKEN PURSUANT TO PUBLIC LAW 85-804 TO FACILITATE THE NATIONAL DEFENSE, JANUARY TO DECEMBER 1976

Name and location of contractor	Actual or estimated potential cost	Description of product or service	Justification
AMENDMENTS WITHOUT CONSIDERATION			
Army:			
Champion Rubber Products, Inc., 4515 Dunham, Los Angeles, Calif. 90023.	$101,065	Barrier bags, elastomeric for 152 mm cartridge.	Cartridge cases used on 152 mm rounds are susceptible to moisture damage which adversely affects their performance. The barrier bag is a protective device for 152 mm ammunition and also protects the rounds from contamination or accidental ignition. This contractor represents the only procurement source for the barrier bags at this time and it would take approximately 9 mo to develop an alternative source. If this company were to discontinue production, it would result in a shutdown of the line at Iowa ammunition plant and place the line in a temporary inactive status.

TABLE II.—LIST OF CONTRACTUAL ACTIONS WITH ACTUAL OR POTENTIAL COST OF $50,000 OR MORE TAKEN PURSUANT TO PUBLIC LAW 85-804 TO FACILITATE THE NATIONAL DEFENSE, JANUARY TO DECEMBER 1976—Continued

Name and location of contractor	Actual or estimated potential cost	Description of product or service	Justification
AMENDMENTS WITHOUT CONSIDERATION—Continued			
Army:—Continued			
Arban & Carosi, Inc., 13800 Dawson Beach Rd., Woodbridge, Va. 22191.	401,893	Precast architectural concrete panels for the new Walter Reed General Hospital.	Blake Construction Co. and U.S. Industries (joint venture) entered into a subcontract with Arban for the manufacture of precast architectural concrete panels and delivery to the job site. The specifications stated that only 1 brand of cement could be used for exposed concrete surfaces, and that both precast concrete panels and poured-in-place concrete must be of same materials, shade, and texture. After award of the contract it was found that no one source could supply the quantities of material necessary for a job of the magnitude of Walter Reed General Hospital. It was almost 2 yr before final approval was given for the design mix. During this time this company suffered severe losses because of material shortages and price increases. While the Contract Adjustment Board does not determine the essentiality of Arban, it considers it fair and appropriate to granting some relief because of Government delays in processing of the application.
Navy:			
Navy Facilities Engineering Command, 200 Stovall St., Alexandria, Va. 22332.	7,618,689	Various contracts for performance in Cambodia and Vietnam.	Naval Facilities Engineering Command (NAVFAC) had awarded 46 contracts for performance in Cambodia and the Republic of Vietnam (South Vietnam). Performance thereunder ceased when the 2 countries were overrun by Communist forces in the spring of 1975. Final payment and settlement are being effected. 1 of the contract provisions provided that all invoices submitted for payment shall cite a U.S. dollar amount which will be paid in Vietnamese piasters only at the current U.S. Embassy official rate of exchange in effect at the time the contractor's invoice is physically paid. When the South Vietnamese and Cambodian Governments fell, these 2 currencies became essentially worthless. There is no longer a current U.S. Embassy official rate of exchange and, in fact, no longer a U.S. Embassy in these 2 countries and the State Department has now requested that remaining payments be made in U.S. dollars. This is considered fair and equitable under the circumstances.
CORRECTION OF MISTAKES			
Army:			
Teledyne Continental Motors, Genera Products Division, Muskeegan, Mich.	106,516	Engine assemblies, including spare parts and services for the M60A1 tank.	A letter contract was awarded for engine assemblies for the M60A1 tank on May 31, 1974, and, in October 1974, a price bill of materials was negotiated. As part of that negotiation, a price decrease for engineering changes was credited to the Government. Subsequently, 2 modifications were effected, incorporating 30 engineering changes into the contract and extending to the Government again the same decrease. The negotiators were not aware of the earlier October 1974 credits and the Army, in effect, has been receiving double credit for these engineering changes.
Air Force:			
T & S Service Associates, Inc., 10 Abbott Park Pl., Providence, R.I. 02903.	347,649	Food attendant services at Homestead AFB, Fla.	Company received a 1-yr contract for food attendant services at Homestead AFB, Fla. The contract established a fixed price per meal served (based upon an estimated number of meals per month) as well as a fixed price for other related mess attendant services. The Government estimated an average of 63,861 meals per month while actual records show an average of 78,850 meals per month. During the course of performance, contractual modifications impacting on the required services included a take-out meal from 7 through 11 p.m., opening of an additional dining room, and additional services such as hors d'oeuvre tables. It appears that both parties were mistaken as to the actual scope of procurement contemplated. The contract is being converted to a cost reimbursement contract bearing no fee, with a not-to-exceed ceiling of $580,000 and with actual costs to be determined by audit.
Defense Logistics Agency:			
Velan Valve Corp., Beekmantown Rd., Plattsburgh, N.Y. 12901.	56,696	6-in gate valves	Velan was awarded a contract for 25 6-in gate valves on Sept. 11, 1975, as a result of a formally advertised solicitation. Velan was the sole bidder and offered a unit price of $1,232. Although the only previous procurement of the item had been from Velan at a unit price of $3,500, and the Government had estimated a unit price of $4,152, the contracting officer awarded the contract without seeking verification of the bid price. It appears that Velan made an error in its bid which should have been apparent to the contracting officer.

CONTINGENT LIABILITIES

Provisions to indemnify contractors against liabilities on account of claims for death or injury or property damage arising out of nuclear radiation, use of high energy propellants, or other risks not covered by the contractor's insurance program were included in 94 contracts (the potential cost of these liabilities cannot be estimated inasmuch as the liability to the Government, if any, will depend upon the occurrence of an incident as described in the indemnification clause). Items procured are generally those associated with nuclear-powered vessels, nuclear-armed guided missiles, experimental work with energy, handling of explosives or performance in hazardous areas.

	Number of contracts		
	Army	Navy	Air Force
Aerojet General Corp			3
Automation Industries, Inc		2	
Boeing Co			6
Classified Contracts		2	
Catalytic, Inc	1		
General Dynamics Corp		36	
General Electric Co		16	
Hercules, Inc			1
Honeywell, Inc		2	
Hughes Aircraft Corp		1	
Martin-Marietta Corp			3
NUS Corp	1		
Northrop Corp		1	
Raytheon Co		3	
Rockwell International Corp		3	3
Seaboard Coastline R.R. Co	1		
Singer Co		1	
TRW, Inc			1
Textron, Inc			2
Thiokol Corp			2
Westinghouse Electric Corp		3	
Total	3	70	21

In addition to the above, indemnification clauses will be inserted into all air transportation contracts entered into by the Military Airlift Command for transportation services to be performed by air carriers which own or control aircraft which have been allocated by the Department of Transportation to the Civil Reserve Air Fleet.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1082. A letter from the Director, Office of Management and Budget, Executive Office of the President, transmitting a report that the appropriation to the Department of Agriculture for the food donations program for fiscal year 1977, has been reapportioned on a basis which indicates the necessity for a supplemental estimate of appropriation, pursuant to section 3679(e)(2) of the Revised Statutes, as amended; to the Committee on Appropriations.

1083. A letter from the Chairman, Federal Election Commission, transmitting a copy of correspondence with the Office of Management and Budget concerning the Commission's revised fiscal year 1977 outlay estimate, pursuant to section 310(d)(1) of the Federal Election Campaign Act, as amended; to the Committee on Appropriations.

1084. A letter from the Comptroller General of the United States, transmitting his review of the withdrawal of a proposed rescission and the revised deferrals of budget authority

contained in the message from the President dated March 9, 1977 (H. Doc. No. 95–94), pursuant to section 1014(c) of Public Law 93–344 (H. Doc. No. 95–110); to the Committee on Appropriations and ordered to be printed.

1085. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 2–12. "To provide additional compensation for District of Columbia teachers," pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

1086. A letter from the Acting Assistant Secretary of Commerce for Administration, transmitting notice of a proposed new system of records, pursuant to 5 U.S.C. 552a(o); to the Committee on Government Operations.

1087. A letter from the Director, Defense Security Assistance Agency, transmitting a report estimating the number of officers and employees of the U.S. Government and U.S. civilian contract personnel in foreign countries for assignments in implementation of sales and commercial exports under the Arms Export Control Act as of December 31, 1976, pursuant to section 36(a)(7) of the act; to the Committee on International Relations.

1088. A letter from the Chairman, U.S. Advisory Commission on International and Cultural Affairs, transmitting a special report of the Commission entitled "Notes on Educational and Cultural Exchange between the United States and Countries in the Middle East, "pursuant to section 107 of Public Law 87–256; to the Committee on International Relations.

1089. A letter from the Chairman, Interstate Commerce Commission, transmitting a report on the Commission's determination to extend the time period for acting on the appeal pending in proceeding No. 35956, *Morelli Overseas Export Services of Wisconsin, Inc.* v. *Chicago and Northwestern Transportation Company*, and related proceedings, pursuant to section 17(9)(f) of the Interstate Commerce Act, as amended (90 Stat. 49); to the Committee on Interstate and Foreign Commerce.

1090. A letter from the Acting Assistant Secretary of Defense (Installations and Logistics), transmitting a report on extraordinary contractual actions to facilitate the national defense during calendar year 1976, pursuant to section 4(a) of Public Law 85–804; to the Committee on the Judiciary.

1091. A letter from the Director, National Institute of Corrections, Bureau of Prisons, Department of Justice, transmitting the Institute's first annual report, pursuant to 18 U.S.C. 4352(b); jointly, to the Committees on Education and Labor, and the Judiciary.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. BROOKS: Committee on Government Operations. Report on protecting Redwood National Park (Rept. No. 95–106). Referred to the Committee of the Whole House on the State of the Union.

Mr. PEPPER: Committee on Rules. House Resolution 430. Resolution providing for the consideration of H.R. 3965. A bill to authorize research, development, and demonstration projects relating to aviation, and for other purposes (Rept. No. 95–107). Referred to the House Calendar.

Mr. PEPPER: Committee on Rules. House Resolution 431. Resolution providing for the consideration of H.R. 4991. A bill to authorize appropriations for activities of the National Science Foundation, and for other purposes (Rept. No. 95–108). Referred to the House Calendar.

Mr. ROBERTS: Committee on Veterans' Affairs. H.R. 5025. A bill to amend title 38 of the United States Code in order to revise the provisions therein relating to the construction, alteration, and acquisition of Veterans' Administration medical facilities (Rept. No. 95–109). Referred to the Committee of the Whole House on the State of the Union.

Mr. ROBERTS: Committee on Veterans' Affairs. H.R. 5027. A bill to amend title 38 of the United States Code to clarify the requirement that medical services by provided by the Veterans' Administration in certain cases (Rept. No. 95–110). Referred to the Committee of the Whole House on the State of the Union.

Mr. ROBERTS: Committee on Veterans' Affairs. H.R. 5029. A bill to amend title 38 of the United States Code in order to authorize contracts with the Republic of the Philippines for the provision of hospital care and medical services to Commonwealth Army veterans and new Philippine Scouts for service-connected disabilities; to authorize the continued maintenance of a Veterans' Administration office in the Republic of the Philippines; and for other purposes (Rept. No. 95–111). Referred to the Committee of the Whole House on the State of the Union.

Mr. ROBERTS: Committee on Veterans' Affairs. H.R. 3695. A bill to amend title 38 of the United States Code in order to revise and improve the program of making grants to the States for the construction, remodeling, or renovation of State home facilities for furnishing hospital, domiciliary, and nursing home care for eligible veterans, and for other purposes (Rept. No. 95–112). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BLOUIN (for himself, Mr. EDWARDS of California, and Mr. IRELAND):

H.R. 5468. A bill to provide for the regular review of certain Federal agencies and for the abolition of such agencies after such review unless Congress specifically provides for their continued existence; to the Committee on Government Operations.

By Mr. CONABLE:

H.R. 5469. A bill to amend the Internal Revenue Code of 1954 to exclude certain mission societies and their missionary members from social security taxes; to the Committee on Ways and Means.

By Mr. CRANE:

H.R. 5470. A bill to amend the Internal Revenue Code of 1954 to provide for an extension of the period during which an individual must purchase a new residence for nonrecognition of gain on the sale of an old residence in the case of members of the Armed Forces who are stationed overseas or who are required to reside in Government-owned quarters; to the Committee on Ways and Means.

H.R. 5471. A bill to amend the Internal Revenue Code of 1954 to provide a credit for tuition paid for higher education; to the Committee on Ways and Means.

By Mr. DENT (for himself, Mr. MOORHEAD of Pennsylvania, Mr. MICHAEL O. MYERS, and Mr. WALKER):

H.R. 5472. A bill to reaffirm the intent of Congress with respect to the structure of the common carrier telecommunications industry rendering services in interstate and foreign commerce; to grant additional authority to the Federal Communications Commission to authorize mergers of carriers when deemed to be in the public interest; to reaffirm the authority of the States to regulate terminal and station equipment used for telephone exchange services; to require the Federal Communications Commission to make certain findings in connection with Commission actions authorizing specialized carriers; and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. DORNAN:

H.R. 5473. A bill to amend the Child Abuse Prevention and Treatment Act to prohibit the sexual exploitation of children and the transportation and dissemination of photographs or films depicting such exploitation; to the Committee on Education and Labor.

H.R. 5474. A bill to amend title 18, United States Code, to prohibit the sexual exploitation of children and the transportation in interstate or foreign commerce of photographs or films depicting such exploitation; to the Committee on the Judiciary.

By Mr. DRINAN:

H.R. 5475. A bill to amend the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 to extend relocation assistance to persons displaced as the result of real property acquisitions by private persons for federally assisted programs or projects, and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

By Mr. EDWARDS of Alabama:

H.R. 5476. A bill to provide that the laws restricting trade between points in the United States to vessels of the United States shall not apply to inflatable boats used in river running; to the Committee on Merchant Marine and Fisheries.

H.R. 5477. A bill to amend the Internal Revenue Code of 1954 to provide income tax incentives to improve the economics of recycling wastepaper; to the Committee on Ways and Means.

By Mr. ERTEL (for himself, Mr. ROE, Mr. GORE, Mr. EILBERG, Mr. EDWARDS of Oklahoma, Mr. GLICKMAN, Mr. LAGOMARSINO, Mr. CLEVELAND, Mr. MCCLOSKEY, Mr. JACOBS, Mr. CHARLES WILSON of Texas, Mr. ASHLEY, Mr. FINDLEY, Mr. BENNETT, Ms. MIKULSKI, Mr. BAUCUS, Mr. GEPHARDT, Mr. EDGAR, Mr. BEDELL, Mr. CONABLE, Mr. MURPHY of Pennsylvania, Mr. COTTER, and Mr. PURSELL):

H.R. 5478. A bill to provide that rates of pay for Members of Congress shall not be automatically adjusted under the Federal Salary Act of 1967; to the Committee on Post Office and Civil Service.

By Mr. FISH:

H.R. 5479. A bill to amend title XVIII of the Social Security Act to include, as a home health service, nutritional counseling provided by or under the supervision of a registered dietitian; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. FOLEY:

H.R. 5480. A bill to authorize the marketing of saccharin under section 409 of the Federal Food, Drug, and Cosmetic Act; to the Committee on Interstate and Foreign Commerce.

By Mr. FOLEY (for himself, Mr. ABDNOR, Mr. ANDREWS of North Dakota, Mr. BRECKINRIDGE, Mr. ENGLISH, Mr. FITHIAN, Mr. GLICKMAN, Mr. HIGHTOWER, Mr. JONES of Tennessee, Mr. JONES of North Carolina, Mr. KELLY, Mr. MCCORMACK, Mr. MATHIS, Mr. POAGE, Mr. SEBELIUS, Mr. THONE, Mr. ULLMAN, Mr. WAMPLER, Mr. WEAVER, and Mr. WINN):

H.R. 5481. A bill to enable wheat producers, processors, end product manufacturers, and

consumers of wheat foods to work together to establish, finance on an equitable basis, and administer a coordinated program of research and education to promote and improve human nutrition through the use of wheat and wheat products as human foods within the United States; to the Committee on Agriculture.

By Mr. FUQUA:

H.R. 5482. A bill to amend the Federal Food, Drug, and Cosmetic Act with respect to the safety of food additives; to the Committee on Interstate and Foreign Commerce.

By Mr. GAYDOS:

H.R. 5483. A bill to amend the Internal Revenue Code of 1954 to encourage the modernization of manufacturing plants by providing an additional investment credit for machinery placed in service in existing manufacturing plants or in nearby plants; to the Committee on Ways and Means.

By Mr. GILMAN (for himself, Mr. ANDERSON of Illinois, Mr. BADILLO, Mr. BROYHILL, Mr. BURGENER, Mr. BUCHANAN, Mrs. COLLINS of Illinois, Mr. CORCORAN of Illinois, Mr. CORNWELL, Mr. DICKS, Mr. EDWARDS of Oklahoma, Mrs. FENWICK, Mr. GLICKMAN, Mr. HALL, Mr. HORTON, Mr. JONES of North Carolina, Mr. KINDNESS, Mr. MCCLOSKEY, Mr. MCKINNEY, Mr. JOHN T. MYERS, Mr. PATTERSON of California, Mr. PRITCHARD, and Mr. RICHMOND):

H.R. 5484. A bill to amend title II of the Social Security Act to reduce from 72 to 65 the age beyond which deductions on account of an individual's outside earnings will no longer be made from such individual's benefits; to the Committee on Ways and Means.

By Mr. GOODLING:

H.R. 5485. A bill to provide for a study of the effects of saccharin and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. HANNAFORD (for himself, Mr. JENRETTE, Mr. MURPHY of New York, Mr. ROE, Mr. HIGHTOWER, Mr. BADILLO, Mrs. CHISHOLM, Mr. BEARD of Rhode Island, Mr. PATTERSON of California, Mr. MAZZOLI, Mr. MOORHEAD of California, Mr. EDWARDS of Oklahoma, Mrs. COLLINS of Illinois, Mr. FISHER, Ms. MIKULSKI, Mr. ROSE, Mr. EMERY, Mr. ZEFERETTI, Mr. DICKS, Mr. WAXMAN, Mr. ANDERSON of California, and Mr. FAUNTROY):

57. Also, memorial of the Legislature of the State of South Dakota, relative to common situs picketing; to the Committee on Education and Labor.

58. Also, memorial of the State of South Dakota, relative to telephone service in South Dakota; to the Committee on Interstate and Foreign Commerce.

59. Also, memorial of the Legislature of the State of South Dakota, relative to rail and barge transportation systems for agricultural products; jointly, to the Committees on Interstate and Foreign Commerce, and Public Works and Transportation.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BURKE of Massachusetts:

H.R. 5554. A bill for the relief of Zivka Jovanovic; to the Committee on the Judiciary.

By Mr. DICKS:

H.R. 5555. A bill for the relief of Adelida Rea Berry; to the Committee on the Judiciary.

By Mr. EMERY:

H.R. 5556. A bill for the relief of Dermot Nicholas Killian; to the Committee on the Judiciary.

By Mr. HYDE:

H.R. 5557. A bill for the relief of Mrs. Olga Tarvin; to the Committee on the Judiciary.

By Mr. MOSS:

H.R. 5558. A bill for the relief of Masako Banno Miller; to the Committee on the Judiciary.

H.R. 4991

By Mr. GARY A. MYERS:

On Page 6 after line 24 add the following new section:

"SUNSHINE IN GOVERNMENT

"SEC. 10(a)(1) Each employee of the Foundation who performs a decision-making

function in the handling of any application or proposal for Foundation funding shall provide a written statement for the record identifying any significant financial interest he has in the person submitting the application or proposal and any academic affiliation he has with that person. If the application or proposal results in an award, the statement shall be made available to the public.

"(2) The Director shall remove or take other appropriate disciplinary action against any employee who knowingly violates the requirements of this subsection.

"(b)(1) Within ninety days after enactment of this section, the Director shall publish implementing regulations. The regulations shall define 'significant financial interest', 'academic affiliation', and 'decision-making function' as used in this section.

"(2) The regulations shall also deal in an appropriate manner with conflicts of interests of peer reviewers.

"(3) The Director shall report annually to the Congress on the administration and enforcement of this section.

"(c) If the President issues an Executive Order that requires financial disclosure by employees across Federal agencies, only so much of this section as relates to peer reviewers and to academic affiliations of employees shall remain effective."

Renumber the following sections.

SENATE—*Wednesday, March 23, 1977*

(Legislative day of Monday, February 21, 1977)

The Senate met at 1 p.m., on the expiration of the recess, and was called to order by Hon. DONALD W. RIEGLE, JR., a Senator from the State of Michigan.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Eternal Spirit, in the midst of the day's demanding duties we pause reverently and open our lives to Thee, unto whom all hearts are open and from whom no secrets are hid. Cleanse us from all unrighteousness, that with clean hands and pure hearts we may serve Thee according to the laws of Thy higher kingdom. Not for ourselves only do we pray, but for every person in this land. Make us a people good enough and great enough for our times. Impart Thy grace to the people of this Nation that they may reveal the same quality of life and the same standards of conduct they expect of the Members of this body. Make and keep us "one nation under God, indivisible." And may goodness and mercy follow us all our days that we may abide with Thee forever.

We pray in the name of the Great Intercessor. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., March 23, 1977.

To the Senate:

Being temporarily absent from the Senate on official duties, I appoint Hon. DONALD W. RIEGLE, JR., a Senator from the State of Michigan, to perform the duties of the Chair during my absence.

JAMES O. EASTLAND,
President pro tempore.

Mr. RIEGLE thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of yesterday, Tuesday, March 22, 1977, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, there are certain nominations on the Executive Calendar that are cleared on both sides for action.

It is my understanding that Mr PROXMIRE wanted to be here when the nominations under Department of Housing and Urban Development were called up and I believe that he is on his way to the floor.

I ask unanimous consent, therefore, that the Senate go into executive session to consider the nominations under Department of State, U.S. Information Agency, Agency for International Development, and Department of Health, Education, and Welfare at this time.

There being no objection, the Senate proceeded to the consideration of executive business.

The ACTING PRESIDENT pro tempore. The clerk will state the first nomination.

Mr. ROBERT C. BYRD. Mr. President, I also ask unanimous consent, now that Mr. PROXMIRE is here, that the nominations under Department of Housing and Urban Development be called up also.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. I believe the minority leader wishes to respond.

Mr. BAKER. Mr. President, I only want to say that I have consulted with the majority leader in advance, as he indicated, about these nominations and they are all cleared on our side, the Department of State, USIA, AID, HUD, and HEW, and there is no objection to their confirmation.

The ACTING PRESIDENT pro tempore. The clerk will state the first nomination.

NOMINATIONS—EXECUTIVE CALENDAR

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that all nominations on the Executive Calendar, with the exception of the nominations under the Department of Housing and Urban Development, be considered and confirmed en bloc.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

The nominations considered and confirmed en bloc are as follows:

DEPARTMENT OF STATE

Lucy Wilson Benson, of Massachusetts, to be Under Secretary of State for Coordinating Security Assistance Programs.

Hodding Carter III, of Mississippi, to be an Assistant Secretary of State.

Richard Holbrooke, of the District of Columbia, to be an Assistant Secretary of State.

Terence A. Todman, of the Virgin Islands, to be an Assistant Secretary of State.

Patsy T. Mink, of Hawaii, to be an Assistant Secretary of State for Oceans and International Environmental and Scientific Affairs.

U.S. INFORMATION AGENCY

John E. Reinhardt, of Maryland, to be Director of the U.S. Information Agency.

AGENCY FOR INTERNATIONAL DEVELOPMENT

John J. Gilligan, of Ohio, to be Administrator of the Agency for International Development.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Thomas D. Morris, of the District of Columbia, to be Inspector General, Department of Health, Education, and Welfare.

Arabella Martinez, of the District of Columbia, to be an Assistant Secretary of Health, Education, and Welfare.

The ACTING PRESIDENT pro tempore. The clerk will now state the first nomination under Housing and Urban Development.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

The assistant legislative clerk proceeded to read nominations on the Executive Calendar under Department of Housing and Urban Development.

Mr. PROXMIRE. Mr. President, the Committee on Banking, Housing, and Urban Affairs has favorably reported the nominations of three individuals to major policymaking positions in the Department of Housing and Urban Development. They are Mr. Jay Janis, to be Under Secretary; Mr. Lawrence Simons, to be Assistant Secretary for Housing-FHA Commissioner; and Mr. Robert Embry, to be Assistant Secretary for Community Development.

All of these individuals are highly qualified to fill the posts to which they are nominated. Mr. Janis and Mr. Simons have had long and distinguished careers in the homebuilding industry. Mr. Janis

also served with distinction at HUD during the Johnson administration. Mr. Embry comes into the administration from the job of housing commissioner of the city of Baltimore, which has had, under his leadership, perhaps the most impressive record in the entire country for its work in preservation and revitalization of inner-city neighborhoods. Mr. Embry has built a national reputation for his innovativeness and for the fact that his housing program, unlike many, has shown a clear-cut record of successful results.

Beyond this, I am very pleased to be able to report that Mr. Janis and Mr. Simons have set a new standard of ethical behavior in their willingness to go beyond the required letter of the law in avoiding potential conflicts of interest. Both of these gentlemen have agreed to divest themselves of financial holdings related to the housing field, despite the fact that they could, legally, have retained the investments and merely disqualified themselves from specific policy decisions from which conflicts might arise. The divestitures made by Mr. Janis and Mr. Simons involved personal financial sacrifices of some significance, and I think they deserve very high praise for their action.

Mr. President, all three of these nominees have put themselves on record for a strong, aggressive national housing policy. At their confirmation hearing on March 18, they impressed me and the committee as a whole with their commitment to a housing program which recognizes the need for a high level of new housing construction, in addition to efforts to preserve and improve existing inner-city housing stock. They echoed the position of Secretary Harris that HUD must become an advocate, rather than an adversary, of the many people in this country who need housing or who have problems arising out of the needs of our cities. I believe that the confirmation of Mr. Janis, Mr. Embry, and Mr. Simons will be a firm step toward that objective.

Mr. President, I indicated at the outset that these three individuals received unanimous approval from the Committee on Banking, Housing, and Urban Affairs. I wholeheartedly commend them to the Senate for confirmation.

Mr. President, it is very important these gentlemen be confirmed, because the Secretary, who is a very able, brilliant woman, has had no experience in housing. For that reason, we went into great details in the Banking Committee in questioning the nominees.

I must say that I was extremely impressed, not only by their background, but by the fact that they were very articulate and deeply committed to a vigorous housing program.

I do think that by confirming these nominees we will put the administration in a position to pursue a vigorous policy in stimulating housing.

Of course, we have to judge the administration by results. I think properly we judged the past administration by results and found them very sorely lacking and wanting. We did not produce the houses we needed.

In the last couple of weeks, we have raised this issue on the floor of the Senate and I intend to continue to raise this issue until we get some results.

The fact is that the Carter administration has neglected housing in their economic stimulus program. It should be the centerpiece of their program. It just calls out for action.

Here is an aspect of our economy that has been woefully neglected. In the last 3 years, we have fallen way short of the production of houses we need. We need more than 2 million houses to make up for the backlog we lost in the last 3 years.

We have very heavy unemployment in housing construction, more than 15 percent higher than any other area. In residential construction it is particularly high.

We have programs available that could put people to work, that could put people to work in the private sector, that could put people to work with very little inflationary effect, if any.

Mr. President, I think it is most desirable that we approve these men who have fine records in housing and who have indicated they intend to get action.

I do think the Senate should watch the performance of the Housing and Urban Development Administration to see they get the results which they have indicated in the record they want to get.

So Mr. President, I am very happy the President has made these particular nominations. They are well qualified. I support them warmly. They were unanimously supported by the members of our Banking Committee and I am hopeful that they will get the kind of results they want.

WHY WE NEED A HOUSING STIMULUS NOW

Mr. President, one issue I raised in the confirmation hearings with each of these three nominees was why is there no housing element in the President's economic stimulus program?

We need a stimulus that will provide jobs with as little inflationary pressures as possible. We need a stimulus that will do this in the private sector to the greatest possible degree and that will provide a service or product which is badly needed.

BROOKE-CRANSTON FUNDS WILL DO THE JOB

Such a stimulus is housing. And there is available, now, almost $2 billion in funds authorized and appropriated under the Brooke-Cranston tandem plan plus very large additional funds from the rollover of the previous tandem plan money.

We could add in the very near future another 125,000 to 150,000 new units for families now priced out of the housing market. This would produce from 250,000 to 300,000 new jobs—there is about one direct and one indirect job for each new housing start—at a cost of no more than $1,750 a job.

This compares with $8,000 to $10,000 per job for a public service job, a $15,000 cost or more for a public works job, and a cost far exceeding that to produce a new job in defense or space.

But for some unexplainable reason neither the Chairman of the Council of Economic Advisers, Mr. Schultze, the Director of the Office of Management and Budget, Mr. Lance, the Secretary of Housing, Mrs. Harris, nor the three nominees before us today are willing to move ahead.

The program should be especially attractive to the Director of the Office of Management and Budget, because the funds used to stimulate housing under the Brooke-Cranston plan would have almost no impact on the budget this year, and over a period of 10 years would cost only about $400 million in outlays to the Federal budget to produce 125,000 housing units.

When we propose that this be done, we are given certain stock arguments. I believe every one of them can be answered totally.

HOUSING STARTS INADEQUATE—FAR BELOW NEEDS AND GOALS

The first is that since housing starts may average 1.8 million units in 1977 the stimulus is not needed.

The answer to that is straightforward. The housing goal is 2.6 million units a year. Present housing needs, as contrasted with the goals, based on the calculations for family formation, units lost from the supply, the number needed for low vacancy rates and second houses, are for about 2.45 million units a year.

In the last 3 years we have built only 1.3 million units, 1.16 million units, and 1.54 million units respectively. Even allowing for generous mobile home shipments, the backlog from these 3 years alone is 2.3 million units.

Even if we produce 1.8 million units this year—and that is still an optimistic figure—we would fall at least 300,000 units short of our needs, allowing for 350,000 mobile home shipments.

Therefore, the fact that housing starts are up and may average 1.8 million units means that we will still fall 300,000 units short of our needs and 450,000 units short of the goals this year. There is obviously a need for another 125,000 to 150,000 starts in the next 2 years.

PRESENT SINGLE FAMILY HOUSING TOO COSTLY FOR MOST FAMILIES

The second argument used against a housing stimulus is that new single family housing production is now quite good. Secretary Harris appearing on Issues and Answers last Sunday used that argument. She said:

> We have found that the single family area is indeed one where people are buying houses and that there are not houses now available which do not have people who are prepared to finance them on the conventional market.

That may be true. But that argument overlooks two vital points. Those single family houses average $48,000 to $50,000 in price. As the Harvard-MIT study, which came out last week, made clear, 75 percent of American families are priced out of that new housing market.

So, yes, people are buying the $50,000 units, but these are families in the upper 25 percent income groups. The remaining 75 percent of the American people cannot finance housing in the conventional market at present interest rates and housing costs. They are out of the market.

LITTLE HOUSING IN MIDWEST AND NORTHEAST

The second vital point is where these units are being built. The statistics on housing starts issued March 16 by the

Department of Commerce show that the units are being built in the so-called Sun Belt. The preliminary figures for February 1977 show that 72 percent of the new privately owned housing starts, based on seasonally adjusted annual rates, were built in the South and the West. Less than 7 percent of the total was built in the Northeast and only 21 percent was built in the Midwest or North Central region.

There is, therefore, a great disparity in both who can buy the new housing and where it is built geographically.

The clear conclusion is that another 125,000 to 150,000 units with a 7½ percent interest rate under the tandem plan would fill a great need and a great demand.

MULTIFAMILY UNITS WILL BE NEEDED THIS YEAR AND NEXT

The third argument used against the Brooke-Cranston program is that any stimulus should mainly be in the multifamily area, but that that takes too long to get going.

The answer is that multifamily units do take longer to start. But a year from now or even 2 years from now unemployment will still be very high by historical standards and housing will still be very short of our needs or our goals.

Unemployment at the end of this year is estimated to be between 6.7 and 6.9 percent. The average for next year is estimated at 6.3 percent. So there is no danger—even if it takes a year to start the multifamily units—that unemployment will be even close to the 3- or 4-percent level for adults which is called relatively full employment.

The need for a housing stimulus, including a multifamily stimulus, will still be here at the end of this year and through next year.

USE IT OR LOSE IT. THE MONEY WILL BE USED

The fourth argument is that because the $1.8 billion of the original $5 billion of the Brooke-Cranston budget authority has not been used there is no reason for the administration to request any or all of the remaining authority.

There is a reason for the nonuse of $1.8 billion and a very swift answer or solution.

When a mortgage company or a builder requests Brooke-Cranston money, they must pay a fee and put a sizable amount of money into escrow. This delays the request for funds, because both are unwilling to put up cash long before the building begins.

There is a simple solution for this which has worked in the past and which can produce a large number of new units fast. Ginny Mae—GNMA—should announce that they are going to close the Brooke-Cranston window in the very near future if the funds are not requested. The motto should be, "Use it or lose it." This was done once before with amazing effect. The funds were asked for overnight.

It is a simple and effective solution and answers the objection.

PROVIDE FOR FAMILIES AT MEDIAN INCOMES OR BELOW

A fifth argument is that the Brooke-Cranston funds in the past have built substitute housing—housing that would have been built in any case. That may be true but there is a simple way to change that. The 7.5-percent money went to people with average incomes of $22,000.

By regulation the units should be allowed to go only to those at or below the median income for the community. Those families are now out of the market. Houses for them will be houses which would not otherwise be built.

Furthermore, the units should be built in areas where unemployment is high and vacancy rates are low.

THERE IS NOW NO FEAST OF HOUSING STARTS—ESPECIALLY ASSISTED STARTS

A final argument used against the program is that we should not have a feast and famine situation in our housing programs and that what we seek is continuity, especially in the assisted housing field.

I agree with that wholeheartedly.

In the President's economic recovery message of January 31, 1977, it was put this way.

> While a healthy housing industry is also critical to economic recovery, this area requires long-term commitments, rather than a short-range program. The Secretary of Housing and Urban Development is now developing a long-term housing program for low and middle income families which will contribute to sustained economic growth.

We need that. We need to build up from the pitifully low 41,000 assisted units started last year to some sustainable level that will meet the existing or revised housing goals. My view is that we should provide at least 400,000 assisted units a year on a sustainable basis, and perhaps more.

But adding another 125,000 to 150,000 Brooke-Cranston tandem plan units over the next 2 years will in no way interfere with this statement or contradict this view.

The reason is very simple. There has been no "feast" of assisted housing. There is no danger of too many assisted starts this year or next year.

The Secretary said only last Sunday that there would probably be no more than 80,000 new "assisted" starts in 1977. That is 520,000 units short of the goal.

The Secretary testified before the Banking Committee that it would be difficult to start more than 200,000 assisted units next year. That is 400,000 units short of the goal.

So this year and next year assisted starts will be 920,000 units short of the assisted housing goals.

I am pleased that the Secretary has been so frank and straight-forward with us about how many units we can genuinely expect of assisted housing this year and next. That is far better than telling us there will be 400,000 or more "reservations," which was done in the past, only to find that the "starts" were less than 7 percent of the goals.

But frankness aside, what these figures show is that assisted housing will make almost no contribution to sustained economic growth this year and next year. There will be no "feast" of assisted housing in these 2 years when a stimulus is needed.

This situation is made to order for using the Brooke-Cranston funds to start another 125,000 to 150,000 units while the Department of Housing is working up to a 400,000 or higher level of sustained assisted housing.

Now is the time to use the program.

CONCLUSION

A housing stimulus is needed in the economic recovery program. The tandem plan is available and ready to go.

It provides a job for one-fifth to one-tenth the cost of a public service or a public works job.

It would have very little effect on the budget, far less than any comparable job-producing program.

The work would be done in the private sector with the discipline of the private sector.

Unlike some public works and public service jobs, it would produce a desperately needed good, namely a house for an American family.

There is a great backlog from the past. We are not even close to meeting our housing goals this year or will we be next year. What housing there is is too high priced for 75 percent of the American people and is built in selected geographical areas.

The assisted housing starts are estimated to be about 920,000 units short of the assisted goals over the next 2 years.

Unemployment in the building trades is over 15 percent.

Given these facts, there is no reason why the Brooke-Cranston funds should not be used.

I remain at a loss to understand why Mr. Schultze and Mr. Lance and Mrs. Harris are so unwilling to move when the economic and housing situation cries out for such action.

The ACTING PRESIDENT pro tempore. Without objection, the three nominations for the posts described in HUD are considered and confirmed en bloc.

The nominations considered and confirmed en bloc are as follows:

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Jay Janis, of Florida, to be Under Secretary of Housing and Urban Development.

Robert Campbell Embry, Jr., of Maryland, to be an Assistant Secretary of Housing and Urban Development.

Lawrence B. Simons, of New York, to be an Assistant Secretary of Housing and Urban Development.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate return to legislative session.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LAND AND WATER RESOURCES CONSERVATION ACT OF 1977

Mr. ROBERT C. BYRD. Mr. President, one measure is on the Unanimous-Consent Calendar, having been cleared for action by unanimous consent for

yesterday's session, and having been placed on the Unanimous Consent Calendar so as to give it a day layover.

I ask unanimous consent that the Senate proceed to the consideration of calendar order No. 50 on the Unanimous Consent Calendar.

The ACTING PRESIDENT pro tempore. The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (S. 106) to provide for furthering the conservation, protection, and enhancement of the Nation's land, water, and related resources for sustained use, and for other purposes, reported with amendments.

The ACTING PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Agriculture, Nutrition, and Forestry, and with amendments as follows:

On page 2, line 14, strike "effect" and insert "affect";

On page 5, line 7, strike "shaall" and insert "shall";

On page 9, line 7, strike "1979" and insert "1982";

On page 9, line 23, strike "1980" and insert "1982";

On page 10, strike line 15 through and including line 17;

On page 10, line 19, strike "10" and insert "9";

On page 10, line 19, strike "of Agriculture";

On page 10, line 24, insert:

EFFECTIVE DATE

SEC. 10. The provisions of this Act shall take effect on October 1, 1977.

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Land and Water Resources Conservation Act of 1977".

FINDINGS

SEC. 2. The Congress finds that—

(1) There is a growing demand on the land, water, and related resources of the Nation to meet present and future needs.

(2) The Congress, in its concern for sustained use of the resource base, created the Soil Conservation Service of the United States Department of Agriculture which possesses information, technical expertise, and a delivery system for providing assistance to land users with respect to conservation and use of soils; plants; woodlands; watershed protection and flood prevention; the conservation, development, utilization, and disposal of water; animal husbandry; fish and wildlife management; recreation; community development; and related resource uses.

(3) Resource appraisal is basic to wise land and water conservation. Since individual and governmental decisions concerning land and water resources often transcend administrative boundaries and affect other programs and decisions, a coordinated appraisal and program framework are essential.

DEFINITIONS

SEC. 3. As used in this Act—

(1) The term "Secretary" means the Secretary of Agriculture.

(2) The term "land, water, and related resources" means those resources which come within the scope of the programs administered and participated in by the Secretary of Agriculture through the Soil Conservation Service.

(3) The term "land and water conservation program" means a framework for attaining the purposes of this Act.

DECLARATIONS OF POLICY AND PURPOSE: PROMOTION THEREOF

SEC. 4. (a) In order to further the conservation of land, water, and related resources, it is declared to be the policy of the United States and purpose of the Act that the conduct of programs administered by the Secretary of Agriculture for the conservation of such resources shall be responsive to the long-term needs of the Nation, as determined under the provisions of this Act.

(b) Recognizing that the arrangements under which the Federal Government cooperates with State soil and water conservation agencies and other appropriate State natural resource agencies such as those concerned with forestry and fish and wildlife and, through conservation districts, with other local units of government and land users, have effectively aided in the protection and improvement of the Nation's basic resources, including the restoration and maintenance of resources damaged by improper use, it is declared to be the policy of the United States that these arrangements and similar cooperative arrangements should be utilized to the fullest extent practicable to achieve the purpose of this Act.

(c) The Secretary shall promote the attainment of the policies and purposes expressed in this Act by—

(1) appraising on a continuing basis the land, water, and related resources of the Nation;

(2) developing and updating periodically a program for furthering the conservation, protection, and enhancement of the land, water, and related resources of the Nation using all of the resources of the Department of Agriculture; and

(3) providing to Congress and the public, through reports, the information developed pursuant to paragraphs (1) and (2) of this subsection, and by providing Congress with an annual evaluation report as provided in section 7.

APPRAISAL

SEC. 5. (a) In recognition of the importance of and need of obtaining and maintaining information on the current status of land, water, and related resources, the Secretary is authorized and directed to carry out, through the Soil Conservation Service, a continuing appraisal of the land, water, and related resources of the Nation. The appraisal shall include, but not be limited to—

(1) data on the quality and quantity of land, water, and related resources;

(2) an analysis of the potential of those resources;

(3) a determination of the changes in the status and condition of those resources resulting from various uses; and

(4) a discussion of current laws, policies, programs, rights, regulations, ownerships, and other considerations associated with the land.

(b) The appraisal shall utilize data collected under this Act and pertinent data and current information collected by the Department of Agriculture and other Federal, State, and local agencies and organizations. The Secretary shall establish an integrated system capable of using combinations of resource data to determine the quality and potential for alternative uses of the resource base and to identify area of local, State, and national concerns pertaining to land conservation, resource use and development, and environmental improvement.

(c) The appraisal shall be made in cooperation with conservation districts and with State soil and water conservation agencies and other appropriate State agencies under such procedures as the Secretary may prescribe to insure public participation.

(d) A report of the appraisal shall be completed by December 31, 1979, and at each five-year interval thereafter.

LAND AND WATER CONSERVATION PROGRAM

SEC. 6. (a) In order to establish a framework for achieving the national land and water policy and purpose of this Act, the Secretary is hereby authorized and directed to develop, through the Soil Conservation Service, in cooperation with and participation by the public through conservation districts, State and national organizations and agencies, and other appropriate means, a national land and water conservation program (hereinafter called the program) to assist landowners and land users, at their request, in furthering land and water conservation on the private and non-Federal lands of the Nation. The program shall set forth the direction for future soil and water conservation efforts based on the current land, water, and related resource appraisal developed in accordance with section 5 of this Act, taking into consideration both the long-term and short-term needs of the Nation, the landowners, and the land users. The program shall also include, but not be limited to—

(1) anaylsis of the Nation's land, water, and related resource problems;

(2) analysis of existing authorities and adjustments needed;

(3) an evaluation, based on a system to determine the effectiveness of the soil and water conservation on-going programs and the progress being achieved in meeting the soil and water conservation objectives of this Act;

(4) identification and evaluation of alternative methods for the conservation, protection, environmental improvement, and enhancement of land and water resources, in the context of specific time frames, and a recommendation of the preferred alternative using all appropriate authorities of the Department of Agriculture;

(5) investigation and analysis of the practicability, desirability, and feasibility of collecting organic waste materials, including manure, crop and food wastes, industrial organic waste, municipal sewage sludge, logging and food manufacturing residues, and any other organic refuse, composting, or similarly treating such materials, transporting and placing such materials onto the land to improve soil tilth and fertility. The analysis shall include the projected cost of collection, transportation, and placement in accordance with sound locally approved soil and water conservation practices; and

(6) analysis of the Federal and non-Federal inputs required to implement the program.

(b) The program plan shall be completed not later than December 31, 1979, and be updated at each five-year interval thereafter.

REPORT TO CONGRESS

SEC. 7. (a) On the first day Congress convenes in 1980 and at each five-year interval thereafter, the President shall transmit to the Speaker of the House of Representatives and the President of the Senate the appraisal report and the program as required by sections 5 and 6 of this Act, together with a detailed statement of policy intended to be used in framing budget requests of the Administration for Soil Conservation Service activities. Following the transmission of such appraisal report, program, and statement of policy, the President shall, subject to other actions of the Congress, carry out programs already established by law in accordance with such statement of policy or any subsequent amendment or modification thereof approved by the Congress, unless, before the end of the first period of ninety calendar days of continuous session of Congress after the date on which the President of the Senate and the Speaker of the House are recipients of the transmission of such appraisal report, program, and statement of policy, either House adopts a resolution reported by the appropriate committee of jurisdiction disapproving the statement of policy. For the purpose of this subsection, the conti-

nuity of a session shall be deemed to be broken only by an adjournment sine die, and the days on which either House is not in session because of an adjournment of more than three days to a day certain shall be excluded in the computation of the ninety-day period. Notwithstanding any other provision of this Act, Congress may revise or modify the statement of policy transmitted by the President, and the revised or modified statement of policy shall be used in framing budget requests.

(b) Commencing with the fiscal budget for the year ending September 30, 1982, requests presented by the President to the Congress governing Soil Conservation Service activities shall express in qualitative and quantitative terms the extent to which the programs and policies projected under the budget meet the policies approved by the Congress in accordance with subsection (a) of this section. In any case in which such budget so represented recommends a course which fails to meet the policies so established, the President shall specifically set forth the reason or reasons for requesting the Congress to approve the lesser program or policies presented. Amounts appropriated to carry out the policies approved in accordance with subsection (a) of this section shall be expended in accordance with the Congressional Budget and Impoundment Control Act of 1974 (Public Law 93-344).

(c) The Secretary, during budget preparation for fiscal year 1982, and annually thereafter, shall prepare a report which evaluates the program's effectiveness in attaining the purposes of this Act. The report, prepared in concise summary form with appropriate detailed appendices, shall contain pertinent data from the current resource appraisal required to be prepared by section 5 of this Act, shall set forth the progress in implementing the program required to be developed by section 6 of this Act, and shall contain appropriate measurements of pertinent costs and benefits. The evaluation shall assess the balance between economic factors and environmental quality factors. The report shall also indicate plans for implementing action and recommendations for new legislation where warranted.

AUTHORIZATION FOR APPROPRIATIONS

SEC. 8. There are authorized to be appropriated such funds as may be necessary to carry out the purposes of this Act.

AVOIDANCE OF DUPLICATION AND OVERLAP

SEC. 9. In carrying out this Act, the Secretary shall utilize information and data available from other Federal, State, and private organizations and shall avoid duplication and overlap of resource appraisal and program planning efforts of other Federal agencies.

EFFECTIVE DATE

SEC. 10. The provisions of this Act shall take effect on October 1, 1977.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the amendments be considered en bloc.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the committee amendments.

Without objection, the committee amendments are considered and agreed to en bloc.

The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and the third reading of the bill.

The bill (S. 106) was ordered to be engrossed for a third reading, was read the third time, and passed.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report. (No. 95-59), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

EXCERPT

SHORT EXPLANATION

S. 106 would establish a mechanism for making long-range policy to encourage the wise and orderly development of the Nation's soil and water resources. The bill—

(1) Requires the Secretary of Agriculture to prepare an appraisal of the Nation's land, water, and related resources not later than December 31, 1979, and at each 5-year interval thereafter;

(2) Requires the Secretary to develop a national land and water conservation program not later than December 31, 1979, and to update it each fifth year thereafter. The program is to set forth the direction for future soil and water conservation efforts on the private and non-Federal lands of the Nation;

(3) Requires submission to Congress of the appraisal report and the program—together with a detailed statement of policy intended to be used in framing budget requests for Soil Conservation Service activities. The material is to be transmitted on the first day Congress convenes in 1980, and at each 5-year interval thereafter;

(4) Requires that programs established by law be carried out in accordance with the statement of policy (or any subsequent amendment or modification thereof approved by Congress) unless either House before the end of 90 days after receiving the appraisal report, program, and statement of policy, adopts a resolution disapproving the statement of policy. (Congress may revise or modify the statement of policy, and the revised or modified statement of policy shall be used in framing budget requests);

(5) Requires—beginning with the fiscal budget for the year ending September 30, 1982—that requests sent by the President to Congress governing Soil Conservation Service activities express the extent to which the programs and policies projected under the budget meet the statement of policy approved by Congress. In any case in which the budget recommendations fail to meet the established policy, the President shall set forth reasons for requesting Congress to approve the lesser program or policies recommended; and

(6) Requires—beginning with fiscal year 1982—that the Secretary submit to Congress an annual report evaluating the program's effectiveness in carrying out the purposes of the bill.

SUMMARY OF APPRAISAL REPORT AND PROGRAM

The appraisal required by the bill would include (but not be limited to)—

(a) data on the quality and quantity of land, water, and related resources;

(b) an analysis of the potential of those resources;

(c) a determination of the changes in the status and conditions of those resources resulting from various uses; and

(d) a discussion of current laws, policies, programs, rights, regulations, ownerships, and other considerations associated with the land.

The appraisal is to be made in cooperation with conservation districts, State soil and water conservation agencies, and other appropriate State agencies under such procedures as the Secretary may prescribe to insure public participation.

The program required by the bill to establish a framework to assist landowners and land users—at their request—in furthering land and water conservation on the private and non-Federal lands of the Nation would include (but not be limited to) —

(a) an analysis of the Nation's land, water, and related resource problems;

(b) an analysis of existing authorities and adjustments needed;

(c) an evaluation to determine the effectiveness of existing soil and water conservation programs and the progress being achieved in meeting the soil and water conservation objections of the bill;

(d) an identification and evaluation of alternative methods for the conservation, protection, environmental improvement, and enhancement of land and water resources, and a recommendation of the preferred alternative;

(e) an investigation and analysis of the practicably, desirability, and feasibility of collecting organic wastes from a variety of sources, treating the wastes, and transporting them to land where they could be used to improve soil tilth and fertility; and

(f) an analysis of the Federal and non-Federal inputs required to implement the program.

The Secretary, in the development of the program, is to provide for participation by the public through conservation districts, State and national organizations and agencies, and other means.

BACKGROUND AND NEED FOR LEGISLATION

I.

In 1974, Congress enacted legislation to provide long-term planning for the Nation's renewable resources. The Forest and Rangeland Renewable Resources Planning Act (Public Law 93-378) directs the Secretary of Agriculture to assess periodically the national situation of the forest and rangeland resources, and to submit, at regular intervals, recommendations for long-range Forest Service programs essential to meet future needs for those resources. The program recommendations are to cover all the activities of the Forest Service. In short, the Act provides a process which should permit better informed choices to be made in the management and administration of the National Forest System.

II.

However, the majority of the Nation's land is privately owned, and there is a need for more information concerning the condition of the soil and the competing demands for land.

The conservation of the Nation's soil and water resources is, of course, a matter of great importance. This importance is reflected, in part, by the fact that the Federal Government makes considerable conservation investments on privately owned land. More than $500 million is expended annually by the Department of Agriculture alone for soil and water conservation programs.

There is a growing demand on the land, water, and related resources of the Nation to meet present and future needs for food and fiber, rural and urban development, agricultural, industrial, and community water supply, fish and wildlife habitat, recreational facilities, and other needs of the people.

III.

During the 1930's, demographers predicted that the population of the United States would stabilize at a peak of 150 million people after 1950. However, the population has expanded to over 200 million, with another 50 million predicted by the turn of the century. On a global basis, the population has now reached 4 billion, and much of this growth has been in the so-called Third World, where hunger and malnutrition are often endemic.

Therefore, the conservation and enhancement of America's farmland will, in the foreseeable future, be related directly to the preservation of human life in the United States and much of the world.

Further, since 1970, there has been a shift of the United States population back to the countryside. This is the first time this phenomenon has occurred since the early settlers arrived from Europe. Rural America is being

examined as a good place to establish industry, and a good place to live. These factors are bound to have an impact on the amount of remaining farmland and its quality.

Statistics compiled by the Department of Agriculture show that despite dramatic urbanization in the Nation, there has been no net loss in the number of acres devoted to agriculture. For every urbanized acre, new land has been reclaimed. What is not known is the quality of the reclaimed lands. Nor is information available showing the other values being lost as a result of cropland conversion (such as the reduction of forest reserves on private lands).

IV.

With respect to the Federal moneys presently being expended for soil and water conservation, questions arise as to what the Government is purchasing with the money; whether the expenditures have been consistent with needed conservation practices and consistent with the condition of the land; and whether the expenditures take into account the changing uses of the land.

While land use decisions should, of course, be made at the State and local levels, if the Federal Government is to make sizable investments in soil and water conservation, it is imperative that the basis for such investments be clearly understood. Further, there should be sound assurances that Federal conservation efforts do not conflict with practices which are environmentally sound or which are locally desired.

Resource appraisal is basic to wise land and water conservation. Since individual and governmental decisions concerning land and water resources often transcend administrative boundaries and affect other programs and decisions, a coordinated appraisal and program framework are essential.

V.

On October 6, 1975, the Department of Agriculture's Public Advisory Committee on Soil and Water Conservation expressed strong concern about the identification, location, and availability of prime farmland. The advisory committee recommended that the Department of Agriculture accelerate its programs to ensure adequate conservation on cropland and encourage land users to convert to cropland only those lands that can be adequately protected.

In July of 1975, the Department of Agriculture's Committee on Land Use held a seminar, including persons from all walks of life, on the preservation of prime lands. A foreword to a publication of the papers presented at the seminar provides, in pertinent part, as follows:

America's land must produce more food and fiber today than ever before. At the same time, additional space is needed for homes, factories, roads, parks, wildlife and recreation, power plants, and all the other activities that knit together the fabric of modern American life. These competing demands for land are becoming more and more a matter of public concern.

Conflicting demands do not press with equal urgency on all lands. Much land lacks the physical characteristics that make it desirable for development. It may be mountainous, swampy, or have severe climatic conditions. It may have thin stony soils or lack available water resources. It may be remote from transportation systems or population centers.

On the other hand, there are those lands that are relatively level, fertile, well-drained, and served by networks of roads, power lines, and communications. They are open, so land development is relatively cheap, and water is generally plentiful. Any builder with an eye toward low construction costs will be drawn to such a location. But low initial economic costs may disregard social costs and thus be only part of the story when prime lands are taken for development.

Many developments require relatively large areas. Instead of a single house or subdivision, new towns have ranged up to 20,000 acres in size. Instead of ordinary power plants on 40 acres, nuclear plants can take 5,000 acres for cooling lakes and "nuclear centers" may require up to 100 square miles of land. Land use decisions of this magnitude must carefully consider the long-term impact on agricultural and forest production.

The Department of Agriculture is concerned with land use alternatives and priorities, particularly those that involve expenditures of Federal funds. Federal projects that take prime land from production should be initiated only when this action is clearly in the public interest. Long-term implications of various land use options on the production of food and fiber must be understood to assure that the public as aware of the trade-offs involved.

* * * * *

Our Nation is blessed with bountiful land resources, a technology that produces food and fiber more efficiently than any in man's history, and political and economic systems that foster individual enterprise. These factors, working together, have made American agriculture the envy of the world. They have provided the backbone of our country's strength. We must not be content, however, with past success. Future needs and opportunities demand that we constantly check our facts, test our assumptions, and rethink our options and priorities. . . .

VI.

S. 106 will provide local citizens, as well as the Federal Government, with needed data on agricultural land and thereby promote the wise and orderly development of the Nation's soil and water resources. Further, it provides for a detailed evaluation on a continuing basis of the land and water resource conservation programs administered and participated in by the Secretary of Agriculture through the Soil Conservation Service.

The legislation does not provide new program authorities for the Soil Conservation Service, but provides for program planning that will more effectively utilize the programs now authorized. S. 106 contemplates that conservation programs will continue to be carried out through existing types of cooperative arrangements, with voluntary participation by private landowners.

Both the appraisal of resources and the program provided for in the bill must be developed in cooperation with State and local government entities, reflecting their interests and needs. The bill recognizes the basic responsibilities of such governmental entities for conservation of the States' land and water resources. There is no provision in the bill that would inhibit or conflict with these State and local responsibilities.

The program developed under the bill is for the purpose of assisting landowners and land users, at their request, in furthering land and water conservation on the private and non-Federal lands of the Nation.

COMMITTEE CONSIDERATION

On January 10, 1977, Senators Huddleston and Eastland introduced S. 106. Seven other Senators joined in the introduction of the measure; they were Senators Bellmon, Clark, Dole, Helms, Humphrey, McGovern, and Talmadge.

Senators Huddleston and Eastland introduced S. 2081, a bill substantially identical to S. 106, in the 94th Congress. Hearings were held on S. 2081 on November 10, 1975, by the Subcommittee on Environment, Soil Conservation, and Forestry. S. 2081 was amended by the Committee and passed by the Senate. The House of Representatives made several amendments to S. 2081, which were concurred in by the Senate. The bill did not, however, receive the approval of President Ford and was pocket vetoed.

The Committee on Agriculture, Nutrition, and Forestry, meeting in Executive Session on March 2, 1977, made a number of minor technical amendments to S. 106 and ordered the bill reported to the Senate.

DEPARTMENTAL VIEW

The Committee has not received a report from the Department of Agriculture concerning its views on the enactment of S. 106.

REGULATORY IMPACT EVALUATION

In compliance with paragraph 5 of rule XXIX of the Standing Rules of the Senate, the Committee makes the following evaluation of the regulatory impact which would be incurred in carrying out S. 106.

The bill is not a regulatory measure in the sense of imposing Government-established standards or significant economic responsibilities on private individuals and businesses. The resource program required by S. 106 would be developed by the Secretary of Agriculture with the voluntary cooperation of the public through conservation districts, State and national organizations and agencies, and other appropriate means.

No personal information would be collected in making the appraisal and developing the program. Therefore, there would be no impact on personal privacy. When the program is developed, it will be used to assist only those landowners and land users who request assistance in furthering land and water conservation on private and non-Federal lands.

The appraisal would be conducted by the Soil Conservation Service, and little, if any, additional paperwork would result from the enactment of S. 106.

COST ESTIMATE

I.

Pursuant to section 252 of the Legislative Reorganization Act of 1970, the Committee estimates that the costs which would be incurred by the Federal Government as a result of enactment of S. 106 would not exceed $9 million during fiscal year 1978. Assuming full implementation of the bill, the cost would subsequently rise to an estimated $18.6 million in four years.

Cost estimates for fiscal 1978 and the subsequent four fiscal years for S. 106

Fiscal year:	Estimated cost
1978	$8,800,000
1979	9,300,000
1980	16,500,000
1981	17,500,000
1982	18,600,000

The Committee's estimate is the same as the cost estimate prepared by the Congressional Budget Office.

The Committee also received a cost estimate prepared by the Department of Agriculture, showing somewhat higher costs during the first two fiscal years and lower costs during the next three fiscal years.

II.

The cost estimate prepared by the Congressional Budget Office dated March 4, 1977, reads as follows:

CONGRESSIONAL BUDGET OFFICE,
U.S. CONGRESS,
Washington, D.C., March 4, 1977.

Hon. HERMAN E. TALMADGE,
Chairman, Senate Committee on Agriculture, Nutrition and Forestry, Russell Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to Section 403 of the Congressional Budget Act of 1974, the Congressional Budget Office has prepared the attached cost estimate for S. 106, a bill to provide for furthering the conservation, protection, and enhancement of the Nation's land, water, and related resources for sustained use, and for other purposes.

Should the Committee so desire, we would be pleased to provide further details on the attached cost estimate.

Sincerely,

ROBERT A. LEVINE,
(For Alice M. Rivlin, Director.)
Director.

CONGRESSIONAL BUDGET OFFICE
COST ESTIMATE

March 4, 1977.

1. Bill number: S. 106.

2. Bill title: Land and Water Resources Conservation Act of 1977.

3. Bill status: As reported by the Senate Committee on Agriculture and Forestry.

4. Purpose of bill: This legislation establishes policies and programs for furthering the conservation of land, water and other related resources. The bill directs the Secretary of Agriculture to carry out a continuing appraisal of the nation's land, water, and other related resources, and to develop a program to further land and water conservation. It requires the President and the Secretary of Agriculture to submit reports to Congress concerning the ongoing appraisal of land and water resources and the conservation program, and it authorizes the appropriation of such funds as may be necessary to implement the programs mandated in the Act.

5. Cost estimate:	*Millions*
Fiscal year 1978	$8.8
Fiscal year 1979	9.3
Fiscal year 1980	16.5
Fiscal year 1981	17.5
Fiscal year 1982	18.6

6. Basis of estimate: The Department of Agriculture estimates that implementation of the requirements of this bill will necessitate 300 additional man-years of effort in each of the fiscal years 1978 and 1979, and 500 additional man-years in each of the fiscal years 1980 through 1982. The cost per man-year is estimated to be the average for the Soil Conservation Service's soil survey and watershed planning activities, which was $26,155 in fiscal year 1976. This average was inflated by 6 percent per year to estimate the costs in future years. Implementation of the bill was assumed to begin on October 1, 1977, the date on which the Act would take effect.

7. Estimate comparison: Preliminary estimates by the USDA indicate their expected costs will be $9 million in fiscal year 1978, $10 million in fiscal year 1979, and $13 million in each of the fiscal years 1980 through 1982.

8. Previous CBO estimate: A CBO estimate of S. 2081 (94th Congress) was based upon the cost of the additional authorization created by the bill. The current cost figure for S. 106 is based upon implementation of the complete program mandated by this legislation.

9. Prepared by: Kathy Weiss (225-7760).

10. Approved by: James L. Blum, Assistant Director for Budget Analysis.

III.

The cost estimate prepared by the Department of Agriculture dated March 7, 1977, reads as follows:

UNITED STATES DEPARTMENT OF AGRICULTURE,
SOIL CONSERVATION SERVICE,
Washington, D.C., March 7, 1977.

Hon. HERMAN E. TALMADGE,
U.S. Senate, Washington, D.C.

DEAR SENATOR TALMADGE: We are providing, as you requested, cost estimates to administer S. 106, the "Land and Water Resources Conservation Act of 1977," if enacted.

We estimate, in meeting the objectives of S. 106, the cost during the first five years to be as follows:

Fiscal year 1978	$9,000,000
Fiscal year 1979	$10,000,000
Fiscal year 1980	$13,000,000
Fiscal year 1981	$13,000,000
Fiscal year 1982	$13,000,000

The estimated cost to administer the bill is changed slightly from the figures provided in the 94th Congress on S. 2081, a similar bill. The Soil Conservation Service recognized the need to move ahead with obtaining information to: (1) determine the impact of conservation on the land, (2) to provide information requested by other agencies and organizations, and (3) to help make decisions regarding future conservation programs. Because of this, we have taken action under existing authority to obtain some of the information needed. Obtaining this information at an early stage will change the time frame for obtaining the appraisal data under S. 106.

We estimated the personnel needs to carry out provision of the bill to begin at 300 in fiscal year 1978 and 1979; and increase to 500 during fiscal year 1980, 1981, and 1982.

Enclosed is a table showing major components of work and associated cost, and a statement on regulatory impact pursuant to S. Res. 4.

Sincerely,

R. M. DAVIS,
Administrator.

Enclosures.

COST ANALYSIS [1] (IMPLEMENTATION OF S. 106)

[In thousands of dollars]

Item	1 [2]	2	3	4	5
1. Appraisal:					
a. Inventory and monitoring	8,050	9,575	12,575	12,525	12,125
b. Report	50	100	100	150	200
2. Report:					
a. Development of program	500	200	200	200	500
b. Evaluation	125	50	50	50	50
c. Report	50				50
3. Congressional reports:					
a. Appraisal	75				
b. Program	75				
c. Program evaluation report	75	75	75	75	75
Total	9,000	10,000	13,000	13,000	13,000

[1] Cost base 1977.
[2] Year bill enacted.

APPENDIX

SOIL CONSERVATION SERVICE

The Soil Conservation Service, an agency in the Department of Agriculture, was established in 1935. The agency assists conservation districts, communities, watershed groups, Federal and State agencies, and other cooperators with erosion control and water management problems and in bringing about needed physical adjustments in land use. The purpose is to conserve soil and water resources, improve agriculture and reduce damage caused by floods and sedimentation.

The Soil Conservation Service maintains its central office in Washington, D.C. Most of its activities, however, are carried out in about 3,050 field offices in the 50 States and Puerto Rico. Four technical service centers provide program coordination and technical support. This includes services such as engineering and watershed planning, cartographic work, soil mechanics laboratories, professional help in agronomy, soils, biology, forestry, information, plant materials, range conservation, and other technical work. Technical programs are carried out in cooperation with conservation districts and other sponsoring local organizations. As of October 31, 1976, there were 13,414 full-time employees and 3,125 part-time, intermittent, and other employees.

The Soil Conservation Service has general responsibility for administration of the following programs of the Department of Agriculture:

1. *Conservation Operations Program.*—Under this program, technical assistance is provided to landowners and operators in accomplishing locally-adapted soil and water conservation programs, primarily through conservation districts in the 50 States, Puerto Rico, and the Virgin Islands. As of June 30, about 3,000 conservation districts cover 97 percent of the Nation's farm and ranch lands. Activities include:

A. Technical assistance to district cooperators and other landowners in the development of plans and application of conservation treatments.

B. A national program of land inventory and monitoring to provide soil, water, and related resource data for land conservation, use, and development, for guidance of community development, for identification of prime agricultural producing areas that should be protected, for use in protecting the quality of the environment, and to issue land inventory reports of resource conditions.

C. Soil surveys are made as an inventory of a basic resource and to determine land capabilities and conservation treatment needs. Soil survey publications include interpretations useful to cooperators, other Federal agencies, State, and local organizations.

D. Snow survey water forecasting from basic data collected to provide estimates of water availability from high mountain snow packs and relating this to summer stream flow.

E. Operation of plant materials centers to assemble, test, and encourage increased use of plant species which show promise for use in conservation problem areas.

2. *River Basin Surveys and Investigations Program.*—This program involves cooperation with other Federal, State, and local agencies in the conduct of river basin surveys and investigations and flood hazard analyses in order to aid in the development of coordinated water resource programs, including the development of guiding principles and procedures. SCS represents the Department on the Water Resource Council, river basin commissions, and river basin interagency committees for coordination among Federal departments and States.

3. *Watershed Planning Program.*—This program consists of (a) making preliminary investigations to assess proposed small watershed projects in response to requests made by sponsoring local organizations and (b) assistance to sponsors in the development of watershed work plans. SCS is responsible for development of guiding principles and procedures.

4. *Watershed and Flood Prevention Operations Program.*—Activities under this program include:

A. Flood prevention operations; planning and installing works of improvement for flood prevention and for the conservation, development, utilization, and disposal of water. This may also include the development of recreational facilities and the improvement of fish and wildlife habitat. Activities are authorized in 11 flood prevention watersheds.

B. Emergency operations to install measures for runoff retardation and soil erosion prevention needed to safeguard lives and property from floods and products of erosion on any watershed whenever fire or any other natural element or force has caused a sudden impairment of that watershed.

C. Watershed operations; cooperation with local sponsors, State and other public agencies in the installation of planned works of improvement in approved watershed projects. Such works of improvement reduce erosion, floodwater and sediment damage. They also further the conservation, development, utilization, and disposal of water, including

the development of recreational facilities and improvement of fish and wildlife habitat.

D. Loans to local organizations to help finance the local share of the cost of carrying out planned watershed and flood prevention works of improvement. Loans are made on an insured basis from the Agricultural Credit Insurance Fund administered by the Farmers Home Administration.

5. *Great Plains Conservation Program.*—Activities under this program include:

A. Cost-sharing of conservation practices under long-term contracts with farmers and ranchers in designated counties of the ten Great Plains States.

B. Cost-share programming and contract administration and technical assistance to help make needed land use adjustments and install conservation measures specified in basic conservation plans in accordance with contract schedules.

6. *Resource Conservation and Development Program.*—Activities under this program include:

A. Project planning assistance to help local sponsors develop overall programs and plans for land use and conservation.

B. Technical assistance and cost-sharing assistance to sponsors, local groups, and individuals in carrying out such plans and programs.

C. Loan services for resource improvements and developments in approved projects. Loans are made on an insured basis from the Agricultural Credit Insurance Fund administered by the Farmers Home Administration.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I yield back the remainder of my time.

THE ENERGY CRISIS

Mr. BAKER. Mr. President, it is no revelation to any of my colleagues that one of the most serious problems still facing this Nation is what has euphemistically been called "the energy crisis." The recent economic upturns as well as increased demand for heating fuel have placed an even greater strain than normal on our Nation's limited energy resources.

For the past few years many prognosticators in both Government and academe have noted the reduced decline in energy consumption, and many future projections have shown the increase in energy consumption leveling off around the 3-percent level.

However, as I have said on a number of occasions, if we are to maintain a vibrant economy, even with proper conservation methods, our consumption patterns are likely to increase significantly. An excellent article appeared on the front page of the March 14 Nashville Tennessean, which indicates the energy growth patterns in the United States during the past year.

Mr. President, in spite of significant conservation efforts to this point, higher fuel bills which inhibit use, and increased awareness on the part of the public of the need to conserve energy, our energy consumption has increased again dramatically. In 1976 energy consumption in the United States was up almost 5 percent. This reverses what had been a 2 year leveling-off period in energy consumption patterns.

Mr. President, I am requesting this morning that the full text of this article from the Nashville Tennessean regarding energy consumption be made a part of the record and am also hoping that the possibility of significant energy increases as far as consumption is concerned be taken into account in developing plans for meeting America's energy future.

Mr. President, I ask unanimous consent that the article to which I refer be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ENERGY USE UP, TREND CHANGES

WASHINGTON.—Energy use in the United States increased 4.8 percent last year, partly due to the cold winter, and reversed a two-year decline in consumption, the government reported yesterday.

Experts said fuel conservation efforts by industry kept total consumption from climbing even higher.

And they noted that, despite the increase, overall energy use was still slightly below the record amounts Americans consumed in 1973.

According to figures released by the U.S. Bureau of Mines, the household and commercial sectors of the economy used 7.3 percent more energy last year than in 1975, reflecting the impact of cold winter weather.

By comparison, industrial energy use rose only 3.3 percent.

Petroleum accounted for nearly half of all U.S. power needs, a slight expansion of the role it played the previous year. Because of drought in the West, hydroelectric power production was down.

Total energy use in the United States dipped 4.9 percent from 1973 to 1975—the first two-year drop since 1945-46. Analysts said reduction was due to a combination of higher fuel prices, energy conservation efforts, reduced economic activity and relatively mild winters.

"Consumption of energy to supply heat, light and power in all forms in 1976 totaled 73,999 trillion British thermal units," the Bureau of Mines says in its latest report.

"This is 4.8 percent greater than the 1975 total . . . and 99.3 percent of the record 74,-555 trillion British Thermal Unit figure for 1973."

Per capita gross energy use averaged 344.8 million BTU, up 4.1 percent from 1975, it said.

The increased energy usage included a 4.5 percent rise in consumption of gasoline for transportation, the report said.

Net imports of crude oil and petroleum products rose 21.4 percent.

Interior Secretary Cecil Andrus, in an accompanying statement, attributed the rise "in large part to increased economic activity and colder weather." He said energy use went up in all major sectors of the economy.

Government experts predicted last year that America will use over twice as much energy annually by the end of the 20th century as it did in the mid-1970s. They forecast an annual 2.5 percent growth rate in per capita energy consumption.

DAIRY SUPPORT PRICES

Mr. BAKER. Mr. President, the Secretary of Agriculture announced yesterday a 9-percent increase in the level at which the Government supports dairy products. What that means at the grocery store is that families will now pay 6 to 8 cents per gallon more for milk following a month when the Consumer Price Index rose to an annual inflation rate of 12 percent.

The Government price support program for dairy products generally operates on the very sound principle that dairy farmers deserve to be protected from severe fluctuations in the price of their products and the cost of producing them. The dairy industry is one of the most important producing elements of the economic structure of the Nation, and, run wisely, this program protects the producer and consumer alike.

The Senate Agriculture Committee has recently held hearings on this subject and found that a majority of dairy producers did not support the 9-percent increase to 85 percent of parity and in fact supported a much more moderate increase. Perhaps those reasonable memers of that industry were remembering the results of a similar increase to 85 percent imposed by the Kennedy administration. That increase stimulated production, created enormous surpluses which the Government spent enormous amounts of money to keep off the market, and it took the Government 8 years to dispose of the surplus. That, by the way, is why we went back to 75 percent of parity, as eventually we will again as a result of this increase.

The reasonable members of that industry recognize this and oppose the increase; the Council on Wage and Price Stability believes even the present level of 75 percent may be too high; and the chairman of the Senate Agriculture Committee has not supported the size of the increase. I believe, Mr. President, that it is reasonable to ask why this administration, against all indications to the contrary, is willing to add this additional increment to the inflationary pressures on the American consumer.

The Washington Post, in an article that appeared this morning, reports that the President is keeping a campaign promise to the Wisconsin dairy farmers. I believe in public officials keeping their word, but I wish he had also promised the parents who have to buy milk to feed their families that he is going to increase the price of milk by 6 to 8 cents a gallon at an overall cost of at least $800,000,000 to the consuming public. I wish he had promised the taxpaying public that by keeping his promise to the Wisconsin dairy farmers he was going to cost the taxpayers an additional $400,000,000 in Government expenditures to buy up the surplus which will be created by this action. Had he made those promises he would have kept his word to the general public as well as to the Wisconsin dairy farmers.

In closing, Mr. President, let me reiterate my regard for the importance of the dairy industry. Had this increase in price supports been moderate as proposed by the National Milk Producers' Federation and other reasonable mem-

bers of that industry I believe that the American public would have accepted the slight resulting increase in the price of milk. But this increase, coming on the heels of renewed inflationary pressures and with the effects of the severe winter still uncertain, is not only unreasonable but irresponsible. I can only hope that there are not too many more of these "campaign promises" for which the American public will have to pay.

INFLATION

Mr. BAKER. Mr. President, on last Friday, March 18, the Washington Star published a front-page story outlining the serious problems inflation is again beginning to play in our Nation's economic picture. The Consumer Price Index rose a full percentage point in February, the largest rise since September of 1974.

If this trend were to continue—and I point out the accelerating impact of this problem over the last 3 months—we would be in a double-digit inflation situation again, at a rate approaching 12 percent.

Even more serious were larger increases in food prices and other commodities essential to the well-being of American families. As the Star article indicated, $177.10 is now required to buy an aggregate assortment of goods and services that would have required $100 only 10 years ago.

I call this very serious situation to the attention of Congress and the administration. Any plans to stimulate or hold down economic expansion should be done with today's situation, not a situation of 6 months ago, in mind.

Mr. President, I ask unanimous consent that the full text of the Star's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRICES SURGE 1 PERCENT FOR BIGGEST INCREASE SINCE SEPT., 1974

(By Ross Evans)

Consumer prices rose a full percentage point last month—the largest monthly increase since September 1974.

Sharply rising prices for food, especially fresh vegetables, were responsible for about half the February increase, the Labor Department reported today.

Food prices alone surged 2 percent—the largest increase in three years—and a record jump of 20.9 percent for fresh vegetables accounted for almost half the total food price increase and about a quarter of the overall rise in the consumer price index, the department said.

The 1 percent rise in the index came on top of an 0.8 percent rise in January. In contrast, the average monthly increase was only 0.3 percent during the last four months of 1976.

White House Press Secretary Jody Powell said February's jump "does not reflect any kind of a trend" and that the administration did not view it "as a long range problem."

In a separate report on prices in the Washington area, the department reported a three-month increase in consumer prices of 2.2 percent. That figure was not adjusted for seasonal influences.

The Washington consumer price index was 6.8 percent above February 1976, reflecting a local inflation rate higher than that for the nation or for the averages for other major cities. The department attributed the local inflation principally to higher prices for food, homes and household services.

The severe winter weather is considered to be the primary factor in boosting prices throughout the country so far this year—especially those of food and fuels.

On an unadjusted basis, the price index rose last month to 177.1, meaning that it took $177.10 to pay for an assortment of goods and services that would have cost $100 in 1967, the base year. The unadjusted consumer price index is used to trigger cost-of-living raises in many pension and other benefit plans. The February consumer price index was 6 percent higher than that of a year ago.

Excluding food prices, the department said, the seasonally adjusted index rose 0.6 percent in February, slightly higher than the monthly increases for the previous several months. The department attributed about 7 percent of the total increase in consumer prices to higher costs for fuel oil, gasoline and natural gas.

Within the food category, the department said prices rose in part because of shortages of vegetables and citrus fruits caused by the weather. Prices increased faster than during the previous month for coffee, poultry, eggs, sugar and sweets. Prices declined, however, for beef, dairy products, and processed fruits and vegetables, as well as for cereal and bakery products.

Coffee leaped another 9.9 percent last month for a total increase of 82.9 percent since February a year ago.

In another report, the department said that despite the 1 percent increase in the consumer price index, workers' average weekly earnings adjusted for the inflation rate increased 0.8 percent in February, after allowing for seasonal influences.

The department said that this increase in spending power was due to a 1.4 percent rise in average weekly hours worked and a 0.4 percent increase in average hourly earnings. The expanded work week was attributed by the department to a large extent to recovery in working establishments after weather-related cutbacks in January.

The Labor Department's index for commodities other than food increased 0.7 percent in February, after seasonal adjustment. That increase continued the trend of the previous two months and was greater than the rise for most months of 1976. Within that category, the department said, prices for fuel oil and coal rose 2 percent, the same as in January. The index for gasoline and motor oil, which had declined in January, rose 0.9 percent last month.

Another factor in the commodity prices was a rise in used car prices, which went up 3.3 percent last month following a 3.8 percent rise in January, seasonally adjusted. Other price increases—those for apparel, new cars, furniture and tobacco products—were smaller than increases in recent months, the department said.

The seasonally adjusted index for services rose 0.6 percent compared with a January increase of 0.9 percent and an 0.4 percent increase in each of the last three months of 1976. The January spurt in prices for services had been attributed to increases in property taxes, mortgage interest rates and natural gas charges, all of which rose less rapidly last month.

The seasonally adjusted prices for medical services rose 0.7 percent, the department said, about the same as in January and December. The cost of transportation services rose 0.9 percent. That increase, larger than in recent months, was attributed to sharper increases in car insurance rates.

The unadjusted price index for food, showing how much prices actually rose last month, primarily reflected prices of food purchased in grocery stores. Those prices rose 2.8 percent in February, the largest unadjusted increase since July 1975.

Fresh vegetable prices rose 25 percent and fresh fruit prices rose 5 percent, the department said, noting that the late January freeze in Florida and the drought in the West had driven these prices up.

Unadjusted prices for most other types of groceries also increased. Other rapid price increases were shown for poultry, 5.8 percent; eggs, 5.1 percent, and pork, 2.8 percent.

ORDER OF BUSINESS

Mr. BAKER. Mr. President, I yield to the distinguished assistant minority leader such time as he may require, under the standing order.

TAX CREDIT FOR VIETNAM VETERANS

Mr. STEVENS. Mr. President, I would like to add my endorsement to the thoughtful suggestion made before this body on Monday by the distinguished minority leader concerning the Nation's obligation to pay tribute to our Vietnam-era veterans.

All of us in this body are more than mindful of the division caused in this country by the moral dilemma of the Vietnam War. Moreover, we recognize the policy considerations underlying programs which are aimed at assimilating the Vietnam-era draft resisters back into our society.

The recent return of the bodies of the 12 U.S. pilots from Vietnam, however, was a solemn reminder of the costs that have always accompanied dutiful compliance with one's military obligation in time of war or hostility. This occasion should also serve to remind all Americans that what we have in this country today is not the result of what was accomplished by those who fled, or even by the country's heroes, but by the rank and file of the millions who simply did what duty dictated.

It is our desire to recognize the dutiful military service rendered by the millions of Vietnam-era veterans who completed honorable service. Congress should act soon to recognize that service. What form the recognition of this group of veterans should take is a matter that warrants thoughtful consideration. I am convinced that we should recognize those veterans who saw duty and responded, rather than becoming preoccupied with the pardons of those who resisted.

Therefore, Mr. President, today I introduce a bill that will offer $1,500 in tax relief, payable over a 3-year period, to those Vietnam veterans who so dutifully served this country during that period. Specifically, this bill would provide a $500 tax credit to these veterans beginning in 1977 and extending through 1978 and 1979.

Let me emphasize that all qualified veterans of the Vietnam-era will be treated equally under the provisions of the bill.

In the event that a veteran would not have a tax liability in the amount of $500 or less in the above taxable years, then the qualified veterans would receive a refundable tax credit in an amount

that would be the difference between his tax liability and the $500 each year.

For example, if a veteran's liability was $500 or more, he would receive an income tax credit of $500, and his tax liability to the Government would be reduced accordingly. If the veteran's tax liability was $250 he would receive a tax credit of $250 and would receive a check for $250 from the Federal Government. If the veteran's tax liability amounted to zero, he would receive a check for the full $500 amount.

Again, let me stress that in this way, the income tax credit or refundable credit will insure that all qualified veterans are treated fairly and that each receives the same dollar value. We will use the tax system rather than organize a completely new administrative system to deal with a bonus for the Vietnam-era veterans.

I hope that others in this body, including our leader, or both leaders, and those involved in the Veterans' Affairs Committee, will see fit to join me in suggesting that it is time now that Congress consider a bonus for Vietnam era veterans who served dutifully in response to the call of their country.

Mr. BAKER. Mr. President, I commend the distinguished assistant minority leader for his statement. There are few issues more important than this one. He has addressed the situation in the most eloquent and effective way. I hope that he will permit me to be a cosponsor.

Mr. President, I yield back the remainder of my time.

Mr. STEVENS. I am honored to have the distinguished minority leader cosponsor this legislation and I am also delighted to learn that the Senator from South Carolina, Mr. THURMOND, has also agreed to cosponsor this bill.

APPOINTMENT BY THE PRESIDENT PRO TEMPORE

The ACTING PRESIDENT pro tempore. The Chair, on behalf of the President pro tempore, pursuant to Public Law 95-118, appoints the Senator from New York (Mr. JAVITS) to the Japan-United States Friendship Commission.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Oklahoma (Mr. BELLMON) is recognized for not to exceed 15 minutes.

Mr. BELLMON. Mr. President, I ask unanimous consent that Mr. Dick Woods, of my staff, be granted the privilege of the floor during the deliverance of this statement.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

FOOD AND NUTRITION PROGRAM OPTIONAL CONSOLIDATION AND REORGANIZATION ACT OF 1977—S. 1094

Mr. BELLMON. Mr. President, today I am introducing the Food and Nutrition Program Optional Consolidation and Reorganization Act of 1977. I have been joined in offering this measure by the Senator from Mexico (Mr. DOMENICI), who has had a very large part in developing this concept, the distinguished Senator from Indiana (Mr. LUGAR), and the senior Senator from North Dakota (Mr. YOUNG). This new approach to federally funded food and nutrition programs comes from several considerations which should be described.

The psychology of many current Federal food programs is tied to the depression. At that time, needy families and school lunch programs were selected as desirable outlets for the distribution of commodities purchased by the Government to bolster agricultural prices and incomes. When the National School Lunch Act of 1946 was passed, the Federal Government's commitment to supporting school lunch programs was clearly established. This legislation had two clear purposes: to safeguard the health and well-being of the Nation's children and to encourage domestic consumption of agricultural commodities. Later, in 1954, special legislation was enacted making reduced-price milk more widely available to preschool and school age children.

During the 1950's and 1960's surplus agricultural commodities were distributed to needy persons in programs imitative of those begun during the depression. After some pilot food stamp programs were undertaken in the early 1960s to test the effectiveness of this alternative for improving nutrition of needy people, the 1964 Food Stamp Act was adopted, increasing the availability of this program to low income families. Increased attention to food and nutrition problems in the United States during the 1960s led to a new focus within the Department of Agriculture, the Food and Nutrition Service. Over the years, participation in the food stamp plan and extensions of the school lunch program have increased Federal efforts enormously. A food stamp plan begun with $35 million in 1965 now—in 1976—totals $5,689,000,000.

Let me repeat that, Mr. President: this food stamp plan, which cost us $35 million in 1965, 11 years later, in 1976, cost the Treasury $5.689 billion.

Child feeding programs, which have grown in their categorical numbers and their coverage, cost $497 million in 1965 and now require $2,471,000,000—in 1976. If we add to this substantial base the nutrition program for the elderly, the community food and nutrition program, food distribution programs, and the expanded food and nutrition program, we have 1976 Federal obligations of $8,376,000,000—an 1,100-percent increase in this Nation's food program expenditures between 1965 and 1976.

There is evidence that, if we have not eradicated the desperate needs for sustenance which prompted these programs, we have certainly reduced them quite considerably. Considering the widespread diffusion of Federal food programs and the dramatic upsurge in Federal funding in recent years, it is not unreasonable to presume that we are reaching a plateau of funding sufficiency, if our concern is to be limited to the emergency considerations which originated the programs. Now our problems have multiplied to include administrative clumsiness and inefficiency, fraud and abuse, and such indications of ineffectiveness as plate waste in school lunch programs.

In addition, we are becoming aware that, while there are still persons whose basic caloric needs remain to be met, the larger problem is one of nutritional counseling and the prevention of obesity. There is little evidence of desirable nutritional consequences of our massive Federal feeding effort, and that ought to be of considerable concern to us since the health consequences of diet appear to be substantial. Faced as we are with the enormous inflationary pressures of rising medical care costs, it makes sense to tie nutritional information and education to our public feeding efforts. Prevention of serious disease related to dietary habits would ease the pressure on our system of health care.

Part of the difficulty we have in adjusting our Federal efforts to these inevitable shifts in need and emphasis stems from the assumption that we can structure Federal categorical programs which are appropriate across the broad range of geographic, democraphic, economic, and social conditions which make up this country. In other words, Mr. President, in my judgment, we have been hampered by the feeling that all wisdom resides in Washington and that all programs must be designed here to apply in every State and every locality across the country. Our debate about such issues as welfare reform seems to proceed from the assumptions that we need new or better categorical programs, or that we ought to consolidate Federal programs at the highest possible level in order to put together a more effective uniform national approach. What I am suggesting is a consolidation, rather than an unrestricted block grant to States. I propose that we establish a procedure by which citizens and agencies at the State level could reorganize and administer food and nutrition programs now federally determined.

Mr. President, this approach closely follows the pattern of S. 3849, the optional educational consolidation grant bill that was developed by the distinguished senior Senator from New Mexico (Mr DOMENICI), and introduced by Senator DOMENICI and myself during the final days of the last Congress.

This suggestion is based upon the realization that State and local needs and conditions vary considerably, that administrative complexity is the inevitable result of finite accountability to remote bureaucracies I propose that States be granted the option of consolidating, for State reorganization and administration, a number of Federal categorical food and nutrition programs. For States which choose the option the bill I am offering today would consolidate:

The food stamp program provided for under the Food Stamp Act of 1964.

The child feeding programs provided

for under the National School Lunch Act and the Child Nutrition Act of 1966, including: The national school lunch program, the school breakfast program, the child care food program, the summer food service program for children, the special milk program, the special supplemental food program for women, infants, and children—WIC program, the supplemental food program, the nonfood assistance program—equipment, State administrative expenses, nutritional training and survey program, special developmental projects.

The expanded food and nutrition education program provided for under the Smith-Lever Act, as amended.

The commodity supplement food program.

In all, Mr. President, there are 14 programs that would be available for consolidation for the States that opt to use this approach.

All of these programs are currently administered at the Federal level through the Department of Agriculture. Other food and nutrition programs administered through such agencies as HEW and CSA as well as commodity distribution programs would not be consolidated, but States which choose to consolidate would be required to account for all State and Federal food and nutrition programs in the required comprehensive State plan mandated by this bill, so as to avoid overlap and duplication.

Each State which chose the consolidation option would be eligible for a planning grant to be used over a period prior to the actual program consolidation. During this period, a single State agency would be designated to perform the required assessments, formulate the State plan, receive and apportion the funds, monitor the progress of programs, prepare general guidelines, and examine all required reports and audits.

The State plan would be initiated with a comprehensive assessment of the food and nutritional requirements of the neediest people of that State. It would also incorporate the results of a comprehensive assessment of the need for food and nutrition education among the people of the State. These assessments must include, but are not limited to, the children, infants, expectant mothers, elderly people, institutionalized populations, and isolated populations of the State, who are living in circumstances of poverty or who are unable to provide themselves with an adequate nutritional diet. The Secretary of Agriculture would participate in the planning process and his approval would be required before the consolidation process could begin.

States which chose the consolidation would not be bound to pattern State food and nutrition programs after existing Federal models; they would be free to design a package of programs which would meet the needs of populations as revealed by the assessments of need.

An open planning process requiring the participation of interested citizens, local organizations, units of general local government, and appropriate State agencies is required. The State plan would establish program priorities, and would insure that funds would be coordinated with other State and Federal funds so as to avoid duplication of effort and to insure program effectiveness.

The State plan would contain procedures for, and results of, the needs assessments; the goals to be achieved by the consolidated programs; program descriptions; policies and procedures to be followed; description of the organization structure for program administration; procedures for necessary monitoring and technical assistance with respect to agenices, institutions and organizations within the State; audit requirements; procedures to eliminate unnecessary paperwork and duplication; methods for insuring that local agencies develop and implement program plans; an appeal process for local agencies; and the requirement that the Secretary of Agriculture will make timely notification to the State as to whether or not its State plan complies with the requirements of the act and, if it does not, in what respects it is deficient.

The State choosing to consolidate would receive funds equal to the amount in total received by that State under the categorical programs specified earlier in the most recent fiscal year in which the State received funds. This amount would be adjusted semiannually to reflect changes in the price of food. Federal funds would have to be used to supplement, and not to supplant, State and/or local funds.

Each State which elected and qualified for the consolidation would also be eligible for an additional amount of funds equal to up to 10 percent of the consolidated Federal funds, providing the State matched that amount with an equal amount of funds from non-Federal sources—considering Federal-State revenue sharing funds to be non-Federal.

No more than 7½ percent of the funds made available to a State under this bill could be used for administrative purposes. The State would not lose funds if it used less than 7½ percent for administration.

In addition to the procedural and auditing safeguards required in the State plan, States would be required to perform annual program evaluations, using an evaluation model developed by the Secretary of Agriculture or a model designed by the State. No later than the end of the 5th fiscal year after enactment of this bill, the Comptroller General would evaluate the entire consolidation experience and make recommendations for legislation, if he sees fit.

To ensure implementation of programs for conformity with the act, the Secretary of Agriculture would undertake such monitoring efforts as are deemed necessary. The Department would be required to undertake an evaluation of consolidated programs every 2 years. That process would include the conduct of open public hearings in the States which have exercised the option to consolidate. When noncompliance with the State plan was found, steps to be taken for the necessary modifications would be arranged with the appropriate State agency. The Secretary of Agriculture would provide advice, counsel, and technical assistance upon request of State and local agencies.

In case of noncompliance, the Secretary of Agriculture could reduce the amount otherwise payable to the State by an amount not to exceed 7½ percent; he could seek an injunction requiring compliance from the Attorney General; or he could terminate the participation of the State in the consolidated program and permit the State to return to categorical programing.

Funds under this act would be subject to the usual civil rights protections. Nonpublic school children would participate. There would be criminal penalties for individual fraud.

Those States not exercising the consolidation option would have the right to do so at a later date. Unless and until they do, they would continue receiving funds through regular categorical programs.

In order to accommodate the dual track of regular categorical and consolidated programs, the Secretary of Agriculture would establish a separate identifiable administrative unit within the Department of Agriculture. Depending upon the number and size of the States which elect to consolidate, personnel to be employed in the administration of the consolidation program would be transferred to the new unit from program units administering the categorical programs consolidated under this bill.

Mr. President, these are the principal features of the legislation that I am offering today.

With my remarks I am submitting a copy of the bill, and I ask unanimous consent that the bill be printed in the RECORD in full at the completion of my remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

(See exhibit 1.)

Mr. BELLMON. There is also a table on Federal payments to the States, based on fiscal year 1976, and I ask unanimous consent that it also be printed in the RECORD.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

(See exhibit 2.)

Mr. BELLMON. Mr. President, I urge that the Senate consider carefully this decentralized approach to the reform of Federal feeding programs. The optional approach utilized in this proposal would permit, if you will, a number of pilot efforts at reform which would allow program design to flow from assessed need instead of some notion of national uniformity. It does not force States which may be unprepared for consolidation to undertake it.

It places the burden of economizing and policing upon State and local agencies, who are in the best position to respond. It provides up to 10 percent more Federal funding for food and nutrition programs, which, when matched by the State, would result in a maximum increase of 20 percent in program funds. It undertakes to infuse food and nutrition programs with information and education intended to improve the public

health. It replaces the practice of categorical program proliferation with more economical consolidation, including elimination of program duplication and multiple eligibility standards. It depends heavily upon an open planning process and upon the anticipatory planning required to implement programs effectively. It would raise the level of sophistication of food and nutrition programs from the Depression-reaction context which we now experience.

Mr. President, we have heard a lot from the new administration and from President Carter about plans to reform the Nation's welfare programs. We in the Senate, particularly in the Agriculture Committee, have struggled for months with food stamp programs trying to bring about an end to the fraud, abuse, and waste that goes on in that program.

I am personally convinced that there is no way at the Federal level for those of us in Congress to write programs that fit every community in this country and that the best way to reform not only the welfare program but also education and other of our categorical funding efforts is to give the States greater flexibility, because I feel that they have both the desire and the knowledge to tailor these programs and to use these funds to meet their own needs far better than we can do it by trying to write one program here in Congress or in the executive branch in Washington.

Therefore, Mr. President, I feel strongly that this is closely in accord with the reform objectives of the Carter administration, and I hope that they will give this approach careful consideration.

I thank my friend from New Mexico. He has worked hard and very effectively in helping conceive not only this concep' but also the bill as well as the related one in the educational area.

EXHIBIT 1

S. 1094

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Food and Nutrition Program Optional Consolidation and Reorganization Act of 1977".

STATEMENT OF PURPOSE

SEC. 2. (a) It is the purpose of this Act to afford to the States the option of consolidating and reorganizing the following food assistance programs presently being provided the States under existing laws:

(1) the food stamp program provided for under the Food Stamp Act of 1964;

(2) the child feeding programs provided for under the National School Lunch Act and the Child Nutrition Act of 1966;

(3) the Expanded Food and Nutrition Education Program provided for under the Smith-Lever Act, and

(4) the Commodity Supplemental Food Program.

(b) It is the further purpose of this Act to permit those States which select the consolidation and reorganization program authorized by this Act greater flexibility in the use of Federal funds provided for food and nutrition assistance than such States presently have under the separate programs described in subsection (a); to permit the States to formulate, establish, and administer food and nutrition programs which match the requirements of their neediest populations; to develop effective methods of educating their citizens regarding the health consequences of diet and nutrition; and to encourage the States to operate food and nutrition programs in an efficient and effective manner.

DEFINITIONS

SEC. 3. As used in this Act—

(1) The term "Secretary" means the Secretary of Agriculture.

(2) The term "State" means any of the fifty States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, the Trust Territory of the Pacific Islands, and the Commonwealth of the Northern Mariana Islands. Such term also includes any agency designated in accordance with applicable State law to receive and disburse funds made available under this Act.

CONSOLIDATED PROGRAM OPTION

SEC. 4. (a) Any State may, upon application to the Secretary and subject to the other provisions of this Act, participate in the consolidated program provided for in this Act. Any State which elects and qualifies to participate in such program shall receive the funds it would have otherwise received under—

(1) the food stamp program provided for under the Food Stamp Act of 1964, including an amount equal to the amount of the bonus value of the food coupons distributed in such State,

(2) the programs provided for under the National School Lunch Act and the Child Nutrition Act of 1966,

(3) The Expanded Food and Nutrition Education Program provided for under the Smith-Lever Act,

(4) the Commodity Supplemental Food Program provided for in annual appropriation Acts (under which assistance is provided to certain women during and after pregnancy and to certain infants and children under 6 years of age who are vulnerable to malnutrition), and

(5) any other program which is enacted after the date of enactment of this Act, administered by the Department of Agriculture, and provides food assistance to needy persons or provides nutrition education to the citizens of the several States, unless the legislation enacting such program specifically provides otherwise.

(b)(1) Any State which elects to participate in the consolidated program in lieu of the categorical programs described in subsection (a) may withdraw its election to participate in the consolidated program and continue participation in the categorical programs if such State withdraws its election at any time prior to the beginning of the first fiscal year it would have been eligible to receive funds (other than planning funds) under the consolidated program.

(2) Any State which has participated in the consolidated program for at least two fiscal years may terminate its participation in such program upon written notice to the Secretary at least 60 days prior to the end of any fiscal year.

(3) A State which terminates its participation in the consolidated program as provided in paragraph (2) shall become eligible to participate in the categorical programs described in subsection (a) at the beginning of the fiscal year following the fiscal year in which participation in the consolidated program ends.

(c) All States which elect to participate in the consolidated program shall begin participation at the beginning of a fiscal year. In no case may a State participate in the consolidated program and in one or more of the categorical programs described in subsection (a) in the same fiscal year.

CONSOLIDATION PROGRAM PAYMENTS

SEC. 5. (a) Each State which elects and qualifies under this Act to receive funds for carrying out the consolidated program provided for in this Act shall be paid by the Secretary of the Treasury each fiscal year such amount as shall be certified to him by the Secretary.

(b) The Secretary shall certify for payment in the case of any State participating in the consolidated program in any fiscal year an amount equal to the total amount received by such State under the categorical programs described in section 4(a) in the most recent fiscal year in which such State received funds under such programs. In no case shall the amount certified for payment in any fiscal year in the case of any State which participated in the consolidated program in the preceding year be less than the amount such State received under this subsection in such preceding year.

(c) The amount to which any State is entitled under this section shall be adjusted to reflect changes in the prices of food published by the Bureau of Labor Statistics, Department of Labor.

PLANNING GRANTS

SEC. 6. (a) Any State desiring to participate in the consolidated program authorized by this Act may, for the purposes of preparing a consolidated plan in accordance with this Act, receive a planning grant for use in not more than two consecutive fiscal years. Any State desiring to receive a planning grant under this section shall file an application at such time, in such manner, and including such information as the Secretary may reasonably require consistent with this section. Each such application shall include, but not be limited to, provisions which—

(1) describe the objectives to be achieved in the development of the State plan with assistance made available under this Act,

(2) set forth procedures to assure an opportunity for comments to be submitted by the chief executive of the State,

(3) set forth assurances that the comprehensive State plan required under section 9 will be prepared in accordance with section 8, and

(4) describe procedures for the promulgation of regulations for the State administration of the programs consolidated by this Act.

(b) The maximum amount of a grant which a State may receive under this section is equal to not more than 2 per centum of the total amount of funds allocated to that State under the programs described in section 4(a) in the most recent fiscal year; and the minimum amount is $500,000.

STATE ADMINISTRATION

SEC. 7. (a) Each State desiring to receive funds for the consolidation program authorized by this Act for any fiscal year shall—

(1) designate, as provided by the constitution and laws of the State, the single State agency within the State which will be responsible for—

(A) assessing the food and nutrition needs of the neediest population of the State;

(B) formulating the State plan provided for under section 9;

(C) receiving and apportioning the funds (Federal and State) made available for carrying out in such State the consolidated program provided for in this Act;

(D) monitoring on a continuing basis the progress of the programs carried out in such State under this Act;

(E) preparing the general guidelines for the State plan; and

(F) examining all reports and audits required in connection with the consolidated program carried out in such State under this Act;

(2) publish prior to the first year of consolidated assistance made to that State under this Act, and each fourth year thereafter, a four year comprehensive State plan which—

(A) is developed in accordance with the procedures described in section 8, and

(B) contains the provisions designed to meet the requirements of section 9,

(3) develop and publish an annual update of the comprehensive State plan, and

(4) certify to the Secretary that it has developed and published the comprehensive State plan or annual update in accordance with the provisions of this Act.

(b) A State desiring to receive funds for the consolidation program authorized by this Act for any fiscal year shall, in addition to the requirements of subsection (a), provide for—

(1) an audit of expenditures for each program year as provided in the State plan;

(2) an annual evaluation of the implementation of the State's final comprehensive plan, and any amendment thereto, adopted under section 8; and

(3) an annual report of that audit and evaluation which report shall include—

(A) such information as the Secretary may prescribe consistent with the consolidation and provisions of this Act, and

(B) assurance that funds were expended in accordance with the Act and the comprehensive State plan.

PROCEDURE FOR DEVELOPING THE COMPREHENSIVE STATE PLAN

SEC. 8. Each State shall, in the development of the comprehensive State plan, establish procedures designed to assure that—

(1) a comprehensive assessment is made to determine the food and nutritional requirements of the neediest people of the State, such assessment to include, but not be limited to the children, infants, expectant mothers, elderly people, institutionalized populations, and isolated populations of the State, who are living in circumstances of poverty or who are unable to provide themselves with an adequate nutritional diet;

(2) a comprehensive assessment is made to determine the need for food and nutrition education among the people of the State, including segments of the State's population which may be suffering from over nutrition as well as those segments which may be suffering from inadequate nutrition;

(3) procedures are established for obtaining the participation of interested citizens, local organizations, units of general local government, and appropriate State agencies prior to and during the development of the comprehensive plan;

(4) the legislature of the State will be informed of the development of the procedures required by this subsection;

(5) programs will be identified in terms of priorities for which funds will be allotted, distributed, and expended;

(6) the use of funds for purposes described in this Act will be coordinated with the use of State, local, and Federal funds (including commodities) made available for similar purposes;

(7) the use of funds for purposes described in this Act will be coordinated with each other and other Federal programs to avoid duplication of effort;

(8) the proposed comprehensive State plan or the annual update thereof will be published at least 120 days prior to its effective date and such plan or update thereof will be available to interested parties and to local agencies within the State. Comment relating to such plan must be accepted for a minimum of 45 days after such publication;

(9) a final comprehensive State plan, or annual update thereof, will be published and made generally available prior to its effective date together with a summary of the comments received and an explanation of the differences between the proposed plan and the final plan and the reasons therefor;

(10) any amendment to the final comprehensive State plan prepared by the State agency designated pursuant to section 7 (a)(1) will be published as a proposed amendment on which the public may comment for a period of at least 20 days, and thereafter the final amendment, together with a summary of the comments received and the action taken on such comments will be published;

(11) procedures will be established to assure that regulations and rules established, amended, or repealed by that State will be established, amended, or repealed with the counsel of local agencies and consistent with State administrative procedures and due process;

(12) the aggregate amount to be expended by the State and its agencies from funds derived from non-Federal sources for the consolidation program for any fiscal year will not be less than the amount expended by the State and its agencies in the preceding fiscal year on programs described in section 4(a) and on similar on related programs; and

(13) Federal funds provided under this Act supplement and in no case supplant State and/or local funds.

PROVISIONS OF THE COMPREHENSIVE STATE PLAN

SEC. 9. (a) A comprehensive State plan meets the requirements of this section if such plan—

(1) sets forth the procedure for, and the results of, the needs assessments conducted pursuant to section 8(a)(1);

(2) sets forth the goals to be achieved under the plan, the basic program objectives and a description of the programs to be carried out under the plan;

(3) sets forth the State's program for providing food and nutrition education and information designed to meet the needs of its people as revealed in the needs assessment;

(4) sets forth the policies and procedures to be followed by the State to assure that the distribution of funds to State and local agencies, institutions, and organizations within the State is in accordance with the provisions of this Act;

(5) contains a description of the organizational structure through which the program consolidated by this Act will be administered;

(6) sets forth the State's program (if any) for providing meals and food and nutrition education in connection with or as a part of (A) any Head Start or Follow Through program for children, (B) the Nutrition Program for the Elderly carried out under title VII of the Older Americans Act of 1965, (C) the Community Food and Nutrition Program, and (D) any other Federally funded food or nutrition education program carried out with funds not provided under this Act.

(7) sets forth the procedures for monitoring activities of the agencies, institutions, and organizations within the State responsible for administering the comprehensive plan of the State, including a provision for technical assistance by the State to each such agency, institution, and organization;

(8) contains a description of the process that the State will use to ensure that any agency, institution, or organization in the State which receives funds under this Act will annually develop or update a comprehensive plan for the use of such funds and that the plan will be made available to the public for comment as provided in the comprehensive State plan;

(9) provides, consistent with State law and practice, for an audit of the expenditure of funds received under this Act by local agencies, institutions, and organizations;

(10) sets forth procedures to be used by the State to eliminate unnecessary paperwork and duplication of information requests in regard to local agency applications, evaluations, and reporting;

(11) prescribes procedures to be followed by the State when a local agency fails to develop or implement a program plan, including procedures for notice and opportunity for hearing in any case funds are to be withheld;

(12) provides a local agency appeal process within the State for any local agency which is dissatisfied with the State's action with respect to the State's compliance with substantive and procedural provisions of the Act. A local agency may appeal the final ruling of the State to the Secretary;

(13) provides for an audit of expenditures for each program year in accordance with generally accepted accounting principles, conducted, in a manner approved by the Secretary, by—

(A) an auditor of the State, using certified public accountants, or

(B) a private certified public accountant or auditing firm utilizing certified public accountants; and

(14) provides for an annual report of such audit.

(b) The Secretary shall, within 60 days after receiving any comprehensive State plan from any State, notify such State in writing whether such plan complies with the requirements of this Act. In the event the Secretary fails to notify any State within the time period prescribed, the comprehensive State plan shall be deemed to have been approved by the Secretary. If the Secretary notifies a State that a plan does not meet the requirements of this Act, he shall indicate specifically in what respect such plan failed and what action must be taken to meet the requirements.

SUPPLEMENTAL PAYMENT

SEC. 10. (a) Each State which elects and qualifies to receive funds for carrying out a consolidated program under this Act shall also be eligible, upon application therefor, to an additional amount of funds for carrying out such program equal to 10 per centum of the amount to which such State is entitled under section 5 on the condition that such amount is matched by such State with an equal amount of funds from non-Federal sources which will be used for carrying out the purposes of this Act. A State may, if it so elects, receive any amount under this section equal to less than 10 per centum of the amount it is entitled to receive under section 5 on the condition that such lesser amount is matched by such State with an equal amount from non-Federal funds which will be used to carry out the purposes of this Act. For purposes of this section, funds received by any State under a Federal-State revenue sharing plan shall be considered to be funds from a non-Federal source.

(b) If the sums appropriated for any fiscal year for making payments to States under this section are not sufficient to pay in full the amount to which each State is entitled under this section for such fiscal year, the amounts which all States may receive under this section for such fiscal year shall be ratably reduced. In case additional funds become available for making such payments for any fiscal year during which the preceding sentence is applicable, such reduced amounts shall be increased on the same basis as they were reduced.

(c) Additional funds under this section shall be paid to a State by the Secretary of the Treasury upon certification of the amount to be paid by the Secretary.

TIME OF PAYMENTS

SEC. 11. The Secretary shall determine the time or times at which payments under this Act are to be made to States.

FEDERAL SERVICES; USE OF FUNDS FOR FOOD SERVICE EQUIPMENT AND FACILITIES

SEC. 12. (a) Whenever any State elects to carry out a consolidated feeding program under this Act and any part of such program is substantially the same or provides substantially the same benefits as any of the programs described in section 4(a), the Secretary shall, upon the request of such State, furnish with respect to such part of such program any services in-kind which would have been furnished such State by the Federal Government had such State participated in the programs described in section 4(a) on a separate basis rather than electing to participate in a consolidated program under this Act.

(b) Funds made available to any State under this Act may be used for the purchase of any food service equipment and facilities necessary or appropriate to carry out effectively the comprehensive State plan of such State.

ADMINISTRATIVE EXPENSES

SEC. 13. None of the funds made available to a State under this Act in any fiscal year (excluding the State's share of matching funds under section 10) in any amount in excess of an amount equal to 7½ per centum of such funds may be used for administrative expenses in carrying out the consolidated program under this Act in such fiscal year.

EVALUATIONS

SEC. 14. (a) The Secretary, after consulting with and obtaining the assistance of the State agency designated pursuant to section 7(a)(1), shall prepare and design several models for evaluation of program effectiveness which will be consistent with the purposes of the consolidation program authorized by this Act. Evaluation of local agency programs should focus on the food and nutrition services provided for needy persons in the State, the food and nutrition education program, the number of such persons served by each program, and the effect or results of such services and programs.

(b)(1) Each State participating in the consolidation program authorized by this Act shall (A) select one of the models developed under subsection (a) of this section, or (B) use a model developed by that State, and shall be responsible for the use of that model in program evaluation of the consolidation program authorized by this Act. Each such evaluation design shall involve participation by local agencies of that State.

(2) An evaluation report which is consistent with the procedures established pursuant to this section and the State comprehensive plan shall be prepared annually by each local agency and submitted to the State agency designated pursuant to section 7(a)(1). No other evaluation reports for programs authorized by this Act may be required of local agencies by the State agency.

(3) The annual State agency evaluation report prepared pursuant to this subsection shall be submitted to the Secretary on such date as the Secretary shall establish. The Secretary shall analyze the State evaluations received under this paragraph and shall, not later than March 1 in the year succeeding the year in which the evaluations are submitted, prepare and submit to the Congress a report on such evaluations.

(c) The Comptroller General shall conduct an evaluation of the program authorized by this Act and, not later than the end of the fifth fiscal year following the fiscal year in which this Act is enacted, prepare and submit to the Speaker of the House of Representatives and the President of the Senate a report on such evaluation together with such recommendations, including such recommendations for legislation, as the Comptroller General deems advisable.

(d) The Secretary is authorized to make applicable to the consolidated programs of all States those program components of the various State consolidated programs determined by him on the basis of evaluations carried out under this section to most effectively and efficiently meet the objective of this Act.

(e) The Secretary shall conduct a comprehensive evaluation of the operation of the consolidated program in the case of each State electing to participate in such program. The first such evaluation shall be conducted by the Secretary within three months after one or more States have participated in such program for a period of two years. Thereafter such evaluation shall be made at the end of every second year. In carrying out his evaluation of the operation of the consolidated program in the case of any State, the Secretary shall hold public hearings in such State to afford interested persons a reasonable opportunity to give testimony regarding such program. The Secretary shall report the results of each such evaluation to the Speaker of the House of Representatives and to the President of the Senate together with such comments and recommendations as the Secretary deems appropriate.

MONITORING AND TECHNICAL ASSISTANCE

SEC. 15. (a) The Secretary shall conduct annually such monitoring programs in each State selecting the consolidation program authorized by this Act as he deems appropriate. The monitoring program authorized by this section shall include review of the plan for compliance with the provisions of this Act. Monitoring shall also include review of implementation of programs for conformity with this Act and with the comprehensive State plan. In order to avoid duplication of monitoring visits as well as an excess of such visits, the Secretary shall coordinate his visits under this section with monitoring visits made by other Federal departments and agencies of the Government.

(b) Whenever, a result of monitoring activities conducted pursuant to this section, the Secretary identifies areas of noncompliance, the Secretary shall establish procedures with the appropriate State agency designated under section 7(a)(1) for the necessary modifications.

(c) The Secretary shall provide advice, counsel, and technical assistance upon request of State and local agencies.

INTERSTATE COOPERATION

SEC. 16. (a) The Secretary shall carry out a program of making grants to States which have elected to consolidate under this Act for the purpose of interstate cooperation.

(b) Such grants for cooperation among States shall be for the purpose of addressing common administrative problems under this Act and for planning and research.

(c) There are authorized to be appropriated $3 million for each of the ten fiscal years beginning October 1, 1977, to carry out the provisions of this section.

FEDERAL ADMINISTRATION

SEC. 17. (a) The consolidated program authorized by this Act shall be administered by a separate identifiable administrative unit to be established within 60 days after the date of enactment of this Act by the Secretary in the Department of Agriculture.

(b) Personnel to be employed in this administration of the consolidation program authorized by this Act shall come from program units administering the categorical programs consolidated under this Act. Any additional personnel necessary for the administration of such consolidated program shall be based on the number and population of the States which elect to consolidate.

(c) The Secretary shall establish procedures to minimize all paper work in regard to information required of State and local agencies.

DELEGATIONS, TRANSFERS OF FUNDS, AND CONTRACTS BY THE STATE AGENCY

SEC. 18. The State agency designated pursuant to subsection 7(a)(1) may, to the extent necessary to carry out the provisions of this Act—

(1) delegate its administrative functions, under this Act to other appropriate State agencies,

(2) transfer to such agencies administrative responsibilities and any funds provided to the State under this Act, and

(3) enter into contracts with public and private agencies, organizations, and institutions for carrying out activities authorized under this Act. Any arrangements entered into under this section for any fiscal year shall be set forth in the comprehensive State plan for that year.

ENFORCEMENT

SEC. 19. (a)(1) No payment may be made under section 5 or 10 to any State that has failed to provide the certification required by section 7(a)(4).

(2) In the case of any State that has provided those certifications, if the Secretary, after reasonable notice and opportunity for a hearing to the State, finds that the comprehensive plan fails to comply with the requirements of sections 8 and 9, or the State has failed substantially to comply with any provision of that plan, or has failed to inform the Secretary of any substantial failure to comply with any provision of that plan or those sections, the Secretary is authorized to (A) reduce the amount otherwise payable to the State under section 5 by any amount equal to not in excess of 7½ per centum, (B) refer to the Attorney General of the United States the matter regarding any such failure by a State with a request that the Attorney General seek an injunction requiring compliance by the State with the requirements of sections 8 and 9 or the provisions of the State plan, as the case may be, (C) terminate the participation of the State in the consolidated program and permit the State to return to participation in the categorical programs described in section 4 (a), or (D) utilize any combination of (A), (B), and (C) as he deems appropriate.

(b) The Secretary shall establish a due process procedure to consider appeals made by local agencies under section 9 (a) (12).

(c)(1) If any State or local agency is dissatisfied with the Secretary's final action with respect to any action taken under this Act, the State may within sixty days after notice of that action, file with the United States court of appeals for the circuit in which the State is located a petition for review of that action. A copy of the petition shall be forthwith transmitted by the clerk of the court to the Secretary. The Secretary thereupon shall file in the court the record of proceedings on which he based his action, as provided in section 2112 of title 28, United States Code.

(2) The findings of fact by the Secretary, if supported by substantial evidence, shall be conclusive; but the court, for good cause shown, may remand the case to the Secretary to take further evidence, and the Secretary may thereupon make new or modified findings of fact and may modify his previous action, and shall file in the court the record of the further proceedings. Such new or modified findings of fact shall likewise be conclusive if supported by substantial evidence.

(3) Upon the filing of such petition, the court shall have jurisdiction to affirm the action of the Secretary or to set it aside, in whole or in part. The judgment of the court shall be subject to review by the Supreme

Court of the United States upon certiorari or certification as provided in section 1254 of title 28, United States Code.

(d) The Secretary and the Comptroller General of the United States, in the exercising of their authority under this Act may not prescribe to the State any requirement for expenditures of funds other than funds provided under this Act.

CIVIL RIGHTS REQUIREMENTS

SEC. 20. Funds made available under this Act shall be subject to title VI of the Civil Rights Act of 1964 (42 U.S.C. 2000–2000d–6), title IX of the Education Amendments of 1972, and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794).

PARTICIPATION OF NONPUBLIC SCHOOL CHILDREN

SEC. 21. If a State is prohibited by law from providing for the participation of children enrolled in private nonprofit or Indian tribal elementary and secondary schools, or if the Secretary determines, after affording notice and an opportunity for a hearing, that a State has substantially failed to provide for such participation, he shall arrange, by contract or otherwise, for such children to receive, on an equitable basis, services similar to those provided under this Act to public school children in the State. The cost of providing those services for any fiscal year shall be paid from the allotment of the State under section 5.

CRIMINAL PENALTY

SEC. 22. Any individual who is an officer, director, agent, or employee of, or who is connected in any capacity with, any partnership, association, firm, group, corporation, business, organization, or other entity, public or private, which receives benefits under this Act by means of a grant, contract of assistance, subsidy, or any other form of Federal assistance, and who knowingly and wilfully embezzles, misapplies, steals, or obtains by fraud, false statement, or forgery, any funds, assets, or property obtained under any program authorized by this Act shall be fined not more than $10,000 or imprisoned for not more than five years, or both; but if the amount so embezzled, misapplied, stolen or obtained by fraud, false statement, or forgery does not exceed $200, such individual shall be fined not more than $1,000 or imprisoned not more than one year, or both.

AUTHORIZATION FOR APPROPRIATIONS

SEC. 23. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act, subject to the limitation contained in section 16(c) on the amount that may be appropriated for interstate cooperation grants.

EXHIBIT 2

TABLE OF PAYMENTS UNDER THE BELLMON "FOOD AND NUTRITION PROGRAM OPTIONAL REORGANIZATION ACT OF 1977"

[By State, using fiscal year 1976 data]

	Federal food stamp expenditures	Federal child nutrition expenditures	Total Federal food aid expenditures	10 percent Federal bonus (to be matched dollar for dollar by State)	Total consolidated Federal payment
Alabama	116,624,203	73,359,000	189,983,203	18,998,320	208,981,523

Mr. DOMENICI. I thank my good friend, the senior Senator from Oklahoma.

Mr. President, I wish to thank my good friend, the distinguished Senator from Oklahoma, for inviting me to join him on this very important, progressive, and far-reaching legislation. As Senator BELLMON has indicated, a major feature of this bill is the concept of optionality. In other words, States which desire to participate in the food program consolidation may do so, while those not so desiring are not penalized in any way for continuing to participate in Federal food programs in the same manner as before. As you may recall, Mr. President, optionality was an overriding philosophy of the Domenici-Bellmon Optional Education Funding Simplification Act, which we cointroduced in the waning days of the 94th Congress and reintroducing this year. We are convinced that this approach offers States a great deal of flexibility to manage Federal assistance programs.

I will not burden the RECORD with a lengthy reiteration of the specifics of this new bill, which my colleague has ably summarized in his introductory remarks. Rather, I would prefer to offer some philosophical comments, which are deeply rooted in my previous experience as mayor of the city of Albuquerque, N. Mex. While serving in that capacity I believe that I shared, with other State and local administrators, the depth of frustration one experiences in attempting to carry out Federal assistance programs for the benefit of the people of my constituency.

This frustration drives from two basic problems which are intrinsic to so many Federal assistance programs—first is the problem of nonspecificity; second is the problem of redtape.

Sometimes I am concerned that we in the Congress share with our counterparts in the administration a certain arrogance toward the wisdom and ability of the citizens of this country to know what is best for them and to effectively manage their own programs. This arrogance is often reflected in sweeping Federal programs which we, here in Washington, contrive and offer as solutions to local problems. Clearly, Federal assistance is needed and greatly sought-after by State and local governments. Nevertheless, many of our Federal programs, in attempting to meet the general needs of all, fail to meet the specific needs of any. Thus we see massive sums of mistargeted Federal money, shameful abuses of Federal programs, and growing local disenchantment with big, centralized government.

The second problem faced daily by local administrators is the enigma of Federal redtape, and how to cope with it. The plethora of rules, regulations, and guidelines which are built into Federal spending programs are intended to assure that the taxpayer's dollars are being wisely and prudently spent. How ironic it is that vast sums of taxpayers' dollars are expended to implement these same rules, regulations, and guidelines.

Another unfortunate characteristic of redtape is that it tends to build on itself. Every year more rules and regulations are promulgated in order to implement new programs and to fine tune existing ones. It is an impossible task for the con-

scientious local administrator to keep up to date with these new rules which seem to "spring up like toadstools after an autumn rain."

In concusion, I believe that the principal contribution of the Bellmon-Domenici bill is that it effectively circumvents the above problems by permitting the States—if they so desire—to plan their own food programs based upon their own needs and to run them with a minimum of Federal interference. The end result, in my judgment, will be a higher level of nutrition for millions of Americans, with minimal increase in Federal spending.

Mr. President, to those in Government and out of Government at the national level and at the State level, who talk today about the need for reform in terms of Federal programs, the need to build flexibility into the programs, the need to find a better way, the need to eliminate the ever-growing arbitrariness of categorical grant programs, the rather fantastic growth in the regulatory process and the ensuing proliferation of redtape—and I believe those people are in predominance in the United States in terms of speaking about a need—to all of those in the executive branch, at the local level, and here in Congress, I strongly suggest that they look at the concept and philosophy espoused in this bill brought here to the Senate by the good senior Senator from Oklahoma and also that they look at Senate bill 3849 in the last Congress, a consolidation and simplification and optional system in education which Senator BELLMON and I will reintroduce in the next 8 or 10 days.

Why do I say that? I say that because everyone is talking about trying to find a better way, a new way and everyone seems to have a degree of dissatisfaction with a centralized type categorical grant program in the field of social services across the board. What we have come up with here and in the educational bill might very properly be called an experiment, for we do not in either bill say we are going from a categorical grant program to another program, but rather say for those States that want to plan for a simplification and a takeover under Federal guidelines of nutrition program we are giving them an opportunity in very open and confrontation type hearings at the local level, with their State officials, and with the interest groups that are protected under these various bills to come up with a State plan.

We give the national Government significant oversight overseeing the ultimate approval of that State plan. And once all of that has gone through we would hope that in the field of delivery we will have a number of States that would take the nutrition program and demonstrate that there may be a better way and that they may have some of the intelligence, the administrative capacity, the knowledge of needs and that they find that better way in the marketplace of implementation, rather than the rhetoric of reform. We envision that, if interested committed people will look at this, they will see it as an opportunity to put in the implementation marketplace of delivery. It will put into that marketplace two, three, four, or five States that might say:

"We choose it and you look at us, look at us every year, look at us as often as you want, and under this bill you let us try it, and we want to prove to you that we have the better way, and the better way is to let us have some of the flexibility rather than the rigidity of the Federal programs. Let us under the goals of Federal legislation find better ways to get rid of the bureaucracy and redtape and deliver the service or the in-kind of assistance. And we want an opportunity to prove to you that it will work better than the one designed, administered, and regulated from Washington, D.C."

The Senator from Oklahoma has gone into the details. He knows them far better than I. He is on the Committee on Agriculture and has done a lot of work in nutrition. I speak only to those people who rhetorically are out seeking a better way, seeking reform, seeking to rid the system of the inhibitions of redtape, of the expenditures of administration under the guise of helping a group of people or a kind of person. I speak to those in Congress, out of Congress, in the administration. This idea is an idea whose time has come. It will not destroy the categorical grant program; it will merely give us something to measure against it, and, in a typical American kind of concept, it will provide competition between this kind of approach and the categorical grant program.

For those of us who think things might be done better in the States than from Washington, the competition for performance will be reassurable. Those of us who want to try it will have, in the marketplace of implementation and measurement as to performance, two competing systems, perhaps one with only four or five States involved in it, and that very competition might be good for the social programs by way of evaluation, but I am absolutely positive that it will prove that there is a better way, and perhaps give us the foot in the door in terms of a notion of basic reform for many of our social programs, from medicaid on down, that might prove that we ought to be a little more trusting of our States and State legislatures, and of leadership at the local level.

I for one consider it a challenge to those who think the way we are doing it now is the best. I wish they would accept the challenge and encourage this as an approach to competition for better performance for our people in important areas of social undertaking by our National Government.

I have not talked with the Senator from Oklahoma, but I think even to make it a demonstration approach and say "Let us try it in three or four States," for those who are so cautious and terribly concerned about the protection that the categorical grant program now gives, I would settle for that. I have no doubt whatsoever that in 4 or 5 years the States would be clamoring, the special interest groups, the people we are trying to help, would be clamoring to the Congress and the President of the United States, to do this and bring in numerous of the Federal programs we try so hard to help with, and more often than not end up with frustration, arbitrariness, fraud, and all the kinds of things that are going to happen with the rigidity we strive to build in for a country as diverse as the United States.

Mr. President, I yield back the remainder of my time.

ROUTINE MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order there will now be a period for the transaction of routine morning business not to extend beyond the hour of 2 p.m., with statements therein limited to 5 minutes.

REFORMING FEDERAL REGULATION: AN IDEA WHOSE TIME HAS COME

Mr. ROBERT C. BYRD. Mr. President, I call attention to S. 600, the Regulatory Reform Act of 1977. The bill, which I have sponsored, along with Senators PERCY and RIBICOFF, undertakes to reform the Federal regulatory agencies by setting a strict agenda and discipline through which, over a period of 8 years, the Congress would scrutinize the purposes, structures, and activities of the regulatory agencies.

This is legislation which I know that the White House is seriously considering as an effective means for implementing the strongly held desire and promise of President Carter to make governmental regulation more responsive.

A series of action-forcing deadlines would, of necessity, assure that Congress makes regulatory reform the pending business on the floor of both Houses by a set date. If comprehensive action is then delayed, the affected agencies would be limited in their authority first to issue new regulations, and later to enforce existing rules—except for those rules certified as necessary for public health and safety. A final sunset provision would terminate each affected agency for which Congress had not enacted reform.

This bill is attracting bipartisan support from conservatives, moderates, and liberals alike. The basic sunset proposal has been studied, questioned, and reviewed to the extent that there is now considerable agreement that it is both a responsible and workable vehicle for congressional oversight. Here then is another example of congressional maturity: where Congress has the courage and wisdom to discipline itself to achieve comprehensive regulatory reform, and commits itself to a difficult undertaking—just as in the case of budget reform a few years back—confident that, in the final analysis, it will be able to arrive at reasonable understandings among reasonable men. This has been our tradition and it is our future.

In a recent column, noted columnist William F. Buckley, Jr., has taken cognizance of developments in the regulatory area. The able and incisive Mr. Buckley sees the Regulatory Reform Act of 1977 as a potential revalidation of the democratic process and democratic

government. This is because the measure reaffirms the vital need for systematic regulatory oversight by the legislative branch, after years of virtual abdication. Now, the 95th Congress appears ready to bring the regulatory agencies back under its supervision—ready to meet the challenge of renewing, and in many cases reformulating, regulation which is more responsive to public concerns and more in line with an interdependent, highly technological economy. Where appropriate, through the discipline of S. 600, if and when enacted, Congress will appear to be prepared to scrap those regulations and procedures which do not serve the interests of American consumers, businessmen, or labor.

I am pleased to announce that my esteemed colleagues, Senators ALLEN, HUDDLESTON, STAFFORD, and ROTH, have now joined in cosponsoring this important legislation along with 27 other Senators.

I invite all those Senators who have not yet had an opportunity to personally review S. 600 to join us in cosponsoring this bill, which when, and if, enacted will undoubtedly be one of the major pieces of legislation passed by this Congress.

Mr. President, I ask unanimous consent that William F. Buckley's column from the March 11, 1977 Washington Star be printed in the RECORD at this point, as well as a summary of the principal provisions of the Regulatory Reform Act of 1977.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A FAR-SEEING BID TO REGULATE THE REGULATORS

(By William F. Buckley, Jr.)

Sen. Charles Percy, along with Senate Majority Leader Robert Byrd and the chairman of the Government Operations Committee, Sen. Abraham Ribicoff, is promoting a bill which all good men should endorse, and it is heartening to see the bipartisan auspices under which it is launched.

The bill is complicated, but the wonderful ingenuity of it overwhelms the slight cost of mastering that complication. And if the bill is passed, it is not an exaggeration to say that the idea of democratic government will be revalidated.

Because as things now stand, the average American is probably affected in the course of a typical year less by laws passed by Congress, than by regulations passed by bodies created by Congress, some of them generations ago, and loosed upon society to torment the public.

How do you get rid of a regulatory agency? Or, for that matter, how do you go about reforming it?

The answer is you don't. Because the agencies are super-lobbies, and entrenched as they are, deep in the bowels of Washington, anyone who attempts a neat incision to pluck them out runs into paralyzing pressures and complications by men and women struggling to maintain power, prestige and affluence.

The neatness of the Regulatory Reform Act of 1977 is in the so-called sunset provisions of the bill. It would say—for instance, to the infamous Occupational Safety and Health Administration (OSHA) of the Department of Labor, which recently undertook to instruct a company on the exact size of the partitions separating the stalls in the factory washrooms—: If no plan for comprehensive reform is passed, then, subject to certain qualifications, you go automatically out of existence.

Under the circumstances, the usual attempts by these agencies to frustrate reform would constitute a self-immolation. As far as OSHA is concerned, one could only wish that exactly that would happen.

But some of the agencies do work that ought to be done. But virtually all of them need to be reformed with a view to contemporary problems.

If the RRA is passed, all regulatory agencies would be reformed or scrapped over a period of eight years. The bill's sponsors have carefully grouped the agencies in related areas. For instance, during the first two-year period, those agencies would be examined that deal with energy, the environment, housing and occupational health and safety. A moment's thought establishes the interconnections in these fields.

What then would happen is that the President of the United States would recommend a reform plan to Congress for the above agencies by April 30, 1979. The relevant committees of Congress would receive these recommendations, weigh them, hold hearings, amend them, accept them, reject them but in any event report out a reform bill by May 1, 1980.

If by Aug. 1, 1980, Congress has failed to act on that reform bill, then from that moment on the affected agencies would lose their authority to issue any new rules (except those certified as necessary for public health and safety).

If by Oct. 1 Congress has not yet acted, then the affected agencies would lose their authority to enforce the old rules.

If by Dec. 31 Congress has not acted, then the affected agencies would cease to exist.

It is contemplated by the prescient sponsors of this legislation that the cycle would continue and infinitum. And of course it should. This means that every government regulatory body—and there are approximately 100, whose rulings result in an expenditure of $60 billion a year if you take the word of the GAO, $120 billion if you take the word of President Ford's economists—would be re-examined every eight years.

This is hardly too much to ask, since it takes far less than eight years for situations to change drastically, as witness the energy crisis, which is less than four years old.

Complaints against the regulatory agencies have climbed up the taxonomic ladder to sit side by side with complaints against the weather, taxes and ill health.

It has simply been assumed that nothing ever can be done about it. And with good reason, because in fact practically nothing ever has been done about them.

That is why Sen. Percy's bill is reason to ring the bells, and remind ourselves that we are supposed to be a self-governing republic.

PRINCIPAL PROVISIONS OF THE REGULATORY REFORM ACT OF 1977

Introduced by Senators Charles H. Percy (R-Ill.), Robert C. Byrd (D-W. Va.), and Abraham Ribicoff (D-Conn.) for referral to the Committee on Governmental Affairs

The Regulatory Reform Act of 1977 sets forth a discipline for action, to apply both to Congress and the President. Over a period of eight years, from 1979 through 1986, the President would submit to the Congress, by May 1 of each year, comprehensive plans for reforming regulation in four specific areas of the economy, namely:

96th Congress (1979–80)—energy, the environment, housing, and occupational health and safety;

97th Congress (1981–82)—transportation and communications;

98th Congress (1983–84)—banking and finance, international trade, and government procurement; and

99th Congress (1985–86)—food, consumer health and safety, economic trade practices, and labor-management relations.

Each plan would include recommendations for increasing competition, and for procedural, functional, administrative and structural reforms.

To ensure that the impact of regulatory activity is in the Nation's best interest, the President will include in his plan a report on the cumulative impact of federal regulation on the following industry groupings:

Transportation and agriculture industries;

Mining, heavy manufacturing, and public utilities;

Construction and light manufacturing industries;

Communication, finance, insurance, real estate, and trade and service industries.

To provide a wider perspective on these problems, the General Accounting Office and the Congressional Office of the Budget will simultaneously submit comprehensive reports to Congress concerning:

The purposes for which each agency was established;

Significant changes which have occurred in regulated areas; the impact of such changes on the agency's effectiveness; and the continued appropriateness of original statutory purposes;

The net impact of the agency and the degree to which it has achieved its purposes;

The cost-efficiency of the operations of each agency; and

Practical, more efficient, alternative approaches to achieving those regulatory needs which currently must be served.

If the President does not submit a plan by May 1 of the first year, the relevant committee would write and report their own plan(s) in the form of a bill, to become the pending business of both Houses not later than May 1 of the second year.

Should Congress fail to approve comprehensive regulatory reform legislation in the designated area by August 1 of the second year, the affected agencies will lose their authority to make new rules (except those essential for preserving public health and safety).

Should Congress fail to pass comprehensive reform legislation by October 1 of the second year, enforcement of existing rules of the affected agencies will be suspended (except those essential for preserving public health and safety).

Should Congress fail to enact comprehensive reform legislation by December 31 of the second year, a "sunset" provision comes into play, terminating each affected agency for which Congress has not enacted reform. Responsibility for enforcing health and safety rules would pass to the Justice Department.

After an eight-year respite following the original review period (1979–86), Congress would begin the reform process again (in 1995), and continue such cycle thereafter, examining agencies in the same order unless Congress and the President change the order by law.

This timetable should in no way reform efforts already underway, or which may arise in the interim, under the designated year for that particular facet of regulation. Thus, it does not mean that transportation reform must wait until 1981, or consumer safety reform until 1985. Rather, it ensures that if no comprehensive reform has been accomplished by these dates, then the discipline imposed by the bill would come into play. If Congress wants to act sooner, all the better.

ASSISTANCE PROGRAMS IN DROUGHT-STRICKEN AREAS—MESSAGE FROM THE PRESIDENT—PM 56

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States:

To the Congress of the United States:

Over the past two years, many of the Western and Plains states of our nation have been victims of a prolonged, severe drought. The effects of the drought have built up over many months, and they will take a long time to correct. Even long periods of rain would not wholly relieve the problem now.

The human and economic costs of the drought have been high. It has jeopardized municipal water supplies, damaged crops and pastureland and depleted livestock numbers. The drought has inflicted financial hardship on countless farmers, ranchers, businessmen and others, and it continues to pose a serious threat to their livelihood.

The Federal government has already made available almost a billion dollars in drought assistance through loans and cost-sharing programs. Although we do not have enough money to meet every requirement or indemnify every loss, we can provide additional help in certain areas. I am recommending a variety of assistance programs which will be applied in each area depending on how severely the drought has affected the people of that region.

In addition, we can encourage water conservation through several existing government programs. In many cases, water conservation is our only hope for immediate relief. As a nation, we must begin to conserve our water supplies, and government—at all levels—must lead the way.

The measures I propose will allocate benefits fairly, will mitigate some of the worst effects of the drought, and will support individuals and communities in their efforts to conserve water. Some of these proposals will require modification of existing programs or additional funding. Others will require totally new legislation. All of these will be temporary authorities; they are designed to cope with short-term problems, and they will expire on September 30, 1977.

Specifically, I propose the following legislative actions:

—New temporary authority to allow the Economic Development Administration and the Farmers Home Administration to provide $150 million in grants and $300 million in low-interest (5%) loans to communities for emergency water system improvements which can be completed quickly and which are essential to protect public health and safety.

—Establishment of a new Small Business Administration drought assistance loan program to provide $50 million in low-interest (5%) loans to small businesses in major drought designated areas.

—Establishment of a new Farmers Home Administration drought assistance loan program in which *prospective* losses can be included. This program will provide $100 million in 5% loans to farmers and ranchers in major drought designated areas.

—New legislation to authorize the Secretary of the Interior to provide $100 million in low-interest (5%) loans to purchasers of water. (Endorsement of the water bank objectives of S-925).

—Supplemental funds totalling $14 million for the Southwestern Power Administration to ensure adequate energy supplies.

—Supplemental funds in the amount of $30 million to the Bureau of Reclamation to provide assistance to irrigators on Federal Reclamation projects.

—Transfer to the Department of Agriculture from the Federal Disaster Assistance Administration authority to administer and fund the Emergency Livestock Feed Program.

—Supplemental funds to the Agricultural Stabilization and Conservation Service in the amount of $100 million to provide for cost-sharing of emergency soil conservation practices.

In addition, I have directed the following administrative measures:

—The Secretaries of Agriculture and Interior will make available additional Federal lands for grazing and issue emergency permits as appropriate.

—The Secretary of Agriculture will take administrative steps to ensure that trained fire-fighters and essential equipment are available to meet the increased danger of forest and wildfires.

When added to the supplemental appropriation of $200 million for disaster assistance, these new legislative proposals will provide almost $1 billion in additional drought assistance and bring to almost $2 billion the assistance provided by the Federal government.

I believe the legislative proposals and administrative actions outlined above offer the best possibility of providing immediate assistance to meet the needs of some of our fellow Americans in this period of crisis. I urge immediate consideration of the legislative proposals and their timely adoption. If we are to be of real help to the people afflicted, time is of the essence.

JIMMY CARTER.

THE WHITE HOUSE, *March 23, 1977.*

ORDER FOR JOINT REFERRAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that a message from the President of the United States, received today, relative to drought, be jointly referred to the Committees on Agriculture, Nutrition, and Forestry; Banking, Housing, and Urban Affairs; Energy and Natural Resources; Environment and Public Works; and Small Business. This request has been cleared with the leadership on the other side of the aisle.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Acting President pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

MESSAGE FROM THE HOUSE

At 1:10 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its clerks, announced that the House has agreed to, without amendment, the concurrent resolution (S. Con. Res. 7) relating to the freedom of emigration.

The message also announced that the House has passed the bill (S. 489) to amend the Foreign Assistance Act of 1961, with amendments in which it requests the concurrence of the Senate.

The message further anounced that the House has passed the bill (H.R. 3437) to make certain technical and miscellaneous amendments to provisions relating to vocational education contained in the Education Amendments of 1976, in which it requests the concurrence of the Senate.

The message also announced that the House has agreed to the concurrent resolution (H. Con. Res. 142) urging the Canadian Government to reassess its policy of permitting the killing of newborn harp seals, in which it requests the concurrence of the Senate.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The PRESIDING OFFICER laid before the Senate the following communications which were referred as indicated:

EC-961. A letter from the Acting Comptroller of the Currency transmitting, pursuant to law, the Annual Report of the Consumer Affairs Division of the Comptroller of the Currency for the calendar year 1976 (with an accompanying report); jointly, by unanimous consent, to the Committees on Banking, Housing, and Urban Affairs and Commerce, Science, and Transportation.

EC-962. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report on the withdrawal of one recession proposal and three revisions to previously reported deferrals contained in the President's eighth special message for fiscal year 1977; jointly, pursuant to the order of January 30, 1975, to the Committees on Appropriations, the Budget, Armed Services, Commerce, Science, and Transportation. Finance and the Select Committee on Small Business, and ordered to be printed.

EC-963. A letter from the Chairman of the

Interstate Commerce Commission transmitting, pursuant to law, a report on the Commission's determination to extend the time period for rendering a final decision in the proceeding before the agency in No. 36420, Joint-line Routing of Coal, CR and LN RR's (with accompanying papers); to the Committee on Commerce, Science, and Transportation.

EC-964. A letter from the Chairman of the Nuclear Regulatory Commission transmitting a draft of proposed legislation authorizing appropriations for fiscal year 1978 and 1979 for the Nuclear Regulatory Commission (with accompanying papers); to the Committee on Environment and Public Works.

EC-965. A letter from the Chairman of the United States Advisory Commission in International Educational and Cultural Affairs transmitting, pursuant to law, a report entitled "Notes on Educational and Cultural Exchange between the United States and Countries in the Middle East (with an accompanying report); to the Committee on Foreign Relations.

EC-966. A letter from the Chairman of the Council of the District of Columbia transmitting, pursuant to law, a copy of Council Act 2-12, "An Act to provide additional compensation for District of Columbia teachers" (with accompanying papers); to the Committee on Governmental Affairs.

EC-967. A letter from the Attorney General transmitting, pursuant to law, a report on the Department of Justice's intention to expand the data base of the Automated Intelligence Records System, in accordance with the Privacy Act (with accompanying papers); to the Committee on Governmental Affairs.

EC-968. A letter from the Secretary of Health, Education, and Welfare transmitting, pursuant to law, a report on a Five-Year Plan for the development of Community Mental Health Centers under the Community Mental Health Centers Amendments of 1975 (with an accompanying report); to the Committee on Human Resources.

EC-969. A letter from the Director of the Office of Management and Budget, Executive Office of the President transmitting, pursuant to law, a report entitled "Indian Education: The Right To Be Indian", Third Annual Report, March 1976 (with an accompanying report); to the Select Committee on Indian Affairs.

EC-970. A letter from the Acting Assistant Secretary of Defense, Installations and Logistics, transmitting, pursuant to law, the calendar year 1976 report on Extraordinary Contractual Actions to Facilitate the National Defense (with an accompanying report); to the Committee on the Judiciary.

PETITIONS

The PRESIDING OFFICER laid before the Senate the following petitions which were referred as indicated:

POM-100. House Joint Resolution No. 168 adopted by the General Assembly of the Commonwealth of Virginia applying to Congress to call a convention for the purpose of amending the Constitution of the United States to provide the President with the power to veto any particular item or items of any appropriations bill; to the Committee on the Judiciary:

Applying to Congress to call a convention for the purpose of amending the constitution of the United States to provide the

"HOUSE JOINT RESOLUTION No. 168

"Whereas, over the past thirty years, the federal government has frequently made appropriations of funds substantially in excess of revenue collections, thereby amassing considerable deficits and necessitating extensive borrowing; and

"Whereas, deficit spending by the federal government has been a major cause of and contributor to the inflation of our national currency; and

"Whereas, inflation imposes the heaviest financial burden on those least able to bear it, and deficit spending imposes the funding of federal debts on future generations of Americans who have had no voice in the incurring of such debts; and

"Whereas, the inflationary consequences of federal budgetary deficits have impaired the credit of the United States and undermined the value of its currency, and have contributed to financial and other difficulties and dislocations for state and local governments; and

"Whereas, the President of the United States could more effectively deal with this problem were he able to exercise an item veto when considering any appropriation bill passed by the Congress; and

"Whereas, there has not been, nor does it appear that there will be, any initiative on the part of the Congress to amend the Constitution of the United States so as to provide the President with such item veto; and

"Whereas, in the event of Congressional inaction, Article V of the Constitution of the United States grants to the states the right to initiate constitutional change through application by the legislatures of two-thirds of the several states to the Congress, calling for a constitutional convention; and

"Whereas, the Congress is required by the Constitution of the United States to call such a convention upon receipt of such applications; now, therefore, be it

"Resolved by the House of Delegates, the Senate concurring, That pursuant to Article V of the Constitution of the United States, the General Assembly of Virginia does hereby make application to the Congress of the United States to call a convention for the sole and exclusive purpose of proposing to the several states a Constitutional amendment, to-wit:

" '1. The President shall have the power to veto any particular item or items of an appropriation bill, but the veto shall not affect the item or items to which he does not object. The item or items objected to shall not take effect except in the manner heretofore provided in this Constitution as to bills which fail to receive the President's approval.'

"And be it resolved further, That unless rescinded by the General Assembly of Virginia, this application shall constitute a continuing application for such convention pursuant to Article V, until the legislatures of two-thirds of the states shall have made like applications and such convention shall have been called by the Congress of the United States.

"Resolved further, That since this method of proposing amendments to the Constitution has never been completed to the point of calling a convention and no interpretation of the power of the states in the exercise of this right has ever been made by any court or any qualified tribunal, if there be such, and since the exercise of the power is a matter of basic sovereign rights and the interpretation thereof is primarily in the sovereign government making such exercise, and since the power to use such right in full also carries the power to use such right in part, the General Assembly of Virginia interprets Article V to mean that if two-thirds of the states make application for a convention to propose an identical amendment to the Constitution for ratification, with a limitation that such amendment be the only matter before it, that such convention would have power only to propose the specified amendment, would be limited to such proposal, and would not have power to vary the text thereof, nor would it have power to propose other amendments on the same or different propositions.

"Resolved finally, That certified copies of this resolution be presented forthwith to the President of the Senate and the Speaker of the House of Representatives of the United States and to the legislatures of each of the several states, attesting the adoption of this resolution by the General Assembly of Virginia."

HOUSE CONCURRENT RESOLUTION REFERRED

The concurrent resolution (H. Con. Res. 142) urging the Canadian Government to reassess its policy of permitting the killing of newborn harp seals was referred to the Committee on Foreign Relations.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. MUSKIE, from the Committee on the Budget, without amendment:

S. Res. 121. A resolution waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 1025 (Rept. No. 95-63).

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. LONG, from the Committee on Finance:

Robert S. Strauss, of Texas, to be Special Representative for Trade Negotiations, with the rank of Ambassador Extraordinary and Plenipotentiary.

Hale Champion, of Massachusetts, to be Under Secretary of Health, Education, and Welfare.

Richard D. Warden, of the District of Columbia, to be an Assistant Secretary of Health, Education, and Welfare.

Henry Jacob Aaron, of the District of Columbia, to be an Assistant Secretary of Health, Education, and Welfare.

Eileen Shanahan, of the District of Columbia, to be an Assistant Secretary of Health, Education, and Welfare.

Bette Beasley Anderson, of Georgia, to be an Under Secretary of the Treasury.

Anthony Morton Solomon, of Virginia, to be Under Secretary of the Treasury for Monetary Affairs.

C. Fred Bergsten, of New York, to be a Deputy Under Secretary of the Treasury.

Gene E. Godley, of the District of Columbia, to be a Deputy Under Secretary of the Treasury.

(The above nominations were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. TALMADGE, from the Committee on Agriculture, Nutrition, and Forestry, with minority views (Rept. No. 95-9):

Carol Tucker Foreman, of the District of Columbia, to be an Assistant Secretary of Agriculture.

Carol Tucker Foreman, of the District of Columbia, to be a member of the Board of Directors of the Commodity Credit Corporation.

(The above nominations were reported with the recommendation that they be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. WILLIAMS (for himself and Mr. CASE):

S. 1093. A bill to amend section 218 of the Social Security Act to include New Jersey in the list of States which may establish a divided retirement system for purposes of providing Social Security coverage of State and local employees under Federal-State agreements; to the Committee on Finance.

By Mr. BELLMON (for himself, Mr. DOMENICI, Mr. LUGAR, and Mr. YOUNG):

S. 1094. A bill to permit the States to consolidate and reorganize certain food programs administered by the Department of Agriculture for the benefit of needy persons; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. HOLLINGS:

S. 1095. A bill for the relief of Dr. John Stephen Haskill; to the Committee on the Judiciary.

By Mr. EASTLAND (for himself and Mr. THURMOND):

S. 1096. A bill to amend title 18, United States Code, relating to the production of false documents or papers of the United States, and the use of false information in obtaining official documents and papers of the United States, involving an element of identification; to the Committee on the Judiciary.

By Mr. THURMOND:

S. 1097. A bill to amend the Internal Revenue Code of 1954 to exempt from taxation the pay received by certain members of the National Guard or of reserve components of the Armed Forces to the extent that such pay does not exceed $1,500 per year; to the Committee on Finance.

By Mr. RIBICOFF:

S. 1098. A bill to provide for certain research and demonstration respecting the disposal of sludge, the reclamation of waters damaged by sludge and sewage, assistance to State and local governments for the removal of sludge and other solid waste from waters and shoreline areas, and to provide that grants for waste treatment works shall be made only if such works provide for environmentally sound sludge management; to the Committee on Environment and Public Works.

By Mr. DURKIN:

S. 1099. A bill to provide for the establishment and maintenance of a reserve inventory of wheat, feed grains, and soybeans; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. BAYH:

S. 1100. A bill to amend the Federal Rules of Evidence to protect the privacy of rape victims and for other purposes; to the Committee on the Judiciary.

By Mr. EAGLETON:

S. 1101. A bill to terminate the District of Columbia's borrowing authority from the U.S. Treasury for the metropolitan area sanitary sewage works fund;

S. 1102. A bill to authorize the District of Columbia government to enter into and to amend compacts between the District and a State; and

S. 1103. A bill to permit States the reciprocal right to sue in the Superior Court of the District of Columbia to recover taxes due the State; to the Committee on Governmental Affairs.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. WILLIAMS (for himself and Mr. CASE):

S. 1093. A bill to amend section 218 of the Social Security Act to include New Jersey in the list of States which may establish a divided retirement system for purposes of providing social security coverage of State and local employees under Federal-State agreements; to the Committee on Finance.

DIVIDED SOCIAL SECURITY COVERAGE

Mr. WILLIAMS. Mr. President, today I join my distinguished colleague from New Jersey, Senator CASE, in introducing legislation which would add the State of New Jersey to a list of 20 States allowing a public retirement system coverage group to obtain social security coverage under the divided retirement system provision of the Social Security Act. Under this provision, a State at its option may divide a public retirement group and extend social security coverage to those employees who elect to acquire coverage and exclude those who vote against coverage. In addition, an identical measure is being sponsored by the entire New Jersey delegation in the House of Representatives.

An identical provision was adopted by the Senate as an amendment to H.R. 3153 in the 93d Congress. Due to the unusual legislative situation existing at the time, the conference committee never completed action on H.R. 3153. It is my understanding that the committee did not reflect any judgment concerning the merits of the provision relating to State and local employees in New Jersey. This provision was reintroduced in the 94th Congress. But because there was insufficient time to deal effectively with complex and comprehensive social security amendments, no final action was taken.

Groups of public employees covered by specific retirement systems have been permitted to participate in social security if a majority of the retirement system members voted in favor of coverage. In the past several years, for example, the New Jersey Essex County Board of Education Employees Pension Fund has had two referendums to permit members to elect social security coverage. Although a majority of those voting favored this proposal, a majority of the entire membership was not achieved and the proposal failed.

Last year I received over 5,000 signed letters from the Essex County Board of Education Employees Pension Fund advocating the extension of social security benefits to workers and officials throughout Essex County. Clearly, there is abundant support for this legislation.

Mr. President, this measure would provide a major benefit for public employees in New Jersey. A substantial group of my constituents have waited a number of years for this change, and I am hopeful that Congress will take up this matter as quickly as possible. I ask unanimous consent that the bill be printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1093

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 218(d)(6)(C) of the Social Security Act is amended by inserting "New Jersey," after "Nevada,".

By Mr. THURMOND:

S. 1097. A bill to amend the Internal Revenue Code of 1954 to exempt from taxation the pay received by certain members of the National Guard or of reserve components of the Armed Forces to the extent that such pay does not exceed $1,500 per year; to the Committee on Finance.

Mr. THURMOND. Mr. President, I send to the desk a bill to amend the Internal Revenue Code of 1954 to ex-

empt from taxation the pay of certain Reserve component members up to $1,500 annually.

As the Members of the Senate know, there exists in the Reserve components, particularly in the Army Guard and Army Reserve, serious shortfalls in personnel strength.

My bill would offer a relatively inexpensive incentive to the thousands of first-term members of the Reserve and Guard, the very members where our strength shortfall is so acute.

This income tax exemption of $1,500 annually applies for 6 years for all first-term members of the Reserve components, both officers and enlisted.

In the absence of the draft, our Reserve components are now our first line of augmentation for the active Forces. They provide this backup at one-fourth the cost of full-time forces. Under our mobilization plan to meet approved force levels, the Reserve components make up over 40 percent of our total requirements.

The personnel strength of the Reserve components has declined about 70,000 from August of 1974 to August of 1976. Most of these shortfalls are in the slots filled by first-term members.

Mr. President, I send this bill to the desk for reference to the appropriate committee and ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1097

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) part III of subchapter B of chapter 1 of the Internal Revenue Code of 1954 (relating to items specifically excluded from gross income) is amended by redesignating section 124 as section 125 and by inserting after section 123 the following new section:

"SEC. 124. PAY OF CERTAIN MEMBERS OF NATIONAL GUARD OR RESERVE COMPONENTS OF THE ARMED FORCES.

"In the case of an individual who serves as an enlisted member of a reserve component of the armed forces (as defined in section 261(a) of title 10, United States Code), gross income does not include so much of the compensation received for the first 72 months of such service, other than for service on active duty for a period of more than 30 days (within the meaning of section 101 (23) of such title), as does not exceed $125 per month.".

(b) The table of sections for such part III is amended by striking out the last item and inserting in lieu thereof the following:

"Sec. 124. Pay of certain members of National Guard or reserve components of the armed forces.
"Sec. 125. Cross references to other Acts.".

(c) The amendments made by this section shall apply to taxable years beginning after December 31, 1977.

By Mr. RIBICOFF:

S. 1098. A bill to provide for certain research and demonstration respecting the disposal of sludge, the reclamation of waters damaged by sludge and sewage, assistance to State and local governments for the removal of sludge and other solid waste from waters and shoreline areas, and to provide that grants for waste treatment works shall be made only if such works provide for environmentally sound sludge management; to the Committee on Environment and Public Works.

SLUDGE MANAGEMENT ACT

Mr. RIBICOFF. Mr. President, one of the most serious environmental problems presently facing the country is the growth of sewage sludge. Sludge is the thick, foul-smelling mass which remains when wastewater is cleaned by sewage treatment or some other pollution control process. Currently, sludge production has risen to 140 million wet tons annually. In less than 10 years it is estimated that 260 million wet tons per annum will be produced—an 86 percent increase over the current rate.

Sludge represents a significant health and environmental hazard. Sludge produced by minicipal and industrial sewage treatment centers contains many potentially dangerous components. Various carcinogenic pesticides are present. Sludge also contains pathenogenic viruses and bacteria and many forms of heavy metals. Most sewage treatment processes are simply not able to reduce the amount of organisms in the sludge.

The costs of sludge management cover a wide range. They depend on such factors as the price of energy, transportation, land, and manpower as well as monitoring expenses to comply with Federal, State, and local regulations. From 30 to 50 percent of the capital costs of a treatment plant are for sludge management, for a total estimated cost of $1.7 to $2.8 billion annually.

There are a number of ways to dispose of sludge. Ocean dumping has been used for many years. This process is scheduled to be phased out by 1981, but some skeptics doubt that deadline will be met. Earlier this year the General Accounting Office reported that the ocean dumping permit program, administered by the Environmental Protection Agency, had only limited success. The GAO said that materials dumped in the ocean contained more harmful substances than the EPA had established as safe but were allowed because no alternative methods could be found.

In 1975 alone more than 5 million tons of municipal sewage sludge was dumped into the ocean, along with 3.4 million tons of industrial waste.

A 1975 report of the National Oceanic and Atmospheric Administration, NOAA, on a sludge dumping area known as the New York Bight stated that "bacteriological effects of ocean dumping have resulted in closing the area around the sludge dumping site to shellfishing." The NOAA report also declared that "There is concern that Long Island beaches are threatened by bacteriological contamination from sludge dumping."

Although sludge can be incinerated, it is an expensive undertaking—a situation exacerbated by rising fuel costs. In Connecticut, for example, most of the sewage treatment facilities built 5 or so years ago included sludge incinerators. I am informed, however, that most of these incinerators are now closed down because of the expense as well as their inability to meet air pollution standards. The air emissions contain chemical contaminations such as PCB's. Also, the process leaves an ash—amounting to about 10 percent of the original volume—to be disposed.

Landfilling sludge is an acceptable practice where suitable sites are available. It avoids the direct public health issues posed by pathogens and heavy metals, but there is danger to ground water if substantial leachates are produced. Recent data suggest this may not be an uncommon problem.

Land application provides for beneficial reuse since sludge does have several soil-improving characteristics. There are concerns, however, over the possible dangers from pathogens and heavy metals in sludge that could enter the food chain when applied to agricultural land, or that surface runoff could carry into rivers and streams. There is little agreement on what is a safe level of application and insufficient information on the behavior of heavy metals under different soil and climate conditions.

One of the most promising technologies is pyrolysis which can produce energy and activated charcoal and reduces the volume of material to be disposed. A demonstration plant is already underway in Orange County, Calif., and another one is planned for Baltimore. Nevertheless, this process is still in the experimental stage.

Mr. President, one does not have to think hard to recall the sludge and solid waste which closed miles of beaches on the sourthern shore of Long Island. These spills resulted in significant losses in beach-related revenues, both in terms of the sums necessary to carry-out clean-up operations as well as direct revenue losses because of a 50-percent decline in the number of beachgoers. Serious delays in carrying out the clean-up of the Long Island beaches were experienced. This revealed that serious jurisdictional and technical problems in sludge and solid waste spill cleanup exist in most areas of the Nation.

I believe the foregoing highlights the fact that a great deal more research is necessary to ascertain the economic and environmental impact of sludge management and disposal. Affirmative steps must be taken to resolve this growing problem. Hazardous and toxic substances found in the sludge we are producing exert serious effects on our Nation's health, environment and economy. By developing effective treatment processes and by recycling the material we will remove the grave dangers presently posed by municipal and industrial sludge.

Because of the problem with which we are confronted I am today introducing the Sludge Management Act of 1977. I commend the distinguished and able Congressman from Massachusetts, ROBERT DRINAN, for taking the initiative in this important area.

The Sludge Management Act provides for an accelerated program in the research and development of sludge management disposal. The Environmental Protection Agency is directed to investigate all aspects of the current sludge management and disposal process with

particular attention focused on ocean dumping, landfilling, land-spreading and incineration. The EPA will have authority to evaluate and fund sludge management technologies determined to be potentially viable. That agency will also undertake a research effort to ascertain the environmental, health and economic impact of the major existing sludge management strategies.

The EPA will establish a local assistance program under which the Federal Government will provide technical and financial aid to communities involved in the cleanup of sludge, sewage and other solid waste spills. In addition, demonstration projects can be undertaken for innovative ways to remove existing sludge deposits from local waterways.

Mr. President, sludge is generated at the rate of 5 million dry tons per year in this country. We must have better sludge disposal technology if we are to effectively cope with this serious economic and environmental problem. I urge therefore that this legislation be acted upon with all possible speed.

By Mr. DURKIN:

S. 1099. A bill to provide for the establishment and maintenance of a reserve inventory of wheat, feed grains, and soybeans; to the Committee on Agriculture, Nutrition, and Forestry.

Mr. DURKIN. Mr. President, I introduce for appropriate reference a bill, which if enacted, would establish and maintain a reserve of wheat, feed grains, and soybeans, so that the extreme shortages of food which occurred in this country just a few short years ago contributing to dramatic price increases in this country and starvation in others will be less likely to occur in the future.

The Biblical Joseph rose to a leading position in ancient Egypt because he understood well a lesson which we seem to forget so quickly—in agriculture there are lean years as well as fat years. I know full well that agricultural methods have developed enormously since the days of the Pharoahs. But what has not changed much is our ability to control one of the most important ingredients in the production of our basic foods—the weather. And until and if we can control that and some other obstacles to guarantee food production, we must prepare for our lean years by acting prudently during our fat years.

This year may be a fat year. That is the strongest reason for dealing with this matter now. U.S. production has been high during the past 2 years, and most other major countries, including the Soviet Union, the People's Republic of China, and India, which often must call upon the United States for substantial food imports, seems to have had abundant harvests last year. The crises in Bangladesh and in Saharah Africa which loomed so large seem to have abated to a degree. The urgent atmosphere which surrounded the November 1974 World Food Conference in Rome at which the United States adopted a position favoring the negotiation of an international system of food reserves has disappeared. The tide that washed through this city as domestic food prices soared in 1973 and 1974 has been reduced to a few ripples.

But we must not be lulled to sleep by our apparent present state of well-being. Already we are hearing about a potential agricultural production catastrophe in the drought-stricken areas of our country west of the Mississippi. Reports are coming from China and the U.S.S.R. that these countries are or will be moving into world markets to purchase grains to make up shortfalls in their own production. We are not yet back to the severe problems of the early 1970's, but neither are we totally free from the problems which could easily create another massive increase in domestic food prices and a massive number of starving people elsewhere in the world.

Food production in this country should not be a competition between farmers and consumers. It should be a source of cooperation. I realize that some people believe that any plan to store grain reserves at Government expense is simply a present to our Nation's farmers. This is a fundamental misperception. The purpose of stored reserves such as those that would follow enactment of my bill is to protect consumers from unanticipated production disasters. At the same time, my bill contains provisions to prevent the release of the stored reserves at prices which will hurt our Nation's farmers who need stable prices as much as do our consumers.

I have taken care, Mr. President, to introduce a provision in my bill to indicate that its passage would in no way affect the authority of the President under section 412, passed during the last Congress, of the Agricultural Trade Development and Assistance Act of 1954 to seek an international agreement for a system of food reserves as envisoned during the 1974 World Food Conference. Strides toward such an international agreement have slowed noticeably, but I hope that under the lead of our new administration, other world leaders take new steps at this time when reason and not just crisis dictates such a move is necessary.

Sensibly stored agricultural reserves can only benefit our country. The sooner the Congress moves to that realization, the sooner these benefits will come.

By Mr. BAYH:

S. 1100. A bill to amend the Federal Rules of Evidence to protect the privacy of rape victims and for other purposes; to the Committee on the Judiciary.

Mr. BAYH. Mr. President, I am introducing today the Privacy Protection for Rape Victims Act of 1977. This legislation is identical to H.R. 408 introduced in the House of Representatives by Congresswoman LIZZ HOLTZMAN along with 102 cosponsors.

The purpose of the legislation I am introducing today is a simple one—to make the prosecution of Federal rape cases more effective and more equitable for rape victims. This legislation is an amendment to the Federal Rules of Evidence, which seeks to provide adequate protection for rape victims against unwarranted invasions of their privacy during rape trials.

At the present time, many women rape victims are reluctant to report a rape or to testify during the trial itself. Many of these women fear that once they take the witness stand they will be subjected to a painful cross examination into the intimate details of their past sexual histories. In Federal court and in most State courts, the trial judge is free to decide on a case by case basis, whether a victim can be cross examined indiscriminately as to her past sexual relationships. Unfortunately, in many instances such questioning has degenerated into a public humiliation of the victim herself, and has had little relevance to the prosecution of the case in question.

The unfortunate result of this practice has been that women are hesitant to cooperate with police and prosecutors in bringing such cases to trial. After suffering the trauma of rape, many victims are understandably reluctant to put themselves through another ordeal on the witness stand. The practice of subjecting rape victims to such interrogation has been clearly shown to act as a deterrent on effective law enforcement for the crime of rape.

One need only look to a few statistics to show that a majority of the rapes committed is never reported. For example, the New York City Police Department estimates that only 1 in every 10 rapes committed in that city are ever reported. An 18-month-long study by the Denver Anti-Crime Council showed that 43.2 percent of reported rapes during the study period were never brought to trial because the victim refused to prosecute.

The legislation that Congresswoman HOLTZMAN and I are proposing would act to correct this problem by barring cross examination about the victim's past sexual history. In order to protect the rights of the defendant in such cases, our bill would provide for two narrow exceptions to this rule. The first is with respect to the victim's prior sexual relationship with the defendant, and the second is the case where a defendant claims that he did not have sexual relations with the victim and wishes to introduce evidence to show a third party was responsible for the act.

Evidence which might fall under these two exceptions is not automatically admissible however. If the defendant proposes to offer evidence in either category, he must first make a written offer of proof which is submitted to the presiding judge. If the judge then decides after an in camera hearing that such evidence is admissible, he must make a written order specifically identifying the evidence to be admitted and describing exactly the areas of cross examination to be permitted. This procedure is designed to afford the victim maximum notice of the questioning that may occur.

It is our hope that this legislation will serve as a model statute for individual State laws. To date at least 30 States, including my own State of Indiana, are more progressive than the Federal Government on this issue.

The crime of forcible rape is the fastest growing crime in the United States. The number of forcible rapes has increased an astonishing 62 percent since 1968. FBI statistics for 1975 show that reported rapes nationwide numbered 56,093. This means there is one rape every 10 minutes. I hope that my colleagues will join me in sponsoring this legislation which will provide for fairer and more effective prosecution of rape crimes. I ask unanimous consent that the text of my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1100

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Privacy Protection for Rape Victims Act of 1977".

SEC. 2. (a) Article IV of the Federal Rules of Evidence is amended by adding at the end thereof the following new rule:

"RULE 412. RAPE CASES; RELEVANCE OF VICTIM'S PAST BEHAVIOR

"(a) Notwithstanding any other provision of law, reputation or opinion evidence of a person's past sexual behavior is not admissible in any trial if an issue in such trial is whether such person was raped or assaulted with intent to commit rape.

"(b) Notwithstanding any other provision of law, evidence of specific instances of a person's past sexual behavior is not admissible in any trial if an issue in such trial is whether such person was raped or assaulted with intent to commit rape, except that otherwise admissible evidence of specific instances of such conduct is admissible in such trial—

"(1) if such evidence—

"(A) is evidence of sexual behavior with persons other than the accused, offered by the accused upon the issue of whether the accused was or was not, with respect to the alleged victim, the source of pregnancy, disease, semen, or injury; or

"(B) is of past sexual behavior with the accused and is offered by the accused upon the issue of whether the alleged victim consented to the sexual behavior with respect to which rape or assault is alleged; and

"(2) if the requirements contained in subsection (c) are satisfied.

"(c)(1) If the person accused of committing rape or assault with intent to commit rape intends to offer under subsection (b) evidence of specific instances of the alleged victim's past sexual behavior, the accused shall make a written motion to offer such evidence not later than fifteen days before the date on which the trial in which such evidence is to be offered is scheduled to begin, except that the court may allow the motion to be made at a later date, including during trial, if the court determines that the evidence is newly discovered and could not have been obtained earlier through the exercise of due diligence. Any motion made under this paragraph shall be served on all other parties and on the alleged victim if not a party.

"(2) The motion described in paragraph (1) shall be accompanied by a written offer of proof. If the court determines that the offer of proof contains evidence described in subsection (b)(1), the court shall order a hearing in chambers to determine if such evidence is admissible. At such hearing the parties may call witnesses, including the alleged victim, and offer relevant evidence. Notwithstanding subsection (b) of rule 104, if the relevancy of the evidence which the accused seeks to offer in the trial depends upon the fulfillment of a condition of fact, the court, at the hearing in chambers or at a subsequent hearing in chambers scheduled for such purpose, shall accept evidence on the issue of whether such condition of fact is fulfilled and shall determine such issue.

"(3) If the court determines on the basis of the hearing described in paragraph (2) that the evidence which the accused seeks to offer is relevant and that the probative value of such evidence substantially outweighs the danger of unfair prejudice, such evidence shall be admissible in the trial to the extent an order made by the court specifies evidence which may be offered and areas with respect to which the alleged victim may be examined or cross-examined.

"(d) For purposes of this rule, the term 'past sexual behavior' means sexual behavior other than the sexual behavior with respect to which rape or assault with intent to commit rape is alleged.".

(b) The table of contents for the Federal Rules of Evidence is amended by inserting immediately after the item relating to rule 411 the following new item:

"Rule 412. Rape cases; relevance of victim's past behavior.".

SEC. 3. The amendments made by this Act shall apply to trials which begin more than thirty days after the date of enactment of this Act.

By Mr. HEINZ:

S. 1104. A bill to direct the Secretary of the Interior to establish the Legionville National Historic Site in the State of Pennsylvania; to the Committee on Energy and Natural Resources.

Mr. HEINZ. Mr. President, I am today introducing legislation which would create a national historic site at Legionville, Pa. I introduced similar legislation into the House of Representatives last year, but unfortunately, no action was taken.

As you may know, Legionville played a very significant role in American history. It served as the first military training camp in the United States, and was the base for Gen. Anthony Wayne's "Legion of the United States," which successfully secured western Pennsylvania from Indian attacks in the 1790's.

Furthermore, the first Legion of the United States, trained at Legionville, opened the Northwest Territory to westward American expansion and settlement. During that time a future President, Benjamin Harrison, served as a lieutenant at Legionville. Merriweather Lewis served as a major there long before he volunteered for his famous westward expedition. Mr. John Jakes, author of the well-known American Bicentennial series, has mentioned Legionville in the third volume of that series, and has described the Battle of Fallen Timbers, in which the first Legion of the United States under General Wayne was engaged.

However, despite its historical significance, Legionville remains the largest unrestored post-Revolutionary site in the United States.

The Anthony Wayne Historical Society, along with other interested historical groups, has been instrumental in having the Legionville area designated as a State historic site. The Pennsylvania State Historical Preservation Office has listed Legionville in the National Register of Historic Places.

Unfortunately, these efforts on the State level have not been enough to protect and preserve this historic location. As of now, this land where Presidents and generals walked is zoned for industrial use. Unless designated as a national historic site and taken over by the National Park Service, Legionville may well be lost for future generations of Americans to enjoy.

For this reason, I am introducing legislation which would direct the Secretary of the Interior to acquire the 22 acres in Harmony Township, Beaver County, which comprise the original Legionville area. The National Park Service would then administer the land as a national historic site, and would not only preserve this land from future misuse, but would be able to reconstruct a model of the original encampment.

It is my hope that we will be able to commemorate a vital part of our American heritage by establishing the Legionville National Historic Site.

For the benefit of my colleagues, I ask unanimous consent that the text of my legislation be printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1104

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) in order to preserve and interpret for the benefit of present and future generations the site of the first military training camp established in the United States, the Secretary of the Interior shall acquire by gift, purchase, or otherwise, the real property described in subsection (b) for the establishment and administration of a national historic site.

(b) The real property referred to in subsection (a) is that real property in Beaver County, Pennsylvania, containing twenty-two acres more or less, in the northernmost part of Harmony Township, adjacent to Baden Borough, which is bordered by Duss Avenue, State Highway 65, and Logan Lane.

SEC. 2. The property acquired under the first section of this Act shall be known as the Legionville National Historic Site, and it shall be administered by the Secretary of the Interior, acting through the National Park Service, in accordance with the Act of August 25, 1916, entitled "An Act to establish a National Park Service, and for other purposes" (16 U.S.C. 1, 2–4) and the Act of August 21, 1935, entitled "An Act to provide for the preservation of historic American sites, buildings, objects, and antiquities of national significance, and for other purposes" (16 U.S.C. 461–467).

By Mr. LEAHY:

S. 1105. A bill to amend section 107 of the Energy Reorganization Act of 1974 (42 U.S.C. 5817) to delegate power to State legislatures to veto Energy Research and Development Administration site selection for radioactive waste storage; to the Committee on Energy and Natural Resources.

Mr. LEAHY. Mr. President, many citizens harbor serious doubts about the safety of our current generation of reactors, and are still more wary of the potential dangers posed by the next, more complicated, generation.

An even more immediate concern focuses on the problems involving disposal of nuclear waste. The findings of a recent

Harris poll confirm the seriousness with which the public views the radioactive waste problem. According to this poll, 67 percent express the view that "the disposal of radioactive waste materials which remain radioactive for many centuries to come is a major problem."

The concern is so great in my own State of Vermont that in a series of town meeting votes earlier this month more than 30 Vermont towns approved proposals to ban construction of nuclear facilities, atomic waste storage, and transportation of atomic wastes within their boundaries.

Mr. President, I ask unanimous consent that two newspaper articles describing these votes be printed in the RECORD at the conclusion of my remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. LEAHY. Mr. President, while I share the concern of those Vermonters and others who have expressed serious reservations about nuclear power, I also realize that we may be forced to resort to this power source in some measure until we can enact the proper environmental and safety standards, and acquire the necessary physical plant to make coal a major option. Solar energy and other alternative sources will play an important role, but they cannot take up all of the slack in the immediate future.

However, a safe means of disposal for these long-lived radioactive wastes must be demonstrated beyond a reasonable doubt. A coordinated, responsible and responsive management of this effort must also be demonstrated by those responsible for is implementation. Neither has been forthcoming.

Even if we never build another facility capable of producing radioactive waste, we will still have to deal with high-level waste being generated by ERDA programs at the rate of 7.5 million gallons a year, and the estimated 60 million gallons of liquid high-level waste that the commercial nuclear power industry in the United States will have generated by the year 2000. In addition, existing military radioactive waste alone is approximately 215 million gallons of liquid waste.

Because I share the concerns of thousands of my constituents, and millions of other Americans, I am today introducing legislation which would give the States a role in the decisionmaking process over the selection of waste storage facilities. My bill would require the Energy Research and Development Administration to publicly notify the presiding officers of a State legislature of its intent to explore a site in that State for the purpose of constructing a radioactive waste storage facility. It would also forbid ERDA from contracting for construction of a radioactive waste storage facility at a site in a State where the State legislature by joint or concurrent resolution states that that site shall not be used for that purpose.

Mr. President, by introducing this bill I am not trying to turn back the clock or deny Vermont or any other State an adequate future energy supply. I am merely putting those responsible for the safe disposal of our atomic waste on notice that until they have demonstrated their grasp of this serious problem, the people of this country will have the power to veto what may be dumped in their own backyard.

Mr. President, I ask unanimous consent that the text of the bill be printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1105

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 107 of the Energy Reorganization Act of 1974 (42 U.S.C. 5817) is amended by adding the following new subsection.

"(g) (1) The Energy Research and Development Administration must publicly notify the presiding officers of the State legislature of its intent to explore a site in that State for the purpose of construction of a radioactive waste storage facility.

"(2) The Energy Research and Development Administration shall not permit contracting for construction of a radioactive waste storage facility at a site in a State where the State legislature by joint or concurrent resolution states that that site shall not be used for such purpose.".

[From the Valley News (Vt.), Mar. 2, 1977]

NUCLEAR BAN VOTED BY VERMONT TOWNS

MONTPELIER, VT.—A citizens action group supported primarily by college students has won a victory over the Vermont electric utility industry.

In a series of town meeting votes, more than 20 Vermont towns Tuesday passed proposals by the Vermont Public Interest Research Group to ban the construction of nuclear facilities and transportation of atomic wastes within their boundaries.

All the Upper Valley towns that considered the issue, voted to ban reactors and nuclear waste transportation.

Norwich passed the ban 70–39 in a standing vote.

Thetford passed the measure with a resounding voice vote.

In Fairlee the vote was 73–18 in a paper ballot.

Newbury passed the ban in a voice vote and the town of Sharon voters were not in favor of "having a 'nuclear' dump within the town."

In Vershire the ban was brought up under "other business" and passed by a voice vote with only one person opposed.

The votes were thought to be the first widespread expression at the local level in the United States of concern about nuclear energy.

The proposed bans were strongly opposed by the electric utility industry, business groups and Gov. Richard Snelling.

Incomplete returns showed 20 towns in favor of such bans and only two against. More than 30 towns had taken votes on the issue.

VPIRG Executive Director Herman Bluestein termed the vote results "a resounding setback to the nuclear industry."

But Thomas Hurcomb, a Central Vermont Public Service Corp. vice president, said since there is little likelihood the bans can be enforced, many people voted without thinking there was "anything at stake."

"People felt it was easy to vote in favor of the measures without having to pay a price," he said.

However, he said the votes could have an impact on the electricity supply in Vermont by reducing the options utilities have in choosing sites for future generating plants.

The only nuclear plant in the state is the 540,000 kilowatt Vermont Yankee nuclear power plant in Vernon. Utility industry spokesmen have announced no further plans to build another nuclear facility in the state.

Current transportation plans have nuclear wastes passing from the Vermont Yankee plant at Vernon through Brattleboro before heading south on Interstate 91 into Massachusetts.

Brattleboro will vote on the question at its March 19 representative town meeting.

Guilford, one of the towns along the nuclear fuel transportation route, voted for the bans Tuesday. But trucks carrying nuclear fuel only pass through Guilford on a short stretch of Interstate 91, a federal superhighway. The nuclear transport trucks do not travel over Guilford town highways.

[From the Burlington Freepress (Vt.), Mar. 2, 1977]

VERMONTERS RESIST NUCLEAR POWER

(By Bill Braun)

Vermonters said "no" to nuclear power plants, atomic waste storage and/or transportation in at least 28 towns around the state Monday night and Tuesday.

There were only three known ripples in a sea of town meeting votes approving anti-nuclear stances.

Voters in Waterville effectively killed an anti-nuclear measure by tabling it after it was brought up from the floor at the close of the meeting.

In Castleton late Monday night, voters decided by a 65–63 margin not to add a transportation ban to the town's year-old prohibition against the construction of nuclear power plants and the storage of nuclear wastes.

And in Orwell, it was decided to postpone a decision on the atomic power and waste questions until a special town meeting which will be held at a time not yet determined.

In many towns the nuclear question was decided on voice votes—unanimous in at least three small towns.

Among towns for which hand counts or Australian ballot totals were available late Tuesday, the margins ranged anywhere from Pawlet's fairly close 229–165 to Fairlee's 73–18.

Most towns considered three-point questions to cover construction and operation of reactors, storage of waste and transportation of materials through the town.

Not all the towns considered or voted on all three parts.

The matter was brought up from the floor in Brunswick in Essex County and voters there decided to ban storage and transportation. They never considered plant construction.

The question was on the Warning in Westminster but the outcome was not available late Tuesday night.

Towns which did adopt anti-nuclear measures ranging from general policy statements to mandates for town ordinances are:

Brookline, Guilford, Jamaica, Marlboro and Putney in Windham County; Benson, Clarendon, Chittenden, Middletown Springs, Mount Holly, Pawlet, Pittsford, Shrewsbury and West Haven in Rutland County; Fairlee, Newbury and Thetford in Orange County; Berlin, Plainfield and Woodbury in Washington County; Barnet, Danville and Stannard in Caledonia County; Norwich and Weston in Windsor County; Charlotte in Chittenden County; Fairfield in Franklin County; Grand Isle in Grand Isle County; and Brunswick in Essex County.

In Putney, only about 10 miles from the state's only atomic power plant at Vernon, residents approved the anti-nuclear questions by a margin of nearly 2–1 despite pro-

nuclear arguments by former U.S. Sen. George Aiken.

The nuclear vote generally considered most critical to the nuclear power industry will be in Brattleboro at that town's representative meeting March 19. Brattleboro is on the transportation route to the Vermont Yankee plant at Vernon.

The Vermont Public Interest Research Group, which initiated the anti-nuclear move, claimed victory Tuesday night.

By Mr. DOLE (for himself and Mr. HUMPHREY):

S. 1106. A bill to amend the Commodity Credit Corporation Charter Act; to the Committee on Agriculture, Nutrition, and Forestry.

SILO LOANS

Mr. DOLE. Mr. President, today I introduce a bill to provide authority for the Department of Agriculture to make loans available to farmers for the construction of on-the-farm storage structures for dry or high moisture forage, silage, or grain. I am especially pleased that the distinguished Senator from Minnesota (Mr. HUMPHREY) has joined me as cosponsor of this legislation.

FARM FACILITY LOANS

Under the terms of the Department of Agriculture's farm facility loan program, loans for the construction of silos have been available intermittently at the discretion of USDA. My legislation is intended to broaden the law to include silo loans as a regular part of the program, together with the loans which are presently available for grain storage bins and drying equipment.

At a time when many farmers are being forced out of business, particularly in the dairy sector, loans for additional storage facilities to handle silage would be extremely useful. Farm facility loans cover up to 70 percent of the cost of a structure and are made at 7.5 percent with a 5-year repayment period.

MANY BENEFITS

The construction of facilities to handle high moisture feed stuffs will give farmers more versatility in the feeding of their livestock. Further, in many areas of the country with short growing periods, early frost sometimes makes it impossible to harvest dry grain. Facilities for handling silage would enable farmers to harvest and utilize forage crops that otherwise might be lost.

ENERGY SAVINGS

High moisture storage facilities have another important benefit—they make possible a significant energy savings. Drying grain requires the use of scarce energy—usually natural gas or propane—in order to preserve it in storage. I understand that more fuel was used to dry the 1976 corn crop than was used to grow it! This is terribly wasteful and contrary to the national interest in conserving fuel since grain can be preserved as feed without expending energy. My legislation provides an incentive for the construction of high moisture storage facilities.

I should add that since the delivery system for on-the-farm storage facility loans already exists through the Agricultural Stabilization and Conservation Service—ASCS—little or no administrative cost will be necessary to implement the intent of my legislation.

Mr. President, this is a good bill aimed at assisting the hard-pressed livestock and dairy operators in every State of the Nation, and I urge my colleagues to support it.

I ask unanimous consent that the text of my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1106

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4(h) of the Commodity Credit Corporation Charter Act (62 Stat. 1070, as amended; 15 U.S.C. 714b(h)) is amended by inserting in the fourth proviso of the second sentence after the words "suitable storage" the following: "for dry or high moisture forage, silage, or grain".

By Mr. HATHAWAY:

S. 1107. A bill to provide Federal financial assistance to employers, labor organizations, or consortiums thereof, or other groups or individuals, to establish and operate occupational alcoholism programs for the diagnosis and treatment of alcohol abuse and alcoholism in employed persons, including managerial personnel, and their dependents, and for other purposes; to the Committee on Human Resources.

Mr. HATHAWAY. Mr. President, I am reintroducing a bill today to provide Federal assistance to employers, labor organizations, and other groups, to establish and operate occupational alcoholism programs.

This bill is similar in many respects to the measure which passed the Senate by a unanimous vote of 69 to 0 last June, as an amendment to the Tax Reform Act. Because of modifications made on the floor of the Senate at that time, however, specific tax-related aspects of the amendment were eliminated, and for that reason the provision was subsequently dropped by the tax conference committee. However, as was clearly indicated at the time, such action in no way indicated a lack of support for the underlying premise of the provision—that there should be a significant Federal role in providing incentive funds to employers and labor organizations for occupational alcoholism programs.

The bill I am introducting today authorizes the Secretary of Health, Education and Welfare, acting through the National Institute on Alcohol Abuse and Alchoholism, to make grants to pay up to one half of the cost of occupational alcoholism programs. Individual employers and unions, or consortiums of such employers or unions, will apply directly to the Secretary for such grants, which will be funded out of a sum of money allotted to programs in the State in which the program is located. Allotments to each State will be made out of annual appropriations, on the basis of the relative labor force population of the State. To fund the program, the bill authorizes the appropriation of an amount equal to 2.5 percent of the total Federal alcohol taxes collected on beer, wine and liquor, for the fiscal years 1979 through 1982. The dollar amounts of such an authorization would probably vary between $100 million and $120 million a year.

The primary difference between this bill and the amendment the Senate accepted to the Tax Act is that the direct, automatic linkage between the program and the tax has been eliminated. While the original intention had been to form a trust fund out of which these programs would be supported, that is no longer the case with the measure being introduced today. After considerable discussion of this matter with my respected colleagues, Senators LONG, MCCLELLAN and WILLIAMS, chairmen of the Committees on Finance, Appropriations and Human Resources, it was decided that the trust fund mechanism would be too difficult both to enact and to administer, and that the route utilized in the current measure fits better into the traditional operating procedures of the Congress.

For that reason, this bill is clearly programmatic in nature, and will be considered by the Committee on Human Resources. Its appropriation will clearly require annual appropriations acts by the Congress. On the other hand, I do intend to maintain the link between the funding of this measure and the level of alcohol consumption in America, by authorizing an appropriation equal to a percentage of the Federal alcohol tax, rather than a specific sum. And I also intend, in the very near future, to offer a tax amendment increasing those alcohol taxes by an amount necessary to fund these programs.

Mr. President, my Subcommittee on Alcoholism and Drug Abuse will hold hearings on this bill, and on the general problems of alcoholism in the workplace, in the very near future. In the course of those hearings, I hope to develop a significant base of information about the social and economic effects of alcoholism in the workplace, as well as the efficacy of occupational programs in alleviating those effects. Meanwhile, I urge my colleagues to read the statement I made on this subject last year, during Senate deliberation of my original amendment, and to join me in cosponsoring this badly needed measure.

I ask unanimous consent that the bill be printed in the RECORD, together with the statement to which I referred.

There being no objection, the bill and statement were ordered to be printed in the RECORD, as follows:

S. 1107

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Occupational Alcoholism Prevention and Treatment Act of 1977".

STATEMENT OF FINDINGS

SEC. 2. (a) The Congress hereby finds and declares that—

(1) significant numbers of working Americans currently suffer from alcohol abuse and alcoholism, generating an incalculable social and economic cost for themselves and their families, and for American industry as a result of absenteeism, accidents, reduced productivity, increased need for health care,

faulty decisions, personnel turnover, and other effects;

(2) occupational alcoholism programs have demonstrated their effectiveness in diagnosing and treating alcohol abuse and alcoholism in employed individuals and managerial personnel, including the identification of such problems at an earlier stage than they are generally diagnosed outside the occupational settings; and

"(3) while certain large employers and labor organizations have underwritten their own occupational alcoholism programs because of the demonstrated cost effectiveness of such programs, economies of scale for most employers and labor organizations will prevent the establishment and operation of such programs unless the Federal Government provides incentives and technical assistance to such employers and organizations for that purpose."

(b) It is the purpose of this Act to authorize grants to employers, labor organizations, consortiums of employers and labor organizations, and public or private nonprofit agencies and organizations, to pay up to half of the cost of establishing and operating occupational alcoholism prevention and treatment programs.

SEC. 3. (a) The Secretary of Health, Education, and Welfare (hereinafter referred to as the Secretary), acting through the National Institute on Alcohol Abuse and Alcoholism (hereinafter referred to as the Institute), shall make grants to employers, labor organizations, consortiums of employers or labor organizations or both, and to public or private nonprofit agencies, organizations, to pay no more than fifty percent of the cost of establishing and operating occupational alcoholism programs.

(b) For the purpose of making such grants, there are hereby authorized to be appropriated for fiscal years 1979, 1980, 1981, and 1982 not to exceed 2.5 percent of those amounts determined by the Secretary of the Treasury to be equivalent to the taxes received in the Treasury under section 5001(a)(1), section 5041(a), and section 5051(a) of the Internal Revenue Code (relating to the rate of tax on alcohol) in the most recent fiscal year for which such information is available.

(2) The program authorized by this Act shall not qualify as one of the exceptions provided in section 401(d) of the Congressional Budget and Impoundment Control Act of 1974.

(3) Sums appropriated pursuant to this Act shall be available until expended.

ALLOTMENTS TO STATES

SEC. 4. (a)(1) From the sums appropriated pursuant to this Act, the Secretary shall allot not more than 1 per centum among Guam, American Samoa, the Virgin Islands and the Trust Territory of the Pacific Islands according to their respective needs.

(2) From 90 per centum of the remainder of such sums the Secretary shall allot to each State an amount which bears the same ratio to such 90 per centum as the labor force population of the States bears to the labor force population of all States.

(3) The remainder of the sums appropriated pursuant to this Act shall be available to the Secretary for administration of this Act, including the evaluation of, and research into, the effectiveness of occupational alcoholism programs, and the training of occupational alcoholism program personnel.

(b)(1) The amount by which any allotment to a State for a fiscal year under subsection (a) exceeds the amount which the Commissioner determines will be required for such fiscal year for applications approved under section 5 within such State shall be available for reallotment to other States in proportion to the original allotments to such States under subsection (a) for that year, to the extent necessary to fund approved applications in such other States.

(2) In order to afford ample opportunity for all eligible applicants in a State to submit applications for assistance under this title, the Secretary shall not fix a date for reallotment, pursuant to this subsection, of any portion of any allotment to a State for a fiscal year which date is earlier than ninety days prior to the end of such fiscal year.

(3) In any year in which funds appropriated pursuant to this Act are determined by the Secretary to exceed the amount required to fund all approved applications for occupational alcoholism programs, the remainder of such funds may be expended by the Secretary, acting through the Institute, to provide treatment and prevention services to other currently underserved populations, such as racial and ethnic minorities, native Americans, youth, female alcoholics, and individuals in geographic areas where such services are not otherwise adequately available.

(c) For the purpose of this Act the term "State" shall include the Commonwealth of Puerto Rico and the District of Columbia.

(d) The labor force population of a State and of all States shall be determined by the Secretary on the basis of the most recent satisfactory data available to him from the Bureau of Labor Statistics of the Department of Labor.

SEC. 5. (a)(1) Sums allotted to each State under this Act shall be used by the Secretary to make grants to approved applicants in the State, including employers, labor organizations, consortiums of employers or labor organizations or both, and public or private non-profit agencies or organizations which enter into cooperative agreements with such employers, labor organizations or consortiums, to establish and operate occupational alcoholism treatment programs.

(2) For the purpose of this Act, "occupational alcoholism programs" shall be defined as programs operated primarily for the diagnosis or treatment, or both, of alcohol abuse and alcoholism in employed persons, including managerial personnel, and their dependents. Such programs may include, but shall not be limited to, intervention, diagnosis, counseling, referral, treatment, prevention and rehabilitation.

(b) Any individual or organization which desires to receive funds pursuant to this Act shall submit an annual application for such funds, for approval by the Secretary, which shall include a description of the program to be carried out, and which shall include assurances of—

(1) the availability of funds, from non-federal sources, to pay at least 50 per cent of the cost of the program;

(2) the professional capability to carry out the program described in the application; and

(a) the need for such a program, including the lack of adequate services currently available to the population intended to be served.

(c) All applicants approved by the Secretary shall be eligible to receive grants from the Secretary out of the sums allotted to the State in which the applicant's program is located, or in the case of applications affecting individuals residing in two or more contiguous States, out of the allotments of more than one State, at the discretion of the Secretary.

(2) If the sums allotted to a State for any fiscal year are not sufficient to fund all the approved applications in that State, the Secretary may, in his discretion, prorate the allotted sums among all approved applicants, or fund only a portion of the approved applications, pursuant to criteria which he shall publish.

OCCUPATIONAL ALCOHOLISM TRUST FUND

Mr. HATHAWAY. Mr. President, the modified amendment I am offering at this time would permit the use of excise taxes on alcoholic beverages for the treatment of persons suffering from alcohol abuse and alcoholism. Specifically, the amendment would create a new Alcoholism Trust Fund, the proceeds of which would be available for the diagnosis, treatment, and rehabilitation of employed alcoholics, and their dependents, through programs operated by or through their employers, their unions, or both.

This amendment involves a modification of an earlier amendment I submitted, which would have required a 2.5-percent increase in the excise taxes on alcohol.

I originally offered it in the Finance Committee during the session in which we considered committee amendments. At that time, the tax increase proposed in my amendment was 5 percent. At the specific suggestion of the distinguished chairman of the committee, I agreed to modify the proposal by cutting it in half. After making that modification, I was extremely gratified that the committee voted unanimously to agree in principle with my proposal, and to support me when I offered the amendment on the floor.

I am also pleased to note the support of the distinguished chairman of the Committee on Labor and Public Welfare, Senator WILLIAMS, who has worked so long and hard for an increased Federal commitment in this area.

At this time, I have agreed to further modify my amendment by eliminating the tax increase feature altogether, pending hearings into the best method of financing the trust fund.

I am well aware that the concept of dedicated taxes and the creation of trust funds has always been a complicated one in the Congress. However, I am firmly convinced that such a concept is nowhere more appropriate than in the area of alcoholism and alcohol abuse.

Our Government and our society now sanction, even encourage, the legal sale of alcoholic beverages, and collects billions of dollars per year in tax revenues from them. Yet the consumption of alcohol directly results in one of our three largest health problems in America, along with heart disease and cancer. And indirectly, when you consider such factors as alcohol-related deaths in auto accidents, other kinds of accidents, and lost productivity to the American economy, alcohol may very well be the largest of those three.

Yet our Federal support for research, diagnosis, treatment, and rehabilitation for alcoholism lags painfully far behind those two major health areas, and many others as well.

During fiscal 1976, for example, the Federal Government spent $762,647,000 on cancer research alone, and $370,347,000 on heart and lung disases. In contrast, alcoholism, with over 9 million victims, received a total of just $155,000,000 to cover research, treatment and rehabilitation, prevention, and several other functions.

Somehow, the societal stigma that has always attached to the disease of alcoholism continues to be attached to efforts to fund an adequate program to alleviate the problems it causes. In the year and a half since I assumed the chairmanship of the Senate Subcommittee on Alcoholism and Narcotics, I have become increasingly convinced that the only way we are ever going to make further progress toward solving these problems is through innovative methods like the one I am proposing today.

There is nothing particularly novel about the notion of earmarking a small portion of the tax on alcohol for treatment and rehabilitation programs. Many foreign coun-

tries have set up complete alcoholism research and care systems, using money collected from alcohol taxes. And nearly a third of our States allocate the proceeds of various specific alcohol taxes to treatment funding.

Included among those States are Alabama, Washington, D.C., Florida, Indiana, Kentucky, Michigan, North and South Carolina, Ohio, South Dakota, Utah, Vermont, Virginia, Washington State, West Virginia, and Wisconsin.

The amount of money required by my amendment is expected to be quite insignificant, in comparison with the total amounts collected from such taxes every year. In 1975, for example, the Federal Government alone raised nearly $6 billion from all its alcohol taxes—making alcohol revenues second only to the income tax in amounts raised in this country.

The amount would also be quite small in comparison to the overall price tag of a bottle of booze. If just 2½ percent of the tax is set aside, the portion per fifth of liquor will be just 5 cents. On a case of beer, only 1½ cents. And on a gallon of wine, less than a penny. That's hardly a sacrifice for drinking Americans, in comparison with the scope of the need for treatment—especially when you consider that some researchers have estimated that fully half of all the alcohol in this country is consumed by our 9 million active alcoholics.

Yet the money raised by such a small earmarking, if used effectively for diagnosing and treatment present and future victims of alcohol abuse, can have a profound effect on this health problem and the human and economic destruction it leaves in its wake.

For while alcoholism is indeed a serious health problem it is unique among such problems in that it is both preventable and treatable. And there is no better place to commence a major new effort to do both than in the occupational setting.

I have chosen occupational alcoholism diagnosis and treatment programs as the primary designated recipient of these funds, for the present. While such programs are currently underfunded and underutilized they offer the strongest hope for identifying and treating the alcoholic while he or she is still capable of functioning in society.

We already spend a considerable sum of money to treat the alcoholic who has "hit bottom," who seeks treatment for his or her disease because there is nowhere else to go. Yet the so-called skid row types which most clearly represent this stage of the illness comprise only 3 to 5 percent of all active alcoholics.

On the other hand, over 90 percent of all male alcoholics are currently employed, and a high percentage of women as well. Taking the figures another way, the National Council on Alcoholism estimates that 5.3 percent of the work force, or over 5 million people, are currently alcoholics. Another 10 percent are estimated to have serious drinking problems.

This represents an almost incalculable cost to American industry—in absenteeism, accidents, reduced productivity, faulty decisions, and personnel turnover. Dollar estimates range from $15 to $25 billion, not including intangible loss in personal and company investment in training an employee. The NCA estimates the average annual per-employee cost at $3,000, and this seems to be a conservative estimate.

This profound effect is demonstrable, because numerous studies have now shown that the alcoholic, compared to other workers, has: 2.5 times as much absenteeism; 3.5 times the work absence due to off-the-job accidents; twice the incidence of respiratory and cardiovascular disease; three times the incidence of digestive disorders.

Other studies have shown that 23 percent of alcoholics are disabled 15 days or more per year, as opposed to 10.3 percent of other employees; 12.8 percent for 30 days or more—compared to 6.5 percent—and 3.8 percent for 90 days or more—compared to 0.6 percent. Also, alcoholic employees have a death rate 3.22 times nonalcoholic employees. In this regard, researchers found that an alcoholism program would reduce insurance premiums by 1.7 percent and claims costs by 1.9 percent, not including workman's compensation savings, which leads us to the second major reason for emphasizing occupational programs:

OCCUPATIONAL ALCOHOLISM PROGRAMS WORK

Occupational alcoholism programs are generally recognized today as being among the most effective substance abuse treatment programs around. The National Council on Alcoholism reports an average recovery rate—abstinence for 1 year—of 75 percent in 16 labor-management programs, versus a 25 percent rate among unemployed alcoholics.

Many organizations with successful rehabilitation programs for problem drinking employees have documented substantial savings. The success rate for rehabilitation of problem drinking employees is very high. This indicates that the possibility of job loss is an incentive for employees to seek rehabilitation.

In addition, after problem drinkers are rehabilitated, there is a great reduction in their utilization of health and sickness benefits. Such reductions in utilization of health benefits due to rehabilitation of problem drinkers significantly contribute to decreasing the cost of group health insurance

Because they are successful, employers making use of such programs often find they save far more in training costs for new employees than they spend on the programs. The annual cost of average industrial programs is actually quite low. A small study currently being conducted by the NIAAA shows the following average programs costs for different size companies:

Number of employees	*Average annual cost*
Less than 5,000	$16,343
5,000–10,000	48,600
10,000–20,000	65,056
20,000–30,000	75,500
30,000 and over	62,384

Taken another way, the data shows an average cost for manufacturing companies of $36,294; for service companies of $40,252.

Many large companies have thus underwritten their own programs with little or no assistance from the Federal Government. Du Pont and Eastman Kodak were the first, in 1943 and 1944 respectively, and today 60 out of the 400 largest corporations in America have programs, including Bethlehem Steel, General Motors—with the UAW—Hughes Aircraft, Illinois Bell, Kemper Insurance, Kennecott Copper, and Scovill.

The success rate for rehabilitation and the reduction of health benefit utilization by problem drinking employees has been proven to be significant in those companies which have programs.

I would like to give some brief summaries of some of these companies and their findings:

"General Motors—(Oldsmobile Division) a study of its 'recovery and rehabilitation' program showed a 50 percent reduction in lost man hours; a 30 percent reduction in sickness and accident benefits paid; a 56 percent drop in leaves of absence; a 78 percent reduction in grievances filed by the group; a 63 percent decrease in disciplinary problems; and an 82 percent drop in job-related accidents.

"Scovill Manufacturing Company in Waterbury, Connecticut employs 6,500 employees. The Scovill programs processed 180 employees over a three year period. They estimate their annual savings at $186,550. Importantly, 78 percent of those problem drinking employees referred for treatment were rehabilitated.

"Economics Laboratory, Inc. of St. Paul, Minnesota has an employee population of 3,500 in the United States. They have a rehabilitaton success rate of 80 percent for employees and 50 percent for dependents of the employees. In addition, the company reduced treatment costs 60 percent to 65 percent by utilizing nonhospital facilities such as alcoholism treatment centers.

"The De Paul Industrial Alcoholism Project of Milwaukee, Wisconsin receives referrals from twenty-three companies in the Milwaukee area. This population is composed primarily of blue-collar, skilled and unskilled factory workers. In conducting a nine month follow-up study of problem drinkers treated, 46 percent reported total abstinence and 25 percent essential abstinence, for a total of 71 percent significantly improved.

"Illinois Bell Telephone Company studied 402 employees for five years prior to referral and for five years after. The job rehabilitation rate was 72 percent. In addition, these 402 employees had 602 cases of sickness disability before rehabilitation and 356 cases after rehabilitation. This is a reduction of 46 percent in sickness disability, indicating a tremendous decrease in utilization of insurance plans.

"The Philadelphia Fire Department established a referral program for its 3,410 employees in 1972. For those problem drinkers referred to outpatient care, sick leave was reduced by 55 percent. Injuries were reduced by 67 percent; both of these factors indicating a significant decrease in health insurance utilization.

"Kennecott Copper Company found sickness and accident costs for alcoholics compared with the average to be more than 5 to 1; hospital, medical and surgical costs were more than 3 to 1. Yet, after a 12½-month involvement in the program, hospital, medical and surgical costs decreased 55.35 percent.

"Ontario Hydro—(Canadian utility) reports 60 to 70 percent success rate.

"8 May Street Industrial Alcoholism Program in Toronto (a consortium) indicates an 81 percent success rate among blue collar and mid-management personnel referred from industry."

Given this record of glowing accomplishments, with the concomitant savings to employers utilizing such programs, it might well be asked why more companies do not set up programs themselves—that is, why is the Federal Government needed in this area at all?

There are several reasons for the Government's interest.

In the first place, I would emphasize again that many large companies are setting up such programs, including 60 of the largest 400 in the Nation.

But the problem is, only the larger companies really have the ready resources to start up such programs, and yet a large percentage of employees in the Nation are in companies with fewer than 500 employees: 97 percent of all companies in America are considered "small businesses" under the Small Business Act, accounting for 53 percent of all private sector employment.

Additional impetus is needed to involve those companies, because for most of them the only workable mode of treatment will be through consortiums, made up of a number of companies or labor unions or both.

It should be noted that the commitment of the private sector would still have to be a significant one, under the procedures set

up by this amendment. In order to get maximum effect from the dollars raised by this new tax, at least 50 percent of the cost of programs funded will have to be paid from non-Federal sources, although those could include health insurance plans and other third-party payors.

In addition, this program will be available to governmental agencies as well as private employers, to enable them to establish or improve their alcoholism treatment programs. Current Federal law requires Federal agencies to provide alcoholism treatment programs for civilian employees. However, as recent hearings held by the House Committee on Government Operations demonstrated, few such programs have been set up, and fewer still have been as effective as many of the private sector programs. Government agencies—including State and local agencies—would also be required to meet the 50/50 matching requirement, but it is hoped that many more of them will be stimulated by this program to set up effective occupational programs.

I should also point out that there are other major Government interests at stake in this area, in addition to the potential savings to industry and the economy in lost productivity. Signs of alcoholism and other problems occur earlier in the workplace than they do elsewhere, enabling earlier intervention and treatment for the abuser. This will almost certainly result in savings to the Government in unemployment compensation costs, welfare payments, medicare and medicaid, food stamps, and all the other costs that are attendant upon a person dropping out of the labor force.

I think the need for more and better treatment of our Nation's alcoholics in general, and occupational programs in particular, was addressed quite eloquently in oversight hearings before my subcommittee by Adolph J. Sullivan, a top executive of Standard Oil of California.

Mr. Sullivan said:

"Industry is not interested in government dollars. But in this particular field of occupational alcoholism, we do need to buy time. . . .

"If you are talking about 8 million alcoholics, there are a lot of people to be helped and a lot of programs needed. I do not know the total number of U.S. corporations, but we only have about 200 viable corporate programs, so that the amount of work remaining to be done is a little scary.

"One other number that popped into my head as I was sitting in the back of the room this morning was with regard to how much money we should spend at the government level.

"After all, I am a conservative, and think about these things.

"I began to realize that there are 9 million alcoholics by anybody's standard, and even if we look at $100, that is $900 million.

"I do not think $100 per head is very much money to try to solve a fatal disease.

"Even if you went to $200, who is going to say? I do not think we are extremists. . . ."

Mr. President, I feel safe in saying that congressional adoption of this concept and this program would be a revolutionary breakthrough for alcoholism diagnosis, treatment, and rehabilitation in America. Since every indication is that we are sadly in need of such a breakthrough, I urge my colleagues to support me in the adoption of my amendment.

ALCOHOLISM TRUST FUND

[Approximate revenues from 2.5 percent earmark of current excise taxes under secs. 5001, 5041, and 5051 of the Internal Revenue Code, based on 1975 taxable gallonage]

	Current tax rate	1975 taxable quantity	Effect of 2.5 percent earmark [1]	Revenue yield
Distilled spirits	$10.50 per proof gallon	295,000,000 gal	26.25 cents per proof gallon	77,500,000
Beer	$9 per barrel (31 gal)	147,000,000 bbl	27.5 cents per barrel	33,000,000
Wine (Tax depends on alcohol content—2 largest given here).	(a) 17 cents per gallon	207,000,000 gal	0.425 cents per gallon	1,000,000
	(b) 67 cents per gallon	80,000,000 gal	1.675 cents per gallon	1,500,000

[1] These earmarks are of the equivalent of 5 cents per fifth of liquor, 1½ cents per case of beer and less than 1 cent per gallon of wine.

Note: Total yield for fund, $113,000,000.

By Mr. PEARSON:

S. 1108. A bill to amend the Communications Act of 1934 with respect to the renewal of licenses for the operation of broadcasting stations; to the Committee on Commerce, Science, and Transportation.

BROADCASTING LICENSE RENEWAL ACT

Mr. PEARSON. Mr. President, in our zeal to protect the public, we often create complicated and cumbersome procedures that make it unnecessarily difficult for regulated industries to operate efficiently and serve the public interest. Unfortunately, this is now the case with broadcast licensing.

Over the past several years, the broadcasting industry has been faced with uncertainty generated largely by the absence of identifiable statutory standards which the Federal Communications Commission—FCC—could apply when acting on license renewal applications. Furthermore, conflicting administrative and judicial decisions have compounded the confusion by making it more difficult for the industry to make rational, long-range business judgments. Equally distressing has been an unmanageable increase in paperwork and the threat of litigation at license renewal time. These conditions make it more difficult for the broadcaster to devote the time necessary to improve the quality of broadcast service.

During previous sessions, Congress recognized the need for statutory clarification and simplification of the renewal process. Indeed, both Houses passed license renewal bills but neither of the measures received final approval. Accordingly, legislation is necessary today.

The bill I offer will enhance broadcast journalism by giving a reasonable degree of security to licensees who operate in the public interest without unduly inhibiting criticism of incumbent broadcasters. For example, the bill would authorize the FCC to grant a license for up to 5 years, depending upon what length of time the Commission determines is in the public interest. This would allow the FCC to minimize the excessive paperwork and attorneys' fees which are particularly burdensome for small stations which lack the financial resources available to large market broadcasters.

A longer license term, where justified, will promote the long-range investments of time, money, and effort that are necessary for quality public service. Moreover, the FCC has estimated that a 5-year license extension would reduce the annual number of renewal applications from 2,700 to 1,600—roughly 40 percent. The Commission will, therefore, be able to screen each application more thoroughly, thereby encouraging licensees to remain committed to their responsibilities throughout the license term.

The bill would clarify the standards of performance to be applied at renewal time and provide assurance to the conscientious licensee that he will not lose his license to the paper promises of a competing applicant. The Commission is directed to establish ascertainment procedures to be used by each broadcaster to identify the problems, needs, and interests of his particular service area.

The licensee's responsiveness to these local problems, needs, and interests will then be given major consideration during the Commission's evaluation of a renewal application. By directing the Commission to prescribe different ascertainment procedures for different categories of broadcasting stations, we may expect broadcasters to tailor their programing more closely to the requirements to their listening audience.

Under the existing provisions of the Communications Act, all appeals from FCC decisions involving license renewal must be brought in the U.S. Court of Appeals for the District of Columbia. This legislation would allow appeals from FCC decisions or orders to be brought in the U.S. court of appeals for the circuit where the broadcasting facility is located. This will undoubtedly assist in easing the caseload of the D.C. Court of Appeals which presently has one of the longest median disposal times in the Nation. Moreover, allowing appeals to be argued in the community of license will be more convenient and less expensive for the parties involved.

Finally, this legislation would help lift the burden of unnecessary paperwork from license renewal applicants by authorizing short form renewal procedures and requiring the FCC to find innovative ways to consolidate material required from each licensee.

Mr. President, American television and radio audiences will be much better served by broadcasters that are able to focus their resources more directly toward creative programing rather than coping with the difficulties brought out

by the existing outdated license renewal procedure. The legislation I offer today will not only promote stability within the broadcasting industry but also preserve the necessary safeguards that assure that broadcasters will continue to operate in the public interest.

Mr. President, I ask unanimous consent that the text of the bill, together with a section-by-section summary of its provisions be printed in the RECORD.

There being no objection, the bill and analysis were ordered to be printed in the RECORD, as follows:

S. 1108

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Broadcast License Renewal Act."

SEC. 2. Section 307(d) of the Communications Act of 1934 is amended to read as follows:

"(d)(1) No license granted for the operation of a broadcasting station shall be for a longer term than three years, unless the Commission determines it is in the public interest to extend such term for an additional two-year period. In making such a determination, the Commission shall consider whether it is in the public interest to prescribe different term lengths for television and radio broadcasting stations and for different categories of licensee. No license so granted for any other class of station shall be for a longer term than five years, and any license granted may be revoked as hereinafter provided. Upon the expiration of any license, upon application therefor, a renewal of such license may be granted from time to time for a term which shall be determined by the Commission (but which shall not exceed five years) if the Commission finds that the public interest, convenience, and necessity would be served thereby.

"(2) In determining if the public interest, convenience, and necessity would be served by the renewal of a broadcast license, the Commission shall grant the renewal application if the licensee, during the preceding term of its license, (i) has been responsive in its program service to the problems, needs and interests of its service area, and (ii) has conducted the operation of its station in a manner not characterized by serious deficiencies. The Commission shall establish procedures to be followed by the licensee for ascertaining the problems, needs, and interests, of its service area. Such ascertainment procedures shall prescribe different procedures for different categories of broadcasting stations.

(3) In order to expedite action on application for renewal of broadcasting station licenses and in order to avoid needless expense to applicants for such renewals, the Commission shall not require any such applicant to file any information which previously has been furnished to the Commission or which is not directly material to the considerations that affect the granting or denial of such application, but the Commission may require any new or additional facts it deems necessary to make its findings. Pending any hearing and final decision on such an application and the disposition of any petition for rehearing pursuant to section 405, the Commission shall continue such license in effect. Consistently with the foregoing provisions of this subsection, the Commission may by rule prescribe the period or periods for which licenses shall be granted and renewed for particular classes of stations, but the Commission may not adopt or follow any rule which would preclude it, in any case involving a station of a particular class, from granting or renewing a license for a shorter period than that prescribed for stations of such class if, in its judgment, the public interest, convenience, or necessity would be served by such action.

SEC. 3. Subsection (b) of section 402 of such Act is amended by striking out "to the United States Court of Appeals for the District of Columbia" and inserting in lieu thereof, "as provided in subsection (c)," and subsection (c) of such section is amended by inserting after "(c)" the following new sentence: "An appeal under subsection (b) from an order or decision of the Commission—

"(1) made on an application (other than one under section 325) involving a broadcast facility and described in paragraph (1), (2), (3), or (6) of subsection (b), or

"(2) described in paragraph (5) of such subsection modifying or revoking a construction permit or station license of a broadcast facility,

shall be brought in the United States court of appeals for the circuit in which such broadcast facility is, or is proposed to be, located; and appeals under such subsection from any other order or decision of the Commission may be brought in the United States Court of Appeals for the District of Columbia Circuit or the United States court of appeals for the circuit in which the person bringing the appeal resides or has his principal place of business.".

SEC. 4. (a) The Federal Communications Commission shall examine its rules, regulations, and procedures relevant to the broadcast license renewal process to determine in what ways the filings, supporting documents, and other administrative materials now required of each licensee by the Commission for renewal considerations can be reduced and consolidated. In making this examination, the Federal Communications Commission shall give special consideration to reducing and consolidating the filings, supporting documents, and other administrative materials now required for license renewal consideration of the smaller broadcast station.

(b) This examination shall be completed within six months after the date of enactment of this Act. Within seven months after the date of enactment of this Act, the Federal Communications Commission shall report to Congress any changes it has made in its rules, regulations, and procedures as a result of this study.

SEC. 5. (a) The first sentence of section 309(d)(2) of such Act is amended to read as follows: "Any party in interest may file with the Commission, within such time period as may be specified by the rules of the Commission, a petition to deny any application (whether as originally filed or as amended) to which subsection (b) applies."

(b) The first sentence of section 309(d)(2) of such Act is amended by inserting after "pleadings filed" the following: "by the parties within the time periods specified by the rules of the Commission.".

THE BROADCAST LICENSE RENEWAL ACT: SECTION-BY-SECTION SUMMARY

Section 2.—The Federal Communications Commission (FCC) shall determine whether it is in the public interest to prescribe different license term lengths for television, radio, or different categories of licensees. The Commission shall renew the broadcast license if, during the preceding license term, the licensee (i) has been responsive to the problems, needs and interests of its service area and (ii) has conducted the operation of its station in a manner not characterized by serious deficiencies.

Section 3.—All appeals from FCC decisions involving applications for a broadcasting license shall be brought in the U.S. Court of Appeals for the circuit in which the broadcast facility is located.

Section 4.—Within six months of enactment, the FCC is directed to complete an examination of its rules and regulations relevant to the license renewal process in order to determine ways of easing the administrative burden now placed on each licensee at renewal time. Special consideration shall be given to smaller broadcast stations. Within seven months of enactment, the FCC shall report to Congress on any changes made as a result of this examination.

Section 5.—Any party in interest may file a petition to deny an application for license renewal.

By Mr. PEARSON:

S. 1109. A bill to amend the Agricultural Development and Assistance Act of 1954 to assist developing nations in making the transition from foreign assistance recipients to full trading partners of the United States, and for other purposes; to the Committee on Agriculture, Nutrition, and Forestry.

Mr. PEARSON. Mr. President, I am deeply concerned about the worldwide hunger and malnutrition problem. From 400 million to 800 million people in the world are suffering from malnutrition. The population of the less-developed nations is increasing faster than the available food supply.

As the Public Law 480 act clearly states, the United States is committed:

To use the abundant agricultural productivity of the United States to combat hunger and malnutrition and to encourage economic development in developing countries . . . (7 U.S.C. No. 1691 [1970]).

Mr. President, one of the most practical and acceptable means to live up to this commitment is to upgrade the quantity and quality of the agricultural goods we export under the Public Law 480 program. This would also allow the United States to comply with the spirit of the sentiments expressed at the World Food Conference, where we pledged to work to raise the nutritional standards of the underdeveloped nations.

A healthy, well-balanced diet requires a combination of protein, carbohydrates, fats, vitamins, and minerals. One of the major problems in less-developed nations is the lack of a sufficient amount of proteins in the diet of the people. For a healthy body to grow and functions properly, it needs eight essential amino acids found in proteins.

Mr. President, the United Nations Economic and Social Council has pointed out that protein malnutrition is the biggest single contributor to infant and young child mortality in developing countries. Over 100 million children under the age of 3 suffer from a form of protein malnutrition. At this age the deficiency can cause irreversible damage to mental and physical development. In addition, the high infant mortality rate in these nations is directly related to the high birthrate, as parents seek to have more children to be sure that some will survive. Thus, adequate nutrition is a prerequisite for the success of plans to curb world population growth.

The traditional sources of protein are meat, milk, eggs, and fish. These animal proteins are often unavailable to people in the less-developed nations because of their limited supply, high cost, and storage difficulties.

Mr. President, it is now possible, through processing and fortifying, to develop blended foods with a protein content ranging from 13 to 20 percent, which approximates the nutritional quality of animal protein. By contrast, unfortified corn meal has a protein content of only 7.9 percent. Thus, these blended foods can provide a convenient and economical source of essential nutrients.

The United States has already acknowledged the importance of blended and fortified grain products. In response to a 1966 amendment to Public Law 480—No. 203—a variety of blended and fortified foods were developed for use in food for peace to combat malnutrition abroad, especially among infants and young children. These foods have since met wide acceptance. For example, over 3 billion pounds of corn-soy-mild—CSM—alone have been shipped to more than 100 countries for use in material/child health programs, school lunch programs, and food-for-work programs.

As a result of their positive experiences with blended and fortified foods under title II many of the developing nations would like to continue receiving these products under title I. Although they might prefer to purchase blended foods, they have felt constrained by the additional costs of processing. While appreciating the nutritional benefits of blended grains, they have sought to maximize the amount of grains they can purchase under title I.

Mr. President, of course, I do not wish to substitute the blended foods for whole grain products. Both are important to our export programs and to achieve the humanitarian goals established by the food for peace program. This bill merely allows the underdeveloped nation the option to purchase more blended foods in addition to whole grain products.

This bill will authorize payment by the United States of the costs of fortification and processing of blended food products purchased by countries under title I. It is intended to allow the purchasing nation to improve the nutritional levels of their neediest individuals. Blended foods will thus be exported under both title I and title II of Public Law 480.

Since the grant of authority to the President is permissive rather than mandatory, the administration will be able to keep the cost of the program within bounds without the need for any express statutory limits. The only new costs to the United States will be the difference between the price of the whole grains and the costs resulting from the blending process. This is a small price indeed compared with the problem of global malnutrition.

When evaluating the costs of this program, we should not overlook the side benefits to the American economy. It will help the farmer by exporting his produce. United States labor and industry could benefit through the related stimulation of production and employment. There is also a great potential for market development of these products in the purchasing nations. One goal of this program is for the less developed nations to become viable trading partners for American agricultural products. Finally, several million dollars have been expended in research, equipment design and installation, and technology in the development and introduction of blended grain products. As a result, we have learned a great deal about nutrition which has had practical applications to improve the diets of people within the United States.

Mr. President, I urge the passage of this measure, which is an example of the combination of the efforts of American ingenuity and American agriculture, working together to help solve one of the most serious problems in the world.

By Mr. HATFIELD:

S. 1111. A bill for the relief of Gunther Griffel; to the Committee on the Judiciary.

GUNTHER GRIFFEL

Mr. HATFIELD. Mr. President, I send to the desk legislation for the relief of Gunther Griffel, a citizen of Canada who has been found excludable from the United States under section 212(a)(23) of the Immigration and Nationality Act.

Mr. Griffel, a Canadian citizen, was admitted to the United States in 1969 for permanent residence, and settled in Eugene, Oreg., where he has been gainfully employed and is a model member of the community. In 1973, he departed the United States for a visit to Canada and upon entering Canada was found to be in possession of a small amount of hashish—less than 1 ounce. The offense found him mandatorily excludable from the United States and, although certain factors exist which might warrant the Department of Justice to grant special consideration in his case, the Department has no such authority without private legislation. The legislation I propose will grant Mr. Griffel an exemption to section 212(a) of the Immigration and Nationality Act and will thus make him eligible for permanent residence to the United States.

I ask unanimous consent that the text of this legislation be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1111

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of paragraph (23) of section 212(a) of the Immigration and Nationality Act, for purposes of such Act, Gunther Griffel may be admitted to the United States for permanent residence if found to be otherwise admissible under the provisions of this Act, except that this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge before the date of the enactment of this Act.

By Mr. HATFIELD:

S. 1112. A bill for the relief of Gladys Yan Chan Lu; to the Committee on the Judiciary.

GLADYS YAN CHAN LU

Mr. HATFIELD. Mr. President, today, I send to the desk legislation for the relief of Gladys Yan Chan Lu, the adopted daughter of an American family residing in Corvallis, Oreg. S. 3514, which I had introduced in the 94th Congress, was not reported out of committee.

Ms. Lu came to the United States from Singapore in 1973 at the age of 15. She was adopted by Mr. and Mrs. Kuo C. Lu shortly thereafter. Ms. Lu was admitted to this country on a nonimmigrant student visa. She now wishes to begin the process of naturalization, but disabilities in existing immigration statutes will not allow Ms. Lu to be naturalized as an adopted noncitizen child. The legislation I propose will permit Ms. Lu to be classified as a child within the meaning of section 101(b)(1)(E) of the Immigration and Nationality Act, thus facilitating the naturalization process in her case.

I ask unanimous consent that the text of this legislation be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1112

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Gladys Yan Chan Lu may be classified as a child within the meaning of section 101 (b) (1) (E) of such Act and shall be accorded immediate relative status under section 201 (b) of such Act upon approval of a petition filed on her behalf by Mr. and Mrs. Kuo C. Lu, citizens of the United States, pursuant to section 204 of such act. No natural parent, brother, or sister, or prior adoptive parent of Gladys Yan Chan Lu shall, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

By Mr. BARTLETT:

S. 1114. A bill to extend the State Taxation of Depositories Act; to the Committee on Banking, Housing, and Urban Affairs.

EXTENSION OF THE STATE TAXATION OF DEPOSITORIES ACT

Mr. BARTLETT. Mr. President, since 1971 Congress has imposed successive moratoria on the authority of the several States to impose "doing business taxes" on out-of-State financial depositories. These moratoria have been enacted in order to provide adequate time for conducting and reviewing several studies on this complex issue and time for Congress to enact uniform Federal guidelines governing the interstate taxation of financial depositories. The most recent moratorium expired on September 12, 1976.

Congress, the Federal Reserve Board, the depository industries, and a number of States have expressed concern that, in the absence of uniform Federal rules, the multi-State taxation of the interstate activities of depositories will produce serious disruptions in credit flows, may reduce the efficiency of the banking system, will be costly to the State and depositories, and will produce adverse revenue impacts for a number of States. On May 11 and 12, 1976, the Subcommittee on Financial Institutions of the Senate Committee on Banking, Housing,

and Urban Affairs, held hearings on several proposals for a uniform Federal law governing the interstate taxation of financial depositories. So far, nothing has been resolved.

To date, the States have voluntarily refrained from imposing their "doing business taxes" on out-of-State depositories. However, as many as 30 States have authority under existing State law to impose such taxes, and a number are likely to start doing so the longer Congress takes to consider this complex issue. Several States which do not at this time have laws for taxing out-of-State depositories are actively considering the enactment of such laws. The current uncertainty as to the application of this vast array of different State and local methods of taxation, as well as concern over higher compliance costs and duplicative taxes by their domiciliary States already is causing many depositories to review their extensions of credit into other States.

In the absence of a Federal moratorium, as States begin to impose their doing business taxes on out-of-State institutions, depositories which cannot curtail their interstate activities will encounter serious problems in attempting to interpret and comply with numerous State and local tax statutes and regulations. Substantial costs will be incurred to change the existing methods of recordkeeping in order to compile the necessary data for filing gross receipts, income and capital stock tax returns with nonuniform division of base rules in a large number of States, cities, and counties. It is highly probable that litigation in the Federal and State courts will ensue as some depositories challenge State attempts to extend taxing jurisdiction or to test the constitutional limits of State and local statutes as applied to out-of-State depositories.

The States have not been able to agree upon uniform and equitable rules and procedures for the State taxation of nonresident depositories. Due to a lack of experience in taxing out-of-State depositories and the possibility of Federal legislation in this area, it is even more unlikely that the States would be able to agree to standardize their methods of taxation for financial depositories within the foreseeable future.

Without the extension of this moratorium, the legislatures of many States will adopt statutes to allow the taxation of out-of-State depositories and will attempt to provide apportionary relief for their own depositories taxed in other States. Tax administrators in all States will incur substantial expenses to secure initial compliance, draft forms, adopt regulations, and train personnel. For the States and their localities, as well as depositories, many of these compliance and administrative expenses may be unnecessary or require duplication when Congress ultimately adopts Federal legislation in this area. The previously existing procedures were simple and efficient and should be allowed to continue until such time as Congress passes uniform legislation in this area.

Until such time as the Federal Government, the State governments, and the financial institutions can agree on one uniform practice, I suggest that we adhere to the declaration of policy contained in the State Taxation and Depositories Act of 1973. In part, it stated:

The Congress finds that the national goals of fostering an efficient banking system and the free flow of commerce among the states will be furthered by clarifying the principles governing state taxation of interstate transactions of banks and other depositories. Application of taxes measured by income or receipts, or other "doing business" taxes in states other than the states in which depositories have their principal offices should be deferred until such time as uniform and equitable methods are developed for determining jurisdiction to tax and for dividing the tax base among the states.

For these reasons, I believe it is important that the moratorium on State taxation on out-of-State depositories should be extended in order to allow Congress sufficient time to enact such uniform and equitable rules so as to avoid even a temporary curtailment of interstate credit flows, the incurring of unnecessary expenses by both the States and depositories, and a disruption of existing State revenue bases.

ADDITIONAL COSPONSORS

S. 11

At the request of Mr. McCLELLAN, the Senator from New Jersey (Mr. CASE) was added as a cosponsor of S. 11, to provide for the appointment of additional district court judges.

S. 18

At the request of Mr. McINTYRE, the Senator from West Virginia (Mr. RANDOLPH) and the Senator from Alaska (Mr. GRAVEL) were added as cosponsors of S. 18, the Octane Disclosure Act of 1977.

S. 149

At the request of Mr. BENTSEN, the Senator from Arizona (Mr. DECONCINI) was added as a cosponsor of S. 149, to amend the Internal Revenue Code.

S. 175

At the request of Mr. SCHWEIKER, the Senator from Rhode Island (Mr. CHAFEE) was added as a cosponsor of S. 175, a bill to provide a special program of financial assistance to opportunities industrialization centers and to other national community-based organizations.

S. 247

At the request of Mr. GOLDWATER, the Senator from Texas (Mr. BENTSEN) was added as a cosponsor of S. 247, to provide recognition to the Women's Air Force Service Pilots.

S. 528

At the request of Mr. WILLIAMS, the Senator from South Dakota (Mr. ABOUREZK) and the Senator from Minnesota (Mr. ANDERSON) were added as cosponsors of S. 528, a bill relating to collective bargaining contracts.

S. 600

At the request of Mr. ROBERT C. BYRD, the Senator from Delaware (Mr. ROTH), the Senator from Alabama (Mr. ALLEN), the Senator from Vermont (Mr. STAFFORD), and the Senator from Kentucky (Mr. HUDDLESTON) were added as cosponsors of S. 600, to reorganize Federal regulatory agencies.

S. 672

At the request of Mr. HUMPHREY, the Senator from Maryland (Mr. SARBANES) was added as a cosponsor of S. 672, to provide for the procurement by the General Services Administration of existing solar energy devices for use in government buildings.

S. 708

At the request of Mr. CLARK, the Senator from California (Mr. CRANSTON), the Senator from Ohio (Mr. GLENN), and the Senator from South Carolina (Mr. HOLLINGS) were added as cosponsors of S. 708, to amend title XVIII of the Social Security Act to provide payment for rural health clinic services.

S. 743

At the request of Mr. DURKIN, the Senator from Massachusetts (Mr. KENNEDY), and the Senator from West Virginia (Mr. RANDOLPH) were added as cosponsors of S. 743, the Petroleum Marketing Practices Act.

S. 779

At the request of Mr. BURDICK, the Senator from Montana (Mr. MELCHER) was added as a cosponsor of S. 779, to amend the Internal Revenue Code.

S. 780

At the request of Mr. CLARK, the Senator from Nevada (Mr. CANNON) was added as a cosponsor of S. 780, to amend title II of the Social Security Act to establish a new consumer price index for older Americans for calculating automatic cost-of-living benefit increases, to provide for semiannual cost-of-living increases, and to modify the social security retirement test.

S. 801

At the request of Mr. McINTYRE, the Senator from Pennsylvania (Mr. HEINZ) was added as a cosponsor of S. 801, to amend title I of the Housing and Community Development Act of 1974 for the purpose of providing that units of general local government which are not metropolitan cities or urban counties and which are receiving grants under the hold-harmless provisions of such title shall be entitled, after fiscal year 1977, to continue to receive at least the amount to which they are presently entitled under such provisions.

S. 805

At the request of Mr. McINTYRE, the Senator from Maryland (Mr. SARBANES), the Senator from West Virginia (Mr. RANDOLPH), and the Senator from New Hampshire (Mr. DURKIN) were added as cosponsors of S. 805, the Solar and Energy Conservation Commercialization Act.

S. 806

At the request of Mr. McINTYRE, the Senator from Michigan (Mr. RIEGLE), the Senator from West Virginia (Mr. RANDOLPH), and the Senator from New Hampshire (Mr. DURKIN) were added as

cosponsors of S. 806, the Renewable Energy and Energy Conservation Tax Act of 1977.

S. 807

At the request of Mr. McINTYRE, the Senator from Maryland (Mr. SARBANES) and the Senator from New Hampshire (Mr. DURKIN) were added as cosponsors of S. 807, the Small Business Energy Research Incentives Act.

S. 821

At the request of Mr. HUMPHREY, the Senator from Maryland (Mr. SARBANES) and the Senator from Montana (Mr. MELCHER) were added as cosponsors of S. 821, to authorize the inclusion of solar energy research, development, and demonstration programs in certain agricultural programs.

S. 846

At the request of Mr. DOMENICI, the Senator from California (Mr. CRANSTON) was added as a cosponsor of S. 846, a bill to provide for a continuing program of water resources research and development.

S. 924

At the request of Mr. WILLIAMS, the Senator from Montana (Mr. METCALF) was added as a cosponsor of S. 924, a bill to provide for equal treatment of craft and industrial workers and to establish a national framework for collective bargaining in the construction industry.

S. 995

At the request of Mr. WILLIAMS, the Senator from Connecticut (Mr. RIBICOFF), the Senator from Maine (Mr. HATHAWAY), the Senator from Ohio (Mr. METZENBAUM), and the Senator from South Dakota (Mr. MCGOVERN) were added as cosponsors of S. 995, a bill to amend title VII of the Civil Rights Act of 1964 to prohibit sex discrimination on the basis of pregnancy.

S. 1034

At the request of Mr. HAYAKAWA, the Senator from Texas (Mr. BENTSEN), the Senator from Utah (Mr. GARN), the Senator from Nebraska (Mr. CURTIS), the Senator from North Dakota (Mr. YOUNG), the Senator from New Mexico (Mr. SCHMITT), the Senator from Nevada (Mr. LAXALT), and the Senator from Alaska (Mr. STEVENS) were added as cosponsors of S. 1034, to provide for a study of the effects of saccharin and for other purposes.

AMENDMENT NO. 86, AS MODIFIED

At the request of Mr. WEICKER, the Senator from Utah (Mr. GARN) was added as a cosponsor of amendment No. 86, as modified, proposed to the resolution (S. Res. 110), to establish a Code of Official Conduct for the Senate.

AMENDMENT NO. 136

At the request of Mr. SCHWEIKER, the Senators from South Carolina (Mr. THURMOND and Mr. HOLLINGS) and the Senator from Nevada (Mr. LAXALT) were added as cosponsors of amendment No. 136, intended to be proposed to H.R. 4876, making appropriations to provide economic stimulus.

AMENDMENT NO. 147

At the request of Mr. WALLOP, the Senator from Alabama (Mr. SPARKMAN), the Senator from Wyoming (Mr. HANSEN) and the Senator from Georgia (Mr. TALMADGE) were added as cosponsors of amendment No. 147, intended to be proposed to Senate Resolution 110, to establish a Code of Official Conduct for Members, officers, and employees of the U.S. Senate; and for other purposes.

SENATE CONCURRENT RESOLUTION 16—SUBMISSION OF A CONCURRENT RESOLUTION RELATING TO THE COMMISSION ON FEDERAL PAPERWORK

(Referred to the Committee on Governmental Affairs.)

Mr. McINTYRE (for himself and Mr. HATFIELD) submitted the following concurrent resolution:

S. CON. RES. 16

Resolved by the Senate (the House of Representatives concurring),

Whereas, The American people, whether as private individuals or engaged in business, professional, or other pursuits, are heavily burdened with paperwork resulting from requirements imposed by the Federal Government; and

Whereas, The paperwork burdens fall most heavily on those least able to bear them, such as small businesses and persons of low and moderate income; and

Whereas, The requirements for such paperwork arise from laws enacted by the Congress and regulations or instructions promulgated by Federal agencies; and

Whereas, The multiplicity and diversity of Federal programs and activities authorized by law and subject to administration direction cause a great deal of duplicative, overlapping, or otherwise excessive and unnecessary paperwork; and

Whereas, The Congress has created the Commission on Federal Paperwork to inquire into the causes and to make recommendations for the reduction or elimination of excessive and unnecessary paperwork; and

Whereas, The Commission on Federal Paperwork has submitted to the President and to the Congress from time to time recommendations for remedial actions and will submit a final report with recommendations by October 1977; and

Whereas, The Congress is mindful that excessive and unnecessary paperwork not only imposes substantial costs on all parties affected but impairs public confidence in the efficiency and the effectiveness of the Federal Government; and

Whereas, The Congress is determined to reduce or eliminate, by all practical means, excessive and unnecessary paperwork associated with Federal programs and activities; now

Therefore, be it resolved, That the findings and recommendations of the Commission on Federal Paperwork be sympathetically received and duly considered by committees of the House and Senate in the development of legislation and in oversight of Federal agencies; and

Be it further resolved, That committees and members of the Congress give careful attention to the recordkeeping and reporting burdens which may be imposed upon persons and organizations, including State and local units of government, as a consequence of specific provisions in legislation to be reported or in administrative regulations and instructions pursuant to legislation which has been enacted; and

Be it further resolved, That committees and members of Congress, in requesting information from Federal agencies and other sources relative to pending legislation, oversight duties, or constituent requests, give due regard to the costs of supplying, receiving, and distributing such information, its usefulness, and the extent to which it probably will be used; and

Be it further resolved, That it is the sense of the Congress that the Federal agencies sympathetically receive and duly consider the findings and recommendations of the Commission on Federal Paperwork and give continuing attention to excessive and unnecessary paperwork.

THE COMMISSION ON FEDERAL PAPERWORK

Mr. McINTYRE. Mr. President, today I submit a concurrent resolution together with Senator HATFIELD, to urge the Congress to study the recommendations of the Commission on Federal Paperwork when developing legislation to help solve the problems facing us all.

This resolution has been introduced in the House of Representatives by Representatives TOM STEED and FRANK HORTON who serve on the Commission on Federal Paperwork with Senator HATFIELD and me.

Our purpose in submitting this resolution is to continue the work done by the Senate when it passed rule changes in February that require paperwork and regulatory impact statements when bills are reported from committees.

Our goal is to cut Government paperwork by making full use of the work done by the 2-year Commission, and insure further that the committees of the Congress fully study the paperwork impact of bills we enact.

As many of you know, the Commission on Federal Paperwork has had considerable success in cutting Government paperwork. Legislation has passed abolishing the 941–A form required by the Social Security Administration to report wages quarterly, replacing that form with one annual report. Changes are being made in the reporting requirements of the Occupational Safety and Health Administration and in the implementation of the Employee Retirement Income Security Act.

In the next few months the Commission will be providing us with progress reports which will update the already copious recommendations it has made that have been accepted by the agencies. It will also be providing us with a series of reports which should be extremely useful to many committees of the Congress.

AMENDMENTS SUBMITTED FOR PRINTING

SENATE CODE OF OFFICIAL CONDUCT—SENATE RESOLUTION 110

AMENDMENT NO. 150

(Ordered to be printed and to lie on the table.)

Mr. MUSKIE submitted an amendment in the nature of a substitute for title 1, intended to be proposed to the resolution (S. Res. 110) to establish a code of official conduct for Members, officers, and employees of the Senate, and for other purposes.

AMENDMENT NO. 151

(Ordered to be printed and to lie on the table.)

Mr. GRIFFIN submitted an amendment intended to be proposed by him to amendment No. 65, proposed to the resolution (S. Res. 110), supra.

AMENDMENT NO. 152

(Ordered to be printed and to lie on the table.)

Mr. HATHAWAY submitted an amendment intended to be proposed by him to amendment No. 65, supra.

Mr. HATHAWAY. Mr. President, tomorrow I intend to offer an amendment which would modify the definition of family business income to allow such income to be excluded from the 15-percent limitation only if that family business income were a return on investment. Any family business income flowing directly or indirectly from personal services would be subject to the 15-percent limitation. The amendment would also tighten the definition of outside earned income.

Proposed rule 44 limits outside earned income to 15 percent of salary, but defines such income as "income received as a result of personal services actually rendered if such services are material income-producing factors." Similiarly, the rule exempts from the 15-percent limitation income, "family enterprises if the services provided by the Senator or officer or employee * * * are not a material income-product factor." These definitions appear to create a loophole which would allow the rendering of personal services which generate income to a family business or otherwise, so long as such income when reviewed proportionately to the total income of the business as a whole, does not constitute a material element of the total business income.

For example, a Senator might be permitted under these rules to accept a $50,000 payment from a multinational corporation as a result of personal services rendered in the form of advice on legislative matters. This income would arguably be exempt from the limitation since the services were not material income-producing factors to the business. Further, the report, in describing what is intended with reference to a family business to be viewed as "a material income-producing factor," states:

> For example, if the Senator or employee is making substantially all of the managerial decisions for the enterprise or spending substantial amounts of time with it, then the income so derived should be considered personal services income.

It is disturbing that income derived from any involvement not meeting this substantiality test would apparently be exempt. My amendment would subject all income resulting from personal services actually rendered to the 15-percent limitation, thus requiring such income to be viewed in an absolute sense and not in a relative sense. The amendment would exempt income deriving from family-controlled businesses from this $8,625 limitation only if the business were one in which both personal services and capital were income-producing factors and the personal services rendered by such individual did not generate a significant amount of income. It would permit income from family businesses as a return on capital consistent with the exemption of unearned income from the 15-percent limitation, but would restrict personal services rendered to such a business to a very minimal level. Otherwise, the income derived from such a business, combined with all other outside earned income, would have to be within the 15-percent ceiling. This language is identical to that already adopted by the House of Representatives.

Over the past few days, we have focused considerable attention on the provisions of the code which impose the 15-percent limitation on earned income, but totally exempt unearned income. We have heard again and again that the primary purpose of this distinction is to insure that we have full-time Senators who are not diverted or distracted by other activities, and do not engage in activity which might create or appear to create conflicts of interest.

This body affirmed this treatment of the two different kinds of income and determined that the 15-percent limitation on earned income resulting from personal services was a key provision to this Code of Conduct.

We must, therefore, insure that the legislative language contained in the code fully meets this intention as expressed yesterday by this body.

The language in proposed rule 44 does cause a number of problems in this regard.

The broad definition laid out in the rule for what constitutes "outside earned income" states:

> Any income earned by an individual which is income received as a result of personal services actually rendered if such services are material income producing factors.

I have no problems with this definition until I reach the words "if such services are material income producing factors." I do not know what these words mean. If they mean what I hope they mean, that all income from personal services is subject to the limitation, they are redundant and ought to be stricken. If they mean what I fear they mean, they create a gigantic loophole and ought to be stricken.

The words connote a viewing of the income involved as a proportion of the total income received by the individual or the business involved and could easily allow personal services income of large amounts.

The House language is much better in this regard, and is consistent with the general structure of the code in exempting unearned income but subjecting personal services income to the $8,600 limitation.

It does, however, allow additional income from family-controlled businesses if these businesses are ones in which both personal services and capital are income producing factors, if the individual can show that this additional income is essentially unearned, if he can show that it is essentially a return on capital, and if he can show that any personal services rendered by him to the business did not generate a significant amount of income to himself or to the business. He would not be permitted to make the day-to-day management decisions of the business for this would be personal services which would generate a significant amount of income.

The Senate language, as explained in the report, would allow an individual to receive an unlimited amount of income from a family business so long as he did not make substantially all of the managerial decisions for the enterprise or spend substantial amounts of time with it. Apparently, he could devote a good deal of time to the enterprise and could make a good deal of the decisions involved and be able to receive large amounts of money for these services. This is grossly unfair to those Senators who are not associated with family businesses and who are, therefore, not allowed to accept any amount of money for personnal services in excess of $8,600 per year.

My amendment would correct this inequity and would subject all income from family businesses which flowed from personal services to the 15 percent limitation and would allow additional income only if that income were a return on investment.

I ask unanimous consent that this amendment be printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 152

On page 25, line 23, strike out all after "rendered" through page 25, line 24 and insert in lieu thereof a period.

On page 26, line 8, beginning with "income", strike out all through "factor" on page 26, line 11, and insert in lieu thereof the following: "in the case of a Senator, officer, or employee of the Senate engaged in a trade or business in which the Senator, officer or employee of the Senate or his family holds a controlling interest and in which both personal services and capital are income-producing factors, any amount received by such Senator, officer, or employee of the Senate so long as the personal services actually rendered by the Senator, officer, or employee of the Senate in the trade or business do not generate a significant amount of income.".

NOTICES OF HEARINGS

YOUNG FAMILIES' HOUSING ACT OF 1977—S. 664

Mr. PROXMIRE. Mr. President, I wish to announce that the Committee on Banking, Housing, and Urban Affairs will hold a 2-day hearing, on March 31 and April 1, 1977 on S. 664, the proposed Young Families' Housing Act of 1977, and S. 1078, a bill to amend section 245 of the National Housing Act to revise the experimental mortgage insurance program.

The hearing will be held in room 5302, Dirksen Senate Office Building, and will begin at 10 o'clock each morning.

The committee would welcome statements for inclusion in the hearing record.

ADDITIONAL STATEMENTS

TUNA FISHERMEN

Mr. GARN. Mr. President, in the pages of our daily newspapers, in the form of full-page, purchased advertising, we hear continually about the Great Tuna War. The war was provoked by the Marine Mammal Protection and Endangered Species Acts, both of which make up in enthusiasm what they lack in realism.

In an attempt to eliminate the accidental killing of porpoises during tuna seining activity, truly Draconian measures have been imposed on the fishing industry. The result has been a rush to foreign-flag registration of our tuna fleet, uncertainty in the industry, the threat of higher prices to consumers, and a number of other undesirable and unanticipated reactions. And through it all, porpoises continue to be killed, if not by American tuna boats, by foreign-flag vessels.

What is needed, Mr. President, is some legislative flexibility, some patience, and above all, some knowledge of the factual situation. Being from Utah myself, I am certainly no expert on either tuna or porpoises, but I can recognize expertise when I see it. The February issue of Smithsonian magazine contains an excellent article by Kenneth S. Norris which describes in detail the problem, and the insight his researches have provided into possible solutions. The best thing about the article is the absence of heat and the abundance of light. Clearly Mr. Norris understands the needs of the tuna fishermen, as he knows the behavior patterns of the tuna. Nor does he discount the feelings motivating the crusaders for the porpoise. In short it is an informative article and must reading for anyone who wants to try to find a way out of our current muddle. Incidentally, it offers insights into things the Senate might try to avoid in future environmental issues.

I ask unanimous consent that Mr. Norris' article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TUNA SANDWICHES COST AT LEAST 78,000 PORPOISE LIVES A YEAR, BUT THERE IS HOPE

(By Kenneth S. Norris)

In 1975 some 154,000 porpoises were killed by fishermen seining yellowfin tuna in the Pacific; most of them suffocated in the three-quarter-mile-long nets. No one wants this to happen. Many fishermen need the porpoises as beacons to locate tuna, because the fish typically swim under and behind the porpoises, even during high-speed chases. And the fishermen are keenly aware of the swell of public indignation over the inadvertent porpoise kills that is threatening the existence of the American tuna industry.

Much of the public perceives these animals as sentient, charming creatures, remarkably friendly toward Man, and considered to be the mammals closest to Man in intelligence. Many people are appalled to think that porpoises are being caught, killed and thrown away. One result has been a proliferation of laws and regulations. Quite a few United States fishermen use expensive fine-mesh net in certain parts of their seines because porpoises don't entangle in it as easily as in older, larger-mesh net. Many vessels now carry observers to record each set a fisherman makes, speedboats are required to stand by to pull on the net in case currents should threaten its collapse on porpoises, and the Marine Mammal Protection Act and the Endangered Species Act prohibit the depletion of any marine mammal species, including those being killed by fishermen.

Our fishermen watch in indignation as their rising foreign competition fishes alongside them with none of these restrictions or costs. It's business as usual for the foreigners, many of whom, so the rumor goes, do not even bother to use the vital porpoise-saving *backdown* maneuver, a bit of ship-handling that can sluice living porpoises out of the net. Backing down is accomplished after most of the net has been drawn in and stacked on the vessel's stern. On a recent cruise I watched the seiner *Elizabeth C.J.* reverse her powerful engines and move in a broad backward circle, pulling the net into a long, finger-shaped channel behind her. The ship literally pulled the net out from under a tightly packed school of porpoises that had clustered in the middle of the net. Most of the porpoises knew instantly that they were free and raced away, bursting repeatedly from the water in high arcing leaps.

The uncomplicated nature of foreign fishing has lured many of our fishermen away. Some are now skippers or crew on foreign vessels. Many more, with family ties and other loyalties in the United States, flirt with ways to fish from foreign shores should pressures and costs in the United States prove worse than import restrictions.

I use the generic term porpoise to include dolphins. They are cetaceans, the major taxonomic group that includes whales. Dolphins tend to have an obvious snout or beak. Three major species of porpoise are involved in tuna fishing: the spotter or spotted, the spinner and the whitebelly. All are slim, delicate creatures that live in large, complex schools in the open sea. All are marked with beautiful bold patterns of light and dark (except for one group of spinners that are nearly uniformly gray), and all, I knew, are wonderfully responsive yet shy animals when trained in captivity. Government figures show that the populations of spinners may be depleted, although everyone admits it is dreadfully difficult to count animals in the sea. Regulation against catching spinners hangs like a bludgeon over the fishermen, for they often set their nets on mixed schools of spinner and spotter porpoises. The fishery is uncertain whether it can survive without "setting" on spinners. (Only yellowfin tuna, which is favored by consumers, is caught by setting on porpoises.)

This situation is recognized by many conservationists as potentially disastrous and paradoxical. If the fleet goes foreign, no amount of American indignation can be expected to save the porpoises. The very activism of the conservation community will have sealed the fate of the eastern Pacific porpoise populations.

I first became involved in the problem in the early 1960s when a few porpoises came back in the freezing holds of tuna vessels and were turned over to scientists, including me. Later I suggested to a graduate student, William Perrin, that he might study them for his dissertation. He went on to become the world's authority on these tropical porpoises, and is now a central figure in governmental research efforts. Then, while working in Hawaii, I had carried out a long study of wild spinner porpoise behavior. In 1972 I was named to a governmental committee charged with designing a research program to find ways of catching tuna without killing porpoises. We knew that the forthcoming Marine Mammal Protection Act would require substantial progress toward a solution during a two-year grace period. Not long afterward, as a member of the United States Marine Mammal Commission's Committee of Scientific Advisers, I headed the tuna-porpoise subcommittee, and continued to press for a more complete and balanced research program.

Thus it was with some pleasure and a considerable feeling of "put up or shut up" that I accepted leadership of a program to study the behavior of both tuna and porpoises in the fall of 1976, with Dr. Warren Stuntz, an experienced behavioral scientist, as my project manager. The idea was simple enough perhaps somewhere in the behavior patterns of fish and porpoises we could find the way to release porpoises alive from the seines. The industry contributed funds and invaluable liaison with the fleet through a newly formed entity, the Porpoise Rescue Foundation. The Marine Mammal Commission provided both money and the impetus for the project.

Two groups of government scientists took part, one under James Coe to study net function during tuna sets, and another group under Perrin to assist in the behavior effort. A third group, an acoustic research team under Drs. Frank Aubrey and William Evans (San Diego State University and the Naval Undersea Center, respectively), sought to define the underwater sound found during a porpoise set, including both those of the animals and the vessel and her gear. The National Marine Fisheries Service provided much support, including sea time on their research vessel, *David Starr Jordan,* and arranged for a research allotment of tuna that would allow us to obtain the services of a working seiner. With this allotment the seiner could fish legally, out of season, in return for helping with our work.

What we found will be documented in the next few months. My intent here is to describe some hints from our work and the results of previous gear modifications that promise ways to eliminate a sizable part of the porpoise kill, provided the necessary actions are taken by the governmental, scientific, legal, fishing and conservation communities. I especially want to show reasons for hope at a time when such hope may be crucial to the continued survival of both the tuna fishery and the animals. What I have seen and heard does convince me that for the first time, with application, a major reduction in the kill is possible.

I knew our tuna seiners were sophisticated fishing vessels, but nothing prepared me for my first walk around the *Elizabeth C.J.*, a spanking new member of the fleet. I first saw her as she lay at the wharf in San Diego, all 260 feet of her, a sleek, pale blue ship, with decks trimmed in sea-foam green. A massive net was piled ten feet high on her stern, surmounted with a beamy skiff. Just forward was the working deck, covered with winches, cables and booms. Forward of the deck rose the raking mast, an elevator in its interior. By riding in this little cage, one could reach the crow's nest, a vantage point from which the chase and the setting of the net were often guided.

Directly below, on a broad midships deck, nestled the five speedboats used to round up the porpoises. They are deep V-hull aluminum craft built for durability, for they are always used at top speed, and it is common to see them totally airborne when the seas are rough, leaping from crest to crest in roaring pursuit of a fleeing porpoise and tuna school.

This entire speedboat fleet is launched in minutes by an ingenious system of lines,

hoists and hooks. When a porpoise school bearing fish is sighted, the drivers pile into these boats, are dropped into the sea, and race off in a long line ahead of the seiner.

The spacious bridge is modernly equipped, including the latest satellite navigation system which, on a small television screen, continually reads out position to hundredths of a degree of latitude and longitude. Outside on the bridge wings are two pairs of high-powered binoculars. Every daylight hour, starting at dawn, two crewmen scan the horizon for bird flocks, the first hint of porpoises and the fish that swim beneath them. An even more powerful tool is chained down atop the broad deckhouse: a two-seater helicopter, a ship's arm that extends her reach many miles beyond the ship itself. From that platform I was able to look down on fleeing porpoise schools and see "shiners," sun glints from tuna swimming below the mammals. Experienced fishermen can estimate the number of tons of fish involved, and thus make the decision whether to initiate a set.

Below decks the vessel is all power and utility, spotlessly clean. Eighteen holds line one deck to receive 1,700 tons of tuna; refrigeration and recirculation machinery is mounted nearby to cool brine for freezing the fish. When complete, the catch is today worth about a million dollars, dockside. Consider that the ship could be loaded on a good trip in as little as 60 days, and the stakes in this enterprise become obvious—as well as the reason why $5.75 million can be poured into the construction of a single vessel.

Everything in an enterprise such as this depends upon the crew. Our ship, I knew, was a highliner—one of the most successful operations in the fleet—and that was because of the leadership of two most able young men, Manny and Joe Jorge. Both in their late 30s, they lead their crew easily. Manny, the more somber of the two, runs the ship, while Joe, the affable one, runs the deck operations.

I have worked with fishermen during much of my career, so I knew they would be proud men, and I knew the industry wanted to put its best foot forward with us. After all, I for one was probably suspected of being lined up with their enemies because of my long agitation for a responsible research program, which sometimes caused me to call both the industry and the government to task. They wouldn't want me to see a poor operation, or especially one that killed porpoises in great numbers. That suited me, too, because I wanted to see what the industry could do if it really tried. The government scientists among us were also suspect, because the government has imposed the rules that contain and frustrate the fishermen. We could expect that elsewhere in the fleet things would be less well done.

Tuna seining is a sophisticated effort run by competitive men who can be expected to be quite single-minded about their personal independence at sea, and anything that might affect their chance to fish. They love to fish. Regulations and observers represent a problem, but will be tolerated so long as the boat can fish. The fishermen know their trade and their gear better than anyone else and can be expected to resist ideas from outside that do not take this into account.

What does all this mean in terms of the tuna-porpoise problem? First, I do not expect knowledge of the magnitude of porpoise kill, or the depleted status of porpoise stocks, to be uniformly effective in motivating the fishermen, even though in the long run they depend heavily upon the porpoise for fishing success. Neither do I expect revulsion at killing porpoises to be wholly comprehensible except to a small percentage of fishermen. Each day they kill hundreds of magnificent sleek tuna, and the porpoises die about as the fish do. There is little the fisherman can see that makes the porpoise special. It's when one comes to know them more intimately—through books, films or exhibitions, and especially through personal contact such as my own—that their mass death becomes such a deep-seated issue. I have only to revive memories of a quivering spinner porpoise lying in my arms, filled with fear as I tried to teach it to swim through an oceanarium gate, or of seeing a wild mother spinner disciplining her rambunctions, tuna-sized calf with a little slap of her flukes, to understand the outcry over the killing.

The motivation for reducing porpoise kill naturally lies outside the fleet. In fact, the ethic itself lies outside the fleet. We should design our laws and regulations so they work in the fisherman's world. Regulations, I believe, should be designed as carrots as well as sticks. Current regulations penalize everyone, including the best boats that try hardest. I think these regulations should be revamped to reward the best boats for their porpoise-saving prowess in the currency they know best—the chance to fish.

So much for the vessel and her crew. What about the animals? What, indeed, do the porpoises and tuna do in a set, and what may be derived that can save porpoise lives? Let me describe a net set from the view of a naturalist.

The school is sighted. On top are perhaps 700 spotters and a few dozen spinners. The helicopter observer estimates that the school harbors upwards of 50 tons of fish, flashing beneath the fleeing porpoises. The word is passed over the loudspeakers that reach every cranny of the *Elizabeth C.J.*, including the heads, the game room and the bunk rooms. The crewmen rush to the speedboats. Fernando straps his belly belt up tight and is lowered over the side. Luis goes. Cowboy goes And the two Manuels. They race off ahead of the vessel and finally turn the porpoise school to the left. The *C.J.* turns in a broad circle to follow it. Manny and Joe are on the PA system, one from the helicopter and the other from the crow's nest, directing everything. With my uneducated ear I can't tell what is going on, except occasionally.

"Luis turn Luis." Luis (whose real name is Manuel, but there are too many Manuels for easy identification) is in the lead boat. Luis turns, beating the water white with his whining outboard engine. The porpoises race toward the bending wake of the *C.J.*, leaping in cascading fronts as they go. The *C.J.* heels over as she circles, wrapping them in a spiral of wake.

TRAPPED IN A WALL OF NET

When the wind and the size of the wake circle are right, a signal is given, a man on the *C.J.'s* stern pounds a pelican hook with his sledge and the net skiff slides off the stern, serving as a sea anchor as the net pulls off the ship. George, once a violinist in the Azores, stands erect in his boat as the huge net comes in leaping folds from the *C.J.*'s stern.

Around we go. At half-net I see the porpoise school leaping toward the net circle. Suddenly it slows, still 250 yards from the net, and begins to mill slowly. What has trapped them is the *C.J.'s* deep wake through which they usually will not pass; where that wake is weak, the smaller wakes of the speedboats suffice. I'm quite confident that the porpoises detect these wakes a long distance away by their animal sonar systems.

Once the net circle is complete, it takes a long time to winch in the big cable that purses the bottom of the net and thus closes the trap. Before that time, both tuna and porpoises are confined within a circular wall of net with no bottom. They apparently stay inside only because the net is so deep it hangs down into cold water uncomfortable to them. The porpoises always, based on the 20 sets I saw, take up station in the area of least disturbance, as far away from the big seiner as they can get without crowding themselves up against the net curtain.

Any disturbance that shifts this balance of fear moves the porpoise school. If, for example, a small skiff enters the net, the porpoises take it into account and edge a bit toward the opposite side of the net, striking a new balance. The skiff can easily maneuver the animals anywhere along the far corkline. Any other disturbance has similar effects: a swimmer, obects in the water, an unusual noise source.

Thus, it should be possible at this stage simply to herd the porpoises to a part of the net where they can be freed. When the net is first set, the fish usually seem to be deep, although we occasionally saw some near the porpoises at the surface. It may be possible to keep the fish and porpoises even farther apart with tuna-attracting methods being developed in Hawaii.

The stakes are high. In 1975 about 20 percent of the kill occurred during this part of the set, and while this was cut in half last year by the use of speedboats to hold the net open, thousands of porpoises are still killed at this stage. Whatever herding method is devised, it must be simple enough to use in fairly rough weather. It must not tangle in the seine. It must not lose tuna. At the moment my thoughts run to a single weighted line that can be stretched across an arc of net containing the porpoises. Using compressed air or some chemical means, the line would produce a curtain of bubbles, like the ship's wake that trapped the porpoises earlier. This curtain, as the line is towed, should move the porpoises, and may well repel tuna. The corkline can then be temporarily and very locally depressed and the porpoises pushed or attracted out. The point is that it is very easy to move porpoises in the net. I believe it will not be very difficult to develop simple and acceptable methods and gear to do it.

But more immediately applicable are some aspects of porpoise behavior in the backdown channel. In combination with new net designs already developed by the National Marine Fisheries Service, these could be used to reduce overall kill by a third or more, and can be applied fairly quickly. All we need is a cadre of trained Jim Coes, to modify the nets of the tuna fleet. Jim Coe is our gear specialist, dedicated to solving both the porpoises' and fishermen's problems. Each time a net set was made, Jim waited until just before backdown began, tossed a one-man rubber raft into the net, jumped in after it, and paddled by hand out into the channel. He went to the market buoys that showed where the porpoises would soon be sluiced over the top of the net. There he waited as the rafting porpoises moved closer and closer in the current. As they piled against the corkline, he could be seen grabbing them and sliding them over the line, pulling on this dorsal fin, placing that beak over the line so the porpoise would swim out. With his face plate he watched below the surface down into the deep backdown channel. One hand was raised in the air, signaling to the skipper of the *C.J.* to pull harder, or to stop when the fish swam near so the corks would rise and the catch be prevented from escaping. Many times he kept the backdown process going several minutes after any of us on board could see porpoises in the net. Then, in ones and twos, animals would appear at the surface to be helped out. Finally he would wave that the net was clear. Backdown would end, the net would be sacked up and the catch winched aboard.

Coe and Perrin told me that many times the fishermen in speedboats stationed at the end of the backdown channel would look down into the water and see porpoises lying deep in the net, and call them dead. After all, they were sometimes stacked up like cordwood, with bellies shining white. But most of the animals, Perrin and Coe told me, were not dead at all. (Others were swimming so deep they might not be seen.) If backdown ended with them still in the net, these living animals had little chance of survival, because the net is soon "sacked up," a maneuver that crowds porpoises and fish together in a frenzied melee for brailing. Brailing consists of dipping down into the dense mass of tuna, sharks and porpoises with a huge scoop on a cable and winching tons of animals onto the deck.

I decided to see for myself and scheduled a dive in the backdown channel. I found that it's a bit eerie to dive in a tuna seine. One knows that common companions of the fish and porpoise are oceanic sharks, and that they commonly inflict awesome bites on both dying porpoises and fish.

At first, as the net was being pursed, I found it hard to get close enough to see the animals very well. They were shadowy shapes merging into the blue. But, as the net was drawn in, it became easy to swim near them and to see their tiered schools reaching downward almost out of sight below. As backdown approached, the animals became more crowded, and they were often all around a swimmer, close enough sometimes to touch. Increasingly, as the set progressed, the spotter porpoises (which are by far the most abundant species in these sets began) to swim more and more in the vertical plane. They dived sharply, throwing their flukes into the air, and descended almost directly downward. None, except some spinners, seemed to move very fast, but they dived down to the limits of vision, 50 or 60 feet below me, then leveled out and came steeply back to the surface. Sometimes, several animals would weave around one another with a ballet dancer's grace as they rose in an arabesque. Then I began to note animals sinking tail first; simply changing their buoyancy and drifting downward, often coming to rest on the sloping mesh walls of the moving net, slightly pressed against it by the water current. As backdown proceeded, more and more animals did this, and clumps of animals could be seen down there, shining pale against the dark blue. I could see the open eyes of some, looking up at me.

Those looks from the trapped porpoises rang a bell in my memory. It was exactly the same behavior I and others had often seen when we pushed a porpoise too far during training. Typically, the animal in question would blow a big bubble under water and sink to the bottom looking up in apparent frustration. No worry, though. Given a minute or two, such an animal would rise to breathe. So it is with porpoises in the backdown channel, just as Jim told us. Give them a minute or two and they scull awkwardly off the net and rise to the surface.

Understanding this behavior can make a big difference in porpoise mortality. While I was on board we made 20 net sets and killed 11 porpoises, of which I felt perhaps eight to ten deaths had resulted from manipulations of the sets by the scientists which the fishermen would not normally make. And we caught 550 tons of tuna. That's a total of 0.02 porpoises killed per ton, if all animals are considered, and about 0.005 per ton if we give the fishermen the benefit of the doubt. The fleet average in 1975 was about one porpoise killed per ton of fish caught, or a kill rate between 50 to 400 times greater than ours.

Now, by no means was all of this fine record due just to Jim's ministrations in the backdown channel. The *Elizabeth C. J.* operates with a carefully modified net designed to remove any fold that might trap a porpoise and to provide a channel for their escape. She also is equipped with fine-mesh net that, more than any other innovation, prevents porpoises from tangling. She operates with a savvy team of fishermen who know precisely how to handle their gear. But, for me, our results show what the fishery can do if properly trained, equipped and motivated. If all our boats modify their nets and learn to handle them with skill, and if a crew member is trained to substitute for Jim, much can be hoped for.

The porpoises that are killed before backdown die in what are called catastrophic sets, where, for one reason or another, the net collapses over groups of porpoises or they entangle in the large mesh. The pace of such catastrophes is usually very slow, taking many minutes to occur. It's then that early release methods could come into play. I think they could also be used to great advantage if the catch of fish or porpoise is very large, and one could expect great crowding in the backdown channel. At any rate, such prebackdown release methods become a sharply focused research problem. We know what needs to be done.

Such development cannot take place on a working seiner. What is needed is a chance for scientific tinkering, and such operations are utterly antithetical to the fisherman's way of doing things. Thus I view it as a most important step that the fishery itself has voted to provide a vessel dedicated to research, and a program is being designed to use it. A major part will be to train a cadre of Jim Coes. Another will be to learn how to modify nets. Still another will be work on prebackdown release methods.

But none of this will be especially effective unless the fishermen care. Many of the more farsighted of them are concerned, but others have a "get-it-while-it-lasts" philosophy, driven by debts or ingrained exploitative attitudes. The rules presently lump all fishermen together: the boats that kill few porpoises suffer from quotas imposed because of other boats that kill most of the animals. It is a minority that accounts for a large fraction of this kill. These boats, I believe, must either be prevented from fishing or they must learn to do much better.

Thus I think the rules must provide both rewards for good performance and punishment for bad. One way to do this might be to classify all boats by their porpoise kill per ton of fish caught, and divide the whole fleet into first- and second-class vessels. For example, all boats that kill less than 0.5 porpoises per ton of tuna might be designated first class, while all those over that number would be second class. (The dividing line could be reduced year by year as the fleet gets better at saving porpoise lives.)

Then the total allowable porpoise kill for a given year would be divided into two parts. All vessels might be allowed to fish until two-thirds of the porpoise quota was used, and then only the first-class vessels would be allowed to take the remaining portion of the quota. I'm sure that vessels threatened with such recall would clean up their act. And I'm sure that fishermen who know their gear and animals better than anyone else will come up with dozens of porpoise-saving ideas that none of us scientists ever dreamed of.

Time is of the essence. Last year environmentalists won a court victory that resulted in a quota being set and the fleet ultimately being called back to port despite appeals to the Supreme Court. This year the fleet will be working under quotas for each species and stock of porpoise. If the quotas are as low as many expect, the fleet will be recalled after only a few months. Congress, aware of the plight of both porpoise and fisherman, is expected to take up the matter early in this year, but the completion date for revised legislation is in doubt.

There is hope for both the porpoise and the U.S. tuna fishery. But, while better ways of catching tuna and saving porpoises are being evolved into policy or science, let's not trap ourselves into a corner nobody wants to occupy—the one where the porpoises and the fishery are both lost.

SENATE LEADERSHIP AND THE GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, today the Senate has an unusual opportunity to assume a leadership role in the conduct of our Nation's foreign affairs. We can join President Carter in placing the United States firmly on the side of human rights by ratifying the Genocide Convention.

For too long the Senate has been considered a follower in foreign affairs, a body which either defers to Presidential leadership or places obstacles in its path. This concept of a passive Senate has been discussed in academic, Government, and mass media circles.

I personally do not believe the Senate is only a responding partner in the conduct of foreign affairs. I think we can now prove our ability to set national priorities be ratifying the Genocide Convention.

President Carter has set the Nation on a course of active support for human rights. He has spoken out for human rights and he has made symbolic gestures to indicate our Nation's support for the basic rights of all men.

For these actions I commend the President of the United States. He has taken action in a field with which we all agree. However, the Senate has an opportunity to do more.

We can take a firm policy initiative by ratifying the Genocide Convention. The Senate can lead our Nation into its rightful position of concern for human rights, removing the stigma of our long absence from the list of nations which have ratified the Genocide Convention.

By ratification of this treaty we can assert our concern for human rights and establish the Senate's position as a leader in the formulation of our Nation's foreign policy. I cannot think of two more worthy goals.

SENATOR HANSEN TESTIFIES ON THE FUTURE OF LOW-COST TELEPHONE SERVICE

Mr. GOLDWATER. Mr. President, on Monday the Communications Subcommittee of the Committee on Commerce began hearings on domestic communications common carrier policies.

One of the major questions raised at those hearings is the impact of recent FCC policies upon the future of the telecommunications industry. Will these policies insure the quality of service? Will they cause dramatic increases in home telephone costs? Will they set back the availability of phone service in rural areas?

Mr. President, these fundamental questions were addressed at the hearing by my good friend, the senior Senator from Wyoming (Mr. HANSEN). Senator HANSEN is the author of legislation I am cosponsoring to preserve the wide availability of high quality, low-cost telephone service in the United States.

His testimony particularly emphasized the importance of safeguarding the quality and provision of low-cost telephone service in the sparsely settled rural areas of the country.

Mr. President, in order that all of my colleagues can read Senator HANSEN'S thoughtful testimony, I ask unanimous consent that it shall be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR CLIFFORD P. HANSEN

Mr. Chairman, thank you for allowing me the privilege of appearing before the Communications Subcommittee concerning the telecommunications industry.

All of us are aware that telephone service is extremely important for most Americans. No longer is it a luxury item that only the affluent need and can afford. Telephone service is now within the reach of nearly all Americans and the people of this country depend upon it for their safety and livelihood.

Yet as important as the telephone is to all Americans, it is particularly important to rural Americans. My own State of Wyoming is still largely rural in character. The ninth largest state in size, it is nearly the smallest in population. Many of our people live distant from one another, spread out over vast expanses of magnificent, yet often harsh, terrain. We need good communication, an active exchange of information and resources to keep our economy strong and our standard of living high.

Highways, railroads, airlines and mail service are all vital links among our people—as they are in any rural area across this great nation. And so is the telephone. People use their telephone for contact with their neighbors, friends and family; for security; for advice and assistance in times of emergency. They depend upon the telephone. It is ready at hand; it works consistently and reliably; and most importantly, its cost is reasonable.

If telephone service were to be reduced or withdrawn from the rural areas of our country, we would all be worse off. If the people of Denver, Los Angeles or New York were unable to call a relative, friend or business client in the remote areas of Wyoming or any other state, then we could not claim to have a truly nationwide telecommunications network.

In spite of the evident obstacles in providing telephone service in a state such as Wyoming, over 92% of our households now have telephones. The number of telephones in service in Wyoming has risen dramatically over the past several years.

In Campbell County, for example, in the northeastern part of the state, a new community to be known as Wright, is taking shape as a result of coal mining operations. Yet even before this community is established, the telephone company is building facilities to serve it. A thousand telephone lines are expected to be in operation in Wright by 1980.

The availability of high quality telephone service throughout my home state—and throughout this country—is directly attributable to sound national telecommunications policies and clear recognition by our predecessors that our national telecommunications system should be planned, developed and coordinated as one integral network.

In the Communications Act of 1934, Congress, in its wisdom, determined that the overriding objective of this country's telephone system was to be service for everybody. The telephone was to be made as widely available to the people of this country as possible. It was to be of high quality and offered to customers at a reasonable charge. In the Communications Act, Congress endorsed the regulated monopoly franchise as the most efficient means of accomplishing the objective of universal service. How well this structure has served us is borne out by the fact that our telephone system today is, in the words of Senator Hart, "the best and the cheapest telephone service in the world".

In recent years, however, the FCC has begun to tamper with this structure. By a series of decisions over the last decade, the Commission has begun to promote competition in various parts of the telecommunications industry.

Those who know me know I am a staunch advocate of competition and free enterprise. Nonetheless, I do not believe that the sophisticated and delicate telecommunications system we now have should be jeopardized to retry an experiment that proved long ago to be unworkable in this vital industry.

Competitive enterprise cannot meet the public interest standard that must be met under regulation in the telephone industry. Under competition, each company, no matter what its product or service, seeks out that segment of the market that will offer the best return on its investment. Those who offer no promise of financial return to the investor remain unserved.

Thus, while nearly 95% of the households in this country have telephone service today, under a totally competitive system, isolated communities and families in this country would still be waiting for their telephones.

Allow me to give an example of the type of service we have in this country. Not far from the western border of Wyoming, near my home in Jackson, there is a small community named Bondurant—population one hundred. Bondurant is a center for the area's agricultural community and a way-station for travelers coming to and from the National Park areas to the north and west.

This year some forty Bondurant families presently receiving telephone service on an 8-party line hookup will have, for the first time, a choice of single-party, 2-party or 4-party service. Some $330,000 is being invested by the phone company on behalf of these Bondurant customers—an average of $8,300 per subscriber.

The basic monthly rate today for 8-party service is $6.55. When this upgrading of service is completed, the monthly rate, for basic 2-party service, will be about $14.50—but the actual rate—if the people in this rural community were paying what it costs to provide this service—would be about $180—$185 per month! This is not an isolated example, for Bondurant is only one of the many rural communities in Wyoming that will see the end of the 8-party line by 1978.

This type of development would never take place in a competitive telecommunications structure. It is possible only because, under a regulated franchise, the telephone company is obligated to serve *all* customers in its assigned geographic area and because it is permitted to balance the costs of service in thinly populated regions with those in more densely settled communities.

If competition is allowed to replace public interest as the guideline for our nation's telephone system, the sparsely-settled, remote, costlier-to-serve areas of this country will see their service deteriorate and, in some cases, vanish altogether.

Several years ago, under changes instituted by the FCC, new specialized telecommunications carriers began to provide microwave and satellite private line services in large intercity markets. Unencumbered by any obligation to serve less lucrative residential markets or to make any contribution to other services—as traditionally done by the established common carriers—these new carriers were able to price their private line services below common carrier rates.

Thus, the FCC opened up to competition those areas which have traditionally been a part of the entire telephone system. In so doing the FCC has thus threatened the "cross-subsidization" which has enabled Americans to have available inexpensive telephone service.

In the past, the revenues from various service categories, such as inter-city and optional services and equipment were used to make substantial contributions to cover common costs and overhead, thereby permitting rates for basic local telephone service to be lower than would otherwise be the case.

This is particularly important in Wyoming where rural telephone systems serve subscribers who can be reached only by stringing miles of expensive cable. Thus the loss of inter-city markets to competitors who can offer reduced prices, since they do not have to serve the entire public, would severely curtail the amounts available for contributions, making the cost of all local service and some long distance services increase materially.

Some would argue that if residential service is to be subsidized that it should be done by the government itself. It should be noted, however, that all telephone rates are set only after scrutiny and approval of appropriate governmental regulatory authorities. Furthermore, if the government is to take upon itself the task of redistributing revenues in franchised monopoly service areas, I fear we can expect a decline in administrative efficiency and an increase in our telephone bills.

This country already has the greatest telephone system in the world in terms of number, installation time, quality and cost. Yet here we are considering policies which threaten that system and make it just another part of an inefficient, costly, federal bureaucracy.

Until very recently, control over the connection of equipment to the network by the customer was recognized as within the jurisdiction of the state regulatory body. Everyone thought the state's authority in this area was acknowledged in the Communications Act of 1934 and that responsibility for safeguarding the quality of intrastate service was completely in the hands of state regulators. This understanding was acted on for forty years until recently when the FCC usurped jurisdiction over customer provided equipment.

I am not suggesting that customers throughout the country should be prohibited from owning their own telephone sets. In some states and localities that may be desirable. Yet, such an option ought to be allowed by the respective state regulatory authorities not in blanket form by the FCC for the country as a whole.

These pro-competition decisions are, in effect, undermining the established rate structure upon which our nationwide telephone system rests. Some business customers and some entrepreneurs may benefit from such a restructuring, but there is no way in which these changes can benefit the aver-

age home telephone user. They are particularly detrimental to people living in rural areas.

When I hear it said that we have achieved universal service in this country and that we should now move on and establish some new standard for our nation's telecommunications system, I am deeply disturbed. Each year, thousands of newcomers move into the rural areas of Wyoming and hundreds of thousands move into similar regions in other states. Have they any guarantee that the FCC's new policy of competition will not push costs of providing telephone service to their new homes completely out of reach? Is the present level of service in communities like Bondurant all that we should hope for? I believe that our nation should never regard what we have as the best that can be offered.

If a departure from existing policy is called for, it ought to take place after careful and comprehensive study by the Congress, not by decisions of an administrative agency which take into consideration only portions of this system on a piece-meal basis.

It has been suggested that there exists real dangers to individual liberties in overturning the steps taken by the FCC relative to the telecommunications industry. However, it is my belief that the real threat to individual liberties is the present approach of the FCC, since, if allowed to continue, it will price out of the telephone market place thousands of our elderly, low income and rural Americans. This a very serious threat since the telephone has assumed, in this modern age, a position much like that of the mail service during the time of our Founding Fathers. The telephone has become tremendously important as one of the primary means of communicating thoughts and ideas. Every Member of this body could attest to the calls his office has received from constituents concerned with pending legislation or wishing merely to transmit their thoughts and feelings in matters affecting their daily lives.

The recent success of the President's "Ask President Carter" program during which over nine million calls were placed to the President's number further attests to the nature of the home telephone as one of the essential elements of a real "freedom of speech".

Early in this session, I introduced in the Senate a bill, S. 530, entitled the Consumer Communications Reform Act, reaffirming the policies established in 1934—specifically: widely available service of high quality at affordable charges; exclusion of wasteful and duplicative facilities and services; and explicit recognition of state jurisdiction over the connection of terminal equipment to the network. Several of my fellow Senators, including my colleague, Mr. Wallop, from Wyoming, have joined with me in this bill. Comparable legislation in several versions has been introduced by over fifty Members in the House of Representatives.

At least a dozen business and professional associations in the State of Wyoming have adopted resolutions supporting the intent and principles of the Consumer Communications Reform Act. The 44th Legislature of the State of Wyoming has also adopted such a resolution, which I recently inserted in the Congressional Record. The Western Governors' Conference (embracing the states of Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington and Wyoming) last year passed a resolution to the same effect.

This Subcommittee, while not addressing this or other legislative proposals, does afford us the opportunity to begin a complete and careful consideration of the important issues addressed in the legislation I have proposed.

I am convinced that if the principles embodied in the bill I have introduced do not become law, consumers across Wyoming and in other sparsely populated areas can expect their rates for telephone service to increase and quality of their service to decline.

Thank you again for this opportunity to speak to such important issues.

THE DOCTOR SHORTAGE

Mr. CLARK. Mr. President, one of the greatest concerns to people who live in rural areas and small towns is the lack of medical care. In States like Iowa, the number of doctors serving in the countryside is dwindling, and the number of young medical graduates choosing to serve in rural areas is not growing enough to replace the doctors who retire or leave their country practices.

In Iowa, one-third of the counties lost primary care physicians in the years from 1974 to 1976 alone. At the same time, only about 4 percent of the recent medical graduates in the United States have chosen to practice in rural areas.

The irony of this situation is that there are far more doctors being graduated than ever before. But these medical graduates are choosing to go into specialties rather than to work in family practice or other primary care fields. In 1950, about 60 percent of doctors were generalists; today 80 percent of young doctors are specialists, and only 20 percent are choosing primary care.

What this means for rural areas is that specialists gravitate toward urban areas where equipment, hospital support, and colleagues can be found. The cities and suburban areas, therefore, have a definite advantage in the doctor-patient ratio. One doctor per 599 metropolitan residents, compared to one doctor per 1,285 rural residents.

This trend is likely to continue in the future unless some changes are made in the incentives for doctors to practice in rural areas.

The National Health Service Corps and other health manpower programs have been upgraded to encourage young physicians to practice in underserved areas. Right now, though, the percentage of NHSC doctors staying in private practice in their assigned areas is small—only about 10 percent—but the hope is that both the numbers and percentages will grow.

Another way to lessen the disparity in health care services between urban and rural areas is to encourage innovative arrangements in the health delivery system. One approach in which I am particularly interested is the use of satellite clinics in small towns and rural areas. These clinics, staffed by nurse practitioners, physician's assistants and other primary health care providers, have been shown to be effective and efficient in providing health care for rural and small town residents.

The Rural Development Subcommittee of the Committee on Agriculture, Nutrition, and Forestry will be holding a hearing on March 29 to investigate the prospects for clinics served by these primary health care providers. The specific subject we shall be exploring is the problem of reimbursement under medicare for this type of service. The current medicare reimbursement policy seems to be a real obstacle to the utilization of primary health care providers and the establishment of satellite clinics in rural areas.

I am submitting for inclusion in the RECORD an article which focuses on, among other things, the doctor distribution problem. The author summarizes the problem when he says:

A general increase in physicians provides no guarantee that less distributional problems will be resolved. Even in surplus, doctors are likely to continue to gravitate to the more prestigious and comfortable suburbs and specialties, unless there are strong incentives in other directions. Past increases have gone disproportionately to regions that already have high densities of physicians.

I ask unanimous consent that the article from the Washington Post of March 13, 1977, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TOO MANY DOCTORS?

(By Paul Starr)

Strange as it may seem to people who still can't find a doctor on weekends, much less get a house call anytime, there is serious talk now about an impending "doctor surplus" after years of lament over a "doctor shortage." Measures have even been proposed to hold down the number of new physicians. With remarkably little fanfare, Congress has already taken one step in that direction. Yet the momentum of expansion in medical education seems irresistable well into the 1980s, and the political and economic implications of a flood of new doctors could be profound.

For reasons I'll come to shortly, I see this as one of the most promising developments in medicine today, but conceivably it could aggravate our problem, or perhaps come to nothing.

The facts are striking. Within the past decade, the yearly increase in the number of new physicians has doubled. The sources have been both foreign and domestic. Foreign medical graduates admitted to the country as immigrants rose from just 2,000 a year in 1965 to more than 7,000 by 1972. Graduates of U.S. medical schools climbed from 7,500 in 1966 to 13,000 last spring as a result of increases in both the size and number of schools.

Ten years ago there was 88 medical schools; now there are 114, with 13 more being planned. If these are completed as scheduled, the total increase since 1966 will amount to almost 40 new medical schools—this in a country that had hardly seen any net growth at all during the previous half-century.

Because population growth has slowed, the gains in the supply of doctors relative to populaton are quite impressive. The number of physicians per 100,000 people in America grew from 148 in 1960 to 174 in 1975; by 1985, according to recent projections, it will soar to between 210 and 218. At that point, probably only Israel and the Soviet Union will have proportionately more physicians than the United States. Today, there are almost a third as many doctors in training in America (roughly 100,000) as there are in active practice. When current medical students and residents inundate the market, the effects should be enormous.

The likely availability of large numbers of new doctors could greatly facilitate future efforts to change the medical system. Young physicians, just coming out of medical school without any prior attachment to private, fee-for-service practice, may be more readily attracted to new institutions and arrangements than older physicians. There is some evidence that the new graduates, particularly women, are less interested than their predecessors in setting themselves up as solo entrepreneurs.

But whatever their preferences, they may find it increasingly difficult to get started in private practice, which now, especially because of rising malpractice insurance rates and medical equipment costs, requires an investment beyond the reach of many young doctors. Instead, they may turn to neighborhood clinics, health maintenance organizations and other institutions that offer secure salaries. The fee-for-service system will most likely be changed, not by making old docs do new tricks, but by generating large numbers of new physicians who find it in their interest to accept arrangements that established practitioners would shun.

A large and expanding supply of physicians also offers a new opportunity to alter the balance of power in medicine. The strength of the medical profession in America has long rested on its success in restricting its own numbers. By holding down the supply of physicians, the organized profession has been able to maintain the highest median income of any occupation and to defeat programs and institutions that threaten its interests. Because of opposition from medical societies, consumer-sponsored health plans in various forms, have typically found it almost impossible to hire staff physicians.

The relative scarcity of doctors has strengthened their bargaining position with the society, enabling them to control the terms of their relationships with patients and medical institutions. Increasing the number of physicians could help reduce the profession's market power. It might even help achieve some equalization of incomes between doctors and other health workers. As Victor Fuchs, professor of community medicine at Stanford University, has shown, incomes within the medical care sector have been more unequal than in any other major industry in America.

FEAST OR FAMINE

Inroads into physicians' economic power would represent an historical reversal. Restrictions on the supply of doctors go back to the early years of the 20th Century, through the 1800s physicians were plentiful and, as a group, not particularly well off. Because of tax state laws, medical colleges proliferated until by 1900 there were 160 in the nation—most of them small, quick degree, profit-making trade schools with few requirements for admission or graduation.

Successful lobbying by medical societies, however, brought stronger medical licensing laws, requiring longer periods of training, higher pre-medical qualifications, laboratory work and clinical hospital instruction. Since meeting such standards cost more money than schools could raise from student tuition, medical education became unprofitable. Commercial schools closed, and almost all training was incorporated into universities.

A 1910 report from the Carnegie Foundation, written by the educator Abraham Flexner, helped organize public opinion in favor of an upgraded but smaller system producing "fewer but better" doctors. By 1922 the number of medical schools had dropped from 160 to 81, and the number of graduates, 5,606 in 1905, plummeted to 2,529.

While the medical schools later increased the size of their graduating classes, they grew more slowly than the nation's population. From the turn of the century through the Depression, the ratio of physicians to population dropped from 173 per 100,000 to around 130. It remained near that low level through the 1950s. In the meantime, medical services expanded enormously and specialization deepened. Between 1931 and 1963, general practitioners dwindled in number from 112,000 to 73,000, or from 72 to 28 per cent of all doctors. Talk of a "doctor shortage" became common, although the country might actually have had more than enough physicians had they been rationally distributed.

The turning point came in the mid-1960s. In 1965, Congress revised the immigration laws, eliminating the old system of national quotas which had favored European countries. Under the new law, occupations in which domestic shortages were believed to exist gained special preference. Medicine was one of these. In 1970, Congress made it easier for foreign medical students who had come here on temporary exchange visas to become permanent immigrants.

As a result, the annual influx of immigrant physicians tripled by the early '70s. (Actually, many of these immigrants were already in the United States on exchange visas, but had the law not been changed they would have found it difficult to stay.)

At the same time, the major source of foreign doctors swung from Europe to Asia. Only 300 Asian doctors emigrated to the United States annually before 1965; there were 5,000 a year by 1972. India, the Philippines and South Korea became the three major contributors in a massive redistribution of human capital from some of the poorest nations to one of the richest.

Also in the mid-1960s, the federal government undertook its first direct support for medical education. The American Medical Association, anxious to keep down the number of doctors, had long opposed such assistance, but the medical schools wanted it dearly and their influence in Washington was growing. An initial measure in 1963 provided for construction grants and student loans; in 1965, the law was amended to include funds for the schools' operating costs, on the condition that they increase enrollment a minimum amount.

By the late '60s, even the AMA joined in support of federal aid for medical education after the great surge in demand for medical services resulting from the enactment of Medicare and Medicaid. Further legislation in 1968 and 1971 increased financial assistance to medical schools and strengthened the provisions making aid conditional on higher enrollments.

These incentives, according to a study by the Rand Corp., were crucial in nearly doubling the number of graduates over the course of a decade.

DISTRIBUTING THE TALENT

The effects of these changes have as yet scarcely been felt. It takes about eight years for increased first-year enrollments to affect the supply of doctors. Only now are the large medical school classes of the late '60s beginning to turn up on the market, and the new doctors have not yet had time to accumulate in great numbers.

Among many people the impression persists that the AMA still keeps down the number of physicians, in part because one hears how difficult it is to get into medical school. (The number of applicants has increased more rapdily than the number of medical school places.) Moreover, unbalanced distribution of physicians, by region and by specialty, continues to leave shortages in rural and inner-city areas, especially in "primary care" (general and family practice, general pediatrics and internal medicine, obstetrics and gynecology).

American medicine is today vastly overspecialized. In Britain, 75 per cent of doctors provide primary care; in the Kaiser-Permanente health plan in America, the proportion is two-thirds. But in the United States as a whole, primary care accounts for only 45 per cent of physicians. So, although we may be building up to a future doctor glut, genuine scarcities still exist.

A general increase in physicians provides no guarantee that these distributional problems will be resolved. Even in surplus, doctors are likely to continue to gravitate to the more prestigious and comfortable suburbs and specialties, unless there are strong incentives in other directions. Past increases have gone disproportionately to regions that already have high densities of physicians.

When the supply of doctors was beginning to grow between 1963 and 1970, the proportion in primary care was actually falling. The educational system turns out highly trained specialists oriented toward work in urban settings, and the current insurance system reimburses specialists more generously for their services.

Lately, in an effort to ward off federal regulation, the AMA has been arguing that the private sector is already remedying the deficiencies in primary care. Between 1968 and 1974, the number of first-year positions in primary care training programs jumped from 4,600 to 8,800. But the increase may be deceptive because of a growing trend toward specialization within primary care fields.

Young internists, for example, are going into subspecialties like cardiology or hematology, rather than general internal medicine. "It is almost certain," the Coordinating Council on Medical Education, a semiofficial body, stated in 1975, "that with the new opportunities for certification in subspecialties, proportionately fewer internists and pediatricians will have an interest in primary care."

New legislation passed by Congress last October makes some effort to correct these distributional problems. It requires medical schools to offer about half their residencies in primary care fields and makes scholarships available to medical students on the condition that they work one year in doctor-poor areas for each year they receive financial aid.

But in a statement of findings and policy, the law also declares that "there is no longer an insufficient number of physicians and surgeons in the United States" and, as a result, "no further need for affording preference to alien physicians and surgeons" in immigration. Further, it terminates the earlier incentives for medical schools to expand first-year classes.

Whether the law will help or hurt doctor-poor communities remains to be seen. Today, one of every five doctors in the country is a foreign medical graduate. These doctors take many of the jobs that Americans spurn, such as staffing municipal hospitals and state mental institutions. In Brooklyn, more than 90 per cent of the city hospital doctors are foreign graduates. Without them, those hospitals may be in dire trouble.

Until 1980, the new federal law allows exceptions to its cutoff of immigrant doctors for institutions that would be seriously disrupted by their loss. The hope is that, as American medical school graduates grow in numbers, they will take the place of foreign physicians, even at the least desirable institutions.

The new scholarships are designed in part to remedy the problems caused by the loss of imported doctors. If fully funded, they will greatly augment the size of the National Health Service Corps, a federal program be-

gun in 1972 that assigns physicians and other medical personnel to underserved areas. Until now, the corps has depended on volunteers and has placed only about 200 doctors a year, almost entirely in rural communities.

The new legislation redefines shortage areas to include public institutions, like prisons and mental hospitals, that have trouble recruiting doctors, and the corps is now preparing to move into urban neighborhoods as well as rural towns. By the mid-1980s, with the scholarships bearing fruit, the size of the program may grow to 5,000 to 10,000 doctors. (Some in Washington mention 20,000 as a goal.) If these changes in size and orientation materialize, the National Health Service Corps could become a powerful instrument in reversing the maldistribution of doctors. Some, however, remain skeptical of a program that may end up only rotating young physicians through communities where they have no serious intention of putting down roots and establishing a practice.

Besides the cutoff of foreign medical graduates and the elimination of incentives for medical schools to expand first-year classes, other moves to slow down the expanding supply of physicians may also be in store. In a recent report, the Carnegie Council on Policy Studies—66 years after Abraham Flexner—argued that the United States is now in "danger" of creating too many medical schools and called upon the federal government to abandon nearly all of the 13 new schools now in development. Throughout the government, a consensus is apparently emerging that America is threatened with a surplus of physicians.

PERVERSE ECONOMICS

What causes concern among policy makers is the possibility that the addition of new physicians may generate increased expenditures for medical care by driving up both the volume and price of services. Once patients bring their complaints to a doctor, the doctor determines whether tests, operations, drugs and further visits are necessary. These judgments are highly variable. Physicians can increase "demand" for medical services by reducing the threshold at which procedures are thought medically warranted.

The higher the density of physicians in an area, the greater the pressure seems to be to perform services that otherwise might be foregone. Considerable evidence suggests that the more surgeons there are in a community, the higher the rates of surgery and hospitalization.

Moreover, an increased supply of surgeons does not necessarily bring down prices. The less individual surgeons work, the more they charge, so they can keep their incomes at the levels to which they are accustomed. The economics of fee-for-service medicine seem to be completely perverse. Demand appears to be controlled by the suppliers, who raise prices to meet expected levels of income. Consequently, the rising number of doctors could quite easily inflate total medical costs for the society.

But the effects might also go the other way. A goodly supply of physicians might help prevent inflation for a national health program. Medicare and Medicaid, one often hears, pushed up medical costs because they increased demand, while the supply of physicians and facilities were relatively inelastic. Conceivably, that kind of demand-push inflation could be blunted in the future by an abundant supply of doctors.

Which of these effects will predominate is unclear. Possibly, they will turn out to affect different parts of the medical system in different ways. By making doctors available at reasonable salaries, a rising supply might hold down costs for neighborhood clinics and health maintenance organizations.

In the fee-for-service sector, however, more doctors will probably mean higher utilization and higher costs, forcing up the price of health insurance. The future effects of the growing supply of doctors on health-care expenditures depend fundamentally on the outlook of fee-for-service medicine. If, as I think, its prospects are poor, then the case for maintaining a high supply of doctors is correspondingly strong.

One further possibility exists. The growing supply of doctors could change the division of labor in medicine. Should physicians become more numerous and less expensive, they may displace nurse practitioners and other "physician extenders," putting an end to recent efforts to develop new para-medical occupations. They might also take over more administrative functions in the medical system. Lateral movements of this sort could prevent any surplus of doctors from developing. Don't expect to find any M.D.s driving taxis.

If the medical system were rationally organized in some rough relation to need, we could probably do with fewer doctors than we already have.

The argument for increasing the supply is primarily political. We need more doctors who are not committed to private practice and an abundant supply of physicians to limit the economic power of the profession.

At some point in the future, we may be forced into a confrontation with the medical profession over the maintenance of its privileges. Doctors' strikes over national health programs are not unheard of.

At that point, it will be extremely useful to have more doctors than we need, instead of needing more doctors than we have. An expanding supply of physicians will not solve our problems, but it may create favorable objective conditions for the success of future efforts.

INCOME DISTRIBUTION AND THE OPEN SOCIETY

Mr. GARN. Mr. President, much has been heard in recent years about the need to reform the tax system, and the need to reduce income disparity. Usually the phrase is "income distribution."

I am one myself who firmly believes that taxes need reforming, and am committed to that end. However, it is not nearly as clear to me that extensive redistributionist policies are needed. Indeed, some strong warnings have recently been raised, in the pages of such influential journals as the Public Interest, that we may not be able to afford much more redistribution than we now have.

Contributing to the debate, the International Institute for Economic Research has just published two brief essays on the subject by Irving Kristol and Peter T. Bauer. I found the essays interesting and informative, and calculated to deflate much of the current rhetoric on the subject of income equality.

I ask unanimous consent that the two essays be printed in the RECORD.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

TWO ESSAYS ON INCOME DISTRIBUTION AND THE OPEN SOCIETY

(By Irving Kristol and Peter T. Bauer)

INTRODUCTION BY COTTON M. LINDSAY

Two separate communities evidence great interest in the distribution and possible redistribution of income. One consists of social scientists who have devoted generous resources to the study of these topics over the past century. Another community, inhabited by political rhetoricians, is perhaps larger and surely more vocal, yet manages to remain isolated from the results of scientific analysis.

Two questions are of concern to both communities: (1) Why does the government engage in income redistribution? (2) What are the effects of such government policies? These questions are made the more interesting by their paradoxical scientific answers.

An innocent commentator would probably reply to the first question that the government seeks to make the distribution of income "fairer." This objective certainly is dear to the hearts of those in the province of rhetoric. And yet, detailed analysis of redistributional results of many government actions indicates that the direction of this income transfer is the reverse of what most people are alleged to regard as "fair." From the Social Security system and minimum wage legislation to government support of agricultural prices and higher education, one sees an array of programs which generally end up serving individuals in the middle and upper-middle classes as primary beneficiaries. Taxes fall on both the rich and the poor, but the poor are disproportionately underserved by these programs.

Irving Kristol and Peter T. Bauer speak from the scientific community, and their comments should prove illuminating to those interested in analysis of income distribution and its social implications. Kristol points out the foolishness of debating the "morality" of a market-determined distribution of income compared to some nonmarket alternative The mechanism and process by which individual incomes are determined is itself a reflection of the prevailing values in a society, and these orientations and perspectives are as unlikely to be influenced by social scientists as they are by politicians.

Some of the fallacious statements made in this nether world of political slogan and shibboleth are taken to task by Bauer. One is that the processes of income generation (production) are independent of, and may be functionally separated from, income distribution. But redistributional activities by governments do affect the level of aggregate income. This has been repeatedly confirmed, not only by virtue of their effects on individuals' incentives to work, save, invest, develop, and bear risk, but through perverse modifications of the incentives faced by business organizations. Threats of punitive action against firms which earn "excessive" profits have been shown to lead directly to reductions in efficiency, as well as to such socially undesirable consequences as sex- and race-based discrimination in hiring, and the sort of expense-account extravagance decried in the recent Presidential election. Potential profits are simply consumed in these and other undesirable and less efficient ways.

Another fantasy attacked by Bauer is the claim that the incomes of the rich are the result of expropriation and exploitation, while those of the poor are legitimately obtained. Facts gleaned from a Brookings Institution study of the affluent may shed

light on this allegation.[1] Although it is true that most of the earnings of the rich represent "property" income, the wealthy typically do not idle about clipping coupons. The study indicates that three of four persons with incomes over $300,000 per year manage their own portfolios. Few take advantage of special tax provisions or "loopholes," with the exception of the capital gains provision, and most work diligently. The average high-income person surveyed works forty-eight hours per week and takes only two weeks' vacation per year. Among those with incomes over $200,000, more than one in three works more than sixty hours per week. In contrast, roughly forty percent of the real incomes of the poorest twenty percent of United States families are government-provided benefits in-kinds, not requiring productive effort on the part of the recipients.

Some imaginative distortion attaches to the reported extent of income diversity in market-organized economies. From one-third to one-half of the diversity appearing in the most popular measure of income inequality (*i.e.*, the Gini coefficient) results from such factors as th. size of family and the pattern of individual income over the life cycle. A large part of the remainder is attributable to unequal education, which even some market detractors would not regard as an illegitimate source of disparity. Also biasing this measure of disparity upward is the failure to include transfers in-kind, such as public housing, food stamps, and Medicaid, as income to those receiving them. The inclusion of such in-kind transfers has recently been estimated to increase the relative share of income going to the lowest quintile in America by eighty percent. Nor is it clear that income disparities in market economies are greater, however measured, than the apparent inequalities which exist in "egalitarian" regimes such as those behind the Iron Curtain. Such statistics are hardly advertised by those governments.

It may be that each of the groups mentioned in the introductory paragraph—the analytical and the rhetorical—is speaking principally to itself in excessive preoccupation with the extent of income disparity and how income "ought" to be distributed. The rhetoricians have nothing to talk about other than "social justice." The analysts can go far to explain how income is distributed—but they have floundered and distracted in normative attempts to conclude how income *should* be distributed. Society at large apparently accepts a modest, pragmatic concept of just distribution, *viz.*, income received in whatever amount (above some small minimum) is to be "earned." Behind the camouflage of the labor theory of proper distribution, the marginal product valuation approach, and, most recently, the social welfare function, probably lies a sensible, if intuitive, notion of "deservingness" which is agreeable to the public. Economists may find it advisable to bow to this community intuitive judgment and fret less over the "justice" of income differentials.

WHAT IS "SOCIAL JUSTICE"? BY IRVING KRISTOL

I recently received a letter from a magazine which is preparing a special issue on the distribution of income in the United States. The letter asked for my thoughts on such questions as: "How should a society determine wages and salaries? Does our society do a fair job of distributing income?" And so on.

The issue to which these questions are addressed is certainly a crucial one. It is nothing less than the issue of "social justice"—or what used to be known, among political philosophers, as "distributive justice." The change in terminology, as it happens, has its own significance; in politics, the language we use to ask questions is always more important than any particular answer. "Distributive justice" is a neutral phrase—it points to a problem without suggesting any particular solution. "Social justice," however, is a loaded phrase: It blithely suggests that "society" ought to determine the distribution of income. This assumption is now so common that few people realize how controversial its implications are.

The social order we call "capitalism," construed on the basis of a market economy and private rights to uses of property, does *not* believe that "society" ought to prescribe a "fair" distribution of income: "Society," in this context, means government—"society" is voiceless until the political authorities speak. And the kind of liberal society historically associated with capitalism was, from its very beginnings, hostile to any political or "social" definition of distributive justice.

It is the basic premise of a liberal-capitalist society that a "fair" distribution of income is determined by the productive input—"productive" as determined by the market—of individuals into the economy. Such productivity is determined by specific talents, general traits of character, and just plain luck (being at the right place at the right time). This market-based distribution of income will create economic incentives and thereby encourage economic growth. As a result of such economic growth, everyone will be better off (though not necessarily equally better off). The economic growth that ensues may itself shape society in ways not everyone might like. But a liberal-capitalist order does not—except in extraordinary circumstances—concede to any authority the right to overrule the aggregate of individual preferences on this matter.

In contrast, non-capitalist societies—whether pre-capitalist or post-capitalist—have a very different conception of "fairness," based on one's contribution to the society, not merely to the economy. In such non-capitalist societies, economic rewards are "socially" justified, as distinct from being economically justified. Thus, in the Middle Ages it was thought to be fair to compel ordinary people to support the church and the clergy, whose activities were deemed to be of major social significance and social value. Similarly, in the Soviet Union today the Communist Party does not have to defend its budget on any economic grounds—the value of its contribution on the polity as a whole is put beyond question. Such societies, of course, place no high valuation on individual liberty.

Obviously, there is no such pure type as "a capitalist society" or "a non-capitalist society." All non-capitalist societies recognize, to one degree or another, the importance of market activity and material welfare. They therefore will allow differntial rewards—again, to one degree or another—based on one's productivity in such activity.

Similarly, all capitalist societies recognize, to one degree or another, that there is more to life than economic growth or material welfare, and they therefor make some provision for differential rewards based on one's effectiveness at literary criticism, music, and philosophy. Indeed, it can be cogently argued that the "openness" of a capitalistic society is maximally conducive to most sorts of individual development.

Still, though "pure" types may not exist, the types themselves do, in however impure a form. And there are three important points to be made about these different conceptions of a good society and the principles of "fairness" in income distribution by which they operate.

(1) There is no rational method which permits us to determine, in the abstract, which principle of distribution is superior. It is absurd to claim that capitalism, anywhere, at any time, is superior to non-capitalism—or vice versa. Any such judgment is bound to be contingent—i.e., based on the particular society's history and traditions, on the attitudes and social habits of its citizenry, and the like. There is no point in arguing that a particular society "ought" to be capitalist or socialist if the overwhelming majority of the people are not of a mind to be bound by the different kinds of self-discipline and imposed constraints that these different political philosophies require, if they are to work. And this, of course, holds true for all large political ideals. Which is why Jefferson, living in Paris before the French Revolution, could write—in all good republican conscience—that the French people were not "ready" for republican self-government, and that it would be a mistake for them to try to establish it immediately.

(2) A distribution of income according to one's contribution to the "common good"—requires that this society have a powerful consensus as to what the "common good" is, and that it also have institutions with the authority to give specific meaning and application to this consensus on all occasions. Now, when you have such a consensus, and such authoritative institutions, you do not have—cannot have—a liberal society as we understand it. It can certainly be a good society (if the values behind the consensus are good); but it will not be a liberal society. The authorities which represent the "common good," and which distribute income in accordance with their conception of the common good, will—with a clear conscience—surely discriminate against those who are subversive of this "common good." They may, if they are broadminded, tolerate dissidents; but they will never concede to them equal rights—even if equality is a prime social value. The dissidents, after all, may be those who believe in inequality.

(3) A liberal society is one that is based on a weak consensus. There is nothing like near-unanimity on what the "common good" is, who contributes to it, or how. There is not utter disagreement, of course; a liberal society is not—no society can be—political chaos. But the liberty of a liberal society derives from a prevalent skepticism as to anyone's ability to know the "common good" with certainty, and from the conviction that the authorities should not try to define this "common good" in any but a minimal definition, in a liberal society, will naturally tend to emphasize the improvement of the material conditions of life—something that very few people are actually against. A liberal society, therefore, will be very tolerant of capitalist transactions between consenting adults (to use Robert Nozick's marvelous phrase), because such transactions are for mutual advantage, and the sum of such transactions is to everyone's material advantage. And, consequently, a liberal society will think it reasonable and "fair" that income should, on the whole, be distributed according to one's productive input into the economy, as this is measured by the marketplace and the transactions which occur there.

In sum and in short; the distribution of income under liberal capitalism is "fair" if—and only if—you think that liberty is, or ought to be, the most important political value. If not, then not. This distribution of income under capitalism is an expression of the general belief that it is better for society to be shaped by the interplay of people's freely formulated and expressed

[1] Robin Barlow, Harvey E. Brazer, and James N. Morgan, *Economic Behavior of the Affluent* (Washington, D.C.: Brookings Institution, 1966).

opinions and preferences than by the enforcement of any one set of values by government.

But there are many people in this world—there have always been many people in this world—who do not believe that liberty is the most important political value. These people include sincere dogmatists. They believe they know the truth about a good society—they believe they possess the true definition of distributive justice—and they inevitably wish to see society shaped in the image of these true beliefs. Sometimes they have prized religious truths more than liberty; sometimes they have prized philosophic truth more than liberty (e.g. the Marxist philosophy); and sometimes they have prized equality more than liberty. It is this last point of view that is especially popular in some circles—mainly academic circles—in the United States today.

Thus Professor Ronald Dworkin—one of our most distinguished liberal legal philosophers—has recently written that "a more equal society is a better society even if its citizens prefer inequality." From which it follows that "social justice" may require a people, whose preferences are corrupt (in that they prefer liberty to equality), to be coerced into equality. It is precisely because they define "social justice" and "fairness" in terms of equality that so many liberal thinkers find it so difficult genuinely to detest left-wing (i.e., egalitarian) authoritarian or totalitarian regimes. And, similarly, it is precisely because they are true believers in justice-as-equality that they dislike a free society, with all its inevitable inequalities.

As one who does like a free society, I have to concede to these people the right to hold and freely express such opinions. But I do find it ironical that their conception of "social justice" should be generally designated as the "liberal" one. Whatever its other merits, an authentic attachment to liberty is not one of them.

EGALITARIANISM: ART OF THE IMPOSSIBLE

(By Peter T. Bauer)

I

The wide economic differences between people in an open and free society result from differences in aptitudes, motivations, and circumstances. State action to remove these economic differences entails such extensive coercion that the society ceases to be open and free. Here lies the central dilemma for egalitarians. The implications of the dilemma and of the persistent, widespread failure to recognize them form the central argument of this essay.

II

A discrepancy between an assumed norm or expectation and social reality is commonly described as a "social problem." Inasmuch as social scientists are largely preoccupied with discerning, announcing, and emphasizing discrepancies between norms or expectations and reality, they tend to generate social problems rather than solve them. An example is the extensive concern with economic differences. Indeed, in recent years there has been an upsurge of interest in this subject, on the international level as well as the domestic.

The appeal of egalitarianism is likely to persist. In recent decades incomes have risen greatly in the West, and income differences have narrowed. But as de Tocqueville observed, when social differences have narrowed, those which remain appear especially irksome and objectionable; and, as he also pointed out, material advance is apt to engender discontent over failure to have achieved more or to have achieved some other objective.

The contemporary predilection for numbers and quantification, together with the emphasis on material conditions, have helped further to focus attention on economic differences. Even when reliable and free from conceptual problems, which is unusual, statistics of income, income differences, and changes in such data tell us little or nothing about the background of the situation, including the process by which the condition has emerged. Yet, how a social situation has arisen is usually basic for worthwhile assessment. Incomes can become more equal as a result of such radically different changes as a relative decline in the birth rate of the poor, or relative increase in their mortality, or expropriation of the rich, or an increase in capital relative to unskilled labor, or technical change, or still other reasons. Conventional statistics by themselves tell us nothing about these radical differences and their causes.

III

Once the moral and political case for egalitarian policies is taken for granted, the movement for more and more egalitarianism perpetuates itself. If the results of egalitarian policies are deemed satisfactory, it is often presumed that still more can be achieved by more extensive efforts; if, on the other hand, the policies are deemed to have failed, it is generally concluded that they were not drastic enough. Such reactions are predictable when the economic positions of different individuals and groups are thought to depend largely on public policy—as, indeed, they often are when economic life is heavily politicized (partly the result of egalitarianism itself).

Exercise of state authority implies inequality of power between ruler and subjects. Political power implies the ability of rulers forcibly to restrict the choices open to those they rule. Enforced reduction or removal of economic differences emerging from voluntary arrangements extends and intensifies the inequality of coercive power. The wider the differences in the circumstances and in the aptitudes and ambitions of those whose economic well-being is to be (at least partially) equalized, the greater the intensity, extent, and duration of the coercion required for the purpose—and thus the more pronounced becomes the inequality of power.

Possession of wealth and the presence of economic differences do not imply ability of the wealthy to restrict the choices open to others and thus to coerce them. In a modern open society, the accumulation of wealth, especially great wealth, normally results from activities which extend the choices of others—as illustrated by the fortunes acquired in mass retailing or in development of the automobile. The absence of coercive power in most forms of successful economic activity is recognized in Dr. Johnson's familiar observation that "there are few ways in which a man can be more innocently employed than in getting money."

Differences in readiness to utilize economic opportunities—willingness to innovate, to assume risk, to organize—are highly significant in explaining economic differences in open societies. This is evident. The opportunities seized by a few were available to many. This has always been the case throughout the West—and, indeed, elsewhere, as shown by the many Chinese *nouveaux riches* in the East. Income differences resulting from readiness to benefit from economic opportunities will be especially wide when there is rapid social, economic, and technical change, including the development of new products and the opening of new markets.

Purported belief in the basic equality of people's economic faculties and ambitions has enabled egalitarians to ignore the main dilemma of egalitarian ideology. It has also colored terminology. If people are assumed to be equally endowed and motivated and yet there are wide economic differences, it would seem that some undefined but manevolent force has perverted the course of events. This discrepancy between assumption and reality may account for the habitual references to economic "inequality" rather than to economic "differences." (The latter term is more appropriate, not implicitly prejudging the issue.)

The same discrepancy between implication and actuality may explain also the familiar but anomalous interpretation of social justice as meaning substantially equal incomes. This interpretation is anomalous because it is not obviously just to penalize those who have contributed more to the social product for the benefit of others who have contributed less—unless it is assumed that incomes are not earned but extracted.

It is widely believed, or at least often asserted, that relatively high incomes are somehow extracted rather than earned, that is, produced. Incomes of certain groups are indeed sometimes increased by monopoly power or, more commonly, by state action. But the idea is misconceived that incomes of the relatively prosperous are secured generally at the expense of the rest of the community.

This misconception has often had lamentable consequences. It has encouraged the maltreatment and even destruction of economically productive groups, including ethnic and religious minorities. (The fate of such prosperous groups at the hands of political masters illustrates the inadequacy of wealth by itself to confer power or even ensure survival. Indeed, the possession of wealth often results in political vulnerability.) The same misconception colors familiar references to "shares," usually unequal shares, of different groups in the national product and lies behind assertions that certain groups have not shared adequately in national or world prosperity—assertions which ignore the question of how little these groups may have contributed to the prosperity.

The unfortunate terminology of egalitarian discourse and, to some extent, of the economic theory of distribution may have contributed to the misconception. As already noted, inequality is an infelicitous term. The same is true of the expression, "distribution of income," which suggests that there is a pre-existing income which somehow gets divided. But incomes normally are earned, produced by their recipients, not "distributed" to them.

"Redistribution" also is misleading, because it is not a preexisting income which is being reallocated. Rather, parts of resources are taken from those who produced them and handed to others, whose incomes are thereby augmented beyond what they have produced.

IV

It is often assumed that income differences will be readily accepted when they plainly reflect achievement. The contrary is just as likely. Lack of economic success is apt to be keenly felt and resented when economic achievement is emphasized and when failure is imputed to inadequacy. When faced with economic success in an open society, many deny that the success reflects even a contribution to society, much less merit.

Equality of opportunity was until recently the principal thrust of egalitarian ideology. For example, many Fabians, notably R. H. Tawney, thought that equality of opportunity would result in substantial equality of incomes; any remaining income differences would reflect merit and would, therefore, be widely respected and readily accepted. Such ideas bypass the intractable

problems behind the central dilemma of egalitarianism: granted that equals should be treated equally, how shall we treat those who are unequally endowed, motivated, or situated?

"Equality of opportunity" is elusive and imprecise. Certain cultures emphasize education and economic productivity and, predictably, confer material advantages on their members—advantages which do not always conduce happiness, dignity, or sensitivity. Some people are advantaged by loving parents or a cultivated background. Good looks and attractive personality result in unequal opportunities. Attempts to offset such advantages, say by taxation, conflict with other criteria of equality—including the principle that equal incomes should bear equal taxes.

On open society, i.e., one with la carriere ouverte aux talents, is the most familiar interpretation of the ambiguous concept of equality of opportunity. But the open society is obviously incompatible wtih substantial equality of income and wealth, because of the wide personal and group differences in economic aptitudes and motivations. These differences are evident in the rise from poverty to prosperity of countless individuals and groups the world over; in the wide differences in prosperity between religious and ethnic groups in different areas and societies for centuries; and in the material success of certain communities in the face of adverse official discrimination, e.g., nonconformists, Huguenots, and Jews in the West and the Chinese communities in Southeast Asia.

It is only the naive belief that everyone's aptitudes and motivations are the same—a belief sinister in its consequences—which supports the notion that an open society is practically synonymous with economic equality or virtually ensures it. It is extraordinary that this should have been believed for so long when the evidence to the contrary is both overwhelming and obvious.

The belief in uniform economic aptitudes and motivations is a facet of the doctrine of the natural equality of man, the idea that all of us are the same except for accidental or nefariously imposed differences in wealth and education. The poor are like the rich minus the money. The peoples of the Third World are all much of a muchness and differ from those of the West only in having less money.

V

The principal cost of egalitarian policies is usually thought to be reduction of efficiency and hence of material progress. This cost, which certainly is real and considerable, is expressed in such formulations as the trade-off between equality (often identified with equity) and efficiency. Such formulations recognize that economic activity is not a zero-sum game but a process of production of goods and services, the flow of which is affected by attitudes and policies.

Although the economic cost of egalitarianism is real and its ramifications are manifold, I shall not discuss it in this article. The dilemma I emphasize here lies in the surrender of freedom for the promised reduction or removal of economic differences.

If people's circumstances and capacities, including economic aptitudes and motivations, were substantially the same, incomes would be largely equal in an open society. Thus the establishment of such a society would suffice for economic equality, without special taxation, let alone more drastic interference with voluntary arrangements. In fact, differences in circumstances, motivations, and aptitudes, including the ability to seize economic opportunities, ensure appreciable differences in incomes in an open society. Political action to reduce these differences or prevent their emergence requires an extension of state power incompatible with a free society.

As wide income differences have not disappeared in open societies, so pressures for their reduction or even elimination also have continued. Hence the demands for increasing the scope and level of what is misleadingly termed redistributive taxation. It is misleading because, as noted, it is not a preexisting income that is being redistributed. Rather, part of the incomes of producers is confiscated for the benefit of others, including those of who derive political or personal advantage from advocating or administering the confiscation.

The imposition of specific disabilities, in addition to progressive taxation, on individuals and groups with cultural and personal characteristics conducive to economic success is now widely advocated and to a considerable exent practiced. Special taxation of talented persons has been proposed on the argument that their talents should be regarded as communal property. Such proposals mean conscription of abilities, which is to some extent implicit also in progressive taxation. The removal of children from their parents and even manipulation of the genetic code also have been suggested as instruments for the promotion of equality, although thus far generally dismissed. Quotas handicapping the ambitious and the gifted have already been widely adopted in higher education and in certain areas of economic activity in the United States.

In an open society, attempts to eliminate, or even substantially to reduce, income differences extend coercive power, i.e., inequality of power between rulers and ruled. This also implies politicization of economic life, a situation in which economic activity depends largely on political decisions, and in which the incomes of people and their economic modus vivendi are prescribed principally by politicians and bureaucrats. How far-reaching is the required coercion and politicization of economic life will depend on the degree of economic equality the rulers intend to achieve; they will depend also on the various aptitudes, motivations, and circumstances of the groups and individuals among whom economic differences are to be reduced.

Extensive politicization of life enhances the prizes of political power and thus the stakes in the fight for them. This in turn exacerbates political tension, at least until opposition is forcibly suppressed or effectively demoralized. And because people's economic fortunes comes to depend so largely on political and administrative decisions, the attention, energies, and resources of forward-looking, perceptive, and ambitious people are diverted from economic activity to political machination.

These consequences are manifest in many societies, especially in multiracial communities. Politization of life, often pursued in the name of equality, has in many countries brought about a situation in which the question of who controls the government has become a matter of overriding importance, even a matter of life and death to millions. The effect of this on people' fears, feelings, and conduct is observable in numerous countries where there is ethnic diversity, including the United Kingdom. It stands out starkly in the profoundly heterogeneous societies of the Third World. The ferocity of political struggle in many Third World countries cannot be understood without an awareness of the politicization of life there—a process helped along by slogans of equality and intensified by the idea that incomes are extracted, not earned.

VI

Differences in income and wealth reflect to a large extent aptitudes and motivations, not only in open societies but also to a considerable degree in societies which are not open, but not completely closed or caste. The poor usually comprise a disproportionate number of people who lack the capabilities and inclinations for distinctive economic achievement, and often for cultural achievement as well. Most agree that weak members of a society should be helped. But why people are poor is fundamental for sensible remedial action.

Those who are poor as a result of crippling disease, or unavoidable or uninsurable accident, or erosion of savings through inflation may be thought to deserve and require treatment different from that directed to those who simply and habitually overspend their incomes. Large-scale penalization of productive groups for the benefit of the materially and culturally less productive—and for the benefit also of those who administer wealth transfers—impairs the prospects of a society. Pronounced adverse effects are especially probable when the support of the less productive is given without stigma and as of right—even more so when those who are more productive are made to feel guilty. These are precisely the stances and attitudes prominent in the advocacy and practice of redistribution.

Support without stigma, as of right, is reflected in the terminology of the "negative income tax." The payment of tax on produced income is a statutory obligation. Conversely, the receipt of a negative income tax is now deemed a right to an income regardless of performance, simply by virtue of being alive and relatively poor. It should be added that personal and group differences in economic aptitudes and motivations are likely to frustrate expectations that guarantee of a cash income would make it possible to abolish specific welfare services. These services will still have to be supplied to the many recipients of cash payments who will fail to provide for the contingencies of life. Such people are likely to be disproportionately numerous among the poorest, *i.e.*, the recipients of negative income tax. In Britain this is suggested by the prevalence of avoidable ill health and dental decay among children of unskilled workers who own television sets.

Support without stigma is conspicuous in the administration of international wealth transfers. Third World governments receiving foreign aid are habitually termed "partners in progress," when in fact they are recipients of doles or alms. And even more often than in domestic wealth transfers, these donations (often misleadingly termed "development finance") are advocated as restitution for past wrongs. Many recipients of both domestic and international wealth transfers are paupers, in the traditional sense of persons dependent on officially provided largesse. But because the support is given as of right and even envisaged as compensation for historical sins, the paupers cannot only insist on being given these transfers, but can even prescribe the political conduct of the donors. This is the case on the domestic scene, and it is much more evident on the global scene.

VII

The promotion of economic equality and the reduction of poverty are objectives which are separate and may conflict. Egalitarian measures often benefit middle-income groups at the expense both of the rich and of the poor. They also commonly obstruct social and economic mobility, discourage the accumulation and effective deployment of capital, and inhibit enterprise. They thereby damage the interests of the poor as well as the wealthy.

Greater equality of income and relief of poverty share the characteristic that contemporary debate about their attainment is pervaded by determination. The poor are often envisaged as a distinct class at the mercy of the environment, with no will of

their own, while at the same time they are denied the primary human characteristic of responsibility. The rich are regarded as having a will of their own, but as being villainous. Poverty is seen as a *condition* caused by external forces, while prosperity, is viewed as the result of *conduct*, although reprehensible conduct. The poor are considered passive but virtuous, the rich as active but wicked. Bureaucrats and social reformers—and at times also academics, artists, media sorts, and entertainers—are distinct categories who seem to get the best of both worlds: they may be prosperous and yet retain virtue.

U.S. INTELLIGENCE

Mr. STEVENSON. Mr. President, the security of intelligence is one of the most difficult questions with which the Executive, the Director of Central Intelligence, and the Congress are wrestling. Equally important is the quality and objectivity of intelligence. Unfortunately, all these requirements—security, quality, and objectivity—have often been damaged in recent years, by selective and self-serving accounts of sensitive intelligence matters leaked to the press, always by persons unknown.

Recently we have seen the intelligence process politicized by garbled press accounts of the "B team" exercise, in which outside experts were commissioned to evaluate the national intelligence estimates concerning Soviet strategic capabilities and intentions. And, still more recently, the distinguished columnist Joseph Alsop has returned to one of his favorite subjects, berating the acuity and objectivity of CIA's analysts and estimators, in so doing luridly painting someone's account of CIA analytical intrigue in allegedly suppressing uncongenial new intelligence. CIA's analyses and estimates have in general enjoyed a good reputation for wisdom and objectivity.

With regard to these questions I commend to my colleagues the thoughtful "Reply to Mr. Alsop" which Mr. John Huizenga, former Chairman of CIA's Board of National Estimates, has contributed to the Washington Post. Whatever the case with respect to the particular estimative questions he and Mr. Alsop are debating, Mr. Huizenga performs a useful service in reminding us of the need for objective, nonideological analysis which can stand "the test of events and makes a contribution to policy" and for political leadership which refrains from pressuring the intelligence analysts "to obtain agreeable findings."

Mr. President, I ask unanimous consent that Mr. Huizenga's excellent article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A REPLY TO MR. ALSOP

On March 7 The Post carried an article by Joseph Alsop, titled "A Cautionary Tale," in which he worried a theme that has preoccupied him before: that CIA analysts and estimators have shown a persistent bias, which has led them, wilfully and against all the evidence, to minimize the Soviet threat to the United States.

This time Mr. Alsop's somewhat feverish "journalism" unmasks analysts who contrived to understate the real scale of Soviet defense effort. The cops and robbers tale of how they were foiled is in Mr. Alsop's best vein. While I am unable to recognize my former colleagues in this melodrama, the style of attack on anonymous analysts who are unable to defend themselves is only too familiar.

In 1973 Mr. Alsop found CIA analysts guilty of what he called "marked historical bias." Reasons given were that they were playing down the likelihood of Soviet attack on China and "had always been broadly gloomy about the Vietnam war." Time and events make it appear that the bias Mr. Alsop perceived derived from their disagreement with him rather than from their own lack of objectivity.

His latest article also revives charges made in 1973 that an unnamed senior analyst was responsible for tendentious errors on Hungary in 1956, Cuba in 1962, and Czechoslovakia in 1968. Mr. Alsop is given to dicta and mostly disdains an accounting of his evidence; whether "sources" or his own formidable powers of invention misled him it is impossible to say. But people who could testify to the falsity of these charges were never consulted by him. Being a knowledgeable source and an interested party, I tried to discuss the matter with him myself. The distinguished "reporter" hung up the phone.

Mr. Alsop did get one thing right in his 1973 articles. He wrote that the role of CIA analysts "is most unlikely to have escaped President Nixon's sharp eye" and that James Schlesinger, the incoming director, was a "new broom" who would have "the President's backing and encouragement" in "sweeping clean." The unnamed senior analyst was "soon to depart." CIA's estimators would be glad to settle for forecasts that turn out as well as that one did.

Mr. Alsop's explanation for the "extreme ideological slants" of CIA analysts is that they "belong, broadly speaking, to the American professoriate." This is odd because the only actual professor ever to serve as director was Mr. Schlesinger, and he obviously had his "slants" right. What is also odd is that many professors, and especially those who would have to be judged ideologically unsound by Mr. Aesop's lights, won't come within shouting distance of CIA any more. True, many professors have served as consultants over the years, but anyone who heard their noisy debates on the relevant issues could hardly believe that they had a uniform, let alone a nefarious, ideological influence.

It is puzzling that Mr. Alsop makes himself the instrument of renewed attack on CIA analysts at this time. The alleged tendentiousness and "unresponsiveness" of their work was supposed to have been corrected years ago, in particular by William Colby's abolition of the Board of National Estimates and by steps he took to give military agencies a larger role in the production of national intelligence. It is possible that Mr. Alsop and his informants believe that CIA analysts have been too stubborn in defense of their independence despite efforts to get them to see the light, as for example in the recent Team A/Team B episode. It is also possible that Mr. Alsop believes that a new director at CIA needs to be alerted promptly to the unwholesome elements he will find in his own house.

Of course, analytical/estimative work in CIA has not always avoided error, and nobody assigns analysts there a purity of heart others lack. But it is a fact that the mission, structure, and traditions of the agency were designed to promote objectivity. No analyst who shows persistent ideological bias, of any sort, will go far in that environment. The career payoff normally derives from penetrating analytical writing that stands the test of events and makes a contribution to policy.

This holds true, however, only when political leadership respects the independence of the intelligence function, refrains from pressures to obtain agreeable findings, and also from urgings to "get on the team." Unfortunately, these conditions have not invariably obtained during the commotions of the last decade or so.

There is likely always to be tension between some politicians and "journalists" on the one hand, and CIA analysts and Foreign Service professionals on the other. The latter are disagreeable because they seem to harp on complexities and uncertainties in world affairs; worse, they may even define the Soviet threat in other than a one-dimensional way. Almost inevitably, they arouse suspicion among self-styled "tough" people for whom a more simplistic, version of reality is obvious.

Thus it will never be easy to carry out CIA's analytical mission, and certainly not in a period when the national security consensus is fractured and when the decline of civility makes attacks on personal integrity and half-baked ideological innuendo the norm in public debate. Still, I remain confident that my former colleagues will do their jobs honestly if given half a chance.

Perhaps the new director will see that they get it. All he has to do is to insist on high standards of competence and objectivity and, no less important, to support and defend those who may be threatened when they try to meet such standards.

POLITICAL PRISONERS IN INDIA

Mr. THURMOND. Mr. President, a recent article appeared in the Washington Star which reported that an estimated 30,000 persons are being held as political prisoners in jails throughout the country of India.

It was also reported that these prisoners intend to go on a hunger strike in the near future to protest this detention in a supposedly free and independent nation.

In this era when the term "human rights" has become a watchword, I believe that it is incumbent upon Americans to question the policies of any nation which espouses the same fundamental freedom as America, yet imprisons a large number of its citizens for exercising these freedoms.

While many are quick to condemn the internal actions of some nations, they simultaneously overlook, and completely disregard, the recent occurrences in India, which I believe to be incompatible with the fundamental ideals of freedom seeking people everywhere.

Mr. President, I ask unanimous consent that the United Press International article which appeared in the March 9, 1977, issue of the Washington Star be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

30,000 IN INDIA'S JAILS PLAN A HUNGER STRIKE

NEW DELHI (UPI)—An estimated 30,000 political prisoners still in jail in India despite relaxation of Prime Minister Indira Gandhi's state of emergency have vowed to go on hunger strike next week to protest their detention.

A spokesman for the opposition Janata (People's) party said yesterday that the prisoners made the decision in meetings in jails last week.

Jayaprakash Narayan, who has emerged as a leader of the opposition challenge to

Gandhi, asked people "to observe sympathetic fast on the same day" as the one-day hunger strike next Thursday.

"Continued detention of thousands of citizens who are denied any access to the court amply proves that relaxation of emergency as claimed by the prime minister is only a mockery," Narayan said in a statement.

Narayan is in a Bombay hospital undergoing treatment for kidney ailment, which he suffered when he was in jail for five months in 1975. His statement was released to reporters by the Janata party spokesman.

A recent constitutional amendment bars prisoners, jailed without trial and not told the reason for their detention, from approaching courts for relief.

The Janata party spokesman said half of the 30,000 prisoners in jail were arrested before the emergency was put into effect June 26, 1975 and the rest afterward.

The Indian government has never said how many political prisoners there are, but contends that almost all have been released since Jan. 18 when Gandhi ordered the March national election.

Meanwhile, the newspaper Indian Express said its latest survey showed the ruling Congress party and the opposition Janata party "are running neck and neck" in the election campaign.

"The fate of the two sides will ultimately be decided by what happens in Uttar Pradesh and Bihar," the two most populous states which would send 139 members to the new Parliament, the newspaper said.

"That the two states are tilting toward the opposition is not in doubt. How many seats it can get is the question and that may provide it the necessary margin," the Express said.

INFLATION

Mr. GARN. Mr. President, Mr. John Pack of West Bountiful, Utah, has just sent me a letter that capsulizes the experience of the average American in trying to keep afloat against the heavy seas of Government-caused inflation.

I pass his questions on to my colleagues, with the hope that they will help me answer him.

I ask unanimous consent that the letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SALT LAKE CITY, UTAH,
March 7, 1977.

HON. JAKE GARN,
United States Senator

SENATOR GARN: After reviewing my financial records for the past ten years I came up with some interesting facts.

For the year of 1966, I had a gross income of 5,843 dollars the year just completed (1976) 16,620 dollars from these figures it would seem that I should have nothing to complain about. A 170 percent increase in salary would seem more than adequate.

But, let us review something about this so-called increase in 1966, eight hours of labor would provide myself, wife and one child with enough income to maintain a lifestyle we were happy with.

In 1976 approximately fourteen hours a day are needed to try and keep a family of six afloat.

In 1966, 753 dollars were witheld for income tax in 1976, 2,199 dollars were taken from my paychecks almost triple. My question is, have federal employees and tax recipients also worked an extra six hours a day as I have?

Physically exhausted, I find myself working ever increasing hours to pay for an ever expanding tax-ridden debt. My dream has been shattered.

Its only a question which will break first my body or my heart.

Sincerely,

MR. JOHN K. PACK.

THE PREGNANCY EPIDEMIC

Mr. STEVENSON. Mr. President, Rev. Jesse Jackson, my constituent and director of People United to Save Humanity, has been preaching old fashioned virtues. He says the enlightened proponents of abortion focus on the consequences of decadence, not, he remarks, on its causes. He says 1 million, plus, girls will conceive this year between the ages of 10 and 19, and only a third or less will conceive in wedlock. Such statistics are the sign of national decadence.

Mr. President, Rev. Jesse Jackson is getting back to fundamentals, and his words are as appropriate for Members of Congress as for the parents of teenage children. I ask unanimous consent that a sample of his message, an article in the Washington Post of March 13, about the children of children, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PREGNANCY EPIDEMIC

(By Rev. Jesse Jackson)

The deadliest poisons are colorless, odorless and tasteless toxins, with the power to penetrate anywhere, undetected. No effective way exists to develop resistance against such invisible poisons. Traditional safeguards are ineffective, and to rely on them blindly can be a fatal mistake.

And so it is today, when parents look to traditional institutions either as sources of help or as scapegoats in their frustrating battles to reach or save the minds of their children. Home, school, church and synagogue are no longer strong enough to save children, because their combined power cannot match or overcome the other forces that also shape children's lives and attitudes. Foremost among these is the power of the media.

Consider only one potent media influence on children that parents generally are insensitive or deaf to: the radio. Those parents who do become aware of their children's addiction to radio and the music it broadcasts deal with it by ordering the volume turned down. But loud or soft, the beat goes on and its message comes through.

In the days when popular music first began flirting with sexually suggestive lyrics, program directors dropped the offending songs once they realized what was going on: some even bleeped or muddied the suggestions. But now the songs are sexually directive, with explicit instructions, and with radios amplifying their messages.

Do you know what songs radios are beaming into the ears of 14-, 15-, and 16-year-olds, and their 4-, 5-, and 6-year-old brothers and sisters? There have been "Snake Your Booty," "Aint That a Bitch," "I Want to Do It to You All Night Long," "Let's Spend the Night Together," "I Want to Do Something Freaky to You," "It's Alright to Make Love on the First Night," "Squeeze Box," and "Love to Love You, Baby," the short version of which, Time magazine said, features the singer, Donna Summer, having 22 orgasms.

These present-day heroines and heroes of the young use their art, through the medium of radio, to transmit a moral tone and an ethical content that, at the least, encourages their listeners, our children, into premature heat. The pervasiveness of radio and pop music is undeniable. Wherever young people go, their radios are with them, from waking to sleeping, playing through the hours. Are our children its audience or its victims?

This year, our nation is in the midst of a teenage pregnancy epidemic: babies having babies. This year, more than one of every 10 of this country's 15- to 19-year-old girls will be pregnant—and so will 30,000 more 10- to 14-year-old girls. Only a third—or less—of these million-plus child-mothers will conceive in wedlock. Where do you suppose they have been tuned while developing their attitudes about love and love-making?

The victims of the pregnancy epidemic aren't just our children, but their children, too. Children they really don't want, children they don't know how to care for, children they lack the maturity to care for—or love—intelligently. Because they may foresee this, more than a fourth of the teenage girls who will get pregnant this year will have abortions. That's a step we should see as another horrifying symptom, rather than as a cure.

Of those teenagers who will bear their children, nine of 10 will take their babies home. They will take them to homes where, because their mothers are immature, unprepared, too poorly educated to find meaningful employment, these children of children will experience enormous family insecurity and, all too often, be condemned to lives of material and mental poverty, physical and psychic deprivation.

All this defies other trends in American life. For more than a decade, the overall birthrate has been dropping—but not among 15- to 17-year-olds. Not only is pregnancy increasing among younger girls, so is the proportion of them who conceive their children out of wedlock. The birthrate for unmarried 18- and 19-year-olds is now higher than that of unmarried women 20 to 24 years old—a reversal of traditional patterns.

What ideals of love and attitudes about love-making are these young women and their lovers tuning into?

Can anyone doubt that the teenager's constant, transistorized companion doesn't influence him? Does anyone doubt that music heard on the radio doesn't motivate millions of teenagers to spend millions to buy the records the radio stations play—and some they don't, like the 16-minute version of Donna Summers' "Love To Love You, Baby"? Can anyone doubt that radio and other media exercise very real power in directing our children's lives?

If the media are to have power over the minds of children, then they must accept responsibility for the directions they provide. The public has a responsibility to see it's done. Educators have a responsibility, too. And so, too, do the heroes and heroines of the young. It may be too late to save some of our children, but it's not too late to save the children of the children.

It still amazes me that so many of abortion's enlightened proponents only focus on the consequences of decadence, not on causes. Their concern is panicked reaction to immediate impact, not with the roots of a problem for which their panacea is abortion.

Isn't it logical that teaching too little, too late, about sex and failing to teach anything about moral responsibilities has produced too many ignorant and irresponsible young men and women?

We can't wait to see who might be willing to take responsibility. Abortion might prevent the arrival of our children's children, but it won't save our children. We—all of us—need to realize and communicate that we cannot and will not allow our public airwaves to transmit society's lowest and most debased values to our youngest and most impressionable citizens.

THE SOVIET THREAT

Mr. THURMOND. Mr. President, a special report by the American Cause, published in December 1976, entitled "High Noon," by Mr. James Angleton and Mr. C. J. V. Murphy, presents a realistic assessment of the Soviet threat to the free world.

The Honorable George Murphy, former Senator, is director of American Cause which is a bipartisan, tax-exempt, political educational organization. The authors of the special report are expert analysts in international affairs. Mr. Angleton, who spent 31 years with the Central Intelligence Agency, founded the Office of Strategic Services—(OSS).

Mr. President, this special report, which is not classified, can be regarded as a very credible and valid intelligence estimate of the Soviet threat and a period of increasing danger to our national security. "The principle threat," as stated in the report, "is the Soviet drive for dominance based upon an unparalleled military buildup." I commend this special report to my distinguished colleagues for review.

Mr. President, I ask unanimous consent for the special report, published by American Cause in December 1976, to be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

HIGH NOON

(By James Angleton and C. J. V. Murphy)

The vital choices in national security awaiting President-Elect Carter bring to mind the dilemma of the citizens of Hadleyville when, as the clock ticked on, Marshal Kane appealed to them to stand with him against the menace arriving on the noon train. Will the man from Plains, Georgia rise to a like occasion?

John Erickson, Director of Defense Studies at the University of Edinburgh, began an analysis [1] of the Kremlin's current strategy with this portentous item of communist exegisis. Comrade Ponomarev's purpose was to reassure the international parties, particularly the Eurocommunists, that beneath the cover of detente the class war was to be waged relentlessly. That brutal diktat is all the more ominous by reason of the political vacuum that has arrested serious American thinking on defense and stragety since President Nixon and Dr. Kissinger traveled in pomp to Moscow in the summer of 1972, there to set in motion the process of detente, semantic stepchild of Lenin's strategy of "peaceful coexistence."

Seldom has a sense of national purpose been so obscured as it was in the wandering Presidential debate on defense and foreign policy in Philadelphia in October. If the verbiage uttered by the candidates should ever be recalled, it will hardly be for their elucidation of the facts and implications of the world power balance and the American role therein. They were all but strangers, unencumbered by serious problems, addressing earthlings as if by satellite from some celestial planet, yet to be identified in our planetary system.

In the aftermath, we are to have a new President. We wish him Godspeed. Unfortunately, we are left with the same vacuum. As Mr. Carter prepares for the Presidency, little more is known now about how he intends to engage American foreign and defense policies than was the case when he emerged in the New Hampshire primary. Indeed, he is all but beleaguered at the Plains' railroad station by the swarm of parochial constituencies which in their diversity of self-interest propelled him to so narrowly into the White House.

The several minorities press him for thicker slices of the national product. The city political machines have already proclaimed that he is committed to sop up their overflowing debts. Others call for restoration of the forest primeval, which they seldom visit. And the radical left, which has contributed nothing to the general economic well-being wants efficient oil companies dismantled, and profitable transnational enterprises expurgated. (Strangely, not a whisper of complaint has been heard from the environmentalists, so fluent in denunciation when the polluter is Amercian, about the radioactive fallout from the nuclear debris which mushrooms from the Chinese weapons tests and drifts across our land and into the food supply.) In all the hubbub, the constituencies concerned with national security and foreign policy—the proper interests of statesmen—can hardly be heard above the strident clamor for slashing defense spending and paring once honored alliances.

FOUR QUESTIONS CRYING TO BE ASKED

For the air of unreality surrounding the transfer of power, we citizens and the press are hardly less to blame than the politicians. In the absence of hard questions, the President was free to focus attention on how good our situation is at home, and how peaceful is the look of things abroad, thanks to the policy of accommodation with communist powers which he has stopped calling detente. Mr. Carter, for his part, sought to convince us how bad things really are at home, and though mainly through the voice of Vice President elect Mondale (Senator Church's tireless ally in detente and disarmament), how much safer the world is going to be once he has taken over the management of foreign policy from Dr. Kissinger. Neither candidate ever addressed himself directly to the Soviet military buildup and its relentless imperialism, most recently exemplified by the bloody takeover of Angola in conspiracy with Castro's tank-borne foreign legion.

Two of the candidates who went to the quick of things were Senator Henry M. Jackson and Governor Ronald Reagan. Senator Jackson was eliminated too early in the Democratic primaries for his theme to have impact on the debates. On the Republican side, Reagan was tardy in raising the issues to national consciousness and drew away from them before he had succeeded in taking the debate to the high ground where the national interest would have best been served.

In fairness, Mr. Carter should not be faulted for his immediate preoccupation with domestic matters. He has promises to keep. Promises to banish inflation, balance the Federal budget, promote full employment, spread the wealth, and launch a populist version of the millenium. Few can expect him to dwell on his rasher promises after he has reckoned their costs against what remains in the national till.

The American economy—that vast, booming engine which supports just about everything we do as a society—stands sorely in need of a fresh injection of confidence if the economic life-blood of risk capital is to continue to flow to the marketplace. To the degree that we turn more productive and venturesome in our domestic activities, our influence will continue to be felt in the world, and will continue to redeem the profligacy of the politicians. But if Mr. Carter should try to shut our minds to what is really happening at the Moscow seat of communist power and strategic deception, then whatever improvements he may seem to foster in the material aspects of American life are certain to prove ephemeral.

For the present, one cannot judge where Mr. Carter really stands on the central issues relating to national security. In a rhetorical way, he is committed to trimming defense spending, easing our forces out of Europe and Asia, and thinning our remaining alliances and commitments while somehow returning the Nation to a stronger military posture. He also appears to have intimated to Party Leader Leonid Brezhnev, according to that ancient leaky and somewhat Delphic oracle Averell Harriman, that he is impatient to carry the Strategic Arms Limitation Talks (SALT) to a second treaty.

Although vague, none of this is yet cause for alarm. Although the high proportion of dovish intellectuals he has posted to Washington to prepare the transition in foreign and defense policies is disquieting.[2] Hopefully, the President-elect has left himself room for saving maneuver. The rest of us won't know whether he has the makings of a statesman until he begins to face up to the crucial questions linked to the reality of Soviet-bloc power and purpose—questions that the Presidential campaign ducked.

Do Soviet-bloc aims and use of power imperil American security and, if so, what is the nature of the threat?

If the danger is real, what should our defense posture be? Can we accept military inferiority? Shall we settle for parity or superiority?

Are alliances essential? Are we prepared to demonstrate that the American leadership can be counted upon in crisis?

If the danger is real and must be met with allies, what new direction and stimuli should be imparted to our strategic policies to restore our deterrence to aggression?

THE FORGOTTEN POLICY

That these questions went unasked through the contest for the Presidency attests to the wisdom of the epigram that those who ignore history are condemned to repeat it. The full text of the historic National Security Council paper known as NSC 68 has now come into the public domain. It reveals that President Truman was beset, 26 years ago, by much the same questions. Mr. Carter was then a junior officer in the Navy. When his turn as Commander-in-Chief comes and he has grasped the intelligence estimates, he may well perceive that the choices confronting him were foreshadowed by those pressing Mr. Truman as the West's attempt at coexistence with the Soviet Union came unravelled with the onset of the Cold War.[3]

---

[1] Professor Erickson's article was published in the Winter 1976 issue of the *Strategic Review*, an excellent American quarterly.

[2] It is particularly disturbing that the migratory left-leaning, antidefense technipols who flit in and out of the myriad Think Tanks and the White House, Pentagon and Congressional staffs are presumed to be calling the tune in the changing of the guard at the National Security Council and the CIA. Unfortunately, the able Mr. George Bush is leaving the CIA in January. In his brief term as Director, he and his deputy, E. Henry Knoche, have sought to bind up the wounds which the Agency had earlier suffered at the hands of the Church Committee. (For further details on the Church Committee, see the June 1976 *American Cause Special Report:* "On the Separation of Church and State.") Another assault could disable the Agency for a generation.

[3] The first experience was the so-called "NEP" (New Economic Policy) period in the 1920s, when Lenin, desperate for technology and capital, opened Russia briefly to the avarice of the West. Among the eager entrepreneurs was a young American banker, Averell Harriman, as enthusiastic today for detente as he was then in pursuit of economic advantage in disregard of the national interest. The second was the war alliance, the good feeling which ended in 1948 with the Soviet blockade of Berlin and rampant Soviet imperialism.

For Truman, the forcing event was the Soviet Union's breaking of the American nuclear monopoly in August 1949. The Department of Defense was directed to collaborate with the State Department in recasting the Armed Forces nuclear doctrine in light of the changed circumstances and to weigh afresh the advisability of developing the more powerful thermonuclear weapon. Eight months later, in April 1950, Mr. Truman was given that and much more in the paper known as NSC 68, a tightly reasoned case for containing Soviet expansionism and a strategy for meeting if a war was forced.

The counsel came none too soon. At that point, only five years after World War II, Stalin had swallowed Latvia, Estonia and Lithuania, and installed by stealth communist dictatorships in Poland, Rumania, Bulgaria, Albania, Hungary, and Czechoslovakia. He had tried to wrest strategic positions in Turkey and Iran, armed the communists for their fierce civil wars in Greece and China, and blockaded Berlin. Now, within two months he would send the North Korean communists, armed by him in concert with the newly victorious Mao regime in Peking, against the thin line of United States and South Korean infantry before Seoul.

Secretary of State Dean Acheson was the senior author of NSC 68. He drew heavily on secret intelligence and the judgments of the scholar-diplomat George F. Kennan. The almost forgotten points of NSC 68 were:

As to the Soviet threat:

The Soviet Union is animated by "a new fanatic faith, antithetical to our own, which seeks to impose its authority over the rest of the world."

Its design for world hegemony "calls for the complete subversion or forcible destruction of the machinery of government and the structure of society" of non-communist nations, by means "both violent and nonviolent," and by "infiltration and intimidation."

If Soviet expansionism was not checked soon, no possible combination of the remaining free nations could assemble sufficient strength to stop it short of its goals."

As to the military response:

The Soviet Union possessed armed forces "far in excess of those needed to defend the national territory."

The United States must have an "overwhelming atomic capability," "command of the air" and sufficient conventional air, ground and sea forces so as not to be altogether dependent upon nuclear weapons.

No moral restraints, only "calculations of practicality," would govern the Kremlin's decision whether to resort to a surprise attack, including the nuclear.

As to American leadership of free nations:

A "cardinal" requirement in deterring war is to "possess sufficient strength in ourselves or in combination with like-minded nations."

As to a policy and strategy for facing down the threat:

The Kremlin recognizes the United States as "the only threat" to the rapid achievement of its aims for world domination.

The task of meeting the threat must start from an appreciation that "the cold war is indeed a real war in which the survival of the free world is at stake."

"A large measure of sacrifice and discipline" had to be forthcoming from Americans and their allies for a "rapid and sustained" buildup of economic, political, and military strength in the United States and among our allies.

"Without superior aggregate military strength, in being and really mobilizable, a policy of containment . . . is no more than a bluff."

We stand in "greater danger of defeat from lack of will" than from any mistakes likely to flow from a show of purpose. "No nation ever saved its freedom by disarming itself in the hope of placating an enemy."

THE PRESENT DANGER

These answers bespoke the resolution of an American leadership which, though but five years after a titanic battle with three totalitarian systems, nevertheless was prepared to stand up to a devouring Moscow-run communist imperialism.

What are the answers to the much harder questions of our day? Who is to speak out?

Aleksandr Solzhenitsyn, the Nobel prize-winning writer and gallant emigre, has given eloquent warning of what is in store for Americans if we fail to identify the right answers. The Soviet Union, he believes, has already won the political side of its war for Europe, the Middle East and the emerging nations—what he calls the Third World War. In his view, the Kremlin strategists have been "breaking off as much of the West as they wanted—piece after piece, country after country. You can simply be taken with bare hands."

That Sholzehnitsyn's warning was heard among us at all on the eve of the Presidential campaign was due to the good offices of the AFL/CIO led by Mr. George Meany. In February, Mr. Meany invited the writer to speak in Washington, D.C. after Dr. Kissinger had advised President Ford to forego a meeting with him, rather than irritate the Russians. This shortsighted advice deprived the President of his one opportunity to hold discussions, face to face, with an informed and unique witness about the harsh realities of Soviet intentions.[1]

Dr. Malcolm Currie, Director of Research and Engineering for the Department of Defense, has warned those willing to listen. "By 1977," he told the Congress in February, "the Soviets could, theoretically, initiate a counterforce strike against the United States, absorb (our) response, and then still have sufficient forces to attack Chinese and NATO nuclear capability, attack U.S. populations and military targets, and then still have a remaining throw-weight greater than ours. Beyond 1977, things will get worse."

From Geneva, on November 26, the West German Willy Brandt, warned fellow Socialists that the urbane brand of "Eurocommunism" in France and Italy is as deadly as the Moscow and Peking brand. "One must understand the realities of communism in the late 20th Century," he said. "Those who fight against phantoms lose sight of the real adversary."

And finally, in Washington last month, the Committee on the Present Danger, made up of dozens of well-known men and women, came together to sound a general alert. The prime movers on the Democratic side include former Secretary of State Dean Rusk and ex-Deputy Secretary of Defense Paul Nitze. Among the Republicans are former Deputy Defense Secretary David Packard; Clare Booth Luce, and Gordon Gray, members both of the President's Foreign Intelligence Advisory Board and, significantly, Lane Kirkland, the brilliant General Secretary of the AFL/CIO. Their founding statement made these points:

"Our country is in a period of danger, and the danger is increasing."

"The principal threat . . . is the Soviet drive for dominance based upon an unparalleled military buildup."

"The scope and sophistication of the Soviet campaign have been increased in recent years, and its tempo quickened. It encourages every divisive tendency within and among the developed states and between the developing world. Simultaneously, the Soviet Union has been acquiring a network of positions including naval and air bases in the Southern Hemisphere which supports its drive for dominance in the Middle East, the Indian Ocean, Africa and the South Atlantic."

"Soviet expansion and the world-wide deployment of its military power threaten . . . the political independence of our friends and allies, their and our fair access to raw materials, the freedom of the seas . . .".

"Without a stable balance of forces in the world, and policies of collective defense based upon it, no . . . objective of our foreign policy is attainable."

What is the collective wisdom of these influential citizens?

It is that if the drift continues, the United States could soon find itself "isolated in a hostile world," and inescapable outcome would then be a succession of "bitter choices between war and surrender."

THE GRAVER CHOICES

These views are very much a restatement made by NSC 68 a quarter of a century ago. One is reminded of another epigram: the more change, the more the same. So it is in the power equation.

Sovereign communist states, bounded by common ideology, are Lenin's heirs. Whatever the dialectical differences, they remain united in the determination to isolate the United States to achieve world domination. Meanwhile, a score or more of freshly minted communist states and Marxist-leaning dictatorships in Africa and elsewhere have entered the Soviet-bloc orbit at fraternal rank. They give expression to this solidarity with increasing boldness and disdain for the United States in their sham deliberations of the UN which they manipulate for purposes of blackmail while our own observers watch helplessly.

There is no longer any question of the Soviet Union's ability to contest our presence in any part of the world beyond our shores. Our intelligence analysts now acknowledge that for some years they have been underestimating Soviet investment in military forces and war-supporting industries and research by as much as one-half. So the question of whether the world military balance has finally swung against us has become academic.

It is this unstated acceptance of likely U.S. inferiority, and at best parity, that differentiates NSC 68 from the position of the Committee on the Present Danger. "Surrender" as an alternative to risk in defense of national interests was abhorrent to the architects of the containment strategy. On the contrary, while they gave heed to the risk of a nuclear exchange, they measured that risk as an option that had to be faced. The notion that the Soviet nuclear weapons had rendered too dangerous a decisive head-to-head stand against Soviet aggression took root later among the gaggle of political and physical scientists who flocked to President Kennedy. General war, in their vocabulary, meant a harrowing choice between "surrender and a nuclear holocaust" with no middle ground.

Dr. Kissinger clothed this spurious and self-deterring assumption in the garments of detente. "In an era of strategic balance, where both sides have the capacity to destroy civilized life," he has argued over and over again, "there is no alternative to detente." His dubious contribution to the strategy of deterrence has been the attempt to spin "a web of interests" calculated to draw the Russians into deals for grain and technology, and for limiting strategic arms and conventional forces in central Europe. His rationalization was that such enticements would awaken the Soviet leaders to

[1] This piece of hyprocisy perhaps tells us more about what is wrong with Dr. Kissinger's conduct of a foreign policy of detente. Only four decades ago, he and his family came to this country on the run from another despot. That he in his exalted position should have moved to "Gulliverize" this giant exile suggests a cynical disregard for our tradition of safe haven for others no less deserving of the opportunity to speak on the consequences of detente.

the material advantages which would accrue to self-restraint and distract them from world conquest. So diverted, the Soviet ideologues would turn mellow and the West would thereby be spared the test of leadership for which Dr. Kissinger was persuaded it had lost will and stomach.

The historical meaning of containment is that in its too brief span it did contain. Made credible by the unequivocal preponderance of American military power assembled during the Eisenhower years, it confined Soviet power to its 1950 banks for a full decade. The main levees did not begin to crumble until 1961. There was first Kennedy's unmistakeable faltering of will at the Bay of Pigs and, then, a year and a half later, his reluctance to make good the showdown and exact a fair price in the missile crisis by forcing Castro's expulsion from Cuba for having conspired with the Kremlin to bring Soviet nuclear power into the Western Hemisphere.

After 1962, for lack of will, containment lost its spring. In Indochina, it snapped for good, despite a fearful frittering away of life and labor—again for lack of will—at the price of national unity. This year, in Angola, a total absence of will found the government unable to postulate and defend a position which was honorable and essential.

And now the ideological war—the class war turned into a war between races—has spread over sub-Saharan Africa. Moscow is arming black Marxist regimes and their guerrilla strike forces for the assault on Rhodesia, South West Africa and, eventually, South Africa itself. The Russians are no longer alone in Africa. Cuban troops and technicians together with East German technicians and black revolutionaries trained in the universities of the bloc, are besprinkled through Angola, Mozambique, Tanzania, Zambia and Somalia. The Russians themselves, their gaze fixed on the main theater, are maneuvering for commanding geographical positions on the approaches to the Red Sea, the Persian Gulf and the Indian Ocean.

The dominoes will continue to fall and events will have their consequences. Soviet character remains unchanged and its ambitions unappeased.

THE CLOCK TICKS ON

The danger is clear and present.

Only by mustering superiority in all azimuths—military, economic, political, technological and, finally, in the spirit—can the United States hope to stop the spread of Soviet-bloc power.

The course we should take is clear enough. It is to return to the principles and strategy laid down by Truman and Acheson in NSC 68 and pursued by Eisenhower and John Foster Dulles in their time.

To try to make our lives easier in material terms, at the expense of national security, will only assure our ruin if, at the final margin, the Nation should be too weak in strength and spirit to meet and face down the threat.

Let us proceed therefore to reconfirm and strengthen our alliances with those people who are truly with us and who value their independence and freedom.

Superiority must logically be achieved with allies. The principal purpose of our armed forces should be the defense of allies. Without allies, war on us is much more certain. But to regain the trust of our allies, let alone recruit new ones, we must first demonstrate that we can stand firmly with them and not alone on issues strategic.

Mr. Carter has sensed the wisdom of this. At their November meeting he told President Ford of his intention to consult with our allies as an early order of business. A pity that Mr. Ford himself did not do that before he set out with Dr. Kissinger to do business, bilaterally, with Brezhnev at Vladivostok.

Credibility in leadership is nourished by mutual confidence, by performance, by how well the leader nation lives by its principles and obligations. A nation is judged by its moral behavior and stamina under pressure and in the discharge of its solemn commitments.

So in a very real sense, our predicament resembles the classic situation in the enduring story of the movie *High Noon*. The prosperous citizens in the frontier town of Hadleyville are suddenly confronted with the return of a menace which they thought had been banished forever. The situation is classic because of its brilliant delineation of the opposed forces of good and evil. One Sunday forenoon, word flashed through the town that the gunslinger Frank Miller, who had terrorized the town until Marshal Kane brought him to justice, had been released from the penitentiary. He was coming back to Hadleyville to take revenge, and his old gang was at the railroad station, awaiting his arrival on the noon train. But when Marshal Kane broke in upon the services at the little church to ask for help, his plea fell on deaf ears. The banker, the merchant, the lawyer, the town clerk all drew back. Frank Miller, they argued, was the Marshal's responsibility; he was paid to handle it. So Kane, mindful of his duty, put aside everything he held dear—his bride, the honeymoon on which they were about to leave. He went into the street alone and did the job.

We are not suggesting this simple situation offers a parallel to our national dilemma. Still, as with the issues posed before Truman in NSC 68, there's a moral waiting for a hero, a moral affected with high principles, and character devoid of self-interest. In a word, national survival. Will the man from Plains step forward and summon us to our duty?

THE CENTRAL UTAH PROJECT

Mr. GARN. Mr. President, since I have been in the Senate, no issue has stirred up the grassroots and Members alike like the decision of President Carter to eliminate, at the stroke of a pen, dozens of water projects that are so vitally needed for growth and development around the country.

During this week, hearings are being held in various cities of the Nation on the projects proposed for deletion. I have chosen to remain in Washington, Mr. President, rather than testify myself at the hearings, because I have serious questions about the propriety of the hearings themselves. The fact is that the Congress has authorized those projects, and will be holding hearings on the appropriations for them. If the administration opposes those projects, and wishes to testify against them, I am sure they would be welcome to do so. But it is not clear to me the exact function of the hearings which are now going on.

Nevertheless, in connection with other members of the Utah delegation, I have prepared some testimony which responds to some of the common questions which are raised about the projects in general, and about the Bonneville unit of the central Utah project specifically. I would like to share this testimony with the Senate, and therefore ask unanimous consent that it be printed in the RECORD, along with a separate statement prepared and delivered by Congressman GUNN MCKAY at the hearing in Salt Lake City.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATEMENT ON CENTRAL UTAH PROJECT

The Utah Congressional Delegation hereby indicates its full and unwavering support for continuation of the Bonneville Unit and all other units of the Central Utah Project, as being absolutely essential to the continued economic well-being of the State of Utah. Non-presence at these hearings of several members of the Delegation should under no circumstances be interpreted as showing a lack of support for the Central Utah Project. The entire Delegation, along with virtually every other elected official in the State, has consistently supported the Project, and does so today. Representative Gunn McKay appears on behalf of the entire Delegation. Senators Jake Garn and Orrin Hatch and Representative Dan Marriott have remained in Washington, D.C. today, partly to allow the technical defense of the Project to occupy the bulk of the time, and partly to underline the fact that we regard the entire proceedings as somewhat irregular.

The fact is that the reclamation projects under attack by President Carter's administration have been authorized by the Congress, only after extensive investigation and hearings over a period of years. Congressional review and approval were not given lightly. It is simply inaccurate to say that these are "porkbarrel" projects which can only be justified on the basis of mutual backscratching. For example, one project in Maine was rejected by the Congress year after year until the Arab oil boycott changed some of the factors on the benefit side of the equation.

Congressional hearings on these projects will continue to be held in the future as they have in the past. It is entirely proper for the Congress to examine these projects and for the Administration to testify against the projects at such hearings, if it so desires. Today's hearings do not fit the framework for proper review of such projects authorized by Congress.

We take this opportunity to submit for the record a few comments about the Central Utah Project, as a matter of information, but we emphasize our view that the proper forum for a defense of the project is before the Congressional committees which are already acting on this and other water projects. We are presently engaged in the preparation of material to present to those committees and we are working closely with the concerned State and local officials.

I. PROCEDURE

The entire handling of the review and cancellation of the Bonneville Unit of the Central Utah Project has been deficient. The information and analysis on which the President's action was based fails to reflect the careful and in-depth inquiry required of such a drastic reversal of federal policy. None of the experts in Utah who have worked for years on the project were consulted, nor is there any evidence of a review within the Bureau of Reclamation prior to the President's announcement of funding cancellation. Moreover, there was no prior consultation with the Congressional delegation as had been promised by Secretary of the Interior, Cecil Andrus. From the materials released on the economic assessment and environmental review by the Carter administration, it is apparent that no extended or fresh analysis was performed. In fact, the cost benefit ratio was inaccurate in the first reported version of the economic analysis. A revision upgraded that ratio from .9 to 1.

The environmental objections reflected in the statements from the Council on Environmental Quality constitute nothing more than a resurrection of the often-heard issues from the environmental impact statements on the Bonneville Unit. Questions about those environmental impact statements were answered positively by the courts as the

statements have successfully survived challenges in the Federal District Court and the 10th Circuit Court of Appeals.

Yet the greatest problems with the President's action lie on issues not addressed and costs not considered. There is little or no consideration of the employment impact or the termination costs which will result from the action. Nowhere is there a discussion of the millions of dollars of construction undertaken in many parts of Utah in reliance on the promise of future water from the Bonneville Unit. In Salt Lake County over 100,000 people are operating without a firm water supply. These people are relying on water to be delivered from the Bonneville Unit. Sudden termination of that project represents a breach of faith with the many people who have relied on legal promises made to them by the federal government. At a time when the President is striving to restore people's faith in our government, he has taken an action which is an abrogation of promises made by five previous administrations to deliver water to thousands of people in Utah and all over the country.

II. INDIAN RIGHTS

The Administration's failure to keep the trust with our people has had a particularly harmful impact on one of the most oppressed groups in our country, Native Americans. In the case of the Central Utah Project, an agreement was completed in 1965 whereby the Ute Indian Tribe agreed to defer development of their water rights in return for development of water storage facilities providing the Indians with ample water to develop their lands upon completion of the Central Utah Project. In particular regard to the Bonneville Unit, the Leland Bench area south of Roosevelt would be developed to provide irrigation for 20,000 acres of federal land held in trust for the benefit of the tribe. If the Bonneville Unit is cancelled, as President Carter proposes, resulting legal action for damages against the federal government will run to millions of dollars, and the courts are disposed to look sympathetically on the claims of Native Americans.

III. NEPA

There will always be some trade-offs as man modifies the environment in an attempt to improve the quality of his existence. We cannot uniformly take the position that any significant alteration of the environment will be sufficient reason to halt a project. The benefits derived from that alteration must be compared to the costs. Oftentimes those perceived costs—such as replacement of trout stream fishing with fishing, boating, and other recreational activities on reservoirs—only reflect a difference in philosophy.

The National Environmental Policy Act requires that these different philosophies be weighed, and a balancing of interests reached. Modifications are adopted, and adjustments made, until the proposal is acceptable from an environmental point of view.

The Bonneville Unit of the Central Utah Project has been through this review process and was found to be environmentally acceptable. The environmental factors were again fully considered by two Federal courts which found that the decision to go ahead with the Project had been made in accordance with the procedures established by NEPA.

When such a decision has been reached, it is only reasonable that an Administration consider that decision inviolate except under the most extreme circumstances. If the same environmental challenges which have been raised and rejected can continue to be brought up every time there is a change of personnel in the Administration, then orderly planning and development are impossible. There is not the slightest evidence that any new environmental questions have been raised to President Carter by his staff. The environmental analysis on which this decision to halt the project was made consists of a few paragraphs reiterating precisely those questions which were raised during consideration of the final Environmental Impact Statement, and yet again by both trial and appellate Federal courts.

President Carter's decision to use these questions to halt an on-going project represents a decision to rule arbitrarily rather than by law. In effect, the environmental philosophy of a small group of presidential advisors is elevated above the law of the land. We cannot allow such a procedure to be established.

IV. MAN AND THE ENVIRONMENT

Concentration on the traditional concept of environment fails to emphasize another significant viewpoint. It is not only wildlife that must be considered. Man is a most important part of the environment, and from that standpoint the Bonneville Unit is clearly an enhancement to the environment. The project will provide development of Colorado River water for the benefit of over half a million people along Utah's Wasatch Front. This is one of the fastest growing areas in the United States. Failure to complete the Bonneville Unit would bring this growth to a halt. But, more importantly, halting the project will severely retard the existing economic activity that is linked to that growth. Most of the water from the Bonneville Unit would go to irrigation. The average farm in Utah that will benefit from this project typically consists of only a few hundred acres. In order for a rich agricultural area such as the Sevier Valley of Utah to fulfill its potential, irrigation water must be developed and delivered. A major goal of our nation is to increase agricultural production to offset rising food costs. In this analysis, clearly beneficial results come from the Central Utah Project.

Another major improvement to the lifestyle of man is the electric power derived from the project. The Bonneville Unit has the capacity to produce 400 megawatts of non-polluting electrical power from flow through power plants on the dams along Diamond Fork. Additionally, our local power company is planning to contract for 26,000 acre feet to develop about 2,000 megawatts in coal-fired electric generation at several different developments. This is another essential element in the growth of our state. In fact, the Bonneville Unit provides significant benefits that will affect approximately 63% of the State's population.

V. CONCLUSION BUT NOT CANCELLATION

The decision to cancel the Bonneville Unit of the Central Utah Project and eighteen other water projects represents a tremendously costly reversal of federal policy. The Bonneville Unit is 17% complete; and if all construction underway were finished, it would be 26% complete. The people of Utah have relied upon the actions of the federal government in authorizing and appropriating money for this project. Their good faith reliance on the actions of the federal government has resulted in irrevocable planning and construction decisions.

There are no viable alternatives for future water supplies. Any alternative developments would be far more costly in both economic and environmental terms. We have relied too heavily on the good faith of the federal government, and we would be hurt too badly by halting construction on this project. In effect, we believe that the federal government is estopped from halting this project. It seems that the federal government, from both a moral and legal point of view, is irrevocably committed to seeing the project through.

The entire handling of the review and cancellation of the Bonneville Unit of the Central Utah Project has been deficient and inadequate. The information and analysis on which the decision was based failed to reflect the careful and in-depth inquiry required of such a drastic reversal of federal policy. None of the experts in Utah who have worked for years on the project was consulted.

Finally, it needs to be said that the costs in delay of constructing the Bonneville Unit have been substantial. The original commitment was to a construction schedule that would have resulted in the first deliveries of water in 1970. By now most of the construction would have been complete, and the Jordanelle Reservoir would contain enough water to meet Salt Lake County's needs for two years. This would have been crucial in the period of drought which we are apparently now facing. Additionally, the escalation in construction costs from 1974 to 1976 has averaged $7 million per month. The federal government finds itself in the position of delaying construction, which results in increased costs, and then using the increased costs as a justification for further delay. This circular approach underlies and underscores the irrationality that pervades the decision-making process pursued by the federal government in the deletion of funding for the Bonneville Unit.

For the reasons set forth in this statement and for other beneficial reasons presented at this hearing, we urge that the Bonneville Unit of the Central Utah Project be continued to completion as authorized by the Congress of the United States.

STATEMENT OF REP. GUNN MCKAY

INTRODUCTION

Mr. Chairman and other members of the hearing panel; I thank you for this opportunity to testify, but I protest the action which makes it necessary.

The Bonneville Unit of the Central Utah Project is the responsibility of Congress, not the executive branch. After careful study and extensive hearings, Congress authorized the Unit, and each year for several years appropriated money for its construction. Of course each year, the Administration recommends a funding level, but Congress appropriates the money and approves increases. I raise this issue to point out that Congress is responsible for making funding decisions for the Bonneville Unit, not the Administration.

In my preparation of evidence, I found it difficult to determine with whom the burdens of proof and persuasion rest. I concluded that since the Bonneville Unit was validated by Congress, it must be presumed valid at this hearing. Therefore, I will address the three announced project review criteria, namely: adverse environmental impacts, benefit-cost disparities, and safety considerations. In that the Interior Department has no objections to the project's safety we need not cover that issue.

ENVIRONMENTAL ASPECTS

The Federal government has established through the National Environmental Policy Act of 1969 (P.L. 91–190), a procedural device known as the Environmental Impact Statement. Its purpose is to define and evaluate the environmental impact of proposed or existing Federal construction projects. Such an environmental impact statement was completed for the Bonneville Unit on August 2, 1973. Since the EIS was prepared under the Interior Department's supervision, I am confident that members of the panel from that same Department will recognize the EIS as the authority on environmental issues.

SALINITY

The Bonneville Unit is now opposed because the diversion of 136,000 acre feet of water out of the Colorado River Basin would increase the salinity concentration in the Colorado River. I point out that the water

diverted by the Bonneville Unit will not reenter the Colorado downstream. It will not add directly to the river's salinity content. The Environmental Impact Statement estimates the increase attributable to the Bonneville Unit would be about 4% of the total estimated increase from all water development. The EIS concluded that "the Bonneville Unit, separately would have only a minor effect on the salinity increase" (Final EIS p. 658).

FISHERY IMPACTS

The Bonneville Unit is now claimed to significantly deteriorate fish population. The EIS states however that "The Bonneville Unit would not be expected to significantly . . . deteriorate . . . existing populations of either game fish species or nongame fish species in either the Upper Bonneville Basin or the Sevier River Basin (EIS p. 349). Furthermore, the Bonneville unit will produce 20,000 surface acres of reservoir area that did not exist before, providing habitat for an estimated 3.6 million fish each year (EIS p. 484). Last, completion of the Bonneville Unit assures minimum flow in some streams that dry up during late summer months or periods of drought, killing many fish that might live there.

As for the allegation the project would limit or destroy wildlife habitat areas, the Bonneville Unit plan calls for establishment of *three* wildlife management areas for the Utah Division of Wildlife Resources. The cost of developing these areas would be covered by Section 8 of the Colorado River Storage Project Act (70 Stat. 105).

In addition, Tribal authorities of the Uintah and Ouray Indian Reservation have selected six areas along the Duchesne River totalling 6,600 acres as wildlife management areas under the project plan. While inundation would cause the principal loss of wildlife habitat, the "broader impact on wildlife habitat on a State-wide level is expected to be less severe." (EIS p. 478).

WETLAND REDUCTION

Yet another environmental objection is the diking of Utah lake to reduce its size by one-third. Diking Provo Bay will result in the loss of an estimated 25,000 acres of wetland. However, the plan partially compensates for this loss with the development of 14,500 acres of replacement habitat along the western shores of the lake. In addition, diking the lake will significantly improve its water quality. Quoting from the Definite Plan Report,

"The water quality of Utah Lake is presently unsuitable for general municipal use and for many industrial uses. Under occasional conditions of low lake levels resulting from drought, (such as the one currently beseeching us) the water has deteriorated to the point of unsuitability for irrigation use . . . Studies show that with the diking . . . and the importation of good quality' water from Strawberry Reservoir under the Central Utah Project, the lake water will be considerably improved in chemical quality over that which has occurred historically." (Central Utah Project, Bonneville Unit, Definite Plan Report, August 1964, Appendix B Water Supply, Volume 2, p. 273.)

POPULATION CONCENTRATION

The final objection to the Bonneville Unit is it will further concentrate population along the Wasatch Front, degrading the quality of life. In direct contrast however, is the conclusion of the EIS which states that "without the Bonneville Unit development, growth within the Bonneville Basin area would be expected to continue, with the expansion of urbanization into the rural areas and the accompanying loss of green belt areas. Migration from the rural areas to the cities would continue. (EIS p. 163).

This review panel should also be apprised of the environmental impacts if the Bonneville Unit is not constructed. The EIS projects that "if the proposed Bonneville Unit were not constructed, many environmental changes would still occur within the Unit area. Many of these changes would alter the esthetic composition of the area . . . If left uncontrolled the problem of haphazard and inadequate development of the land around Strawberry Reservoir would likely become worse. The erosion problems in the Diamond Fork area can be expected to continue and worsen as long as the present Strawberry Reservoir irrigation system is in operation. The level of Utah Lake will continue its historic pattern of fluctuation and esthetically undesirable conditions will . . . occur." (EIS p. 157 and 158).

To date gentlemen, I have seen no report, study, or investigation of this magnitude to justify the Department of Interior's position that the Bonneville Unit fails for environmental reasons. The Environmental Impact Statement is accepted and approved and its decision on the Bonneville Unit should stand.

BENEFIT-COST COMPARISONS

The use of the benefit-cost analysis in the evaluation of water resource development projects is not without objection. The benefit-cost ratio is a sort of magic number. It is supposed to indicate whether constructing a project would be in the national interest. The legal foundation for this economic analysis is essentially a single phrase from the Flood Control Act of 1936. It authorized projects, "if the benefits to whomever they may accrue are in excess of the estimated costs . . ."

Since 1936, the benefit-cost ratio analysis has been changed or modified twelve times. An average of once every three years. Congress became agitated with these repeated efforts to change the rules of the game so it mandated in Section 80 of the Water Resources Development Act of 1974 (P.L. 93–251) that projects authorized prior to 1969 would be assessed through to completion with the interest rate in effect prior to 1968. Apparently the Executive Branch did not get the message.

Under the legally authorized discount rate of 3⅛ percent, the Bonneville Unit enjoys a benefit cost ratio of 1.3 to 1.0. Even under the Interior Department's new, illegitimate discount rate of 6⅜ percent, the project still reflects a B/C ratio of 1.0 to 1.0, or for every dollar spent, a dollar's worth of good.

It is important to remember that the benefit-cost ratio is an accurate assessment only to the extent that *all* of a project's merits and demerits are included in the benefit-cost formula. With the Bonneville Unit, they are not.
